Over recent years it has become increasingly evident—and our discussion here today is further positive testimony—that the numbers of groups and individuals in the welfare field have grown restive within the confines of traditional practice and have sought to strike new balances and find new common denominators in the agency-client relationship. I should like to call your attention to one such effort, which is currently the center of very warm controversy and which holds the promise of bringing about a wholly fresh and radically different approach to the relations of agency and client. This effort is embodied in a piece of pending national legislation known as the Kennedy-Baring bill—the provisions of which are incorporated in some 60 bills already introduced into Congress and likely to be the subject of committee hearings early next year. Although the measure deals explicitly with the rights of blind persons as citizens and welfare clients, the democratic principle which it expresses has, as I hope to demonstrate, much broader application. (Even if its significance were limited solely to this category of recipients, however, it would be important for social workers in all areas to recognize and ponder the political and professional issues which it poses).

The Kennedy-Baring bill has as its stated purpose "to protect the right of blind persons to self-expression through organizations of the blind." More specifically, the measure is designed (1) to provide for systematic consultation with organizations of the blind themselves by officials responsible for the administration of programs for the blind supported by Federal funds, and (2) to prevent such officials from interfering with the right of blind people to form or join associations of their own choosing.

In short, this legislation seeks to safeguard blind persons in their exercise of three elementary rights of citizenship: The right to organize, the right to speak for themselves, and the right to be heard.

It should be apparent even from this brief description that the Kennedy-Baring bill carries implications of the greatest significance for the agency-client relationship in the field of work for the blind, and indirectly for the broader field of welfare. The explicit extension to one specified clientele group of the "right to organize" presages modifications in the interaction of agency and client which may quite possibly be as far reaching in their own way as the changes in labor-management relations long since ushered in by the advent of trade unions and the principle of collective bargaining.

I would not wish to press the labor parallel too far. The blind are certainly not a single socioeconomic class, and their voluntary associations are not trade unions. Some of their most important problems, however, such as those which arise from the programs of vending stands and sheltered workshops, do bring together blind clients and social agencies in a direct confrontation of employer and employee. I shall have more to say about these economic relations later on; for the moment, the crucial point is that the Kennedy-Baring bill promises to introduce into the traditional agency-client relationship, at least with respect to the blind, something very like the principle of collective bargaining; or, to put it another way, it seeks to introduce a novel element of mutuality and equality by virtue of which advice and counsel would no longer flow all one way—from agency to client—but would become a genuinely reciprocal exchange: a transaction among equals to which both sides would contribute and from which each may derive instruction and advantage.

The right to organize, which this legislation seeks to safeguard in the case of the blind, is sufficiently well entrenched as a democratic principle to need little justification today. Freedom of association and assembly is enshrined alongside freedom of speech and expression among the guarantees of the 1st and 14th amendments; moreover, it has been reinforced, beyond danger of effective assault, by a long succession of historic events and judicial decisions. As recently as June 30 of this year, the United States Supreme Court declared that "Effective advocacy of both public and private points of view, particularly controversial ones, is undeniably enhanced by group association, as this Court has more than once recognized by remarking upon the close nexus between the freedoms of speech and assembly. It is beyond debate that freedom to engage in association for the advancement of beliefs and ideas is an inseparable aspect of the 'liberty' assured by the due-process clause of the 14th amendment, which embraces freedom of speech."

It may be, however, that what I have referred to as the "right to be heard"—which may be expressed in constitutional terms as the right of petition, in administrative terms as the right of consultation, and in quasi-judicial terms as the right of appeal in a fair-hearing process—is not quite so self-evident. At the level of the caseworker and of the fair-hearing appeal, this right is predominantly but not exclusively an individual right; at the constitutional, congressional and administrative levels, it is predominantly (but not exclusively) a right which in practice can only be exercised collectively. Because this "right to be heard" is less a part of our common language and accepted belief than the right to speak and the right to organize, let me take a moment to spell out what I take to be its indispensable function in the governmental process.

Despite its somewhat less than universal recognition, few principles of democratic government and public administration are in fact more firmly established or more widely practiced than this principle of the right to be heard—taken to mean the right of citizen groups sharing a common interest to be consulted in the formulation and execution of programs directly affecting them. The literature of public administration is replete with affirmations of the principle. A typical comment is that of Avery Leiserson: "There are always either formal or informal relationships between group organizations and official bureaucracies. Furthermore, it is perfectly clear that in the sense of the right to be heard, to be consulted, and to be informed in advance of the tentative basis of emerging policy determination, group participation is a fundamental feature of democratic legislation and administration." Another well-known authority, David B. Truman, has pointed out that the fundamental "rules of the game" which operate to preserve the public interest in the democratic process "prescribe that individuals and groups likely to be affected should be consulted before governmental action is taken." Indeed, he continues, "Not only is the requirement of consultation likely to be more or less automatically observed by administrative agencies in order to maximize support; the obligation is frequently explicitly written into particular authorizing statutes or into laws of general application, such as the Administrative Procedures Act of 1946."

The principle of group representation and consultation finds its most direct expression in the structure of government whenever an agency is created to serve a particular category of citizens or to promote the welfare of a group sharing common needs and interests. These are the so-called clientele agencies, of which probably the best known examples are the Veterans' Administration, and the Office of Indian Affairs. Moreover, even where public agencies are organized along functional rather than clientele lines, as Professor Leiserson has noted, "a function may be so defined that, in effect, it is restricted to a major industrial or economic group." (Examples of this would be the

Federal Reserve System, the Securities and Exchange Commission, and the Interstate Commerce Commission).

In a broader sense, at least three of the major departments of the Federal Government may be classified as clientele departments: namely, those of Agriculture, Labor, and Commerce. The main point concerning all such agencies and departments is that they have institutionalized the principle of direct consultation with those citizen groups primarily affected by their work. It should be emphasized that this principle of direct consultation is wholly distinct from other devices which may from time to time be adopted by the agency to obtain the opinion of the broader public or of interested nonclientele groups such as scholarly or professional societies. Thus the principle of client consultation within the Department of Agriculture, for example, means consulting regularly and systematically with organized groups of farmers—although the department may also seek the advice of academic specialists or other nonfarm experts. Similarly, the Departments of Labor and of Commerce have respectively developed both formal and informal methods of consultation with labor unions and trade associations, chambers of commerce and other business groups. In short, the principle of consultation—the right to be heard—means consultation first and foremost with the particular groups directly affected—not with external individuals or agencies, in or out of Government, however closely associated or professionally knowledgeable.

It is no longer a live issue whether administrative agencies should be delegated the power to make rules binding upon the groups affected by them; they have and should have the power. The issue today is rather that of rendering bureaucracy responsible and democratic. It is in this area of democratizing public administration that the role of consultation is most significant. For this function is not, and in the nature of things cannot be, adequately discharged by the formal processes of legislative oversight, executive supervision, and judicial review—which at best can only erect overall standards of regulation and make intermittent checks upon performance, or, in the case of the courts, review what has happened in the light of a negative power.

The direct responsiveness which is owed by administrative agencies to the client groups primarily affected by their policies has been convincingly shown in a widely cited article by Profs. Arthur A. Maass and Laurence I. Radway, of Harvard University. A major precept in their assessment of administrative responsibility is that "an administrative agency should be responsible to (private) groups so far as necessary to equalize opportunities for safeguarding interests, to acquire specialized knowledge, and to secure consent for its own program. This growing tendency for interest groups to participate in the formulation and execution of policy, irrespective of legislative provision, can be supported on at least three grounds: first, that such group representation is desirable to equalize opportunities for protecting and promoting respective interests; second, that the preparation of detailed regulations on complicated matters requires exact knowledge which even the best informed official may not possess and which interest groups can supply; third, that group participation in policy decisions makes possible the winning of consent for the agency's program."

In fine, the principle of consultation—the right of citizen groups to be heard—is no less serviceable to the democratic process than its companion rights of speech and association. After all, no degree of organization and no amount of speech are of any avail if no one is listening. The right to be heard is no more than the power of effective speech in matters of direct and vital concern—the right of access to the agencies of representative government.

To many in this audience the foregoing discussion of the right to be heard may seem to be only a superfluous demonstration of the obvious. But it is not, I can assure you, always so regarded; and the right itself is often deliberately disregarded in the formal relations between welfare agencies, both in and out of government, and their various client groups. There is not now, and there has never been any regularized or systematic consultation with representative organizations of the blind by those agencies of the Federal Government—notably the Office of Vocational Rehabilitation and the Social Security Administration—charged with the provision of services to the blind. To be sure, these Federal agencies do indeed consult regularly and systematically with professional agencies and with State welfare officers, and usually take the position that client groups should do their consulting on the State level, since it is the State agencies which collect and disburse Federal funds. But aside from the fact that these funds are for the benefit of clients rather than administrators, it is obvious that policy for these programs is made in Washington and that it is in Washington no less than in the States and counties, that group consultation can have policy significance and fruitful results. Nor is the absence of consultative machinery noticeably improved with respect to other groups of the physically handicapped, or for that matter with respect to most categories of aid recipients (the organized veterans representing, of course, the most formidable and rule-proving exception). When we turn from public programs to the private agencies, the degree of recognition given to the right of clients to be consulted in the formulation of policy is still more conspicuous by its rarity. Here the rule would almost seem to be: Clients should be overseen but not heard.

That wisecrack may in fact contain more truth than humor. I have described the principle of consultation as a democratic right of citizens; but the working relationship of the welfare agency and the client of services is not often thought of as a democratic process in which rights exist on both sides of the table. The analogies most commonly used among social workers are those of the religious confessional, the psychiatric interview, or the medical consultation. More than a few professionals blandly accept without much struggle of conscience what they take to be the inherent and inescapable authoritarianism of the agency-client relationship. Witness, for example, this comment by the editor of a national journal for workers with the blind:

"Principally the concern about agency-client relationships has centered on the custodial-paternalistic tendency in service to blind people, which is to an extent an inherent natural concomitant of any program in which society provides a service for its minority of less favored members, be the minority based on blindness or any other cause or condition. • • • The problem of the custodialism and paternalism has been reduced, to the extent that its inherent nature permits, by those of society's agencies which are in the forefront of progress. • • • Still, to expect society to be completely free of all suggestion of difference between the beneficiary of service and the rest of society is probably visionary, given human nature as it is."

However remarkable that statement may seem to you, it is very far from exceptional in the field of work for the blind. It was the American Association of Workers for the Blind which issued a convention resolution opposing the Kennedy-Baring bill—with its protection of the right to organize and the right to be heard—as embodying a completely unsound and retrogressive concept of the responsibilities and privileges of blind persons as citizens. And it was the same association which declared, in the first sentence of its code of ethics: "The operations of all agencies for the blind entail a high degree of responsibility because of the element of public trusteeship and protection of the blind involved in services to the blind." It was the executive director of the largest national agency for the blind who proclaimed not long ago that a job, a home, and the right to be a citizen will come to the blind in that generation when each and every blind person is a living advertisement of his ability and capacity to accept the privileges and responsibilities of citizenship. And it was the head of another large private agency who wrote these candid words, only a few years ago: "The fact that so few workers or organizations are doing anything appreciable to (help in the adjustment of blind people) cannot be explained entirely on the ground that they are not in the vanguard of social thinking. It is rather because they are realistic enough to recognize that the rank and file of blind people have neither the exceptional urge for independence nor the personal qualifications necessary to satisfactory adjustment in the sighted world."

Such judgments as these could be, I assure you, almost indefinitely extended. What they reflect is an attitude of moral and intellectual superiority (if not of superciliousness) on the part of those administering services to a presumptively inferior (if not incompetent) clientele. The attitude clearly suggests, in the words of a shrewd observer, "that those who need the services of the State in any social matter are sick and can only be made well through the help of a class of trained, objective, neurosis-free officials. In this only the social worker or the psychiatrist is effective."

Let me say again that most, if not all, practitioners and theorists in the casework field are unquestionably devout in their liturgical affirmations of democratic values and sincere in their professional commitment to client self-determination. But it is difficult to escape the impression that in recent years more and more categories of welfare recipients have been proclaimed incompetent to lead their own lives. Those potential clients who resist the offer of services may be put down, ipso facto, as unstable defectives. Unwed mothers may be collectively dismissed as unable, if not incapable of making their own independent decisions without casework services. The parents of problem children may be considered too close to the problem to evaluate it rationally; while the children of public assistance clients come to be classified as wards of the community.

However indefinite or inconclusive these custodial attitudes may be held to be in the overall field of casework, there is no mistaking their prevalence, if not their predominance, in the special field of work for the blind. Here there are certain factors, not present to the same degree elsewhere, which function to reinforce the authoritarian bias among agency workers. The first of these is simply the physical fact of blindness which is regarded almost universally as qualitatively different and far more crippling in its consequences than the run of physical disabilities or social disadvantages. "All visible deformities," to quote the blunt words of an agency psychiatrist, "require special study. Blindness is a visible deformity and all blind persons follow a pattern of dependency." It would be hard to speak plainer, or crueler, than that. Naturally it follows, for those who accept this line of reasoning, that blind people must be closely supervised and protected, not only in the specific area of need in which they may seek aid but in

most aspects of their lives, and not merely for a limited period of training or assistance but virtually from cradle to grave. Thus this proclamation of an agency administrator: "After he is once trained and placed, the average disabled person can fend for himself. In the case of the blind, it has been found necessary to set up a special State service agency which will supply them not only rehabilitation training but other services for the rest of their lives. * * * (The agencies) keep in constant contact with them as long as they live."

There is yet an additional factor in public welfare provisions for the blind which operates to perpetuate this custodial philosophy. It arises from the peculiar set of institutions and services which has been established for their benefit, particularly the Federal-State vending-stand program and the hundreds or so sheltered workshops across the country operated especially for the blind. The issue of agency control versus client freedom, the antinomy of liberty and authority, is nowhere more clearly focused, as it seems to me, than in these two special provinces of social welfare.

The sheltered workshops constitute an arena of conflict in which the interests of blind persons as employees and the interests of the agencies as management confront each other over the workbench. (Nor is this conflict merely latent; for something over 2 months last summer, seven blind employees of a sheltered workshop in Texas carried on a strike against the shop management, maintaining a daily picket of the establishment and evoking the services of a special community committee to mediate the dispute). The interests of the workshop managers are intimately involved with such things as certificates of exemption from minimum-wage standards and from workmen's compensation laws, together with authority to retain in their shops (for reasons of efficiency) blind persons fully capable and deserving of release into competitive employment. It goes without saying that workshop administrators are opposed to independent organization by their blind employees, to collective bargaining, and to the whole set of established perquisites (seniority, pension plans, and the rest) elsewhere enjoyed as a matter of course by organized labor. Here is paternalism of a very familiar kind—albeit one that should by now have disappeared from the civilized world.

No less obvious, and no less anachronistic, is the manifestation of this custodial philosophy in the operation of the public vending-stand program under the Randolph-Sheppard Act. In all but a few States the program is administered under a strict system of agency control in which the blind vending-stand operators are in every sense employees of the enterprise—which functions, incidentally, very much like a commercial chain store in compelling all operators to contribute from their own earnings to support the operators of stands in unprofitable locations. The agency-control system is fervently opposed by organizations of the blind themselves, who have long sought (and in a few States have achieved) a system which permits operators to become independent owners of their businesses through the purchase of stands and equipment from the licensing agency. The rationale of the agency preference for tight and permanent control has been expressed by one prominent administrator in these straightforward terms: "The operation of the vending-stand program, we feel, necessitates maintaining a close control by the Federal Government through the licensing agency with respect to both equipment and stock, as well as the actual supervision of the operation of each individual stand. It is therefore our belief that the program would fail if the blind stand managers were permitted to operate without such control."

In such specialized areas of welfare as those of the sheltered workshops and vending stands for the blind, the existing conflict of interests between agency and client is plainly demonstrable and irrefutable. That definite vested interests in the maintenance of controls over the lives and livelihood of these client-employees have developed on the part of the agency managers is equally undeniable. But even in these extreme and agitated areas, the introduction of the principle of consultation—the right of the effected interests to be heard in the formulation of policy—can do much to reconcile the polarized interests and to make possible a more democratic perspective in which both client and administrator will participate as equal partners in a joint enterprise of mutual advantage and clear public service.

The principle of group consultation has primary applicability to the administrative process, in private welfare as in public policy—although it carries important implications as well for the individualized relationship of client and caseworker. Through systematic enforcement of this principle, welfare clients may be expected to perform increasingly a positive, rather than a merely negative and receptive, role in their dealings with the agency. The sharp dichotomy of interest and viewpoint which so often divides the two sides of the process; the invidious connotations which still persevere in the classic relationship of mendicant and almsgiver; the unilateral flow of counsel and advice over the administrator's desks—all these may be substantially reduced if not ultimately resolved by judicious and progressive application to the field of social welfare of that trinity of constitutional and human rights; the right to organize, the right to speak, and the right to be heard.

How Shall We Pay for Research and Education?

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here a brilliant article by Dr. Paul E. Klopsteg, president of the American Association for the Advancement of Science, on the subject of how the education we so badly need can raise large sums from private sources.

The article follows:

[From Science, Nov. 16, 1956]

HOW SHALL WE PAY FOR RESEARCH AND EDUCATION?

(By Paul E. Klopsteg)

Population trends in the United States during the past two decades, along with the changing public attitude toward higher education and research, have posed a predicament for our colleges and universities. The approaching tidal wave of increasing college enrollments—a wave that has already engulfed our lower schools and is lapping the shores of higher education—is giving administrators and governning bodies apprehension and anxiety. The predicament is the inadequacy of operating funds to keep abreast of the rapidly growing needs of the institutions.[1]

The report of the Committee on Institutional Research[2] of the American Council on Education states as fundamental principles that "all accredited institutions of higher learning subscribe with varying emphases to three primary and essential aims: (a) the extension of the boundaries of knowledge; (b) the conservation of knowledge already acquired; and (c) the diffusion of knowledge through teaching, publication and other accepted methods of dissemination." It states further that "institutions of higher education are the principal instrumentality through which new knowledge is created by research scholars, existing knowledge is preserved and propagated through libraries and the minds of faculty members and students, and knowledge is disseminated through teaching and publications. In order that they may fulfill their primary and essential functions, institutions of higher learning require the utmost freedom in both their administrative and academic activities."

That these principles are truly fundamental in our society is beyond argument. The preservation of the essential freedom of research and education must be assured. Is it, in fact, assured in the future, or is freedom threatened? If we consider seriously the aforementioned predicament, there is no escape from the view that freedom of research and education, in both its administrative and intellectual aspects, is indeed threatened.

Government agencies are supplying, in growing amounts, funds for scholarly research but not to support the teaching function and other primary and essential activities in higher education. If the rapidly growing demands on institutions should bring about increasingly unbalanced budgets, substantial Federal support of all education would appear inevitable. Although present support by Government of research activities seems to have no concomitant control or intrusion, these are appearing in subtle, though not insidious ways. They develop almost spontaneously, without plan or intent, simply because the expenditure of Government funds calls for safeguards against improper disbursement and for checks to insure proper use. The exercise of such authority of guardianship of funds almost invariably becomes bureaucratic and can easily develop sinister aspects. If Federal aid to education, as well as to research, were to increase by large sums, we could not afford to remain complacent about the likelihood of increasing Government control.

Thus, although Federal subsidy appears to be a way out of one predicament, it immediately leads into another. Under the irresistible pressures that come with increasing demands on educational facilities, we are not only accepting but actively seeking more Government money, notwithstanding the probability that this carries with it increasing Government intrusion and eventual control.

The situation, though serious, is not yet hopeless. A remedy is possible which keeps complete authority of management and direction in the hands of the governing and administrative heads of our schools and colleges, where it belongs, and does not permit it to pass under the heavy hand of some Federal agency, where it might easily become lodged.

DILEMMA OF COLLEGES AND UNIVERSITIES

From its very beginnings, our Nation attached great importance to the education of its citizenry. Public policy called for schools, locally founded, supported, and controlled. Colleges in growing numbers were

[1] The opinions expressed in this article are entirely my own; they reflect no official position of the National Science Foundation.

[2] Committee on Institutional Research, American Council on Education (Washington, D.C., 1954). Known as the Hancher Report.

established. Some were privately started and run by religious organizations, some by secular groups, others by municipalities and States. Attempts were made to establish a national university, but the idea of Federal support never took root. Indeed, strong sentiment prevails in the Congress, reflecting public sentiments, against Federal subsidies for education, especially at the higher levels. Unless some better way is found soon, however, Federal money for education may, by default, become the pattern for an attempted remedy for the present and impending difficulties.

Faced with the increasing pressure for more admissions, private institutions may and do take the position that they can accept only so many students, that they are under no obligation to take more, and that they will raise admission standards to limit enrollment. No one expects a college to carry a larger load than its resources allow. It may be suggested, however, that, as an institution organized to serve a public need, it may soon have to find means for expanding its capacity. As private institutions limit their admissions, the burdens are increased on those supported by taxes. •Of the latter, many are under pressure and some are under compulsion to accept all qualified comers, the qualification being a high-school diploma. How can the schools, public and private, under increasing heavy demands, solve the dilemma? All of them should be expanding their facilities now to take care of future student population, which is expected to double in the next 15 years, and probably sooner.

By minor artifices we may defer, but cannot avoid, facing the problem: How shall we finance research and education? These are the solid foundation of the Nation's future, and funds for their support must be adequate to provide superior opportunities for gifted students and able scientists. Greater knowledge and fuller understanding in all fields of learning must be the goal. No equal expenditure of money can bring greater returns for the public benefit. In no other way can we achieve the freedom that comes from knowing the truth. In no other way can we as a nation hold our own on this overpopulated planet. As we face the problem squarely, we find only one solution: Assurance that a sufficient part of our vast national income will flow normally and effectively into education, to meet its financial needs as they arise.

In trying to bring this about, should we take the easy way? During the past couple of decades, a father complex seems to have come upon many of our citizens, causing them to look to Washington as the ever-present help in time of trouble, especially when money appears to be the remedy. Many people seem to think that money from the Federal Government does not cost anybody anything. The easy way then would be to look to the Government to make annual grants to cover all operating deficits in education, under a formula by which funds would be doled out to all institutions, public and private.

To do this by statute would require a highly sophisticated law under which an attempt might be made to secure fair and just distribution, with effective safeguards against abuse. These are almost unattainable specifications. If they were attainable, and if easy money were meted out year after year, the institutions would lean more and more on Federal support and depend less and less on their own efforts and resources. The disbursing agency would have the annual task of accurately and objectively budgeting the needs, beginning 2 years in advance; of gaining approval by the Bureau of the Budget; of getting the budgeted amount through the congressional mill to an appropriation, with all the political implications of the process; and, finally, of disbursing the funds thus provided.

It is not a reassuring picture. A vast organization would be needed by the dispensing agency. It could easily become one of the greatest empire-building bureaucracies that the country has known. It would have to be vividly mindful of the fact that every college and university is in a congressional district. Could the institution in such circumstances escape governmental intrusion in its affairs, or avoid a measure of eventual control from Washington? If we treasure our heritage of freedom in thinking, in learning, in teaching, we cannot take the risk of traveling this way.

PRIVATE SUPPORT IS NEEDED

What, then, is the alternative? There is only one. The money needed to keep our colleges and universities solvent must be private, not public, money; and it must come from a great number and diversity of sources to assure complete independence from outside influence or control.

The efforts that are being made by friends of education to encourage and develop increased giving by corporations are commendable and should continue. Such gifts, though significant, cannot be more than a partial solution. Sentiment already exists against too large a fraction of the supporting funds being derived from business and industrial corporate sources. Even if it were feasible to get all needed support from them, strong antipathy against doing so would surely develop.

Desirable and helpful though they may be, gifts from business or industrial corporations are neither easy to come by nor easy to keep coming year after year. Boards of directors are trustees for the owners. They must be circumspect in either spending or giving away their stockholders' money. When the economic situation becomes unfavorable, prior actions are easily rescinded. Moreover, a large part of corporate aid is special-purpose money for specific projects or activities, to assure easy justification to stockholders. Although some special-purpose money can be well used, institutions would be hamstrung if the major part were of this kind. Keeping institutions in good balance in all fields of learning requires funds that, for the most part, are uncommitted.

In these considerations, then, there is left only one source for the kind and quantity of money needed. It is the individual whose income is enough to make him a potential donor. If he makes a Federal income tax return, he is in this class. Of his kind there are many millions. He is a major source of the Federal revenue. As a donor of gifts for the general welfare, especially education, he has not collectivley distinguished himself. There are, to be sure, outstanding exceptions among individuals in all income classes, and their generosity is most heartening. But at the very best, the total of their gifts cannot now come near to meeting all needs. However generous, they cannot fairly be expected to carry the whole burden.

Although it may seem that our individual generosity is not notable, we are in fact a nation of givers, and we are almost unique in this respect. Were we not collectively generous, our Government could not, year after year, maintain its program of foreign aid for nonmilitary purposes. But we could not be collectively generous unless we were individually so. If, then, the present total of gifts for public causes is relatively low, the reason is to be found not in the individual's unwillingness but rather in his inability to be generous.

TABLE 1.—*A table drawn to assist in explaining and illustrating how a simple revision of the income-tax laws would operate to make the cost of giving commensurate with the giver's income*

I Group No.	II Highest surtax rate (percent)	III Gift surtax (percent)	IV Present cost of gift dollar (cents)
1	No surtax	2	80.
2	20 to 31	3	80 to 69.
3	32 to 41	4	68 to 59.
4	42 to 51	5	58 to 49.
5	52 to 61	6	48 to 39.
6	62 to 71	7	38 to 29.
7	72 to 81	8	28 to 19.
8	82 to 91	9	18 to 9.

INCOME TAXES AND INDIVIDUAL GIVING

Notwithstanding the apparent unqualified approval by Government of the taxpayer's charitable inclinations, expressed by its permission to him to deduct up to 30 percent of his adjusted gross income for legal charities, he failed in 1954 by about $20 billion to take advantage of this exemption. Deductibility of charitable gifts must, therefore, be regarded as a gesture, not empty but unrealistic. Under this seemingly generous provision the Government exposes itself to possible loss of substantial revenue—namely, the taxes on the billions that the taxpayer might make as deductible gifts. Why has this provision failed so utterly to stir to vigorous action the generosity of individuals toward making gifts to worthy public causes?

Such gifts, approved by Government, are called a legal charity. They are the charitable contribution now deductible from adjusted gross income in the computation of Federal income tax. The term legal charity was superbly well defined in 1867 by Horace Gray, associate justice of the Massachusetts Supreme Court and later a justice of the U.S. Supreme Court: "A charity, in the legal sense, may be more fully defined as a gift, to be applied consistently with existing laws, for the benefit of an indefinite number of persons, either by bringing their minds or hearts under the influence of education or religion, by relieving their bodies from disease, suffering or constraint, by assisting them to establish themselves in life, or by erecting or maintaining public buildings or works, or by otherwise lessening the burdens of government." In view of the great number of Government-approved legal charities, why have individuals declined by so wide a margin to make deductible gifts?

The answer is found in the glaring inconsistency between the Government policy of approving gifts "to lessen the burdens of government" and its income tax laws. The curious if not startling fact is that the tax laws operate to increase greatly the ability to give of those whose income makes them most able to give and to diminish drastically the ability to give of those whose income already renders that ability low. The cost of giving for persons with a maximum surtax rate of 20 percent is almost 9 times that for those at the 91-percent maximum.

How does the disparity in the cost of the gift dollar arise? Consider one of the dollars given by the person whose highest surtax rate is 91 percent. It is tax-free. But if he had not given it, Government would have taken 91 cents, leaving him 9 cents. Thus the dollar he gave cost him 9 cents. By like process, we find that the cost of the dollar for one whose highest rate is 20 percent becomes 80 cents.

Such disparity in cost of giving between those of low and high incomes, respectively,

does not harmonize with governmental approval of giving as now expressed in the income tax laws. The zooming rise in cost of the gift dollar, with decreasing amounts of adjusted gross income, is a powerful deterrent, not an incentive, to liberality. This has undoubtedly been a major cause of the restraint by the individual upon his generous inclinations. To the person with income in the thousands or low tens of thousands, there is a double deterrent to giving. The first is that, after living expenses and other normal obligations have been met out of the year's income, the surplus remaining for savings and gifts is small; thus the intrinsic value of his surplus dollar is large—relatively much greater than it is for his counterpart with large income. The second deterrent is the amount that the gift dollar costs him. The effect is to put restraint on his generous impulses and to make him take the position that the Government had better use the taxes he pays to finance the public causes that seek his donations.

The inequity of the situation as it affects the individual who may wish to support worthy enterprises is clear, and its remedy is clear. The cost of the gift dollar to the person with low income should be no greater, and preferably less, than its cost to the wealthy donor. The cost of giving should be commensurate with income. Giving should be possible for all taxpayers. With a well-designed plan for establishing the obviously fair principle that has been stated, there is little question but that greatly increased and probably adequate funds for all worthy public causes would be forthcoming. They would come from a substantial fraction of the 40 million people who now pay income tax on the basis of form 1040, in accordance with their own choices and decisions. Such widely distributed giving is in the pattern of our tradition, an expression of the democratic process. It has been the mainstay of many of our necessary and valuable causes. With growing population, their increasing support becomes imperative. Education and research present the most immediate and most critical need.

RECOMMENDED REVISION IN TAX LAWS

To remedy the disparity in cost of gift dollars under the income tax laws involves relatively simple mechanics. Several methods can be devised by which a positive incentive to giving would replace the existing negative one, and which would end the incongruity between the tax laws and the Government's approval of giving.

* * * * *

The essence of the scheme is simple. At present the gift dollar costs the donor the amount shown in column IV of table 1. Under the proposed plan it would cost him, in cents, the amounts shown as percentages in column 3. This makes giving no less attractive than under present laws for the wealthy, but makes it much more feasible and hence more attractive for those with moderate or small incomes. The change in laws would give the many millions in, say, the lower four groups an opportunity that they are now virtually denied: to participate effectively in truly democratic support of education and other public enterprises.

That there will be strong objections to the plan may be surmised, and some of them are easy to anticipate. One comprehensive answer to any objection is that for eduaction there is no possible third choice; either the mounting deficits will be financed by Government, or they will be met privately. If the plan here proposed is not the answer, we face the challenge of devising a better answer. A decision must be made and action taken promptly, because the situation is critical and becoming worse.

There will be great reluctance in some quarters to do anything that might reduce gross public revenue. But we must look at the net decrease, and, whatever it may be, it will be a low price indeed for the benefits to be derived. Here is a plan that would avoid not only the cost but the adverse political aspects of the channeling of funds through Government. The gift dollar would reach its destination with its value intact. If it is forced through Government channels, its value is reduced by one-half or more. Since in either case the money comes from the taxpayer, the saving made in eliminating Government operations would leave his income after taxes higher, on the average.

One objection raised is that a plan of this kind would be putting the expenditure of public funds in the hands of private individuals. The reply is that the possibility exists now, in the permissive deduction up to 30 percent of gross income for gifts. In principle, there is no change; in operation there is. It would not only introduce realism into the expressed approval of giving but would assure a distribution of the gifts in accordance with popular decision. The many millions of donors would constitute a valid statistical sample of the entire population. Hence their collective good judgment could be implicitly trusted, as experience and history prove. At any rate, it is not inferior in wisdom to that of a central disbursing agency.

Should it appear that the more emotionally motivated giving to some causes provided funds disproportionate to the needs, the controls built into the plan could be operated selectively. Obviously any plan must be wisely administered. Amendments to the income tax laws will always embody safeguards against abuses; the Congress will see to that.

In its most important positive aspects, once the details of the plan were wisely developed and set in operation, it would solve the deeply rooted problems of education for the long term. As population and the need for more funds for education grow, the flow of support would similarly increase. It would help to solve the immediate problems of the school districts, the colleges, and the universities. There would be adequate funds for research on disease and public health and for the support of the basic research which is one of the primary responsibilities of the institution of higher education. Community funds would benefit immediately, as would the Red Cross. Religious charities would become better able to carry on their humanitarian efforts among the underprivileged, the ill, and the disabled.

Apart from the substantial quick and long-term relief that would be provided the elementary and secondary schools, and the easement that the plan would offer higher education and other qualified causes, there is an aspect of even greater significance. Where the gift dollar goes the giver's interest follows. His interest continues as he sees the dollar to its destination and observes the intended beneficial results. On the other hand, if the money thus to be used eventually is paid to the collector of public revenue, a curtain is dropped at that point against the taxpayer's further interest in his dollars, for their destination is now obscured. No better way has appeared to stimulate a citizen's interest, and to encourage him to become active in public causes, than to make possible his financial participation in them. He becomes a better citizen. We can, in the manner suggested, make millions of better citizens. It is the way our democracy has worked in the past. This great and valuable asset to the success of our democratic process can be recaptured by making it possible once again for many millions of citizens to participate in private giving, in accordance with their own decisions.

The Federal Credit Union Act Helps Millions of American Citizens

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. METCALF. Mr. Speaker, for more than a century the credit union idea has given unfailing aid and inspiration to all who have turned to it in Europe. In the United States, too, this courageous outlook has been given all who have participated in the program since it was started in Massachusetts 50 years ago.

This past week in Washington, 175 Members of the Congress assembled at a dinner honoring those 28 original sponsors of the Federal Credit Union Act who still are Members. Accepting in behalf of 26 of his colleagues the plaque given by Credit Union National Association on the occasion of the 25th anniversary of the act was Representative WRIGHT PATMAN, long a champion of the credit union movement. The 26 other Members who were original sponsors of the Federal Credit Union Act are Senators BYRD, CHAVEZ, HAYDEN, HILL, O'MAHONEY, RUSSELL, and DIRKSEN, and Representatives BROWN of Georgia, CANNON, CELLER, COLMER, MCCORMACK, O'BRIEN of Illinois, POLK, RAYBURN, SMITH of Virginia, SPENCE, VINSON, WALTER, ALLEN, MARTIN, REECE of Tennessee, REED, ROGERS of Massachusetts, TABER, and WITHROW.

Representative PATMAN's address was as follows:

Many things have happened in these 25 years since Congress passed the Federal Credit Union Act.

The Members of Congress whom you have so graciously complimented this evening have supported many good legislative proposals; and not a few of these proposals have aroused in us deep convictions and inspired us to hard and thoughtful work.

Yet we can never know in advance just how a new legislative measure will turn out in practice. Measures that seem to have the greatest promise sometimes turn out poorly. Others meet with only indifferent success. And, of course, a few succeed beyond even our greatest hopes.

I know of no legislation enacted within the last 25 years which has turned out better than the Federal Credit Union Act.

The credit union movement has succeeded mostly because it has been in the hands of good people. It attracts good people. And it makes better people of all who become members of a credit union. It fosters capitalism, because it brings democracy to capitalism. It teaches not just thrift—because thrift is no end in itself—but it teaches humanity, self-help, and community reliance.

Those of us who have been privileged to work for the Federal Credit Union Act, and to work for its improvement are indeed fortunate. It would be hard to find anywhere the kind of satisfaction which comes from feeling that we have had a share in the accomplishments you have made in the credit union movement. Every community in our country is a better community because of the credit unions. Our Nation is a better and stronger Nation because of them. And the other countries of the world to which this

progressive and human endeavor has spread are also better off and better neighbors in the community of nations.

With this meaning and record behind them, the beautiful plaques which you have so generously given to the 28 Members of Congress who had the good fortune of helping to pass the Federal Credit Union Act 25 years ago are treasures beyond comparison.

The great public service which credit unions perform, and their basic soundness, had been well demonstrated before the Federal Credit Union Act was passed. At that time there were some 2,200 credit unions in the country, operating under State law. Massachusetts had enacted the first credit union law in the United States in 1909. That law worked so well that President Taft, a few years later, called its great merit to the attention of the governors of the other States. By 1934, 38 States and the District of Columbia had similar laws.

But the 2,200 credit unions which had then been established had hardly begun to meet the great problems which faced people of ordinary means almost everywhere. These were the days when installment buying was still new but gaining great momentum. Ordinary working people were being victimized by the loan sharks on an unconscionable scale. Shocking incidents came to light such as that of the man who borrowed $30 from a loan shark, paid the loan shark $1,C80 in interest charges, and was then sued for the initial $30. Clearly there was a great need for legislation to encourage and strengthen the credit union movement. At least the need was made clear by the vigilant and able campaigning of the late Senator Sheppard of Texas who, I might add, had the able and inspiring help of our friend, the late Roy Bergengren.

Recently I reread one of Roy Bergengren's speeches pleading for this legislation—a speech he called "Credit for All the People." And I found that he said the credit union movement introduced three new banking theories, as follows:

1. Ordinary folks can develop capacity to manage their own money.

2. It puts money to work for the benefit of the people to whom it belongs.

3. The purpose of the loan is the important thing.

And to this he added, "the loan must promise a real benefit to the borrower."

Those ideas seemed somewhat radical at that time, but they were also persuasive.

Despite all the persuasive efforts, however, to obtain early enactment of Senator Sheppard's bill in the 73d Congress, the bill suffered the fate of almost all legislation to help the common man, even today: The bill was put over until almost the last moment before Congress adjourned. It passed the Senate on May 10, 1934, very late in the 2d session of the 73d Congress. Finally, the House took it up, amended it, and passed it on June 16, only 2 days before the Congress was to adjourn. Yet, when it was finally put to a vote, it passed almost unanimously. I called for a division vote, and the RECORD shows the House voted 180 to 2 in support of the bill.

But passage at this late date required some pretty fast footwork to get final clearance and get the bill to the White House before the Congress adjourned, as otherwise the legislation would have died with that Congress. The amended bill was, however, brought to the attention of the Senate on the same day; and the Senate passed it as amended. During the next 2 days we worked until the late hours of the night to make sure that the redtape was cleared away, that the Speaker of the House and the Vice President signed the bill, and that it was transmitted to the White House before Congress adjourned on the night of the 18th. There was never any doubt that President Roosevelt would approve it and sign it. In all this activity, I can assure you, Roy Bergengren performed some extremely fast footwork.

It is always pleasant to look back and describe victories that have been hard won, and to recount setbacks that have been narrowly averted. But there is considerable danger in too much looking backward, particularly when there are great new challenges to be met.

The question is, where are you going tomorrow and the day after?

If I might suggest my personal view, it would be this: The credit union movement has made only a beginning. The importance and the excitement in this movement lies ahead, not in the past. This is no time to rest on your past accomplishments. And the time has not come to dig trenches and merely try to hold onto your past gains. If 19,000 local credit unions are good for the country today, then twice that number should be good for the country 5 years hence. If 10 to 12 million people are better off today by reason of their membership in credit unions, then at least twice that number should enjoy this privilege 5 years hence. If the credit unions have proved a successful way of helping people meet their credit needs in their personal and family affairs, then it should also prove successful in meeting the credit needs of people who operate small businesses.

The Federal law authorizes loans for any provident or productive purpose. Provident purposes have been well served in the field of consumer finance, but much more needs to be done for productive purposes. One of the great challenges ahead, it seems to me, is to explore more fully the possibility of bringing small business into the credit unions.

Most small businesses have no place to go. And what a pity. We have in this country a great capitalistic system—a system which is based on credit. Even our money is based on credit. No debt, no money. Yet many of our most efficient and productive free enterprises are being squeezed out for lack of credit.

Here then is a new challenge and one worthy, I think of the credit unions' great heritage.

The question is whether to push on to new frontiers.

There is a tendency, we know, for great movements to become tired and conservative. There is a temptation to forego new advantures and new advances because of fears that what has been won may be lost. The time for new crusades seems unpropitious; the climate of opinion seems to turn threatening if not hostile; and the potential opposition seems to grow more powerful and more menacing. The voices of caution in all of us counsel against rising to new challenges; they advise that it is safer to let new growth proceed within the confines of the niche that has already been carved out.

Well, it has seemed to me that when the credit-union movement stops making new advances, it is as good as dead. No crusade can last bivouacked behind a fixed wall.

Of course there are powerful and selfish forces who see in the credit unions a potential threat to their self-interest. There are groups who would use the legislative halls to roll back, confine, and hamstring this movement. But these groups would outlaw all self-help on the part of the masses of the people.

There are groups who would try to find ways to tax the credit unions out of existence. But these gorups would tax the churches and the fraternal organizations.

And I think you will find that these selfish forces of reaction are with us at all times. They may seem more menacing today than in the past, but I doubt if they are. They only seem so because new conflicts and new tests of courage always seem more fearsome than those past.

If you push into new areas there will, of course, be opposition. If you carry on the crusade as you have in the past, there will be fights. But the fights will be no harder than in the past. And certainly the new advances to be made are no less important than those which have been made over the past 25 years.

New legislation is needed to improve and moderize the Federal law—that we all know. Present your legislative needs to Congress clearly and on their own merits, and you may be sure that Congress will give them careful and sympathetic consideration.

Certainly you can count on your stanch friends in the House Committee on Banking and Currency. The two legislative giants of that committee, Chairman BRENT SPENCE, of Kentucky, and the Honorable PAUL BROWN, of Georgia, are still battling for the public interest, just as vigorously as when they gave their able support to the Federal Credit Union bill 25 years ago.

The Federal credit-union bill which was introduced last summer by Congressman LEROY ANDERSON, of Montana, will, I think, receive most sympathetic attention in Congress. And I know that if General ANDERSON continues to carry the leadership for this bill, many Members of the House will be willing to support it and to work to make its provisions and their merits understood. Under those circumstances, it would be my prediction that this Congress will pass such a bill.

You will always have many champions in Congress so long as your cause is good, and I can see little chance that your cause can ever be anything but good.

General MacArthur at 79

EXTENSION OF REMARKS
OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 15, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to take this opportunity to insert in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Globe Democrat on January 26, 1959, the birthday of Gen. Douglas MacArthur. It is another fine and deserved tribute to our illustrious general.

The editorial follows:

GENERAL MACARTHUR AT 79

Today General of the Army Douglas MacArthur celebrates his 79th birthday.

As this noble patriot and greatest military genius of our age enters his 80th year, a grateful Nation might well pause to reflect not only on his incomparable service over half a century but the lessons which it holds for America.

General MacArthur's every word and deed has been dedicated to strength, both military and moral. He preached unceasingly that only the strong could remain free, and that only the prepared could be strong. He coupled military strength with the fully equal concommitant of the moral fiber of the people.

To its sorrow, America has not always listened to Douglas MacArthur. After World War I we created a vacuum of power when we decimated our Army and sank our fleet. Hitler and Mussolini and Tojo arose to take their place.

In World War II at an age when most soldiers are completing their military careers, General MacArthur assumed command of our scant military forces in the southwest Pacific and in a series of campaigns which will live forever in military history, he led his forces back from Australia, through New Guinea and the Philippines, to final triumph on the battleship *Missouri* in Tokyo Bay.

But again the forces of weakness and compromise and pacifism prevailed, with an inevitable Korea as a result, and a third time the United States paid the penalty of weakness by having a fight a long and costly and inconclusive war.

If Douglas MacArthur's advice had been heard and heeded, Korea might easily have been transformed into a victory which might have stemmed the tide of Communist aggression perhaps forever, in the Far East. The Nation at some future day may to its sorrow have to pay for the neglect of General MacArthur's repeated warnings.

In peace and in war, Douglas MacArthur has preached the need for strength. When his advice has been heeded, America has been victorious. When his warnings have been disregarded and we have listened to counsels of despair, our cost in men and wealth has been overwhelming, and is not yet fully reckoned.

Only when we learn the lessons of a lifetime of dedicated service—that only the strong are free—that only the strong can prevent future and even more disastrous wars—will Douglas MacArthur's enormous stature in world history be fully comprehended.

Showdown

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. MACK of Washington. Mr. Speaker, editorials are appearing in numerous newspapers, big and small, throughout the country urging Congress to live within the President's $77 billion budget to the end that the budget will be balanced and the danger of runaway inflation overcome.

Many of the editors laud the President's indicated intention of vetoing bills that exceed his budget recommendations.

The following is an editorial from the Chicago Tribune on the need for a balanced budget:

SHOWDOWN

The Democrats who control both Houses of Congress have set out to wreck President Eisenhower's precariously balanced $77 billion budget. The outlook for preserving the value of the dollar thus is bleak, at least until the 1960 election when the voters will have another chance to say whether they want their pensions and savings destroyed by further inflation.

The Senate almost contemptuously passed a bill authorizing a $2.6 billion expansion of the slum clearance and public housing programs. The amount is approximately twice as large as the administration had requested. The Senate also lost no time in approving a $465 million airport improvement program, disregarding the administration's recommendation that only $200 million be appropriated for this purpose. The House voted overwhelmingly to set up a new $300 million loan fund for veterans' housing.

The President has indicated that he intends to veto all spending measures that go beyond his budget and he will explain his reasons in television and radio appeals to the people. He has challenged the Democrats in Congress to raise taxes to match all their reckless spending programs.

It's too bad Mr. Eisenhower didn't start earlier to fight for sanity in public expenditures. His failure to do so deprived his party of the inflation issue in the last congressional election and permitted the Democratic Party to pose as the champions of all the groups that want handouts from the Federal Government.

He would be in a better posture also for his fight against the squander maniacs if his current budget did not call for continued waste of tax funds on foreign aid and on a continuation of military conscription. The spending involved in both is as inflationary as any other spending. It is hard to answer arguments for housing and slum clearance programs under these circumstances.

Yet the President should hold to his determination to keep the Nation's spending within its income. Sometime there must be a showdown, and the sooner the better.

Disagreement on America's Future

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, St. Mary's College, nestled in the Moraga Hills in Contra Costa County, Calif., sometime ago initiated an annual Business and Industrial Executives Symposium where outstanding leaders in government, business, education, and science are brought together to discuss the current affairs of the country in the quiet atmosphere of the campus.

The keynote speaker in this year's seminar was Gen. Lucius D. Clay, board chairman, Continental Can Co., and one of America's outstanding soldiers.

This year's symposium was marked by a clash in the views of General Clay and Dr. Mortimer J. Adler, director of the Institute of Philosophical Research.

Herewith is a report of the symposium taken from the San Francisco Monitor, the official publication of the Catholic archdiocese for San Francisco, dated February 6:

AT ST. MARY'S—DISAGREEMENT ON AMERICA'S FUTURE

(By Jim Kelly)

St. Mary's College last Thursday sent 100 business and industrial leaders back to their desks and factories with:

An executive's cheerful prediction that an exciting atmosphere of change heralds continued economic growth for America.

A philosophers' gloomy warning that our system and Russia's are converging toward a meeting point on their side of the line.

Better understanding of, if not immediate solutions to, mutual problems.

Conferees left St. Mary's second annual business and industrial executives' symposium with handshakes all around after a stimulating 2-day tussle with the topic "What's in store for tomorrow's executive, and what can he do about it?"

Gen. Lucius D. Clay, board chairman, Continental Can Co., and Mortimer J. Adler, director of the Institute of Philosophical Research here, were the men on opposite sides of the oratorical fence in viewing this country's economic future.

REFUSE TO FEAR

Declared keynoter Clay: "I refuse to fear that inflation will get out of hand to limit our economic growth before the commonsense of the American people brings it to a stop.

"With new products and scientific developments stimulating consumer interest, with the consuming desire of the American people for an even better standard of living, with a better educated people contributing more to productivity, there appears ahead an economic climate favorable to continued and even more rapid growth in as far as conditions at home are concerned."

"If anything threatens this country's capacity for growth," Gen. Clay said: "it is the possibility of international turmoil so far staved off by NATO and our own defensive strength."

He told conferees their part in winning the cold war lies in assisting the have-not areas of the world where nationalism has become the raging passion.

"It cannot be done with large grants of money," he said. "It requires technical information, industrial know-how, and to the fullest extent possible the expansion of American business enterprise into these areas."

General Clay cautioned the businessmen to think less of sending export goods, more of sending capital and management to build and operate plants and factories which provide employment and contribute to the industrial development of the have not country.

Philosopher Adler, critiquing the Clay thesis, disagreed with the general that the cold war solution lies in peoples' choosing between communism's control by the state and the type of government of the people represented by the United States.

"So-called capitalist democracy and so-called Communist democracy are tending to be more and more alike," he said. "They are converging rather than diverging—and, worst of all, the meeting point does not seem to be in the middle, but well over on their side of the line."

The U.S. economy has been progressively socialized, Adler charged. He noted that less than 10 percent of American families own equities, that what they are getting, from government and giant unions and corportations, is the economic equivalent of property—a high living standard, good working conditions, access to the pleasures of sense (recreation) and the goods of the mind (education).

People in Communist countries are provided with the same economic equivalents through the state alone, Adler said.

He saw the United States heading for complete socialization unless it finds a way to diffuse private property in the means of production, instead of its economic equivalents.

Good speakers, good food, and a relaxing campus atmosphere stimulated the off-the-cuff seminar discussions that formed the heart of the 2-day meet. Sitting in as consultants, and guiding the conversation, were Christian brothers and lay professors of the St. Mary's staff, plus experts from other bay area college faculties.

One group burnished up these facets of America's troubles in overseas areas:

"It's a fine thing we're doing, helping the underdeveloped countries. But what happens when they reach the point of producing enough to export to us? Do we let them invade our markets? Can we keep our own level of technical achievements always in advance of theirs?

"That's where it becomes important to American business to have topflight men in our Foreign Service. That will be a problem for them to handle. And right now we aren't

luring that caliber of man into consular posts.

"What we need are young men to enter Government service abroad with the same sense of dedication that others enter West Point and Annapolis.

"How about offering tax and insurance benefits as an inducement? The problem now is, our Foreign Service career men spend a lifetime in a tough job and retire with very little to show for it financially. Let's make it lucrative enough to attract able, talented men who'd otherwise go into business."

On the 20-hour week:

"That will mean fewer hours on the job for the rank-and-file, but think what it'll mean for executives—more work than ever.

"In that case, it's going to set up one specific problem: Less time that executives can devote to civic and community affairs. Dealing with Government agencies, pressure groups, and labor already is eating into time that we used to be able to give to charity drives and the like."

"Why not delegate more of the civic-responsibility jobs to a wider number of men in our firms? Spread the load, give the junior execs a chance to function in public service, and I think that our communities will reap more service from business and industry than they get now."

On lack of manpower for industry's mechanical jobs:

"Youngsters these days seem to think it's a sin to get ink or paint or grease on their hands. They all want to go to college and become executives. We're getting too many would-be generals, not enough privates to keep the wheels turning.

"That's for sure. And after a lad has gone to college it's usually too late to train him for mechanical production work after he's found out his chances are small of reaching the executive level of business.

"By that time he has a car to keep up, maybe a family started, and can't afford to go back to the wages an apprentice makes.

"The crux of this thing is to interest more high school graduates in filling the gaps at the level where industry needs manpower. That means selling them on the idea that working with the hands is a respectable way to make a living, and quite often an extremely well-paying way.

"If we can do it, we might accomplish this, too. We'd take some of the pressure off the colleges. They'd be getting the kind of material they want—serious students who will go all the way."

May 22, 23, and 24 Selected as Dates for 1959 Congressional Tour of New York City for Members of Congress and Their Families

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. VAN ZANDT. Mr. Speaker, plans are being perfected for the 1959 annual congressional tour of New York City for Members of Congress and their families.

The weekend of May 22, 23, and 24 has been selected for the tour which provides for three fun-packed days in New York at a cost of $39.50 each for adults and $34.50 each for children between the ages of 5 and 12 years. This year's trip will include a reception at New York City Hall, a visit to the United Nations, a reception aboard a transatlantic liner, a boat trip of New York's harbor, a visit to the Empire State Building, together with receptions, and so forth, at various hotels and clubs. Opportunities for attending New York theaters are included in the schedule.

Since this is not a congressional election year, the weekend of May 22, 23, and 24 should now be reserved by all Members who desire to make this enjoyable visit to New York City. Those wishing to obtain further information may call Miss Patricia Bryan in my office, telephone extension 4576.

A Reporter Bares a Story About Fidel Castro

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an interesting story concerning the Cuban revolutionary movement headed by Fidel Castro. The article was written by Mr. Tony Canty, a reporter on the Sunday Journal, published at East St. Louis, Ill. The article is from the February 8 issue.

Tony Canty, a personal acquaintance of mine, is an experienced and reliable newsman. He has been on the Evening & Sunday Journal staff 13 years, his career with the newspaper beginning after his separation from military service following World War II.

Canty followed two hobbies: the collection of guns and vacation trips to Mexico. The experience which prompted his story stems from these hobbies.

Mr. Canty's story follows:

REPORTER BARES A STORY ABOUT FIDEL CASTRO

(By Tony Canty)

With the overthrow of the Cuban dictator Fulgencio Batista by rebel leader Fidel Castro, some of the now it can be told stories of the bitter revolution are emerging.

One such story may be of interest to those who plan to visit East St. Louis Police Headquarters during open house next Tuesday. It concerns three pistols, one of which will be on display during "open house" and two companions to it which we hope helped just a little in assuring Batista's downfall.

We long have taken a deep interest in Latin American countries. For many years we have had strong ties in Mexico, which we have visited often. For some time we have had a personal interest in Cuba. Of great interest to us have been the ground swellings of revolution in some of the Latin Americas, directed against dictatorships as cruel, as undemocratic as that which very nearly enabled Hitler to conquer all of Europe. It has been of great concern to us that while our Nation preached and encouraged democracy for peoples far separated from the United States by oceans and continents, it did little to support and hearten those at our very doorsteps when at times they found the leadership and inspiration to attempt to bring their countries under more democratic processes.

After leading an initial but ineffective uprising in 1953 and serving a prison term, Castro was exiled to Mexico in 1955. Mainly because the young and honest intellectual brought them to believe in his cause, not only fellow exiles but Mexicans and others were drawn to him. He soon was training what was reported as an army. In reality it was merely a small group of deadly serious, fiercely determined men.

Although the people of the United States were told little of him, bit by bit, we learned more of this man, of his motives. We placed our bets on him and right up until his forces took over all of Cuba last month, no one could convince us that he would do other than win out in the end.

CLOSE TO HOME

In December of 1956, Castro with 80-odd freedom fighters returned to Cuba from Mexico and landed in Oriente Province, his home and the home of some of our in-laws. That first day all but a handful of them were killed. Batista reported Castro dead and did his best to publicize him to death.

We went to New Orleans that month on a short trip. New Orleans was a hotbed of Latin American exiles. Cuba was but a step away by plane. We learned, that as with Mark Twain, the reports of Castro's death were exaggerated. We also learned that his followers were ever increasing from the handful which had survived his landing in Cuba. These followers were willing to trade their lives for an end to the hated Batista. It was then and there that Castro, his followers and his motives became very live to us, not merely words in print.

Besides arms and ammunition, the rebels sought other supplies, and very wisely, sought the understanding of the people of this country. We were able to help in a minute way but not nearly as much as we would have liked.

During the next few months, Castro started slowly on the road to victory with his hit-and-run guerrilla tactics, coming out of the mountain to attack and wreak havoc, and backtrailing into the mountains to avoid destruction. It was a familiar picture to us. We were with guerrilla fighters in German-occupied Yugoslavia in 1944. In Cuba as there, the powers controlling the cities and the government could do little but hold on as time after time, the occupiers were slashed to pieces in night attack by fighters who held the mountains. In Cuba as well as Yugoslavia, old men, youngsters, and young women fought side by side. In both countries arms and ammunition was the chief problem.

Much has been said about the larger shipments of arms which were seized by the United States on their way to Castro. Little has been reported on the small individual contributions, at times a single gun or a handful of cartridges, which were donated by Castro supporters in this and other countries. It is estimated that at least 50 percent of the guns meant for the rebel forces slipped past United States and Cuban officials and reached the hands of the guerrillas.

One of the techniques of guerrilla fighting, when ammunition is at a premium, is to depend on guns which can handle the caliber of ammunition used by the enemy. Batista was using arms and ammunition furnished by the United States and a supply in such calibers was available if it could be captured or taken from a dead soldier.

Of great importance were pistols which rebels could tuck away on their person while infiltrating lines or mingling in towns. It was important that the hand guns take .45 caliber automatic ammunition such as used by Batista's army and police. This ammunition is for the .45 caliber automatic pistol.

Following one of our hobbies, that of collecting weapons, late in 1957 we came across a type of revolver converted to handle

the ammunition of the .45 automatic pistol, at a price even within our limited means. We thought a couple of them could be put to good use in Cuba.

The pistol is the English-made Webley Mark V service revolver with a break-top design which allows it to be emptied and loaded even while on the run. In its original form it handles the British .455 caliber cartridge. However, carloads of them were brought into the United States as surplus by dealers and in some instances were being converted to handle our .45 caliber automatic ammunition. Two three-shot, half-moon clips are used to load the six-shot cylinder of the gun.

TWO FIND THEIR WAY

We purchased one of the pistols for our collection, the pistol which can be seen Tuesday. We found it to be a rugged, dependable piece of workmanship and acquired two more in perfect, like-new condition.

The U.S. Government had pointed out that aid to Castro was a violation of the Neutrality Act. There is no law against making a gift to nonbelligerent friends. In December of 1957 we were in Mexico. A few weeks after we returned we heard that the two Webleys were being put to good use in Cuba but received no further details.

We hope some day to trace one of the guns. If we find it we gladly will trade the Webley we have or a better gun for it, yes and something to boot, if we find it has been put to proper use. Then we would like to retire it permanently to our collection.

We think that it will deserve that retirement.

The House Committee on Un-American Activities Has Done a Good Job and Should Be Continued

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. MACK of Washington. Mr. Speaker, petitions bearing the signatures of more than 350 church member citizens of Clark County, Wash., lauding the House Committee on Un-American Activities for its investigation of subversion and expressing opposition to any efforts to discontinue that committee have been received by me.

The headings on the petitions read as follows:

Whereas it is an established fact that our concept of Government, based on the Declaration of Independence, and the Constitution of the United States, is under attack by an opposing ideology, despotic and godless in nature; and

Whereas the perpetrators of this ideology have ceaselessly proclaimed to the nations of the world their plans for subjugation of said nations; and

Whereas the U.S. Government has been designated as a major objective of the aforementioned subjugation; and

Whereas one of the approved techniques of appropriation is the infiltration of the subversive element into policymaking levels of Government, and into strategic defense positions: Therefore be it

Resolved, That the undersigned do petition the Congress of these United States for the continuation of the Un-American Activities Committee, the past achievements of which have been of inestimable value to our national security.

I am in complete agreement with these citizens. In my opinion the Un-American Activities Committee is one of the most valuable in the House. It should be continued and granted adequate funds for the thoroughgoing investigations it has been making.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of February 7, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, February 7, 1959)

The veterans' direct housing loan bill provided $300 million more for direct Treasury loans and increased the maximum interest rate from the present 4¾ percent to 5¼ percent. Arguments for: (1) Additional veteran home purchases may result; (2) more private investment money may become available to veterans through the increased interest; (3) the President is not forced to spend this money, it is only made available. Arguments against: (1) There is $192 million still on hand for such loans; (2) Congress, control of expenditures is bypassed by this direct Treasury payout; (3) this is $300 million beyond the budget. The bill was passed 310 to 89 (35 not voting). I opposed the bill. As I see it, the merits of the bill were completely eclipsed by the unconscionable expenditure of $300 million we don't have, to that extent unbalancing the budget.

The "battle of the budget" is on, the opening gun being the vote on this loan bill. Not a single Democrat voted to keep the budget balanced (all 89 were Republican). Several Democrats spoke vehemently against the bill. Some, like myself, consider the bill clearly unconstitutional, since such appropriations bypass the expressed provisions of the Constitution for appropriating money. This backdoor to the Treasury, or House appropriation procedures bypass, accounted for $4½ billion of the 85th Congress' expenditures. Why this unconstitutional procedure? Why does not even one Democrat vote against it, including all alleged southern conservatives? Why? Could it be politics, pure and simple—the attempt to discredit and embarrass the President who is now trying to hold the line, trying to cut spending, trying to tailor spending to income—as all responsible fiscal practice demands—even household operation?

In the Senate Democrats are pushing a $2½ billion housing bill (creating the inflation which wrecks the income of the very people who politicians claim need housing); then there's the Armed Forces budget struggle with the "defense at any cost" cliche (our defense is based on a sound economy and can be wrecked by inflation); or how about agriculture with the Democrat plan now for direct subsidy payments to farmers. Well, where's the money coming from? The Federal Government hasn't any—it's broke and in debt. Do people want their taxes raised? The President reminded the spenders—"include the taxes in each of these programs to pay for them." Politicians vote for every appropriation and against every tax. If ever conservatives of both parties had the courage of their convictions, now is the time to support the President's balanced budget for the sake of our Nation. Surely, not even rabid partisans can oppose economy moves just because it's the President, a Republican, asking it. A prevalent distortion now presented by Democrat leadership is "the Democrat Congress clipped $5.6 billion off the budgets for 1958 and 1959." What a transparent distortion, even to the untutored, when it is remembered that the Democrat-led Congress piled up a deficit of $12.7 billion during this period. As Knebel, columnist, says of the budget battle: "Ike challenges Democrats to raise taxes to cover their spending. That's pay-as-you-go, but Democrats have their own slogan: 'Pie now—pay later.'" For myself, I dislike thinking the labor leaders, the ADA, and/or liberal Democrat leaders can so influence the traditionally conservative southern Democrats.

The draft bill extension passed handily 381 to 20 (32 not voting) extending for 4 years compulsory military service. Many Congressmen dislike a draft in our freedom and peace-loving country, but this cannot blind us to the reality of the dangers confronting us. We don't seem to be able to maintain the necessary manpower by voluntary methods.

The mountain of debt in this country now totals a staggering $788.8 billion, that's $4,650 for every man, woman, and child, a total debt more than that of all the rest of the world. The breakdown: Federal, $283 billion; State, $14.7 billion; farm, corporate, and family, $449.6 billion. Isn't it time we held the line on spending, taxing, and borrowing, and lived within our Federal income? The Alger thumbnail legislative program might be said in one sentence—cut Government spending, cut Federal taxes, make social security a sound pay-as-we-go system, free farmers from regulations and subsidies, evaluate all existing law, and stop the socialistic labor trend of government.

Voice in the Washington Wilderness Department: Last year, when a something-for-everybody boost in railroad workers unemployment compensation was being whistled through the Interstate Commerce Committee, only senior Republican Member JOE O'HARA and I protested in a separate report that under current conditions the unemployment insurance fund might well drop dangerously from $170 million to less than $100 million "within a year's time" O'HARA blocked the bill during the closing days of the session. Now this proposal is up again, backed by the committee chairman. Meanwhile in 8 months the compensation fund has plummeted to $80 million and the retirement board head requests authority to borrow around $100 million—coupled with a move to increase benefits.

Medal of Valor Awarded to Oakland Policeman Robert Ross

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the East Bay Police and Fire Post, Veterans of Foreign Wars, has awarded the Medal of Valor to Oakland policeman, Robert Ross, 32, 14317 Bradley Street, San Leandro, Calif., for the

performance of duties above and beyond the call of his official duty.

Last March Patrolman Ross went inside a tanker that was moored at the foot of Oakland's embarcadero to rescue three men who were inside the tanker, overcome by leaking gas fumes.

The citation given Ross reads in part:

A man's quick thinking and immediate action saved the lives of three workmen.

Ross and Charlie Kitchen, 30, a shipyard worker also from San Leandro, lowered themselves 40 feet into the tank of an oil barge where the three men were overcome by fumes. They secured lines about the men and a crane pulled them to safety as Ross and Kitchen guided the cables.

Ross is married and has two children, Karen, 9, and Robert, 6.

Judge Homer Buckley, Oakland Municipal Court, presented the medal and citation at a meeting held in the Veterans Memorial Building.

The Medal of Valor is given annually to an outstanding East Bay fireman and policeman. This year the medal was given only to Ross, since no firemen were nominated by the judging committee for the honor.

Can We Afford Not To Pay Off the National Debt

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PELLY. Mr. Speaker, I have been asking myself two questions which have a definite tie-in with the arguments over Federal spending policies and balanced budgets.

One question is this. Why do investors have a growing apathy toward the purchase of Government securities?

The second question is related to the first. It has to do with the obvious present difficulty of the Secretary of the Treasury. I would like to know whether or not the problem of debt management, the continual refinancing of U.S. note and bond issues, could develop into as serious a situation as it seems to me might easily occur?

There is certainly no lack of public savings. The total savings accounts in the banks and on deposit in financial institutions keep growing and growing. Yet, the regular public drives to encourage purchase of U.S. savings bonds do not seem to be very successful. Corporate investors lack enthusiasm too.

Some economists say we are in an expanding economy with no immediate threat of inflation or decline in the buying power of the dollar due to increasing Government spending.

Other economists do not agree and are fearful of more deficit Federal spending.

The investors seem to agree with the latter, or at least appear to lack confidence in long-term Government securities.

The national debt now stands at $283 billion. Interest on this is estimated during the next fiscal year at $8.1 billion. If the average rate increases to 3.5 percent as some people believe it will, the annual cost to the taxpayers will climb to $9.9 billion. In other words, assuming the debt remains constant, in less than 30 years at this rate we will pay as much as the debt is today but we will still owe all of it.

Meanwhile, it occurs to me, as I said at the start, that lack of enthusiasm for Government securities could be serious. Our increasing debt, it seems to me, could bring on a buyers' strike. I wonder what will be the consequences if Congress, year after year, creates deficits. I wonder as to the consequences of spending enormous and necessary sums for defense, and at the same time paying out ever-increasing subsidies for foreign aid and domestic programs of all kinds beyond the Government's income.

I wonder as to the advisability of the new Federal proposals which call for State matching funds. Many States at the moment face very serious budget dilemmas. Are we not causing them to overspend along with the Federal Government toward more debt and more taxes?

Socialists do not worry about a possible crisis in Government finances. Why should they? It means higher taxes and a possible capital levy. When a business pays a 52-percent income tax, it is more than half socialized. Let us not overlook that. Are we headed for more socialism?

Dictators can rise out of uncontrolled inflation, too. Adolf Hitler did.

As for the Communists, inflation is the means they plan to use to take over. Inflation gave communism its chance in Russia. That is how it started. And so it was with Red China.

Of course, Uncle Sam is not broke and there is no reason to panic, certainly not as long as the Government lives within its means. Not if we exercise self-discipline. Not if we plan and govern ourselves properly.

In this connection, a concurrent resolution was introduced in the Congress earlier this week which points the way. It called for a systematic program of national debt reduction. Its author showed how embarking on such a plan or retiring the $283 billion debt in 100 years, with payments of $2.8 billion annually, would actually save future taxpayers $485 billion as against continuing to pay the interest each year on the present debt.

Mr. Speaker, a policy of balanced budgets, together with regular yearly payments on the debt, could restore confidence in Government securities and the interest rates on Treasury borrowing would decline almost enough to offset the amount of yearly debt reduction.

If the volume of Treasury securities offered for sale declined each year, the demand would stiffen. Suppose as a result of this that the average interest rate declined 1 percent. That would save 1 percent of about $280 billion the first year or the amount of annual reduction under the resolution which I referred to previously. In other words, public confidence and more demand could be the solution of our Treasury problems, but only if we abandon the philosophy of spending ourselves rich. Only if we abandon that kind of quack fiscal remedy.

Mr. Speaker, let us adopt a policy of systematic retiring the Federal debt and set our financial house in order.

That is the road to victory in our economic competition with the Soviet Union.

Unless we hold the line on Government spending, I fear the consequences.

Massachusetts Loses, United States Gains, Guardian of Natural Resources

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LANE. Mr. Speaker, the bulldozer is the great leveler of our times. It opens the way for highways, shopping centers, and spreading "suburbia."

But it must not be permitted to destroy all those natural resources which, apart from their beauty that recreates the spirit of man, serve him in ways that are necessary to his life on earth.

For many years a few wise men have sensed the danger implicit in this encroachment by the machine on the sanctuary of nature.

They have fought against it with imagination and skill and with protective programs that future generations will truly appreciate.

In Massachusetts we have a young man who has served with distinction as commissioner of the department of natural resources.

Almost singlehandedly he fought for and won the battle to save the natural features of our State from the onslaught of the bulldozer.

Francis W. Sargent has been recognized as one of our leading conservationists.

He has been summoned to serve as Executive Director of the new Outdoor Recreation Resources Review Commission in Washington.

Massachusetts is sorry to lose a man of his foresight and his inspiring devotion to the public interest. But we know that his talents deserve a larger field of opportunity for the Nation's good.

In his honor, under unanimous consent, I include in the CONGRESSIONAL RECORD the following editorial from the February 6 issue of the Boston Herald:

WE LOSE A LANDGRABBER

The resignation of Francis W. Sargent as commissioner of the department of natural resources is sad news for Massachusetts; good news for the Nation. He is leaving us to serve as Executive Director of the Federal Government's new Outdoor Recreation Resources Review Commission in Washington.

As top staff man for this agency, Mr. Sargent will play a key part in its forthcoming

survey of the natural resources of the United States and its Territories, and in the formulation of a long-term plan for conserving these steadily diminishing resources. Mr. Sargent is admirably suited for this work. Indeed, his conservation accomplishments in Massachusetts may well have led to the Federal appointment, which was unsolicited.

Largely in response to Mr. Sargent's insistent and eloquent prodding, the legislature last year approved the first step in his 20-year, $100 million program for the acquisition and development of State parks and other outdoor recreation areas. It is a program that should some day be recognized as one of the wisest adopted in the Bay State in the 20th century. It is a public-spirit land grab initiated by a man who is delighted to be called a landgrabber.

The board of natural resources will not find it easy to obtain a topflight replacement for Mr. Sargent. The commissioner's post pays a paltry $10,000 a year. (There is a bill in the legislature increasing the salary to $15,000. It should be passed.) But the five distinguished men who comprise this board should not rest until they have found the best man available.

Massachusetts needs another indefatigable landgrabber to replace the one it is losing. Otherwise the ambitious conservation program launched by Mr. Sargent may falter. And if this happens, the Commonwealth in another generation will present an aspect of physical devastation and spiritual poverty.

Federal Assistance to Education

SPEECH
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. WAINWRIGHT. Mr. Speaker, it is my privilege today to introduce one of two bills carrying out the administration program to strengthen American education. These bills properly recognize a national concern for our educational system by providing Federal assistance in meeting two of the most critical problems confronting our schools and colleges.

The first bill, introduced by Representative FRELINGHUYSEN, would remedy the plight of needy school districts which do not have the financial resources to overcome their classroom shortages on their own. It would enable such communities to construct up to $3 billion worth of new classrooms in the next 5 years.

Over the same period, my bill would help colleges and universities accelerate $2 billion worth of construction of additional academic and housing facilities which will be needed to accommodate the ever-increasing numbers of able boys and girls who will reach college age in the next few years.

Many colleges and universities, both public and private, are presently unable to finance the construction of additional classrooms, laboratories, and dormitories which must be built now to provide facilities for the tremendous enrollment increases expected in the decade ahead. It is a matter of national interest to assure that the opportunity for higher education will remain available to all able young men and women who seek it in the years to come.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a part of my remarks in observance of the Lithuanian Independence Day at the Lithuanian Citizens Club in Lawrence, Mass., on Sunday, February 8, 1959.

The matter follows:

On Lithuanian Independence Day it is pleasant to note that Lithuania is as old as most of the other European nations, with a language, with a culture, and with political institutions that are definitely her own. In fact she was an independent state 900 years ago.

In spite of centuries of struggle to defend herself against envious neighbors, the Lithuanians have succeeded in preserving their language, which is proof of their national spirit and their pride.

It is a strange fact of history that when the savage Tartar tribes swept out of the Orient they easily conquered Russia but were defeated in battle by the Lithuanian princes.

Some of that cruel Tartar character has survived and still manifests itself in the rule by terror that is practiced by the Communists of today.

Even the famous author of Polish descent, Joseph Conrad, has said that in the second half of the 18th century there were two centers of progressive ideas on the Continent of Europe: one was France; the other, Poland and Lithuania. The educated classes of Poland and Lithuania were permeated with the humanitarian ideas of French and English literature. There was a Diet and an elective monarchy; the universities of Vilnius and Warsaw were important centers of culture. The liberal complexion of Polish and Lithuanian institutions was naturally distasteful to Russia, Prussia, and Austria, who decided to eliminate the outposts of liberal and democratic ideas by partitioning the Polish-Lithuanian commonwealth among themselves.

Lithuania's subjection to Russia lasted 120 years.

In all that long time, however, the spirit of the people never weakened. They never lost hope of regaining their freedom and independence.

The oppressive rule of the czars prevented economic and cultural development. The only way out for many was by emigration to the New World. Happily for us, there are now over a million Lithuanians in the United States.

The people in Lithuania know that you will speak for them in the free world, so that the free world will not forget its obligations toward those who live under the hated domination of the Communists.

Meanwhile, consoled and strengthened by their Catholic faith, Lithuanians in the homeland endure the Soviet tyranny. From their history they know that they can outlast Stalin and Khrushchev and others who, being mortal, must die. But faith is eternal.

Soviet troops and puppet officials seem to have the country under their control.

But there is a resistance movement that is doing its work in preparation for the day of liberation. The main purposes of this movement are: (1) To obstruct the attainment of all Bolshevik political aims; (2) to keep the local inhabitants informed of the true state of affairs; and (3) to document everything that has been done by the Soviets in Lithuania since 1944 and is still being done. And it can only be left to the free world to hope that the hour is not far distant when the authors of these outrages against humanity will be brought to account and made to pay the just penalty for their crimes.

And what about the Russian people who were the first slaves of communism? They are quiet because they know that the secret police are everywhere watching and listening. But the Russian people must be thinking of the day when they, too, can reach for freedom.

The Soviets would like everybody to forget Lithuanian Independence Day.

This is impossible.

Every year as February 16 approaches the Soviets squirm.

They hear of the proclamations issued by State Governors and mayors of the cities, giving official recognition to Republic of Lithuania Day."

United States Senators and Representatives pay tribute to Lithuania's splendid record of progress during her years of freedom, and to the admirable personal qualities of her sons and daughters in the New World.

This is not a tribute that is voiced on 1 day of each year and forgotten until the next anniversary rolls around.

It involves our own character and our own responsibilities as a democratic people.

For the principle at stake concerns the sanctity of human rights and of elementary justice and decency.

On Lithuanian Independence Day we serve notice on the Soviet Union that we shall never relax in our efforts until Lithuania becomes once again a free and equal member of the family of nations.

February 16: Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MADDEN. Mr. Speaker, on February 16 Lithuanians and the citizens of Lithuanian descent throughout the Nation will commemorate the 41st anniversary of Lithuanian independence. Freedom loving Americans all admire the fight the Lithuanian people are making today to be released from the yoke of Communist tyranny.

Forty-one years ago, we all thought that Lithuania would be given the opportunity to build a free and independent government and establish a nation under the leadership of statesmen from their own ranks to again demonstrate to the people of the world their ability to build a nation in competition with the other great nations of the world. This dream was not to be realized because of the infiltration, duplicity, and aggression of its powerful Communist neighbor the Soviet Union. Lithuanians for over a century and a half had formerly received a dark experience of enslavement under the Russian czars.

The temporary rule of the Russian Communists will some day capitulate and collapse. The United States and all free nations should aid Lithuania in accomplishing this victory. It will require great sacrifice, and as long as Lithuania is enslaved and other neigh-

boring nations are captives of communism, liberty is threatened throughout the world including our own free country.

On February 16 commemoration programs will be held throughout the United States in honor of the 41st anniversary of Lithuanian independence. In Gary, Ind., Lithuanians from the Calumet district and their friends will assemble in a gathering and banquet commemorating this event and again reaffirm their determination to continue Lithuania's fight for independence.

I am hereby submitting a proclamation issued this week by Gov. Harold W. Handley, of Indiana, and Mayor George Chacharis, of Gary, Ind., setting aside this date, February 16, 1959, as Lithuanian Independence Day:

PROCLAMATION BY MAYOR OF GARY, IND.

Whereas on February 16 of this year, the people of Lithuania and Lithuanians throughout the world, will commemorate the 41st anniversary of the Declaration of Independence for Lithuania, the city of Gary is fortunate to have as its citizens, a great number of people of Lithuanian descent who came to our shores to enjoy the liberties and freedoms of our great Republic; and

Whereas the great progress of our city, county, State, and Nation has been attained by stalwart immigrants and their descendents from nations across the water who have diligently worked and sacrificed to build a community and Nation wherein their children and their children's children will enjoy the life of freedom; and

Whereas the great majority of the people of Lithuania and citizens of Lithuanian descent living in our city and our State and our Nation, have consistently fought and opposed tyranny of all kinds back through the centuries and are continuing the fight for liberty until their mother nation is freed from the Soviet Communist tyranny; and

Whereas Americans of all nationalities and extractions join the people of Lithuania in this noble observance of their freedom anniversary:

Now, therefore, I, George Chacharis, mayor of the city of Gary, hereby proclaim February 16, 1959, as Republic of Lithuania Day throughout the city and hope that all of our citizens will join in this anniversary day. It is the hope of all of us that the day is not too far distant when self-government and freedom will again triumph in Lithuania and all satellite nations under Communist enslavement.

In testimony whereof, I have hereunto set my hand and caused to be affixed the great seal of the city of Gary, State of Indiana, this 10th day of February 1959.

GEORGE CHACHARIS,
Mayor, City of Gary, Ind.

PROCLAMATION BY GOVERNOR OF INDIANA

Whereas the 16th day of February 1959, will marks the 41st anniversary of the declaration of independence by the people of the Republic of Lithuania; and

Whereas on that day the citizens of the State of Indiana who are of Lithuanian origin or descent will convene in various communities throughout the State to commemorate that occasion and to join their countrymen in the grief of a liberty-loving nation caused by the aggression and the acts of injustice of the Soviet Union which took over Lithuania by force of arms, usurped the sovereign and inalienable rights of the Lithuanian people and proceeded with the extermination of them by mass deportation, imprisonment, and execution; and

Whereas the Lithuanian people are strongly opposed to foreign occupation and oppression, and are determined to restore their freedom and sovereignty which has been always recognized by the Government of the United States of America; and

Whereas because of their unmistakable attitude toward the Communists, struggling for world domination, the Lithuanian people together with a million Americans of Lithuanian descent represent an important force in the present fight of free nations against the Communist aggression; and

Whereas the residents of the State of Indiana feel deep sympathy for the gallant people of Lithuania and of other countries, presently enslaved by the Kremlin imperialism:

Now, therefore, I, Harold W. Handley, Governor of the State of Indiana, do hereby proclaim Monday, February 16, 1959, as Republic of Lithuania Day throughout the State of Indiana, and commend all interested groups, organizations, and individuals to appropriately observe the occasion, encouraging the Lithuanian people and wishing that they soon attain their goal of freedom and independence which they so ardently desire and cherish, and to which they have every right.

In testimony whereof, I have hereunto set my hand and caused to be affixed the great seal of the State of Indiana, at the Capitol, in the city of Indianapolis, this 15th day of January 1959.

[SEAL] HAROLD W. HANDLEY,
Governor of Indiana.

By the Governor:

JOHN R. WALSH,
Secretary of State.

Dogfish Bounty

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 9, 1959

Mr. PELLY. Mr. Speaker, I believe the Federal Fish and Wildlife Service would do well to study the results of a Canadian program to reduce dogfish.

Last year proposed legislation to pay a bounty on dogfish to fishermen on the Pacific coast, including my own bill, were not reported out of the House Merchant Marine and Fisheries Committee. Instead, a bill providing for research as to possible commercial uses of the dogfish was passed.

Frankly, I think stopgap legislation is needed. Scientific research may develop an answer to the problem of this predator that prays on valuable types of fish and sea life, but meanwhile we must reduce the menace which causes such economic loss to our fishermen. And our Canadian neighbors may prove that a bounty system is an effective means of doing this.

The following news article from the New York Times gives a graphic picture of what is happening in British Columbia waters:

DOGFISH YIELDS BONANZA—CANADIAN FISHERMEN GET 10 CENTS A POUND FOR THEIR LIVERS

VICTORIA, BRITISH COLUMBIA.—When hordes of dogfish were drawn toward Saanich Inlet by swarms of herring, the fishermen began reaping a bonanza through the subsidy of 10 cents a pound for dogfish livers.

"Ten trawlers are getting about 1,600 pounds of liver apiece, daily," said Will Egeland, a fisherman. "The average is about 200 pounds of liver to a ton of fish."

The fishermen are eagerly in favor of killing the destructive little sharks.

"Every dogfish caught has six or eight herring in its stomach," Mr. Egeland explained. "It is impossible to guess the number of tons of herring lost every day. When a dogfish school goes through, nothing is left—not even shrimps."

Likewise, this Marine Digest article describes the Canadian program:

BRITISH COLUMBIA FISHERMEN GIVEN SPECIAL DOGFISH BOUNTY

VANCOUVER, BRITISH COLUMBIA.—Many British Columbia fishermen got underway recently on a clean-up of predatory dogfish, as a direct result of a special bounty of $130,000 provided by the Canadian government.

Dogfish have been increasing greatly in recent years, with heavy loss of food fish, and much damage done to fishermen's nets.

Fishermen will receive a bounty of 10 cents a pound for dogfish livers, delivered to processing plants at Vancouver or at Prince Rupert.

It is expected Vancouver fishermen will concentrate in the Gulf of Georgia and Vancouver Island, while Prince Rupert fishermen will work in Hecate Strait.

The fisheries department has chartered five trawlers to help combat the dogfish menace. In addition to the charter money, an incentive bonus of $6 a ton for the first 300 tons and $15 per ton for quantities in excess of 300 tons, was being paid for the first 4 weeks.

Italian Politics

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the following article by Mr. Vanni B. Montana, which appeared in the Giustizia, official organ of the International Ladies' Garment Workers' Union.

Mr. Montana is a great American. I have known him a long time. During World War II he held a very sensitive position with the United States and contributed greatly in the liberation of Italy and later in furthering the strong ties which presently exist between the United States and that country. Mr. Montana is a trade unionist and knows the labor movement in Italy almost as well as he does here. In addition thereto, he has studied the political parties of Italy and is au courant with all of them.

The association which he makes in this article between the Italian Socialist Party led by Pietro Nenni and that of the Communist Party led by Palmiro Togliatti is most interesting and I am sure my colleagues will find it so:

WHAT DOES NENNI REALLY WANT?

(By Vanni B. Montana)

Do the results of the Naples Congress of the Partito Socialista Italiano (PSI) mean a positive step by its leader Pietro Nenni toward

broadening the basis of Italian democracy?

As far as appearance goes, it could be yes. Were appearance to count more than substance, it might also be said that Communists are for democracy, since they often speak very loudly about constitutional rights and freedom and never fail to parade behind the names of such great democratic figures as Lincoln and Jefferson in America, Garibaldi in Italy, or Bolivar in South America.

But, if we look beneath the surface of the Naples Congress of the PSI, it will be seen that Nenni and his friends actually did not make a forward but a backward step. The autonomy proclaimed by the PSI in Naples from the Communist Party is not a new development. Its congress, held in Venice, a couple of years before, did practically the same thing.

Prior to the Venice Congress, Nenni and Giuseppe Saragat, leader of the Italian Social Democratic Party (PSDI) had met in a summer resort town, Prolognan, to arrangé for the merging of the two parties, on a democratic basis, free from all subordination to the Communists.

At the Naples Congress, Nenni disdainfully rejected any idea of dealing with the PSDI which—despite its numerical weakness, lack of strong organization and meager financial means—has contributed the decisive margin which Italian democracy needed to safeguard its newly gained free institutions against Communist and Fascist attacks, and to maintain Italy's bonds with the free nations organized in NATO.

Not only did Nenni reject at Naples any idea of merging with the PSDI, but he directed the main fire of his colorful oratory against the PSDI, the Christian Democrats and the other genuine democratic groups rather than against the Communists.

The important test is whether or not a party or any other organization helps Moscow's policies which are flexible in form to meet special local situations, but which are rigid and firm in their purpose—the weakening of the free world, the destruction of democracy and its replacement by worldwide Soviet despotism. It is not so much the kind of utterances one hears from the spokesmen of the PSI that counts as the practical work it does.

The fundamental points of Communist policy in Italy are:

1. Unity within the Confederazione Italiana Generale del Lavoro (C.G.I.L.) which is the central labor body completely dominated by the Communists.

2. Unity in the Cooperative Alliance, a central body controlling thousands of cooperatives, and tightly dominated by the Communist Party.

3. Unity and cooperation between Communists and the P.S.I. in the thousands of municipal and provincial governments, as well as strengthening the unprincipled united fronts in the regional government of Sicily between Communists, P.S.I. Fascists, Monarchists, and insurgent Christian Democrats.

4. United fronts in all other mass organizations—Women's League, sports, etc., etc.

5. One of the main aims of the Moscow-led Italian Communist Party is to dominate southern Italy and the great islands of Sicily and Sardinia, whose strategic importance in the Mediterranean, a sea connecting three continents—Europe, Africa, and Asia—is very clear. Those parts of Italy are largely depressed areas. The Communist Party has built a special united front organization "Comitato del Mezzogiorno," whose task is to win political domination of southern Italy and its islands. The Naples Congress of Nenni's P.S.I. strongly endorsed this committee.

Theoretically, Nenni again proclaimed the antonomy, the independence, of the P.S.I. from the Communist Party. But, in practice, he cemented once again the unity of action and common aims with the Communist Party in all these vitally important fields.

This is not all. In regard to foreign policy, Nenni's formula adopted at the Naples convention calls upon Italy to be outside the two blocs. It is said that this is neutralism of the Nasser kind. But the position of Italy is very different from that of Egypt. Italy is not in Africa. Italy is part of Western Europe and the shield of Western Europe including Italy, is the Atlantic Alliance. Deprived of this shield, Italy would become an easy prey to Communist maneuvers which are moving definitely in the direction of deals with the Fascists and some greedy industrialists who want to do business with Russia and its satellites.

In the new crisis created by the P.S.I. Naples congress, Giuseppe Saragat has been showing determination and courage in resisting the latest tricky and sinister Nenni maneuvers. Should disloyalty develop in his party, he would be fully justified in speedily taking the firmest measures to protect the democratic Socialist Party organization and future.

It is the opinion of this writer that the leaders of the Italian Liberal Party (P.L.I.) are also responsible for the dangerous situation now in the making. Their rigid opposition to the urgently needed reforms has led some sectors of the Christian Democratic Party, of the P.S.D.I., of the Republican Party, to look to the left. And it is in this so-called left where Palmiro Togliatti, head of the Italian Communist Party, has never stopped fishing with several rods and lines, with different hooks and baits, to lure the different fish he wants to catch.

What is greatly needed is not only a common denominator for liberty, but also a common denominator for social justice. To help the P.S.I., to serenade Nenni and his type of leaders, to approve, applaud or even excuse its policies can only result in destroying the free Italian trade unions, fatally weakening NATO, and ultimately preparing the crucifying and burial of Italian democracy without any further hope of resurrection. That is the ultimate goal and inevitable outcome of the new Nenni course. No critical Communist phrases and no hypocritical Nenni claims to the contrary can deter or defeat this logic of events.

TV Grows Up

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 11, 1959

Mr. SANTANGELO. Mr. Speaker, television has become an effective medium for communication in politics and is a growing medium for educational purposes. The broadcasting companies recognize the growing importance of TV and are streamlining their programs to better educate the listening and viewing public and to make the citizenry more informed.

Donald H. McGannon, president of the Westinghouse Broadcasting Co., has announced a new concept in programing of forum programs which streamlines existing programs and brings the matters of public affairs to the local people as well as to a national audience.

A press release from Mr. McGannon sets forth the concept and the scope of the new plan and will be of interest to the televiewers and listening audiences:

WBC TO TELECAST "YOUTH WANTS TO KNOW" AND "AMERICAN FORUM OF THE AIR"

NEW YORK, February 5, 1959.—A new concept in programing of forum programs which will bring two of the Nation's outstanding public affairs programs to local television stations was announced by Donald H. McGannon, president of the Westinghouse Broadcasting Co. The programs which will be aired in February are the award-winning "Youth Wants To Know" and "The American Forum of the Air," produced by WBC in cooperation with the broadcasting industry's pioneer in forum programs, Theodore Granik.

WBC will schedule the two programs on its five television stations, each once a month as local specials in prime evening time. The TV programs will be syndicated to other television stations possessing tape equipment.

WBC will also produce with Mr. Granik "The American Forum of the Air" for WBC's six radio stations, a half-hour each week. These will be syndicated to radio stations from coast to coast. The radio and television programs have been made available for commercial sponsorship.

The WBC programs will originate in the studios of WTTG, Washington, D.C. and both WTTG and WNEW–TV, New York, owned by the Metropolitan Broadcasting Co., who will be broadcasting both shows. The WBC television stations which will carry these programs are: KDKA–TV, Pittsburgh; KYW–TV, Cleveland; KPIX, San Francisco; WJZ–TV, Baltimore; WBZ–TV, Boston.

The WBC radio stations carrying "American Forum of the Air" are: KDKA, Pittsburgh; KYW, Cleveland; WBZ, Boston; WOWO, Fort Wayne; KEX, Portland, Oreg.; WIND, Chicago.

"We are undertaking more than the production of a program and the investment of money in this effort," said Donald H. McGannon in making the announcement. He further stated, "We are testing a conviction that the appetite of the American public for information and background in the crucial issues that face the United States and the world today has grown dramatically and demandingly; there is a strong proof they are eager to be better informed in these areas and the opportunity to have our audience see and hear great men of our times face the hard realities and complexities of the nuclear world must be grasped by us as a broadcaster now and under conditions that will permit maximum family exposure. This experiment in the fields of public information and debate, like our prior efforts in the field of education, etc., carries with it our highest hopes. It is believed that the adoption of program vehicles such as 'Youth Wants to Know' and 'American Forum of the Air' which are bywords in the American household, will do a great deal to assure the ultimate success of our undertaking. We also anticipate the ability to fill a need on the part of other local radio and TV stations for service programing of national dimension on this basis that will achieve a service beyond the present extraordinary accomplishments of the networks and broadcasters to the moment."

In the more than quarter of a century of "The American Forum of the Air," Mr. Granik has brought to listeners virtually every major Washington name of those decades including such luminaries as ex-Presidents Franklin D. Roosevelt and Harry S. Truman. "Youth Wants to Know" in its 9th year, has faced the controversial national and international issues and personalities who have been subjected to the sharp and incisive questions of bright and knowledgeable youngsters. As recently as last summer Mr. Granik went to Russia and filmed a "Youth

Wants to Know" interview with Mikoyan, the first such interview with the Deputy Prime Minister of the U.S.S.R., which achieved international acclaim.

"Both 'Youth Wants to Know' and 'American Forum of the Air' which have received worldwide acclaim and continual attention throughout their program careers, will be reshaped to add further excitement and new dimensions to stimulate audience appeal. WBC and Ted Granik intend to deliver to the public newsmaking guests and important and exciting subject matter," said Richard M. Pack, vice president, programing, Westinghouse Broadcasting Co.

Six Points To Watch in Cuba

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, Dale Francis, in an article in Our Sunday Visitor, a Catholic weekly, for February 15, 1959, has analyzed the possibility of a turn to the left in the new Government of Cuba. He comes up with six points to watch for in making judgments on which direction the new Cuba is taking. I think this is an interesting guideline for use as the months go on. Under unanimous consent, I include his article in the Appendix of the RECORD:

"Batista is America's best friend in Cuba and the strongest bulwark against the flood tide of communism." These are words published since the end of the Batista regime in an anti-Communist publication called American Opinion.

If the people of Latin America could really be convinced these words were true then the revulsion against the United States would be unanimous and the victory of communism in Latin America would be assured.

Yet a supposedly anti-Communist publication in the United States republished these words after the fall of Batista. They were words that had been spoken by Spruille Braden, a man who once served as assistant secretary of state for Latin America. His words demonstrate the myopic shallowness of men who lived and worked in Latin America for years and yet remained insensitive to the sufferings of the people.

American Opinion is also a publication that has called Fidel Castro a Communist. So let us examine the truth of this statement.

Fidel Castro is a graduate of Belen College, a Jesuit school in Havana. He has since that time been in contact almost continuously with priests of that school. They have talked with him often, going into the mountains to consult with him.

One of his closest friends is Father Amando Llorente, head of the Agrupacion Catolica Universitaria and a man who has appeared frequently in these stories on Cuba. Father Llorente knew Fidel Castro as a boy and knows him as a man. Castro in a letter to Father Llorente that Father showed me said, "I have kept unchanged the special feeling I always had for you because you were able to understand and encourage me."

Does Father Llorente understand Fidel Castro? He thinks he does. He has had every opportunity to know him well. Father Llorente says Fidel Castro is not a Communist, could never be a Communist.

Yet Robert Welch, editor of American Opinion, calls Castro a Communist. J. B. Matthews, writing in American Opinion, doesn't go so far as to call Castro a Communist, but suggests he cooperated and worked with Communists.

Who knows the most about Fidel Castro? Father Amando Llorente, who has known the man since he was a boy, talked with him many times in recent days, had a close contact with him, or the editor of an American magazine who probably has never met him, knows only by hearsay and does not give his sources for his statement?

I have talked with Castro, watched him in action. I found him a flamboyant man, a man of big gestures, extravagant language, a man who talks almost incessantly.

He struck me as a young man, more immature than his 32 years. Certainly he is not a prudent man when you consider that he is now a man of important stature in the world and yet a man who talks on and on. I told a close friend of his that he is certain to regret his talkativeness. A man who talks an hour may say something foolish; a man who talks 2 hours will probably say something foolish, but a man who talks for 3 hours is certain to say something foolish. Fidel Castro gives public addresses that last 3 and 4 hours.

He talks poetically. He seems incapable of expressing things simply. He dramatizes situations, and it is this flair for the dramatic that gives him much of his appeal.

But I know of no one who has heard him talk who thought him a demagog; I know of no one who knows the man who is not impressed by his apparent sincerity.

Yet his personality is not entirely pleasing. He seems a bit more enamoured of himself than even a man of such prestige should be.

But a Communist? Nothing he has said or done confirms that he is. And much he has said and done indicates he is not. There has been absolutely no indoctrination of the troops. Anyone who has talked with soldiers or heard them talk—and literally thousands were interviewed over television in Havana soon after the end of the war—could see there was no Communist indoctrination of these men. There wasn't even any anti-American indoctrination—one soldier ran after me down the street, when we finished talking, to tell me how much he liked Americans. This is not, of course, a certain indication, but it would seem that a Communist would have indoctrinated his troops at least a little.

The cabinet Fidel Castro formed is not a cabinet that leans to the left. It would have been difficult to have found a cabinet that stayed more to the middle. What is more, the men who were chosen were men well known to the public as genuine believers in democracy.

All the evidence seems to indicate Castro is not a Communist. But, of course, there are Communists in Cuba, and there are Communists who have served the rebellion.

While there is no proof he is a Communist, I have severe misgivings about Raul Castro, Fidel's younger brother. Like Fidel, he was Jesuit educated. Unlike Fidel—who still claims to be a Catholic although he does not seem to be a practical one—Raul takes pride in calling himself an atheist.

Several times in the past year I have called attention to the fact that the rebels received a part of their training from Alberto Bayo Giruoud. Bayo is a veteran of the Spanish Civil War, where he fought on the side of the so-called Loyalists. He is quite possibly a Communist, and he did help train the rebel units in Mexico. He stayed in Mexico during the rebellion—he is an old man—and while he came to Cuba to join in the celebration, there is no indication he will be invited to join in any way in the Government.

Another man of possible Red background is one I've mentioned several times before—Ernesto Guevarra. He is known to Cubans as "Che" and his handsome face is one of the most photographed. He was director of La Cabana, the military prison, when I went to see him.

A young man, he is nevertheless a medical doctor and a man who also participated in fighting in Guatemala on a side that was supported by Communists.

He is an Argentinian by birth and those who know his family there said his background was that of a boy from comfortable circumstances. A friend of mine, high in the Guatemalan Government and an anti-Communist, says he does not believe "Che" Guevarra is a Communist.

But Guevarra says that he is neutral in the disputes between the United States and Russia and that very neutralism tells a great deal about him. His early public statements indicated certainly a strong leftist leaning and this is a man I would judge bears close watching.

There is also a strong potential Communist influence in the labor movement. As this is written, this Communist influence has gained power in only a few places, but you can be certain it will keep trying and be ready to take over completely if the opportunity offers itself.

Because Communists are wise in the way of politics, because Communists recognize the importance of Cuba, it is certain that they will bear close watching.

Every action that creates more anti-Americanism paves the way for the Communists to move. The political illiterates who favor tyrants may think they are being anti-Communist, but they are the best friends the Communists have.

My own fear is not so much that Castro and his rebels might turn to communism as that in his own immaturity, Castro may destroy his own government by too much talking and too little responsibility and so create new chaos in Cuba.

I also have some fear about the welfare of Castro. He walks among the people and appears among them on speaking platforms absolutely without real protection. I think it inevitable that among the barbudos there would be some Batista plants. The murder of Castro, President Urrutia and a couple of more key figures would create chaos in Cuba.

The provisional President is essentially a middle-of-the-road man who heads an equally responsible Cabinet. When, in 1952, Batista took the Government by force, the party that seemed most likely to win the election was a new party called the Autenico. Many of the members of that party are represented in the new Cabinet, among them Roberto Agramonte, who would have been named President in a free election in 1952, and Raul Chibas, whose brother was the leader of the party.

Castro is not a member of this Cabinet. He says he does not want to be in the Government since his desire was only to free Cuba. But this ignores the political reality that he is the leading figure in Cuba. And it ignores the fact that he continues to speak on governmental matters, therefore usurping the Government without taking any responsibility for his actions.

There are a few key things that I think the average person can watch to know how the Government of Cuba is progressing.

1. The preservation of right of asylum: Castro seems to want to override the ancient provisions of asylum. Why he wants to do this is understandable—there are some real criminals who have taken asylum in embassies in Havana. But to override this would be to override a very necessary protection for freedom since not all those who seek asylum are criminals and overriding it now would set a precedent that could be used by tyrants in the future.

2. The fate of General Cantillo: The end of the war was precipitated by General Can-

tillo's negotiations with Castro. Batista learned of this and hurriedly left Cuba. Since Batista's police had planned a heavy drive early in January, his early leaving saved the lives of many persons. Castro, however, was angered because General Cantillo had promised to turn over Batista for justice. So General Cantillo is held for trial. It would be rank injustice to condemn General Cantillo to death, and if the Castro government does this you can mark down a most serious blot against it. I do not believe Castro will allow this mistake to be made, but this is one of the signs to look for to know what is happening in Cuba.

3. Castro in the cabinet or silent: If Castro wishes to continue to speak publicly on all matters of government then he should be in the government. If he does not choose to join the cabinet or take an active part, then he should become relatively silent. If he continues speaking but taking no responsibility, he may well make the work of the new government almost impossible and precipitate the resignations of mature men who are greatly needed.

4. The Communist Party in Cuba: After being banned for years—but still active—the Communists are allowed to come out into the open in Havana. You can observe their success by the positions they take in the labor movement. The name of the party in Cuba is the Popular Socialist Party, so if you see reports of government appointments of men of this party you'll know the Communists are gaining in power. As this is written, they have not yet attained power.

5. Recognition of Russia: If Roberto Agramonte and the Provisional President have their way there will be no recognition of Russia. You can know the solid men are being overridden if Cuba does give recognition to the Reds.

6. Continuation of executions: The justice of the executions of real criminals is something about which those who understand the Cuban situation have had no doubt. The manner of the trials and executions was bad. If the executions were to continue, if new arrests continue to be made, there will be real fear. There is an unfortunate failure on the part of some persons to distinguish between murder and death in battle. A news dispatch says three policemen have been arrested for the March 1957 murder of a Havana university student. If they are speaking of the death of Jose Antonio Echevarria, it really isn't proper to call it murder. He is a martyr for a noble cause, but he died in an attempt at revolt, armed and ready for death—his mother told a friend of ours that on the morning of the attack on the palace he told her he had gone to confession and holy communion and that if he died she should understand he was prepared. The soldiers who killed him may have been fighting against those who were right and for a tyrant, but it was surely not murder in a real sense.

The murder the next day of Pelayo Cuervo Navarro, a highly respected political leader who was taken from his home and shot, was murder in a real sense and these murderers could be punished. If executions continue in Cuba I fear a further lack of discrimination and eventual injustice.

These are six points to watch. If you keep up with them in your daily papers you will be as well informed as anyone in the country.

But don't be misled by some other things. The new government's insistence that all contracts with foreign companies be examined doesn't mean the government is going to go Communist. There was so much graft, kickbacks were so common, it is absolutely necessary to study all contracts made by Batista's government.

Summing up, Cuba has just rid herself of a corrupt and tyrannical government. This doesn't automatically mean the new government will be all we would wish it to be. Persons who know these leaders best are convinced, however, that they do believe in democratic freedom, and there is indication this is true.

We in the United States should offer understanding and support for the Cuban people, showing them a friendship on a fraternal and not paternal basis. We should aid the new government in the establishment of freedom, and regain whatever friendship we lost because of our support of the tyrant—Batista—who caused so much suffering in Cuba.

If we do not we are likely to drive the Cubans away from us into the waiting arms of the Communists.

In Mr. Dulles' Absence

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. WALLHAUSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very well written and timely editorial which appeared in the Washingotn Post today, February 11.

In my opinion this emphasizes the desire of all Americans, regardless of party or political affiliations, to support those in our governmental service, who are devoting their lives, energies, and abilities to work unceasingly to preserve the peace.

I am sure that we all join together, as suggested by the President, to pray for the good health and speedy recovery of this outstanding American and Secretary of State, the Honorable John Foster Dulles:

IN MR. DULLES' ABSENCE

President Eisenhower spoke for the entire Nation yesterday in expressing profound regret about Secretary Dulles' new illness. Past disagreements are cast aside in recognition of how much the President and indeed the whole Western alliance have come to depend upon this one forceful man. His combination of firmness on Berlin and resilience on Germany has won the admiration of many here and abroad who have been critical of him on other occasions.

Mr. Dulles' absence is the more unfortunate because of the necessity for perseverance in establishing detailed Allied agreement on access to Berlin. Under Secretary Dillon, and Under Secretary Herter when he returns from vacation this weekend, may be counted on to do their utmost to maintain continuity. But these officials inevitably will be under some handicap because of Mr. Dulles' intensely personal approach to large diplomatic problems.

One could wish in other circumstances that the Secretary would place more reliance upon the initiative of subordinates and would permit more independent advance planning. As it is, there is no disguising the fact that his illness will leave a big hole not only in the State Department, but also in the Cabinet and the Government generally. Mr. Dulles indubitably is the strongman of this Administration, and his devotion merits an accolade.

Fortunately, the doctors report no recurrence of malignancy, although General Heaton and Walter Reed Hospital observe that Mr. Dulles is worn out and will need a considerable period of rest to recuperate from his prospective hernia operation. It would be altogether surprising if a man of nearly 71 did not show the strains of 6 years in office; the truly remarkable thing is that Mr. Dulles has stood up so well to the burdens he has had to bear for the administration and to the almost inhuman schedule he has set for himself.

It is important to have Mr. Dulles back, especially if there are to be negotiations with the Soviet Union. For that reason we hope that he really will rest and will encourage others to make necessary decisions while he is recuperating without attempting himself to carry the weight of policymaking. That will be the most effective way, incidentally, of showing the world that American policy is stronger than a single personality.

An Alternate Murdock Plan for Furnishing Water to the Western Portion of the Navajo Indian Reservation

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to include in the RECORD the first of three articles by the Honorable John R. Murdock, of Arizona, a former Member of the House for 16 years and a former chairman of the Committee on Interior and Insular Affairs.

Mr. Murdock's articles set forth his proposal for the comprehensive development of the Little Colorado River so that its waters may be put to beneficial use on the western portion of the vast Navajo Indian Reservation and on the Hopi Reservation in Arizona. The Murdock plan also contemplates a supply of municipal water for Arizona's rapidly expanding city of Phoenix.

Mr. Murdock's plan to use Arizona's allotment of water under the upper Colorado River Basin compact of 1948 as a pump primer to develop additional water in the Little Colorado is based on his long years of service as a Member of the House, plus years of private study since he left the House in 1952.

The first installment of Mr. Murdock's plan follows:

AN ALTERNATE MURDOCK PLAN FOR FURNISHING WATER TO THE WESTERN PORTION OF THE NAVAJO INDIAN RESERVATION

A recent enactment by Congress contemplates as one of its details furnishing water to the eastern portion of the Navajo Reservation in New Mexico and Arizona. However, the most elaborate plans in the recent legislation referred to cannot possibly provide the necessary water for the western portion of that vast area. On the other hand, it is the opinion of those who know the situation well that thousands of Indians, Navajos and Hopis, will either have to be moved off the reservation or perish. It therefore becomes highly important that something more be done for these Indians.

Up until recent years when oil and gas and uranium were found on this arid and desolate plateau, the Navajo Indians have been regarded as the poorest as well as the largest Indian tribe in America. Friends of

the Indians and especially thousands of church people of every Christian denomination have long urged that better and proper treatment be given this group of American citizens. Many of the proposals already tried have cost large sums of money and some may not have been too successful, but after many years of study I can report that relatively small but important progress has been made.

CONGRESS HAS ACTED

In defense of Congress I must contend that the Government at Washington has not been as niggardly in furnishing appropriations for these Indians as many are led to believe. Whether the money appropriated has been used most effectively is another matter. I want to call attention to some Navajo Indian legislation 8 years ago which has had bipartisan congressional support and I shall name only a few Members on both sides of the aisle who have taken the lead in this matter. In the 80th Congress—a Republican Congress—the Honorable Richard J. Welsh, Republican of California, as chairman of the House committee dealing with Indian matters introduced legislation entitled "Rehabilitation of the Navajo Indians." I, being on the committee, asked the chairman to broaden the legislation and include the Hopi Indians, because the 5,000 Hopis are on a reservation within the Navajo Reservation and entirely surrounded by the 65,000 Navajos, and their circumstances are equally critical. This bill was amended and made to include the Hopi Indians.

Only a beginning was thus made at that time in the Republican Congress but in the 81st Congress—which was a Democratic Congress—Congressman TOBY MORRIS, of Oklahoma, took the lead in enacting the legislation which Chairman Welsh had introduced. I am happy to say the authorizing legislation was passed and became law. Therefore, I want to give due credit to Judge MORRIS, of Oklahoma, for his effctive work on the bill and also to Wesley D'Ewart, who was at that time Republican Congressman from Montana. Congresswoman Bosone, of Utah, gave it her very best support. Of course I as a Democratic Member of Congress representing the State of Arizona am giving myself some credit for this enactment. In recent months I have traveled over hundreds of miles of these reservations and have seen the physical construction made possible and resulting from this legislation.

GETTING MORE WATER ONE WEIGHTY PROBLEM

The chairman of the Navajo Tribal Council told me that the western end of his reservation is by all odds the driest portion, and in spite of the success in putting down deep wells—with which program I have also helped—they have been unable to get sufficient water for the vast portion of that reservation area lying next to the Colorado River and north of the Little Colorado River. There is a lot of water in the main Colorado River flowing by and some of it undoubtedly belongs to those Indians but, gloomily, it might seem as well to be on the planet Mars as to be so far below where they live.

An easy answer to this problem is to say, "Let's move the Navajo and Hopi Indians off that high and arid plateau." My question is, "where will we move them? The Hopi Indians living on the mountain tops like eagles on a rock do not want to remove from the sky cities which they have occupied centuries before Columbus came to America. My belief is that without too great an expenditure of money it would be quite possible to furnish sufficient water to enable them to continue and expand their life right where they have lived for more than 2,000 years. My studies show this should be done by utilizing the natural resources which are in the region. The following is perhaps the germ of a unique idea.

MURDOCK'S LITTLE COLORADO RIVER PLAN

My own view of the "law of the Colorado River" assigns to Arizona in perpetuity a firm block of 50,000 acre-feet of water annually out of the Colorado River system to be used where Arizona can get maximum benefit. This water need not all come out of the depth of the Colorado River if an "exchange of water" will improve the situation. By proper engineering it could be supplied in part by the Little Colorado tributary below any point at which white men or Indians might feasibly divert water from that stream except as herein proposed. Although the Little Colorado River at its junction with the main Colorado is in a very deep gorge—where the two great airliners collided June 30, 1956, with a loss of 128 lives—a large part of its waters come from the high plateau and could be captured before they reach the bed of the main stream. Many springs, like the famous Blue Spring in the Little Colorado, furnish much water which is not measured under the "law of the river" and is not used any place in the State of Arizona. My contention is that there is undoubtedly sufficient of such water to furnish those Navajo and Hopi Indians more than 50,000 acre-feet annually when and if the other and varying supply is stabilized or regulated by some such work as Murdock's Little Colorado River plan.

What expensive engineering would be required in this proposed Little Colorado River plan? Nothing like the expense which is contemplated by the recently enacted legislation for the Navajo Dam on the San Juan River. I do estimate that four sizable dams and one smaller dam would need to be built. The smallest of these, in the nature of a diversion dam, should be on the mainstream of the Colorado River just below the mouth of the Little Colorado. This would not be the most expensive dam and not nearly as expensive as the great project now provided for on the San Juan River by the recent enactment. This diversion dam on the main Colorado need not exceed 150 feet in height for purposes of my Little Colorado River development. I have studied four dam sites upstream on the Little Colorado where large dams could be built, but none of them exceeding 400 feet in height above the stream bed. These dams would each provide a catchment basin backing the water up to the foot of the dam above it and each have a unique powerplant for pumping water to the final level of Tuba City in the surrounding areas where Indians now are cultivating a little land with their limited supply of water.

TERMS EXPLAINED

Murdock's Little Colorado River plan: This is not a little plan, but a big plan on the Little Colorado River in northern Arizona, to develop its waters fully.

Diversion dam: In this water plan it means an obstruction across the main Colorado River, where the Little Colorado enters, high enough above stream bed to force a small part of the flow up the channel of the Little Colorado River a few miles to a point on the Navajo Indian Reservation and outside the Grand Canyon National Park.

Unique power plants on the high dams: With most reclamation dams we build hydroelectric power plants to produce electric power from falling water. My Little Colorado River plan is quite different. I want to catch all the water draining from its watershed (also sand, silt, etc.) behind these high dams so that none of the flow of the Little Colorado, water or rock, gets to the main Colorado. On each dam in the Little Colorado I want a Percy Thomas wind-driven power plant to lift the water from the foot of the dam to its top, thus reversing the river's flow. Also from the V-shaped lake at the junction of the two rivers I would count on the same, a wind-powered pumping plant, to lift about 140 acre-feet of water daily over the top of the highest dam near the main Colorado. The 140 acre-feet of water daily, more or less, would total the 50,000 acre-feet to be taken out of the main stream, to be mingled with waters coming down and to be used both on the Indian reservations and to be diverted southward for Greater Phoenix and central Arizona.

Exchange of water: Intermingling of the waters of the two rivers in this series of man-made lakes and dividing them according to a legal formula. A portion of the mingled waters is to be diverted to the Verde River for Greater Phoenix.

This, very briefly, too briefly, is my first alternate plan for a system of dams and unique power plants to furnish a constant and dependable water supply for the western Navajo area which would cost less than that contemplated for the eastern Navajo area in New Mexico. It would, in my opinion, be the sanest solution for this part of the Navajo problem. Since the foregoing is but a very brief outline of one phase of my proposed water development in northern Arizona, perhaps a further statement should follow and explain these suggestions.

Another reason calling for explanation and clarification is that terms and expressions have been used in this statement having different meanings, and capable of different interpretations. Further, some of the phases of this proposal are controversial and will need to be justified in the public mind because of the likely objections to be raised. Therefore, I want to follow this with a statement which will offer further explanation, elaboration, and justification.

In Honor of the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. LANE. Mr. Speaker, during the week of February 7 to February 13, the attention of the Nation is centered on the Boy Scouts of America.

The Scouts are proud of their organization; of its happy, wholesome program of activities; and its contributions to the making of a finer America.

As we, their elders, are proud of them.

Men and women devote their lives to their work, their homes, and their children.

But the greatest satisfaction they derive from all this effort is to see their youngsters become worthy of the advantages and the opportunities provided for them.

In our youth we knew little about the Boy Scouts. There were no troops available for us to join; and no one to direct us toward this organization that offers such fulfillment for the energy, the enthusiasm, and the natural idealism of youth.

If we had our lives to live over again, we would make certain to engage in those activities that we missed, and high among these would be membership in the Boy Scouts of America.

For there is no movement in this country that does more to make a boy self-sufficient, courteous, and inspired by the right thinking and the right doing that

develops a good man and a good citizen than the Boy Scouts.

I am humbly grateful for this emblem you have presented to me, and I shall be happy to wear it in celebration of the week that is set aside to honor your fine organization.

But do not ask me to go camping just yet. You will have to teach me the ropes before I can qualify for life in the great outdoors.

Even though boyhood days are far behind me. I admire your spirit, your healthy adventures, and your consideration for other people, that you are learning as members of your local troop.

Congratulations to the Boy Scouts of America.

Montana Eagle Scout Praises National Program of Youth Fitness

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. ANDERSON of Montana. Mr. Speaker, the President's Council on Youth Fitness is doing an admirable job of focusing the attention of the Nation on the conservation of its most important asset, its youth. The council, made up of the Secretaries and Administrators of Federal departments, with Secretary of Interior Fred A. Seaton, Chairman, is catalytic by nature and design. It achieves its ends by stimulating the multiplicity of youth-serving organizations and resources and the homes that support them. Prominent among these agencies is the Boy Scouts of America. At the recent 49th anniversary breakfast of the Boy Scouts of America, a gifted Montana youth, one of 12 carefully selected Explorer Scouts, made a statement on the relationship of scouting and fitness, which Shane MacCarthy, Executive Director of the President's Council, proclaimed a most enlightened and eloquent interpretation. I commend the exposition to my colleagues. It follows:

PRESENTATION BY EXPLORER DON A. LABAR, BILLINGS, MONT., OF REGION X, BOY SCOUTS OF AMERICA

The fitness of youth is an important subject which is getting much attention these days. My part on this program is to tell you about scouting and fitness. As everyone knows, the Scout program has been one that developed fitness ever since it started. All through the years the main emphasis has been on the outdoor activities of rugged camping and hiking, and on the Scout oath which says, "* * * physically strong, mentally awake, and morally straight." It has been an all-round fitness program teaching boys to take care of themselves, be of service to others, and to develop functional and emotion, as well as physical, aspects of fitness.

President Eisenhower has called on all organizations and individuals to "take further action to improve the fitness of American youth." This will be a major emphasis in the Boy Scouts of America program during 1959 and 1960. Personal fitness will become a more important part of activities in units all across America. In other words, we're going to give more attention to something we've already been doing most of the time.

In this way we'll help youth become more fit. Through our adult leaders we hope to help parents understand their responsibility for fitness and how important it is for young people to be fit and stay fit.

It's going to take a great deal of planning and effort to do this job. Through our various committees and adult leaders, and with the help of experts in the various fields of all-round fitness, I know we'll do it and do it well for the personal fitness of the boys of our country.

Yorkville Today

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. SANTANGELO. Mr. Speaker, New York has a glorious and eventful history. Unless the spirit of the passing times is captured and preserved by some one incorporating it into literature that spirit vanishes with the passing years. While I represent the 18th Congressional District and feel that I understand the people, the times, and the pulse, I feel that there are so many events which have escaped my attention. A few people have written about the glorious history of East Harlem and Yorkville. One of my constituents, Gertrude McManamon, of 325 East 69th Street, forwarded me a letter in which she portrayed a picture of Yorkville as it was in yesteryear and is today. This story depicts the area and describes the people who populated it, were supplanted by new groups, and moved on to other climes. It tells the story of the people of my district, the Italians, the Germans, the Irish, the Bohemians, and other ethnic groups who came, lived, and departed.

I find it a great pleasure to incorporate this letter in the CONGRESSIONAL RECORD so that a history of the segment of my district shall be preserved for posterity.

The letter follows:

YORKVILLE TODAY

As we walk along the streets how many of us ever think of the way these streets looked some 50 years ago or even 25 years ago.

The cliental and the appearance of Yorkville today would impress any visitor or even those who had moved some years past and made a visit therein.

Jones Woods, empty lots, and coalyards are now a thing of the past. Likewise the old families who for generations had made Yorkville what it was are all a memory.

Yorkville in the beginning of the century belonged to the Italian heritage. When one would pass through or experience an apartment hunt, the majority living therein were Italian families. After the 1908 depression many of these families lost their little apartments and had to double up because of lack of work and money.

After a year of complete poverty throughout the section there were many apartments available but no money to rent them. At that time Yorkville ceased to be Italian. There were many young Irish boys and girls who had migrated here from Ireland. With salaries at their lowest many of these boys and girls found their new home in America in the homes of others as domestics. Those who could afford servants as they were called lived on Fifth Avenue. Avenue A, First Avenue, Second and Third Avenues were a novelty to these employees when time permitted them to be free. Free time was very little. Lunch was served at 12 and they had to be sure to report by 4 to draw the blinds. They were permitted one evening a week free and every other Sunday. To them it was wonderful. They had a good home and enough to eat with a salary of $6 to $8 a month. With these few free hours they could find time to discover the other side of town or as they would say it—across the tracks.

As time passes boy meets girl and it was the Irish who took over the middle sixties of Yorkville. Then we eventually find the Bohemian people finding their way therein. The eighties found the German immigrants making Yorkville their land.

The year of 1914 saw difficulties which in most sections could have been bloodshed but in Yorkville the neighbors and inhabitants were one. Italian—German—Irish the problem was in their fatherland but they had found home in Yorkville where all worked and lived together.

The flu of 1918 did not spare anyone. The neighbor being struck down was as great a blow as one of the family, as Yorkville was all one big family.

The men who had loved Yorkville were corpses in their fatherland or the fatherland of their neighbors. Their sacrifice was to make Yorkville a home safe for their wives—and sons and daughters and in time for their grandsons and granddaughters.

The First World War was over; some did return to the home they loved more dearly than the home of their childhood. Many never did return, but they had left little boys and little girls to carry on their love.

The gayety of the twenties was felt to the utmost in Yorkville for they were fun-loving people. The dances and block parties more numerous in this section of the city than anywhere else. Most of the inhabitants were poor, some very poor but in love and kindness they were rich.

The first sorrow reached Yorkville when announcement was made of the abolition of Jones Woods now the site of Rockefeller Institute. Yes, a hospital was to arise to help not the poor of Yorkville but the unknown diseases of the whole world.

Then to the dismay of many, Burns Coal Co. must leave Yorkville. Many of the inhabitants had been employees since their immigration to America. To find new employment was not easy but to find new homes was harder. All the employees were forced to leave their homes, another new hospital was being sought out for this section of town. New York Hospital from West 16th Street was now to be among the beauties of Yorkville.

With new surroundings, furnished rooms would be a thing of the past. Sixty-eighth Street between First and Second Avenues was the first experiment sought out. Among the furnished-room houses was the home of the Dominican Sisters of Sparkill Community, 227 the number. A new home for the convent. This was not easy; it was not to be determined quickly. The Sisters returned to their motherhouse for the summer months and in September a house was secured at 228 East 69th Street.

With the advent of the winter months the buildings were slow arising. The boom of money which seemed to entwine the twenties was dwindling off into the past and by 1930 the new buildings completed but who had the wherewith to rent them. By 1931 work got scarcer the boys and girls of the boys and girls of the war years were now approaching their working years.

New York Hospital employed many from the neighborhood but many also from other neighborhoods therefore there were many unemployed in Yorkville. The Democratic Club was never lonely for visitors and the members therein in many instances took the opportunity to benefit themselves many jobs would be filled if a remuneration was given.

Through the years national churches had been added to the vicinity—now the church of St. Catherine which was the upper level of the school had outlived its usefulness. The parishioners who arrived in their teens now had grown to old age. The stairs was a hardship and many found that they could not attend the services because of the stairs.

Another edifice to be added to Yorkville, St. Catherine of Siena Church, on 69th Street. Now the depression in its highest the boys and the girls walked the streets day and night. Work was something everyone talked of but few had the joy of having a weekly pay envelope. Checks in those days were not thought of.

Soon the boys were again to disappear now not to their fatherland but to try to keep the homes for their parents, wives, or families. The CCC was founded. Many of the Yorkville boys were responsible for the roads and improvements which was attained by the CCC. Then to some the luck of the WPA saved them from leaving their homes. They were fortunate enough to stay at home and received the dole of the city to keep their little homes together. Few ever thought of the idea of leaving Yorkville.

Improvements were made in the suburbs and new edifices erected but the neighbors of Yorkville just married and waited for the God-given blessing of securing an apartment in Yorkville.

With the sorrow of the depression put aside and another decade added to time more and more looked for homes but this joy was not long to be experienced. New York Hospital continued to expand and the true natives of Yorkville had to take leave there were no homes left for them. Many homes because of lack of money had been neglected and were now beyond repair. These were just boarded up others were passed on to new owners and redecorated not for the Yorkville family of three or four but for the transient of one who would rent it out to two nurses on different shifts and get an exhorbitant fee for the rental. This was at first in the minority.

Pearl Harbor again brought back to many the sorrow of 1914. Once again the neighborhood was heavily robbed of its male youth yet too many of Yorkville females faced the safety of their country. The draft was heavy because of the many hospitals and city buildings and schools within the area. No one was safe. One with glasses from his baby years appeared in a uniform and some were among those who never returned to Yorkville but lay in the fatherland of their fathers or mothers.

Divorce or separation in Yorkville was seldom heard of. There was sickness and poverty but there was always a way. There was neighborly love and there was family devotion. To stay near to help the old folks to help the young ones with their little families was not a burden but a duty.

The war ended all looked to the return of the youth who in turn looked for a long happy life in Yorkville. This was soon to end their home and hopes. Now with homes at an impossibility of securing each month hundreds of families are forced out of the only home they have known or wanted to know Yorkville.

Lenox Hill settlement that withstood the depression and wars cannot withstand the inflation. It is not one house but blocks of houses turned into parking lots, office buildings, or apartment houses far beyond the reach of the working class.

As the hospital center moved in to help the people of Yorkville, it has helped the people of all over the world and left the lifelong inhabitants of Yorkville homeless.

Those who come to take the place of the immigrants that built and preserved and loved this spot in no way feel the home love it deserves. It is an address, or a place to work, but family life is not part of the dwelling. These tenants live for the day they will return to Pennsylvania, North Carolina, California, or any one of the other 49 States, but those who are being relocated are never to return to the home of their love and their childhood—Yorkville.

As history repeats itself, there is no room in the hearts of the political leaders to direct or preserve Yorkville from its fall. Home is not new beautiful buildings; home is where the family is raised and taught to be good citizens—good fathers and mothers—and in turn their children will do likewise. There will be no children to grow up in Yorkville to preserve its future or to pass on to their families the love they have inherited through the generations from their parents and grandparents.

Yorkville has helped make some of your dreams come true; surely it is in your reach to produce some possible assistance to save Yorkville.

Program of Inauguration of Hon. Pat Brown as Governor of California

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of the program occurring at Sacramento, the capital city of my native State of California, on January 15, when the distinguished California citizen, Pat Brown, was inaugurated as Governor of my State.

Heretofore, the distinguished U.S. Senator from California, Hon. CLAIR ENGLE, inserted in the Appendix of this CONGRESSIONAL RECORD on January 14, 1959, beginning at page A140 thereof the text of the inaugural address by Gov. Pat Brown. It is now my pleasure to supplement for the information of all who read this the inaugural day program on that same historical occasion:

PROGRAM

Call to order of the joint session of the Legislature of the State of California. President pro tempore of the senate and speaker of the assembly presiding.

"Star-Spangled Banner": Organist, Assemblyman Frank Lanterman.

Invocation: Chaplain of the assembly.

Lieutenant Governor escorted into chamber and seated.

Governor escorted into chamber.

Introduction of Gov. Goodwin J. Knight by the speaker of the assembly.

Remarks.

Administration of oath of office to Hon. Edmund G. Brown, Governor, by Hon. Phil S. Gibson, chief justice of the supreme court.

"America."

Administration of oath of office to Hon. Glenn M. Anderson, Lieutenant Governor, by Hon. Phil S. Gibson, chief justice of the supreme court.

Introduction of Gov. Edmund G. Brown by the president pro tempore of the senate.

Inaugural address: Gov. Edmund G. Brown.

Introduction of Lt. Gov. Glenn M. Anderson by the speaker of the assembly.

Address: Lt. Gov. Glenn M. Anderson.

Benediction: Chaplain of the senate.

"I Love You California."

INAUGURAL DAY PROGRAM, STATE CAPITOL, WEST ENTRANCE, MONDAY, JANUARY 5, 1959, SACRAMENTO, CALIF.

1:30 P.M.

Band concert, San Francisco Boys' Club Band, Roland Terry, director.

2 P.M.

Proceedings from the assembly chambers.

3 P.M.

Call to order.

Presentation of colors.

Pledge of allegiance.

Invocation.

Administration of oath of office to Stanley Mosk, attorney general; Alan Cranston, controller; Bert A. Betts, State treasurer, by Hon. Phil S. Gibson, chief justice of the supreme court.

Presentation of Lt. Gov. Glenn M. Anderson and Gov. Edmund G. Brown.

Benediction.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Businessman in Public Affairs

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. GRUENING. Mr. President, the address I am about to ask to have inserted in the Appendix of the RECORD was made yesterday by a man who is peculiarly qualified to make it. It is on the subject "The Businessman in Public Affairs," and was made to the Weirton, W.Va., Chamber of Commerce. The speaker was the senior Senator from West Virginia [Mr. RANDOLPH]. He began his activities as a working newspaperman. Then he became, successively, a newspaper editor, a magazine editor, a college professor, and a business executive.

JENNINGS RANDOLPH served with distinction for seven terms in the House of Representatives. In the course of that service, I was privileged to have him, with other Members of a House committee, visit us in Alaska, where his interest in its problems was reflected in subsequent legislation.

After his seven terms in the House, JENNINGS RANDOLPH became a business executive again in an industry which is greatly affected with the public interest, namely, the aviation industry. He is now, I am happy to say, our colleague in the Senate. I ask unanimous consent that his thoughtful and timely address, "The Businessman in Public Affairs," be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BUSINESSMAN IN PUBLIC AFFAIRS

Mr. Toastmaster, members of the Weirton Chamber of Commerce, and guests, it is a pleasure to be with you and to discuss the role of the businessman in public affairs. This is a question which has long been of interest and personal concern to me—since I have considered myself a businessman as well as one professionally interested in public affairs—and I note that it is a subject which is becoming of increasing regard to your own organization.

During the campaign last fall an incident occurred which I think highlights one aspect of our discussion tonight. As I was walking along the street in my home community of Elkins, talking with the voters and discussing the issues, I was stopped by a citizen who drew me into a doorway to discuss the campaign. After finishing our conversation I asked him why he had drawn me off the street and into the privacy of a doorway. Whereupon he replied: "You know I am in business and I must be very careful of what I do and say."

Though this man may have dramatized his fears somewhat, ladies and gentlemen, he does not represent an isolated state of mind. For, the rule of prudence—the precautionary attitude against speaking one's mind on controversial issues—has taken seed among too many of us. It is a measure of the failure of the democratic process—a failure in the belief in the great dialogue of democracy—when anyone, business man, professional man, or teacher, fears to participate in the political process.

Therefore, I am much heartened by the U.S. Chamber of Commerce program of the Aircade and local political workshops to encourage the political activity and participation of businessmen.

However, I would offer a word of caution. For there is some indication that this action is stimulated by the concern within the thinking of some members of the chamber for what is seen as the growing power and political effectiveness of organized labor.

I hope that this view will not dominate the political actions of businessmen. I hope that they will see their role in larger terms—and not merely in opposition to labor. For any action which is cast in terms of protagonist and antagonist limits the freedom of the actors—by limiting the scope of their imagination and perception.

I would digress a moment to illustrate this principle in reference to our own national attitudes toward the Soviet Union. Russia has at one and the same time become our national demon and the gage by which we measure our own progress. We are too frequently confronted with such questions as "Are American schools as advanced as those of Russia?" "Do we offer enough support for basic research in science and technology compared with that of Russia?" "Are race relations in the United States strengthening the position of Russia in world opinion?"

Thus, in recent years, we have too frequently approached our problems not in terms of finding the best possible solutions, but in terms of the cold war with Russia. And to that extent we have fallen increasingly under the dominance of the Kremlin. For the solution to any problem is determined, in large measure, by the questions which one addresses to the problem.

I devoutly hope, therefore, that the political actions of businessmen will not be thus restricted—that they will ask questions not in terms of whether a particular policy will circumscribe the power of labor, but rather whether it is in the best national interests as well as their own legitimate self interests.

This is only instance, however, of the need to avoid the general tendency of interpreting public problems in terms of opposite solutions. Our political discourse, and hence the solution to political questions, is too often restricted by the use of polar or opposite terms—liberal and conservative, radical and reactionary, labor and management, farmer and consumer, socialist and capitalist, et cetera. The list could be extended. And we are all familiar with the old platitude, "There are two sides to every question."

Such a polarizing of public problems, however, falsifies the realities of political life. For there are, in fact, as many sides to every question as there are parties or interests involved. And the great genius of the democratic process is that it offers a wider variety of solutions than can be encompassed by mere opposites.

Politics in a democracy is the art of the possible—the art of compromise and conciliation. Webster defines "compromise" as "a settlement by arbitration or by consent reached by mutual concessions." This definition offers us a clue as to how the businessman can make one of his chief contributions in the arena of public affairs. For the life of business and commerce is in large measure a life of offering mutual concessions, of arriving at a compromise of interests whereby each party gains some satisfaction.

It was popular at one time in some quarters to state that America neded a sound business Government. Without commenting on the recent record of some businessmen in Government, I suggest that this statement offers an oversimplification of both business and Government. For it assumes that business can be defined solely in terms of dollars and cents and cost accounting. And that the justification of governmental policies should be decided in the same terms. I have called this an oversimplification, first, because it fails to acknowledge the complexity of government in a modern democratic society; and second, because it fails to perceive the cultural significance of business and commerce.

The modern businessman must be more than a mere cost accountant. Wise decisions in business require not only a knowledge of how to conduct a commercial transaction, but knowledge of personal relations, of community relations, and of the whole process of communication. From this point of view, therefore, the businessman, the modern businessman, is peculiarly well gifted to contribute to public affairs.

In this connection, it is appropriate to mention that one of the distinguished guests with us tonight, President Thomas E. Millsop, of National Steel Corp., is not only a man of management, but one who has associated himself with public affairs and has made real contributions to the advancement of community, State, and national interests.

The National Management Association, an organization of 73,000 members in 340 affiliated clubs representing 1,200 companies in 34 States, honored Mr. Millsop by awarding to him its 1958 Management Man of the Year distinction. I am sure that this award was not bestowed upon Tom Millsop simply because of his technical proficiency in the management field; rather, it was recognition, too, of his broad understanding of and contributions to public affairs in relationship to the free-enterprise system.

I say in passing, however, that we should not limit the term "public affairs" to the application of government alone. Public affairs, and the role of the businessman therein, imply the whole range of public life and all of our cultural institutions as well as those of the States. This means that the businessman should interest himself not only in politics in the more limited sense, but also in the advancement of our schools, our hospitals, and our institutions of the fine arts, as well as those matters which more immediately affect his own interests, such as tax revisions, fair-trade practices, and the reciprocal trade agreements.

Participation in such affairs can be justified in more than just humanitarian terms as well. It can be justified in terms acceptable to the most hardheaded businessman. For example, we are all well aware of the need to attract a more diversified industry to West Virginia. While we are fortunate in having such basic industries as coal and steel and chemicals, we also need light in-

dustries which involve a lower capitalization per man in order to revive our sagging economy and offer jobs to workers who have been displaced by technological developments. And it has been the experience of other States which have sought to attract new industry that modern enlightened management is becoming increasingly concerned with the general cultural conditions in the area in which they seek to locate. While such factors as the tax climate, transportation facilities, and natural resources are perhaps the dominant factors in attracting industry, present day management is aware that its industrial and personnel relations are strongly affected by the surrounding conditions in schools, hospitals, recreational facilities, et cetera. Thus, from a long range point of view, it is equally to the interest of the businessman to engage himself in the development of the general cultural facilities of his area.

This suggests another respect in which the business community can make a genuine contribution to public affairs. Ours is a civilization dominated in large measure by a business ethos—by the values and attitudes of the business world. This condition affords the businessman considerable influence in the molding of public opinion—in the conditioning of cultural attitudes. I would like to see him use this influence on public opinion in raising the cultural status of the expert—the person of achieved excellence.

The American businessman has the reputation of being tough-minded. He is from Missouri. He is hospitable to facts and to the person who is expert in dealing with them. I should like to see him use his influence and his arts of communication to extend this hospitality to the expert throughout the range of public affairs; I should like to see such efforts emerge in a revitalization of the American regard for the expert, for the person who has achieved excellence in whatever field—in the arts, in business, in science, in scholarship, in government administration, as well as in the individual conduct of life in our daily affairs.

We are today, and we have been for some years, faced with what might be called a growing lack of accountability. In an ever-more complex society in which individual responsibility becomes lost in the mesh of social relationships, it is too easy to avoid responsibility—too simple to avoid being held accountable for the quality of one's performance. This is what I mean by the lack of accountability.

Thus we have given rise to the glorification of mediocrity and the neglect of excellence. To dispel such a popular attitude and reawaken a public regard for quality performance may well be one of the greatest contributions the businessman could make to public affairs.

Now after this somewhat philosophical foray, let me turn, in closing, to more concrete matters, to matters which I am confident have occupied a considerable amount of your interest.

I refer to two items of legislation which will soon be presented to the 86th Congress. First, Senate bill 505, introduced by Senator KENNEDY with myself as one of the cosponsors. This is the labor-management reform bill—a revised version of the Kennedy-Ives proposal which passed the Senate in the last session by a vote of 88 to 1. During my campaign I stated that I would support such legislation as that offered by Senators KENNEDY and Ives. As a member of the Subcommittee on Labor of the Senate Labor and Public Welfare Committee, I have offered myself as cosponsor of the present measure.

I am well aware of the criticism that has been leveled from some quarters. Without taking these criticisms up in detail, and without impugning the motives of any who have criticized the bill, I would like to state briefly its purpose and its provisions. But first I would like to quote from a letter which Senator KENNEDY recently received from former Senator Ives.

Senator IVES wrote, "This bill represents many months of careful study in committee, the collective judgment of the U.S. Senate as expressed in 5 days and nights of debating and voting, and many, many years of collective experience of labor-management legislation.

"Furthermore, it is designed to meet the objectives set forth in the report of the Senate Select Committee on Improper Activities in the Labor or Management Field. It is my firm conviction that this bill not only meets those objectives but does so in a fashion that makes it corrective rather than punitive legislation, a measure which will correct abuses without undermining the rights of working men and women."

First, as Senator KENNEDY has said, it is "a bipartisan measure on a nonpartisan subject." Second, it is stronger and clearer in its terms than was the original Kennedy-Ives bill. It has been revised to make it quite clear that the section on employer reporting does not interfere with normal personnel relations or communications, and that the section on bribes cannot possibly be interpreted to include wage or other normal payments.

And third, it is, as Senator KENNEDY stated, "primarily a labor-management reform bill, dealing with the problems of dishonest racketeering—it is not a bill on industrial relations, dealing with the problems of collective bargaining and economic power." The broad issues of labor-management relations are not involved in this legislation and were not so intended. For these are quite properly divorced from the issues of corruption and racketeering in labor.

I would, therefore, urge each of you to consult the bill yourself and in your own judgment determine if this is not for the best interests for labor and management alike, as well as in the larger national interests.

A question of equal importance to all of you is that of forthcoming legislation on small business. I am pleased that I am also a member of the Senate Committee on Small Business, and will be actively engaged in legislation in this field.

In preface to my remarks on this topic let me state that I am not one to whom big business per se is an evil; there is nothing inherent in the size of any economic structure, nor for that matter in any political or social structure, which makes it either good or evil. It is the uses to which such organizations are placed and the degree of responsibility exercised by those in management which determine their ultimate benefit to society. In recognizing this we must acknowledge also that bigness has become a permanent and fundamental characteristic of American economic and political institutions—big government, big labor, and big business are here to stay. The problems of capitalizing modern industry and exploring the new frontiers of technology require large units of production. But with this, we must develop and maintain the means and techniques to prevent the individual man and woman from being lost in the shuffle and to insure the continued vitality of small business.

The 85th Congress moved significantly in this direction in establishing the Small Business Administration as a permanent agency, in passing the Small Business Investment Act, and in broadening the lending authority of the Small Business Administration. But much remains to be done.

There are approximately 5 million small businessmen in the United States, roughly the same number as there are farm families. These two groups comprise much of the reservoir of talent and initiative that have brought our Nation to its present greatness. We must see that this reservoir is not drained off by neglect, by inequitable tax laws, and by administrative regulations.

Let me emphasize once again the potential power the businessman has for exerting his influence far beyond the range of the activities of buying and selling and of producing and distributing goods. For the men of commerce and industry are the ones who control the material resources of our society; morally speaking, these resources are held not in fee simple but in stewardship—a stewardship which carries with it the responsibility to see that these material resources are used to assure the widest possible benefit, both materially and spiritually, for a free society. It is within your power if you but will it.

These are times of extreme tension—sometimes of deep doubts about our tomorrows.

I close on this positive approach:

There is no room for gloom in the long-term future. Fact and faith must combine in the promise of a further unprecedented era of expansion, creation of new industry, and a more sustained prosperity.

The American people are resourceful. They will realistically meet the challenge of changing world and domestic conditions.

We must see to it that business continues its dynamic development and that our cooperative capitalism, which embraces both employee and employer, be cushioned by reasonable Government regulation and reputable practices within the framework of our private enterprise system.

Ours is a growth country. It is a fallacy to short-sell its future.

Deseret News Discusses Neuberger Bill on Alcohol and Tobacco Education

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. NEUBERGER. Mr. President, one of the outstanding newspapers in America is the Deseret News, of Salt Lake City. In its weekly supplements for January 17, 1959, and January 24, 1959, the Deseret News has published two comprehensive interviews with me about my legislative proposal to have Federal matching funds used to encourage courses in our public schools in educating children with respect to the impact on their health of both tobacco and alcohol.

These interviews were written by Mr. George L. Scott, veteran newspaperman, who is correspondent in the Pacific Northwest for the Deseret News.

I ask unanimous consent that these interviews from the Deseret News, of Salt Lake City, be printed in the Appendix of the RECORD.

There being no objection, the interviews were ordered to be printed in the RECORD, as follows:

[From the Salt Lake City Deseret News, Jan. 17, 1959]

OREGON U.S. SENATOR OPPOSES TOBACCO, LIQUOR ADVERTISING

PORTLAND, OREG.—"Glamour advertising of cigarettes and liquor over TV and radio, in magazines and newspapers is aimed at the young—older people are already hooked."

So declared U.S. Senator RICHARD L. NEUBERGER, of Oregon, as he prepared to reopen his senatorial effort to educate the youth of the Nation on their gamble with health if they use either product.

The Senator said he would reintroduce the bill he placed before the Senate on May 21, 1958. This bill, which did not reach the Senate floor before adjournment, provided Federal grants-in-aid for educational programs to teach schoolchildren about the dangers to health from cigarettes and liquor. He said there would be no substantial change in the measure.

Senator NEUBERGER emphasized that he was not advocating a prohibition in the use of either tobacco or liquor.

"My purpose is to give the States of this Nation a chance to advise their young people on important matters concerning their health," he said.

"Most of the advertising on tobacco and liquor is beamed at young people.

"They are entitled to know what the facts are. After that, if they want to smoke, it's up to them. Their own reasoning rather than the pressure of glamorized advertising should prompt them," he declared.

LAUDS HEALTH EDUCATION

Senator NEUBERGER, who does not smoke nor drink, said his determination to push for health education was intensified following his return from Washington after the last session of Congress.

He underwent surgery for a malignant growth and is still under treatment.

"My own experience," the Senator said, "has intensified my interest in anything dealing with health."

He pointed to the Nation's $6.8 billion expenditure for research, most of it dealing with nuclear science, while only $211 million, or 4 percent, was spent on medical research of all diseases.

"Cobalt radiation, now used in the treatment of cancer, is a result of research," Senator NEUBERGER said. "If my trouble had developed a few years ago my chances would have been much less.

"Look at the children in the past who died of polio, diphtheria and other diseases before medical research made recovery almost certain."

CHILDREN SHOULD BE INFORMED

"I feel every child is entitled to the right to be informed of dangers ahead. The best place to do this is in school—backed by research and not advertising glamor," he said.

"In contrast to the questionable advertising which prompts young people to take up smoking at an early age, when they frequently are told to associate this habit with the success of some great baseball star or motion-picture queen, is the warning by the Surgeon General of the United States, Dr. Leroy E. Burney, who said:

" 'Many independent studies thus have confirmed beyond reasonable doubt that there is a high degree of statistical association between lung cancer and prolonged cigarette smoking * * * while there are naturally differences of opinion in interpreting the data on lung cancer and cigarette smoking, the Public Health Service feels the weight of the evidence is increasingly pointing in one direction—that excessive smoking is one of the causative factors in lung cancer'," the Senator quoted.

[From the Salt Lake City Deseret News, Jan. 24, 1959]

PUBLIC INDIFFERENCE DELAYS HEALTH BILL

PORTLAND, OREG.—Public indifference, advertising power and sectional economy will be major hurdles to clear before the public can be educated on the health hazards surrounding the use of liquor and tobacco.

Senator RICHARD L. NEUBERGER, Democrat, of Oregon, encountered all of these obstacles after he first introduced his bill for Federal aid to States desiring to give their schoolchildren the facts of research concerning the use of cigarettes and alcohol.

He is hopeful there will be an upsurge of support from Senators and the public when he reintroduces his bill sometime in March.

"Any bill that has strong support from public bodies in the States will be brought out of committee for congressional action," the Senator said.

REACTION TO MEASURE

In dividing first reaction to his measure, Senator NEUBERGER listed the following:

Public: Indifferent, little immediate support in general.

Educators: Some support but far under expectations.

Churches: Good reaction from religious groups, particularly the Church of Jesus Christ of Latter-day Saints, Seventh-day Adventists, and Methodists.

Advertising agencies: Hostile reaction from advertising magazines and publications. Much of their revenues come from tobacco and liquor.

"Only a few Senators gave promise of support," Senator NEUBERGER said.

"Southern Senators are swayed away from support by the importance of the tobacco crop to the South although they favored education on liquor.

"I realize that it takes time to build up a program but with the aid of such organizations as the American Cancer Society, other health groups, educators, and churches it can be done.

"If the public gives its support you have a chance to pass legislation.

"If indifferent, little chance because of the great amount of legislation facing Congress."

CHURCH MEMBERS LEND SUPPORT

Senator NEUBERGER said he received many letters from Mormon Church officials and members in Utah, Idaho, and California backing his program.

"The power of liquor and tobacco advertisers is the main hurdle facing the grant-in-aid education program," Senator NEUBERGER said.

"We leave the field entirely to the liquor and tobacco people who have unlimited capital to support their products."

The Senator insisted that education is the great hope for everything. He pointed out that the grant-in-aid plan he backs for giving the facts on cigarettes and alcohol respects State's rights. No State, he said, is required to give such education unless it so desires.

"I don't believe in prohibition," he declared, "but I do believe in giving relative facts. If advertisers misdirect the Nation's youth, the Government should at least give the fair facts.

U.S. AGENCIES INCONSISTENT

"If ever there was a situation where the left hand knoweth not what the right hand doeth, it is in the policy of the U.S. Government with respect to tobacco and cigarettes. While one agency of Government warns that cigarettes may be a factor in causing cancer, the most terrible disease afflicting the human race, another governmental agency subsidizes and encourages the growth of the product from which cigarettes are made."

Senator NEUBERGER inquired:

"What would be the reaction here in America if we learned that the government of Red China was subsidizing the production of poppies, from which opium is distilled? Would we not raise our voices in righteous scorn and indignation? Then what must the rest of the world think of the fact that in the United States eggs and meat and vegetables are not supported as basic farm crops, but tobacco is?"

The Senator conceded that "a bill is simply a piece of printed paper that can be indefinitely postponed."

"Other things," he said, "cannot be postponed so readily—cancer of the lung, for instance. The doctors and scientists will continue their studies. They will report, and some men in journalism and politics will disseminate the reports. People will smoke cigarettes, and human tissue and protoplasm will react accordingly. Such events as President Eisenhower's account of how he himself overcame the smoking habit are sure to have a mighty effect. Americans will learn the facts about cigarettes and various diseases, and then they will wonder why their Government considers tobacco a basic crop but not the Thanksgiving turkey or baby's milk or the morning baked apple or glass of orange juice.

"When enough Americans wonder about this, my bill will pass," Senator NEUBERGER concluded.

Who Will Control?

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, February 12, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Edgefield Advertiser, in Edgefield, S.C., on February 4. The editor of this weekly paper points to the real danger of the continuing centralization of control by the Federal Government of the individual citizens of our country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO WILL CONTROL?

Among all the controversial issues or milder subjects that ferment in legislative bodies, in departments of state, in the press, and elsewhere, there is one—the most important among them all—that gets little or no attention.

It is: Who will control?

Each year, the individual has less control over what he earns.

Each year, he has less control over the who and the what and the how of the education of his children.

Each year, he has less control over his way of life.

Each year, he has less control over his Government.

It is a simple deduction, that, with less control over what he earns, and this control going to the state; with less control over education of his children, this control going to the state; with less control over his way of life, this control going to the state; and with less control over the state itself, the very meaning of freedom has been renounced.

It is not surprising that the ideals of American history are being subverted in many public school textbooks in the United States.

The words of Patrick Henry, for example, which were presented stirringly to schoolchildren for generations, "Give me liberty or give me death," are now in a position of ridicule, or are twisted to serve a new purpose.

The sordid substitute now is: "Gimme; I'm afraid of insecurity; and who wants to die for anything?"

To interpret the political trend in any other way is serving untruth. It is dishonest, and it is also a reason for more than impatience.

It is getting late to brand the enemies of freedom; for there are so many of them.

They parade with the mantle of welfarism, and speak with the sweetness of saints. From time immemorial it is the type which people of love and zeal have had to oppose with ceaseless vigilance and determination.

There is far too little hostility against these perpetrators of public evils and these abettors of communistic subversion in the United States.

No Communist missiles carrying hydrogen bombs will ever destroy freedom.

But freedom is on the way out because of these forces working from within.

Right-to-Work Legislation Held Harmful to U.S. Economy

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. MOSS. Mr. President, on Tuesday, February 3, my distinguished colleague, the junior Senator from Arizona [Mr. GOLDWATER], had printed in the RECORD an editorial from one of the leading papers in my great home State of Utah, the Deseret News, of Salt Lake City. The editorial dealt with the so-called right-to-work issue, and detailed the views of that newspaper on this important subject.

In the State of Utah, the Deseret News has a well-deserved reputation for precisely and forthrightly stating its point of view. It also has a reputation for fairness, and it regularly opens its columns to its readers whose views differ from those of the newspaper. This is, to my mind, a sound and fine example of true belief in freedom of the press and in freedom of speech.

The editorial which Senator GOLDWATER inserted into the RECORD on February 3, was published in the Deseret News on January 17. On January 30, however, that newspaper published a letter, from Mr. LaMar D. Gulbransen, chairman of the United Labor Committee of Utah, and president of the Utah State AFL–CIO, taking vigorous issue with points cited in the News editorial.

The Deseret News thus presented both sides of a controversial issue. I am sure that my distinguished colleague, Senator GOLDWATER, would want the CONGRESSIONAL RECORD to present equally both sides of this issue; and, probably, when he offered the editorial he did not realize that the other side had already been presented in the same newspaper.

Therefore, Mr. President, I ask unanimous consent that this letter to the editor of a great newspaper, the Deseret News, of Salt Lake City, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Salt Lake City Deseret News, Jan. 30, 1959]

RIGHT-TO-WORK LEGISLATION HELD HARMFUL TO U.S. ECONOMY

Our American democracy is based upon the collective bargaining process guaranteed under the present rule of the majority.

So-called right-to-work legislation is a fundamental attack on these basic principles; an attempt by a comparative few to make the expression "Union Busting" more realistic. It is a system devised to weaken and eventually destroy the fundamental and basic concepts of the collective bargaining process.

The right to work is not new; in the early 1900's it was formulated in an attempt to stop organization of working men and women into unions of their choice. This type of propaganda has been used by the National Association of Manufacturers and other employer groups in an effort to slow, weaken, and destroy labor throughout the entire first 60 years of the 20th century. Clarence Darrow stated in a legal brief drawn in 1900: "Right to work is a bit of bird lime to sway the unthinking mass."

It still is:

Proponents of right to work profess to be worried about the fate of the individual workers. They seek to give the right to a single employee to contact management for negotiation purposes—all by himself—for pay increases and/or better working conditions. In other words, right-to-work supporters seek to restore the ancient liberties of the working man and woman—the right to suffer, starve and work long hours under sweatshop conditions.

Responsible unionism is the result of secure unionism. The Taft-Hartley Act recognizes this. Under the Taft-Hartley Act a union may bargain for a union shop only if a majority of the workers so affected vote for a union shop. Originally, the Taft-Hartley Act provided for such employee votes to be supervised by the Federal Government. After 4 years, 92 percent of all such elections resulted in 95 percent of all affected workers voting for the union shop and Senator Taft, himself, asked that the provision of the Federal law calling for such elections be dropped as a waste of money.

Defenders of the right-to-work law use figures indiscriminately to try to prove that this type of legislation helps the economy. In reality, the right-to-work States rank at the bottom of the list of States in personal income according to the U.S. Department of Commerce. Utah's per capita income in 1957 was $333—16 percent—below the national average. Utah is 30th in the list of States in this category.

Right-to-work States with the low income are States where reactionary and selfish employers seek to manufacture goods on a 1920 pay scale and sell elsewhere on a 1959 scale. This is harmful to the economy of the United States. When our national economy is hurt; when the economy of States is harmed; it means that each of us is hurt as well.

To keep in step with progress—to regain her position in the march of States toward a better and more prosperous life, we need to restore the rule of sane and safe legislation and repeal the present unsound and harmful right-to-work law.

LAMAR D. GULBRANSEN,
Chairman, United Labor Committee of Utah, and President of the Utah State AFL–CIO.

Legality of Supreme Court Decision in Doubt

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent that an editorial entitled "Legality in Doubt," which was published in the Greenville News in Greenville, S.C., on February 10, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LEGALITY IN DOUBT

It almost certainly is unintentional, but both the Republican administration and a group of Democratic and Republican liberals headed by Senator PAUL DOUGLAS, of Illinois, are betraying doubt that the antisegregation decision of the U.S. Supreme Court really is the law of the land.

They have been saying all along that it is, and have either used force or proposed the use of further force to compel segregated communities to admit Negroes to their white schools.

Now, however, in separate bills, the administration and the Douglas group are asking Congress to adopt a resolution declaring the decision of 1954 to be the supreme law of the land and demanding that the States must take immediate steps to end segregation.

We have never believed that the decision is truly constitutional and legal, but if the integrationists are right in their contention that it is, why do they feel the need of an act of Congress to declare it so?

Blows Against Protestant Christianity by the Peiping Communist Government

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. LAUSCHE. Mr. President, last November, the press of the Nation gave much attention to a proposal made by the Fifth World Order Study Conference of the National Council of Churches' Department of International Affairs, in Cleveland, Ohio. This proposal urged that Red China be granted diplomatic recognition by the United States and also be admitted to the United Nations. Opponents of the proposal quickly pointed out that the pronouncement did not constitute an official policy of the council.

A news story recently carried by the Religious News Service tells of a questionnaire sent to Protestant pastors and of the overwhelming disapproval of the study conference's proposal.

At the same time, the District of Columbia Baptist Convention weekly newspaper printed a compilation of reports from the National Council of Churches depicting the crippling blows which have been dealt to Protestant Christianity by the Peiping Communist Government.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD these two news stories, which indicate the views of many Protestant ministers and the terrible circumstances under which the Protestant churches in Red China exist.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SURVEY DISCLOSES 7,437 PROTESTANT MINISTERS OPPOSE RECOGNIZING PEIPING

NEW YORK.—In a nationwide survey 7,437 Protestant ministers recently opposed United States recognition of Communist China and its admission to the United Nations.

Questionnaires were sent out to some 45,000 pastors of major Protestant denominations in this country. Of 8,572 replies, 963 approved China's recognition and United Nations entry, 172 expressed no opinion, and the remainder were opposed.

The clergy group, which originated the survey, said it was designed to counteract a proposal made by the Fifth World Order Study Conference last November in Cleveland that Red China be granted diplomatic recognition by the United States and admitted to the United Nations.

Sponsoring the conference was the National Council of Churches' Department of International Affairs but its pronouncements did not constitute an official policy of the council.

GOVERNMENT CRIPPLES CHURCH IN CHINA

(The following is a compilation of reports from the National Council of Churches. The sources are: Dr. Wallace C. Merwin, executive secretary of the China Committee, Division of Foreign Missions; Dr. Frank W. Price, director of the Missionary Research Library. Their sources included personal letters, the New China News Agency and China's only nationally distributed Protestant biweekly, Tien-Feng.)

A series of crippling blows has been dealt to Protestant Christianity in Communist China. Under pressure from the Peking Government, all denominations are being merged into a single church body, and a preponderance of local churches are being forced to close.

Involved are 16 principal denominations long established in the country, with a membership of nearly 1 million. Typical of local church closings was the recent shutdown of all but 12 of the 200 Protestant churches in Shanghai, while in Peking itself 61 out of 65 churches have been closed. These closed churches are being turned over to the Government as patriotic gifts, the reports indicate.

The measures are being carried out by the Three-Self Patriotic Movement Committee of Chinese church leaders, the only Protestant agency in the country officially recognized by the Peiping Government.

"By leaving the churches little choice except to join the Three-Self Patriotic Movement Committee," Dr. Merwin declared, "the Chinese authorities are succeeding in maintaining closer controls over the churches and their members. They have already acquired Protestant schools, hospitals and other institutions as 'patriotic gifts.' As a result, it is not so much a persecuted church as it is a captive church."

During the first 6 months of 1958, church workers underwent an intensive course in education for socialism as a part of a general thought-rectification campaign. Many rightists in the churches were exposed and a considerable number arrested. Among the many who refused to cooperate, Dr. Merwin cited a woman, the former president of a Christian college in South China, who is now scrubbing floors in that institution.

Congregations are constantly urged to carry out self-reform and to take an active part in China's giant leap forward. In inland towns, denominations have already merged into a single organization and church leaders everywhere are reportedly pledging wholehearted obedience to the Government and the Three-Self Committee. By holding joint services in a single building, the funds of the other churches are dedicated to socialist construction.

Under special attack now are freelance preachers, revivalists, and the steadily increasing religious gatherings in private homes, which are considered subversive.

In 1950, the year of the last count, Protestants numbered 903,805 active church members, perhaps 1,500,000 in the total community. The largest group was the Church of Christ in China, about 177,000. The Methodists reported 102,693, a few thousand less than the True Jesus Church, the second largest group. Lutherans and the China Baptist Convention numbered 65,000 each, the Seventh Day Adventists 21,117, and North China Congregationalists 18,235. Roman Catholic membership was estimated at between 2 and 3 million, including family members of all ages.

"Today," said Dr. Merwin, "Chinese Protestants are told that church divisions and denominational names are 'vestiges of western colonialism aimed to divide and rule'." To be truly independent and patriotic, they are advised, the churches must unify their forms of worship, methods of support and doctrinal creeds. This counsel is bringing such incompatible religious factions together that more and more church members are staying away from church. These latest actions are the first attempt to break denominational authority and bring all churches into a controlled ecclesiastical system. "It is also the first time," he concluded, "that Protestant congregations have had to surrender their properties and funds on such a large scale."

Two letters report the drastic changes taking place in Chinese Protestant churches.

"The first group of pastors and church workers have now finished their meetings after about 5 months," says the first writer. "There are many decisions, many restrictions. No one may teach or preach except those registered with the Three-Self Movement Committee and no services, prayers or Bible teaching may be carried out except in regular church buildings. Attendance has much fallen off, partly because so many work on Sunday—one of the latest resolutions is that services on Sunday must not be allowed to interfere with work.

"Many pastors and church workers are being taken into factories, the younger ones go out to farms. They are all having what they call the 'leap forward,' and everyone must work more, faster, better, and more economically. It is amazing what they have accomplished, working very hard often with only about 5 hours left for sleep."

A second letter:

"Mother does not always go to church on Sunday as the churches have now been joined together. The pastors who are not needed in the combined church are sent to work in factories or in the fields. And the church is not open much besides Sundays as the pastors have to attend political study meetings. The tension and fear of doing or saying something wrong is enough to wear you out."

A Star for Hawaii

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. CHURCH. Mr. President, sometimes a very few words depict the essence of a problem so clearly that comment upon the content is superfluous. Such is the very brief and to-the-point editorial urging Hawaiian statehood which appeared in the Idaho Falls (Idaho) Post-Register of February 5, 1959. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A STAR FOR HAWAII

Alaska is over the hurdle and is one of us. Now it's Hawaii's turn. Statehood for the islands, a pretty sturdy perennial before Congress, is about to enter the bill-drafting stage for the umpteenth time.

This year the odds run more strongly for it, though opposition still exists. Alaska has broken the ice and changed the flag.

Hawaii seems to present a more stable picture than in former years. Communist influence in unions appears to have waned, and that argument has faded in consequence.

With Alaska we abandoned the notion that only territory directly attached to the continental United States could be brought within the fold of States. Once we did that, then what difference whether the spread is 1,500 miles or 2,600?

By all the fair measures Hawaii is believed ready for statehood. The issue has reached the point where much further delay cannot be explained on reasonable grounds.

Recognition Is Given to Worldwide Travel Show at Bluefield, W. Va.

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. RANDOLPH. Mr. President, next Tuesday, February 17, the Bluefield, W. Va., Automobile Club will open its Worldwide Travel Show in the Bluefield Municipal Auditorium.

Mine has been a lively interest in the beneficial effects of travel, and I was privileged to issue a statement in connection with the forthcoming Bluefield Automobile Club travel show venture.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my statement to the sponsoring club.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I extend my congratulations to the Bluefield Automobile Club and its director of travel, James H. Cowan, for initiating the first Worldwide Travel Show in West Virginia. I am confident of the success of this venture. The Bluefield Automobile Club deserves the gratitude of the citizens of the Mountaineer State for taking this step to attract the attention of American travelers to the charms and beauties of our fair State.

The tourist industry offers one of the chief sources of potential economic development in the State of West Virginia, and the automobile clubs are to be commended for the part they are playing in stimulating its development.

But it is worth noting that the Bluefield Automobile Club Show is not limited by merely State or sectional interests. This exhibition is an appropriate expression of the growing interest of Americans in world travel itself, and it offers another link between us and our neighbors in other lands.

We Americans are a mobile people, and the urge to be somewhere else will hold a continued fascination for innumerable millions of folk during this next record travel year.

The once-popular song words, "I was born to wander, I was born to roam," continue to be lived by vacationers and tourists who are lured "to the far-away places with the strange-sounding names."

We Americans who live and work at such a rapid pace can find in travel refreshment for the body and renewal of the lagging spirit. We may be mindful as well of the inspirational and spiritual values that flow from travel and the act of occasionally drawing away from our daily preoccupations. For it was the Master of all mankind, who, when the pressures from expectant people tapped too deeply His earthly resources, whispered to His disciples: "Come apart, and rest a while."

Travel, however, fulfills more than the needs of the individual alone. For the American traveler has become his country's main diplomat abroad. And as a nation we are in large measure judged by our neighbors in other lands on the basis of the behavior of the American tourist. Thus, the modern conveniences of travel—the jet airliner and the luxury ocean liner—will not alone bring about a world community of neighbors. There must be global-mined people traveling, men and women disposed to appreciate and understand the customs, cultures, and the philosophies of the countries they visit.

The late Irish poet, George Russell, predicted in the 1920's that the United States would have an historic role to play, because "Americans have been the first people to adopt a planetary viewpoint." Though Russell's statement was contested by those who worried about America's apparent drift to extreme isolation, he insisted that he could detect signs that we were preparing to assume planetary responsibilities. He said, "You Americans have a vision about this planet that no other nation has ever had."

We need to understand that our 177 million citizens, comprising only 10 percent of the non-Soviet world, control over half of the world's production of goods. Therefore, our policies and our actions affect not only our own national destiny, but that of the world at large. We are challenged to thinking in world terms. We have now reached the point where we must assume the same kind of responsibility in world affairs as we are accustomed to assume in our individual affairs. If we falter, the free world falters. If we are firm, the free world is firm.

A Children's Birthday Party With Emphasis on Giving Instead of Getting

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 12, 1959

Mr. YARBOROUGH. Mr. President, particularly for youngsters, receiving gifts is more than half the fun of a birthday party.

However, when the birthdays of two young ladies in Forth Worth, Tex., came this year, they gave a gift instead of taking for themselves.

There is some concern these days over the rise of juvenile delinquency and many have commented on the lack of civic spirit of today's young Americans. I have always maintained that the vast majority of young people in the United States not only stay out of major trouble and are therefore never mentioned in news reports, but they are actively working to be good citizens now and training to be better ones later. Seldom do we hear of the young people who do volunteer work with churches and hospitals, work with worthy charity solicitations and perform other unselfish acts that display good citizenship. I believe the spirit of giving in asking that, instead of birthday gifts for them, the money be given to a fund to buy milk for needy children, of Misses Sheryl and Brenda Palmer is a fine example of the spirit of today's young people.

Mr. President, in recognition of these two young ladies' unselfish action and as a salute to the other fine work being done quietly by today's young people, I request unanimous consent to have printed in the Appendix of the RECORD an article by Catherine Gunn which was published in the Fort Worth Star-Telegram for Sunday, February 8, 1959, under the heading "Party Given by Sisters Helps Fund."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARTY GIVEN BY SISTERS HELPS FUND

(By Catherine Gunn)

Fort Worth children in need of milk were remembered when two sisters recently celebrated their birthdays.

Sheryl and Brenda Palmer, daughters of Mr. and Mrs. Max S. Palmer, of 2908 Cedar Park, asked their friends to help other children instead of bringing presents to their joint birthday party.

Contributing $6.55, which went to the Star-Telegram milk and ice fund, were Cathy Leggett, Janice Morgan, Paula Daniels, Debbie Thomas, Delane Mauldin, Linda Ard, Lavon Walker, Marilyn Walker, and Carol Rogers.

Sheryl's ninth birthday was January 31. Brenda was 7 on January 30.

Business Forecast by C. B. Stephenson, President, First National Bank of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 12, 1959

Mr. NEUBERGER. Mr. President, on January 5, 1959, Mr. C. B. Stephenson, president of the First National Bank of Portland, in my home city, made his annual report to the Portland Chamber of Commerce on business conditions.

Mr. Stephenson is particularly afraid of mounting and continuing inflation, a fear which I share. Inflation is especially cruel to retired men and women on fixed incomes, such as social security and annuities.

While I do not agree with all the conclusions advocated by Mr. Stephenson, he has presented an important and significant point of view which merits inclusion in the Appendix of the RECORD, so that Members of the Senate and the House may be familiar with his recommendations.

Mr. President, I ask unanimous consent of my colleagues for that purpose, and I trust it will be granted.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

HOW FAR CAN WE GO?

(Annual business forecast presented by Mr. C. B. Stephenson, president of the First National Bank of Oregon, to the Portland Chamber of Commerce, January 5, 1959)

The year 1958 turned out pretty much as predicted. If forecasts were wrong, they were wrong in the areas of timing and the depth of our recent recession. Only a few prognosticators saw the beginning of the upturn in the spring of the year. Most took the more cautious approach and predicted midyear as the turning point.

Once under way, the rebound was sharper than experienced in previous recession periods; and as we begin the new year it would appear that this momentum will continue. There is some historical pattern for this. The record shows that these upward swings carry on long enough to include a span of the 12 months that lie ahead.

Most everyone is aboard the good-business-outlook bandwagon although there are many economists who could not be classified as highly enthusiastic. Those less optimistic put normal-size question marks after housing and automobiles and smaller-size question marks after inventories and plant expansion.

Reasons for optimism are numerous. It is rather clear there will be a continuation of consumer spending. How much of the consumers' dollar will go into consumption items and how much into durables remains to be seen. Both areas of spending should be up. The same holds true of expenditures for services.

The automobile business should do better. It certainly has had a bad time. Just when it started to get off the ground it was plagued with strikes.

Government spending can be expected to keep up its steady march. A hundred speeches of this kind could be devoted to that subject.

Inventory liquidation continued in 1958 and chances are there will be restocking before the year is out.

Estimates on the gross national product vary from $460 billion to $480 billion for the year ahead. This will compare with about $435 billion for 1958.

These estimates all confirm the somewhat monotonous predictions of good business ahead. Perhaps some of you will say that you won't mind that kind of monotony. It doesn't take any seer to read these signs; and with the strong note with which many segments of business ended 1958, one is on pretty safe ground to forecast a continuation of the recovery.

There continue at work many major forces, however, that give one concern when he looks beyond the immediate future.

I think on this occasion I will devote most of my time to some observations on long-range problems. Before doing so, however, I will speak specifically of one or two significant events of 1958 and perhaps observe more particularly regarding some of the situations within Oregon that would have meaning to you on a more individual and day-to-day basis.

What has sustained our economy here in the State in the last half year has been improvement in lumber prices, which firmed up again in December after a dip between then and early fall. The lumber business, as you know, is closely tied to housing, and housing is closely tied to credit. Credit

opened up as money eased but is still the No. 1 problem in housing. I think credit will be forthcoming, but at somewhat higher prices. I believe one of the first things to which the Federal Congress will apply itself is legislation in the area of housing. So housing starts should be greater in number in 1959, which is particularly meaningful to us Oregonians, although there appears to be no unanimity of opinion on that subject.

Construction, of course, played a strong part, and projects presently under way and those on the drawing boards will maintain a high level of employment in that industry for 1959.

A high level of farming income also helped last year. Crops were good. Prices were up only moderately.

Our centennial celebration will attract thousands of tourists. And that industry—our third biggest—should have a banner year.

We start the year with a new Federal Congress and a new State legislature. While there are carryovers in both bodies, the number of new faces likely will be greater than at any time in history.

So, again, when one takes a look at the longer-range economic picture, the first place to start is with the legislators, both State and national. What they do in coping with some of the basic problems that confront us will determine very much the long-range economic well-being of us all.

Locally the voters indicated their attitude by turning down everything that had to do with spending money. Even measures on the ballot such as for an increase in veterans' loans by the State were rejected. The State legislature will confront that declared attitude of the people and also have before it a very good report prepared by Dr. Sly and his associates on the tax situation in Oregon.

The National Congress will confront various demands that will add up in increased spending. The President has presented a budget that balances at the figure of $77 billion. Increases in the gasoline tax and in postal rates were recommended by him. It is obvious to everyone that we can't have another $12 billion deficit. And it is equally obvious that over a period of time we cannot permit the forces of inflation to keep up their persistent inroads on the purchasing power of the dollar.

Inflation is something about which everyone talks but does little. Some economists say it isn't all bad. And some go further to say any chance to curb it is remote. However, it is hard to accept the latter philosophy. Inflation is an insidious thing. In small doses it is pleasant but in large doses it is fatal.

We have just witnessed the further devaluation of the franc by the De Gaulle government. Things had gotten pretty well out of hand in France, as everyone knows. How well the people of that country will accept an austerity program remains to be seen.

Along with that devaluation came an adjustment in other currencies of the European group. This could have limiting effects on our foreign trade. Already the industrial development of many countries has begun to have its impact in world trade. An example of that is in the automobile business. Almost overnight our automobile industry has shifted from a net exports to a net imports basis. Imports now outnumber exports three to one.

Beyond that there has been some shift in general international trade against us, all at a time when the forces of inflation are still proceeding. This has some Europeans using the term "soft" dollar. The term "flight from the dollar" has appeared here and there.

Certain it is that markets we used to consider secure are threatened not only with competition from countries within the Western bloc who have learned a good deal of our know-how, but with the continuing threat of Russian competition at prices we cannot meet.

While an increase in the price of gold is not likely, I remind you that there was movement of gold out of the country during the past year and that we are being looked at very closely by our overseas friends regarding what action we may take to retard further decline in the value of the dollar.

Perhaps while we have roughly 4 million unemployed and some idle plant capacity, these influences will tend to stabilize prices.

However, the matter of inflation cannot be dismissed that easily. Somehow we have to get over the idea that we can get more out of our economy than we put into it. Responsibility for controlling inflation, it seems to me, rests squarely with the Congress. The executive branch of the Government cannot spend anything the Congress does not authorize and appropriate.

A significant remark was made a few months ago by Representative CLARENCE CANNON, of Missouri, chairman of the House Appropriations Committee, when he told his colleagues, "When you go home at the close of this session and your people complain about the high cost of living, do not pass the buck. Tell them the facts. Tell them the national debt is higher because you voted to make it higher. Tell them the dollar has gone down and the cost of groceries has gone up because you voted to depreciate the dollar and voted to raise prices."

Unfortunately there do not appear to be many Congressmen as candid and forthright as Representative CANNON. I took his remarks from a speech made recently by James F. Oates, Jr., president of the Equitable Life Assurance Society of the United States.

Mr. Oates went on to say that the statements of Representative CANNON "place responsibility squarely where it belongs—with the Congress of the United States. It is high time that we stop fencing with windmills and concentrate our attention on the political scene where the malignancy of inflation originates * * * It is high time for those of us in the business and financial community to attack the problem of inflation at its source, first by making certain that all Congressmen undersand fully the inflationary implications of their day-to-day legislative activities and, second, by offering them vigorous support for strong public policies to preserve the integrity of the dollar."

That is forceful language. How can Mr. Oates, or I who quote him, produce not only the depth of interest but action as well on the part of us all? Many are inclined to shrug off the possibilities of doing anything with the Federal Congress.

Some say that since 60 to 70 percent of our budget goes for defense there isn't very much left to work on. But I say to you, as a businessman, that if we were to take that attitude to our respective businesses we would soon be in financial trouble. All of us have an area of fixed expense that we cannot avoid. It is in the area of controllable expenses where we have to make savings in order to produce a profit—and without profits our economy would be in a sad state indeed.

What can be done? It is not the kind of issue that prompts a march on Washington. Housewives will not parade the streets with banners reading "Stop Inflation."

One simple way, some say, would be to provide the President of the United States with stand-by controls which could be invoked if matters got out of hand. If labor unions set about for a hefty increase in wages, a control could be imposed. The same could be done with regard to a business that proposed a hefty price increase.

But would that be the way to do? If we were ever to establish price controls by legislative action and executive decree, would we ever take them away again? Maybe. True, we did have controls during wartime in the field of installment credit. But as a fixed instrument of national policy, would controls be in the democratic tradition? I don't think so. What then can be done?

One suggestion I have to make to you, unpalatable as it may be, is that no increase in spending be undertaken without a comparable increase in taxes.

Another suggestion is that the new Congress revise the Employment Act of 1946 so as to include as an objective reasonable stability in the value of the dollar. The act now makes it a policy for the Federal Government to promote maximum employment and production, and foster free competitive enterprise and the general welfare. This law is supposed to reflect and guide Congress' general economic philosophy. As it stands, it encourages the idea of maximum employment at any cost. It does not carry the implication that inflation is bad, as is unemployment. As you probably remember, the Employment Act was passed at a time when the greatest fear was of a serious postwar recession. Little consideration was given to what actually has happened—a postwar boom and inflation.

William McChesney Martin, Jr., Chairman of the Federal Reserve Board, on returning from a recent world tour said he ran into this question: Since America is the richest country in the world, it can afford whatever amounts are needed for the national defense of the United States and for social benefits the American public demands as well. Since Americans can clearly afford these expenditures, why don't they pay for them? That is, why don't they pay in taxes or reduce other programs instead of giving I O U's and simply printing more paper dollars?

He stated further that he was amazed to see how closely our budgetary developments were being followed in such remote areas as Thailand and Hong Kong, and how many people there knew our precise budget figures better than most Americans. He said their interest is stimulated by personal experience. They remember the stern lectures America has given foreign countries about their need to have the moral fiber to put their finances in order. He continued, it is only natural that foreign countries should be wondering if we have that same moral fiber to take the medicine we have so freely prescribed for others.

When the British, a year ago, faced a crisis of sorts, they took the bull by the horns. They applied a real stiff dose of old-fashioned monetary medicine. The discount rate was raised to 7 percent and restrictions on imports imposed. They had courage and it paid off.

America needs to pause and take a look at itself. We have had a long period of prosperity, interrupted of course by some short-lived recessions. During that period of boom the Federal Government was barely able to make both ends meet during the best of years and even with the highest tax rates in peacetime history.

We have accepted the theory of enormous Government spending as not only an essential element of modern life but as the very lifeblood of our prosperity. Business, the farmer, and the individual have all sought to lean on the special crutch of Federal aid. Even defense spending, which absorbs some 60 percent of all Federal outlays, is treated as a prop to prosperity rather than, as it really is, a necessary but horrible burden on the economy.

And so, if America is at an economic crossroads, we as voters, as well as the Congress, are to blame. More inflation will only put us on an endless merry-go-round which will some day burst under internal stresses. This is our clear danger.

So, as I conclude these remarks, I urge upon each and every one of you the very great importance of developing a dedicated interest in national affairs with particular emphasis on the vital matter of inflation. It could be the most important New Year's resolution you have ever made.

Flexibility in Approach to West Berlin Problem

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. CHURCH. Mr. President, Mr. Walter Lippmann's column in the Washington Post of February 10 emphasizes the importance of flexibility in our approach to the problem of West Berlin. Mr. Lippmann's thoughts, it seems to me, are of value to us and I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ON FLEXIBILITY

(By Walter Lippmann)

The new word in western diplomacy is flexibility. It has become fashionable because just under the surface of the official formulae there is going on in Washington, in London, and in Bonn a reappraisal of the German problem. It is a wholly false picture of what is going on to suppose that the issue in this reappraisal is between surrendering and standing firm, between appeasement and principle, between being soft and being strong.

The real issue, to which the reappraisal is addressed, is whether to stand pat on positions that have become untenable or to move to new positions from which the Western Allies can recover the political initiative.

Let us take Berlin for a concrete example, remembering, of course, that it is only the focal point of the whole larger German problem. At present there are two streams of traffic between West Berlin and West Germany. One, which is much the larger, is civilian traffic. This traffic is regulated by an agreement between the West German Government and the East German Government and it is by this traffic that the civilian population of West Berlin lives and does its business. The other traffic is military. It is between the British, French and American forces in West Germany and their garrisons in West Berlin. This traffic is regulated by allied agreement with the Soviet Union.

Moscow has now said that if there is no other negotiation about the status of Berlin, it will on May 27 turn over to the East German Government its authority over the military traffic. If this is done, it will mean that at the checkpoints on the highways and railroads and canals Allied military traffic will be met by East German rather than by Soviet officials.

The immediate and specific questions about Berlin are: (1) What will we do when we meet these East German officials; and (2) what will the East German officials do about our military traffic?

This is where the difference between an inflexible and a flexible policy shows itself. The inflexibles say that we do not recognize the East German Government, and that we cannot, therefore, allow them to have anything to do with our traffic to Berlin. The flexibles reply that as long as no one interferes with our traffic to Berlin, it does not make any difference whether the official who stamps the papers wears an East German or a Soviet uniform. They add that if Dr. Adenauer can allow East German officials to stamp his papers for the civilian traffic, he is in no position to insist that President Eisenhower be more inflexible than he is himself.

In speculating about the use of force to keep open access to Berlin, the first question to be decided is whether we ought to be ready to go to war if we meet an East German official at the checkpoints on the highway. Do we fight because the official who wants to see the papers carried by the truck wears an East German uniform, or do we fight if he closes the highway? The flexibles say that a blockade of West Berlin is a fighting matter but that whether the official is East German or Soviet is not a fighting matter.

The flexibles say, moreover, that to announce you will fight about the official at the checkpoint is not a strong policy but a foolish one, and because it is foolish, it is weak. It is weak because the people of the Western World cannot conceivably be united to fight a world war on such an idiotic issue.

As we know, the mayor of West Berlin, the highly esteemed Willy Brandt, can be counted among the flexibles. He has suggested that the East German officials might be recognized as agents of the Soviet Union. An easier, and as good a way, to accomplish the same result would be to ask a Soviet guarantee of access to West Berlin until a new status can be arranged by negotiations covering the two Germanys and the two Berlins. What we want is that West Berlin should not be blockaded and strangled and that Berlin should become again the capital of a reunited Germany.

This flexible position is a strong one. We stand firm on the substance, which is that West Berlin is not to be blockaded. We are indifferent to the formalities which do not matter as long as access to West Berlin is open. We keep alive our real objective, which is not to maintain West Berlin as an island within East Germany but to restore its status as the capital city to which all parts of Germany must have equal access.

It may well be that the Soviet Union will refuse to guarantee access during the period, which would have to be a long one, when the whole German problem is being negotiated. If that is what happens, the Soviet Union will find itself in a dangerous position. It will have given the East Germans a free hand to impose a blockade, which would be an act of war, and it will be committed to come to the defense of the East Germans if they provoke a war.

This is a much bigger gamble than Moscow has ever taken before, and we need not jump to the conclusion that it will take the gamble now.

"Abraham Lincoln," Poem by Herbert L. Oberer

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. LAUSCHE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an original poem, by Mr. Herbert L. Oberer, of Youngstown, Ohio, which is extremely appropriate on this day, in recognition of the 150th anniversary of the birth of Abraham Lincoln.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

ABRAHAM LINCOLN

Abraham Lincoln—in prose and in rhyme
His praises will echo through unending time
And the things that he did and the things that he said,
Throughout all the world have been heard and been read.
When chosen to pilot our land's ship of state
The perils he faced were both many and great:
A nation divided by cruel civil war
Was restored, through his efforts, to union once more.

Abraham Lincoln—with sorrows beset;
With wisdom and patience his trials he met.
Though heavy the load he was called on to bear,
He never gave way to the gloom of despair.
In the hearts of all mankind secure is his place
For he loosened the shackles that bound a whole race.
In his life's darkest moments he never lost sight
Of the power of mercy to kindle a light.

Abraham Lincoln—his well-earned renown
Was further exalted by martyrdom's crown.
Derided by many political foes,
Unafraid and undaunted, in stature he rose,
And those who had snubbed him acknowledged his worth
When his great, benign soul winged its way from this earth;
Abraham Lincoln—how solid his fame!
Abraham Lincoln—how hallowed his name!

—*Herbert L. Oberer.*

"I Will Support and Defend the Constitution"

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the September 1958 issue of Navy. This article was written by an outstanding legal scholar and successful practicing attorney and an experienced naval officer, Comdr. Robert W. Collins, USNR, of Yazoo City, Miss.

This article, entitled "I Will Support and Defend the Constitution," is exceedingly well written; and I call it to the special attention of all those who are interested in a brief, but detailed, discussion and study of this most precious document, the Constitution of the United States.

As Commander Collins points out in this article, the Constitution is the guiding rudder of our Nation.

Our Nation should heed the suggestions of outstanding men like Commander Collins endeavoring to preserve and foster respect for our Constitution. I commend Commander Collins for his excellent presentation and recommend it

to be worthy of the special study and attention of all Members of Congress as well as all other citizens of our great Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"I WILL SUPPORT AND DEFEND THE CONSTITUTION"

(By Comdr. Robert W. Collins, USNR)

When I accepted this invitation to give a message on appreciation of the United States Constitution from the viewpoint of a Naval Reserve legal-specialist officer, I did so in serious thoughts and reflections on that day so many years ago when I was first commissioned in the U.S. Naval Reserve and swore "that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same."

In celebrating the 171st anniversary of the adoption of the United States Constitution, we are paying just tribute to the very foundation of our Government, that is, the Constitution itself.

On the 17th of September 1787, a convention of delegates of the people of the United States, selected from the original 13 States, adopted and made public that document, which consisted of a preamble and seven articles expressed in the language of the common law.

When accepted and ratified by those States on behalf of the people of these United States, our charter of Government came into being.

It should be remembered that the Constitution at that stage in American history was much clearer in its definition of responsibility and its imposition of obligation on its citizens and member States than at a shortly later date in our history.

Four years later there came into force and effect the first ten amendments, commonly called then and at all times since, including the present moment in history, the Bill of Rights. These early amendments did not alter in any manner the form of our constitutional government. However, they did write into the charter itself certain rights, largely of the individual, guaranteed to them by their Government in this basic compact of their own creation.

Perhaps the Constitution was better understood in its terms and in its meaning at the time of its adoption than it is presently understood, although thoughtful Americans have at all times recognized that the obligations of citizenship are implicit and inherent in the Constitution. To support and defend the Constitution is part of the oath required in all services, but it is a definite obligation on all citizens with or without a formal oath. The struggle to maintain the Constitution of the United States is an unending one, and we would do well to remember the old adage that "eternal vigilance is the price of liberty."

As we take time from our ordinary pursuits to honor such an event as the adoption of our Constitution, it is well for us to consider whether or not the American people had the same appreciation then as we now have of this basic instrument of our lives and Government.

The people did understand the document, but the degree of appreciation and support was far from what we now have. History teaches us that only 55 of the 65 delegates of the Constitutional Convention attended that Convention. Only 12 of the 13 Original States were represented in the deliberations. Of the delegates in attendance participating in the drafting of the Constitution, 16 failed or refused to sign the document at the time of its adoption. When the secrecy was broken and the proposed plan was published, a tempest of debate over its merits began to blow. Critics fell upon it. Scarcely a single sentence or line of the Constitution escaped attack. While this public debate over the plan was in full course, conventions duly elected in the States assembled to pass upon it.

Within 3 months three States ratified it, Delaware and New Jersey and Pennsylvania, after a hot contest. Early in 1788, Georgia and Connecticut added their approval. By a close vote Massachusetts accepted it in February. Maryland and South Carolina soon followed. The New Hampshire convention, at first opposed or hesitant, decided favorably before the end of June. Nine States, the number necessary to make the Constitution effective and binding between the States so ratifying same, had now made their fateful decision. Two large States wavered. In New York and Virginia the result was long in doubt, and it was not until the late summer of 1788 that New York and Virginia ratified on the same day. Two States still remained aloof. North Carolina withheld its approval until November 1789, and Rhode Island, which had sent no delegates to the Convention, would have nothing to do with the new Constitution until the spring of 1790, when it added its own ratification. Upon that event the full acceptance of the charter was accomplished. It had stood the test of scrutiny and searching criticism and survived. Its great ideal, its great body of principles, its great hope for the human race then became the basic charter of the United States, binding and effective at the same time on all of the people in all of the States of our great Nation.

If proof be needed that the Constitution was clear and explicit, permit me to show briefly how that document provided the basic authority for the existence of that department of the Government in which we of the Navy League have particular interest. The Department of the Navy exists due to the following items:

Article I, section 8 provides:

"The Congress shall have power—

* * * * *

"(13) to provide and maintain a navy;

"(14) to make rules for the government and regulation of the land and naval forces;

"(18) to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

The only other reference to the Department of the Navy in the Constitution is contained in article II, section 2(1), which provides: "The President shall be Commander in Chief of the Army and Navy of the United States."

It may be interesting to note that during its first years the Navy operated without the benefit of being a separate department. It was a great soldier-statesman who urged the creation of a permanent Navy and the founding of the Department of the Navy which was accomplished April 30, 1798. Washington's recommendation hereon contained the following language which we cherish: "To secure respect of a neutral flag requires a naval force, organized and ready to vindicate it from insults and aggression. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violations of the rights of the neutral party as may, first or last, leave no other option." The prime mission of the Navy Department was then, as it is now, to assist the people of the United States to provide for their common defense and this is one of the people's prime obligations under the Constitution.

When the Constitution was adopted our Nation was living in a period described at that time as "These are the times that try men's souls." There have been various times during our history when the expression would have been appropriate and it is particularly appropriate today. We are fortunate that the framers of the Constitution were moralists. They were to a man moralists to the degree that they held that every right has its corresponding responsibility. They knew that benefits and rights flow from the fulfillment of just and honorable obligations.

The Constitution as framed by the great convention and reluctantly and somewhat grudgingly ratified by the American States was at the same time the wisest and the noblest assertion of constitutional morality in the annals of statecraft. If the Founding Fathers were dubious of the future of that Constitution, it was not they questioned its wisdom so much as they doubted the willingness of successive generations of American citizens to accept its wise restraints and fulfill its implied and inherent obligations. Washington himself was very reserved as to the merits of the Constitution, but as months passed he came to feel that the result had been wiser than he had anticipated. After stating that the powers of Government had been wisely distributed so as to prevent any undue concentration of power in any one man or body of men, he stated that the new Government would not be other than good, "so long as there shall remain any virtue in the body of the people."

It is recorded in our history that the great delegate from Pennsylvania, Benjamin Franklin, with tears in his eyes implored his fellow delegates to sign the compact. He said in an answer to those who saw fatal objections in the Constitution: "There is no form of government but what may be a blessing to the people if well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other."

In these statements, Washington and Franklin were giving similar advice and warning of an earlier statesman of our colonial era. It was William Penn who expressed the same principle in this simple analogy. He said: "Governments, like clocks, go from the motion men give them; and as governments are made and moved by men, so by them they are ruined, too. Therefore, governments depend upon men rather than men upon governments."

Our Constitution, as a scheme of Government, is a Government under law, and not under men. Nevertheless, our Government depends upon its citizens to fulfill their individual responsibilities in the manner set forth in the precepts handed to us by those great early Americans we have mentioned. The Constitution is the organic expression of our national unity and has brought unbounded blessings to the millions of Americans that have come and gone.

The great English historian, Macauley, nearly 70 years after the adoption of the Constitution, made this studied criticism: "Your Constitution is all sail and no anchor." The terms of that critique stimulate my interest. What that great writer probably had in mind was the suggestion that no written document could wholly restrain the excesses of democracy. His underlying suggestion is not incorrect, but possibly it would be more accurate to State that the Constitution has proved to be more of a rudder than an anchor. No state of human society is wholly static; there was no occasion for the Constitution to be an anchor. Its purpose was, and is, to guide rather than to hold.

Another great and disinterested witness of American institutions rendered his opinion on the occasion of the centennial anniversary of the American Constitution. Gladstone, the English statesman, wrote the committee in charge of that celebration: "I have always regarded that Constitution as the most re-

markable work known to me in modern times to have been produced by the human intellect, at a single stroke, so to speak, in its application to political affairs." We have reason to consider that he believed most strongly that opinion, for earlier the same Gladstone had written the following: "The American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man."

We Americans and generations which follow us will do well on occasions such as this if we will remember the advice of the ancient proverb in our actions in relation to the Constitution of the United States: "Remove not the ancient landmark, which thy fathers have set."

The Multitude of Government Reports

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. LAUSCHE. Mr. President, unquestionably many of my colleagues have been receiving much correspondence from small businessmen complaining of high taxes, Government waste, and unnecessary expenditures. Admittedly, until the budget is balanced and the huge multibillion-dollar deficit is reduced, there can be no marked degree of tax relief. Congress and the agencies of the Federal Government however can, right now, provide some relief for these businessmen and at the same time reduce Government spending by calling a halt to the ever mounting volume of paper work imposed upon business.

Mr. President, I present the views of the editor of the Rittman (Ohio) Press on this subject, so ably stated in the editorial which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO THE PRESIDENT: THERE ARE A LOT OF MAD AMERICANS

Mr. PRESIDENT: There are a lot of Americans who are just plain mad at the multitude of Government reports that have to be made out. It seems that every year they are getting more burdensome than the year before. Just ask the average businessman. He'll tell you how he feels. He is just loaded down with work in getting reports out for this department and that department.

The Government bureaucrats have learned the art of the crackdown and threats. Every report carries a deadline and a threat of a fine plus interest.

Many small businessmen have been holding up their hands in disgust. They have their wits scared out of them when a Government agent darkens their doorway.

These departments have been able to raise their budgets so they hire more agents to harass business firms.

So you lean back in your chair and say, "Why doesn't the businessman comply?" He does or else. But this working for the Government takes a lot of time and adds to the cost of doing business.

Besides business firms have to collect sales taxes for the State and they just about get their heads knocked off if they innocently make a mistake in forgetting to charge a tax on one out of thousands of sales. Or the Federal agents swoop down on the little guy who doesn't withhold money for income taxes from an employee.

Why it's getting to be criminal the way the little man is being pushed around and made to collect money from his employees and customers, which a self-respecting merchant never would do.

But the little businessman doesn't talk out loud because he's afraid of two things: Either he is afraid that these Government agents will pull further reprisals on him, or he is afraid inwardly that to protest might seem to be unpatriotic. So, he goes along and submits meekly like a Russian slave.

If he gets a heavy fine for being late with a Government report, he meekly pays it and keeps his mouth shut. He's learned that there is not much use in writing to Congressmen or Senators, because they don't get anything done to lighten up on the load or they are too busy serving on national committees drafting laws to spend more of our tax money.

Mr. President, we need relief from this type of badgering and harassment which in the past we have associated only with dictatorships.

Attacking Segregation in the North

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 22, 1959

Mr. MULTER. Mr. Speaker, no one can make the assertion that we have true equality for all races in the North. However, I am pleased to state that we are attacking the problem with a view to its solution. I hope that before long we will be able to say that true equality exists.

In this connection, I commend to the attention of our colleagues the following article written by Naomi Levine, program director of the American Jewish Congress. Miss Levine's article appeared in the January 19, 1959, issue of Congress Bi-Weekly:

ATTACKING SEGREGATION IN THE NORTH

(By Naomi Levine)

On December 15, 1958, Justice Justine Wise Polier issued a decision in the domestic relations court of New York City in a case involving de facto segregation in the New York public schools, that is destined to become a major contribution in the struggle to achieve genuine equality in education for all children, in the North as well as in the South.

In a sense this case began 2 years ago with the adoption by the New York City Board of Education of six reports submitted by its commission on integration, which conducted a series of studies to investigate the charges of the Public Education Association that the schools in New York City were in fact segregated. The reports established the fact that public schools in the North were indeed segregated, notwithstanding the Supreme Court decision outlawing segregation in public schools. These segregated schools were, moreover providing inadequate and unequal educational facilities. Thus the reports sustained the charge made by the Public Education Association that the schools in New York City were not only separate but unequal.

The reports also contained detailed suggestions for eliminating segregation and for improving the curriculum, facilities, and staff of the segregated schools. While recognizing that segregated schools in the North are largely a consequence of residential segregation, the reports pointed to techniques that can be used to integrate these schools despite this factor. For example, the zoning report, while recognizing the problem of schools built in the heart of segregated residential districts, suggested techniques of rezoning, permissive transfers, bus transportation, new site selection, etc., to promote integration despite the segregated housing patterns.

The other reports were concerned largely with equalizing educational facilities for the segregated schools. The board of education and the organizations that supported the integration reports held "that improved zoning procedures, however effective in achieving more racially balanced schools, will fall short of the board's stated objective regarding integration unless equal concern and direction is given to teacher assignment, improved facilities, curriculum, proper guidance, and educational stimulation."

One of the major problems in implementing these reports concerned teacher assignments. The teacher assignment report stated simply that the needs of the children must be given preference over the needs of the teachers. As soon as this principle was announced teachers voiced loud opposition. They made it clear that teaching in the difficult schools was an unpleasant and trying experience, and they insisted on their right to choose the schools in which they wanted to teach. These vehement protests had their effect. The board of education refused to implement or even interpret any part of the teacher assignment report in a way that might suggest compulsory assignment. Instead, it concentrated its efforts on recruiting volunteers for these difficult schools. To date, the program of volunteer recruitment has been a dismal failure.

In fact, it is no exaggeration to state that the implementation of all the six reports has been profoundly disappointing. The board of education has refused to take any major step to put into effect the basic recommendations of these reports. No effort has been made to develop a comprehensive zoning plan aimed at the eventual elimination of de facto segregation. Only a meager effort has been made to improve the physical plants of the segregated schools. No real guidance program and educational motivation program has been developed to raise the academic level in the segregated schools. And no real effort has been made to improve the quality of the teaching staff in these schools.

It is no wonder that organizations and individuals which praised the board of education when it adopted the integration reports have become sharply critical. More important is the impatience of those parents whose children are attending the segregated schools and are receiving inadequate and unequal education. Several of these parents during the past year have picketed the segregated schools; others have refused outright to send their children to these schools. Several brought suits against the board of education charging discrimination and inequality; and still others have been brought into court by the board of education on charges that they willfully have kept their children out of schools. It was such a case that was presented to Justice Polier.

The facts in the case are simple. Two sets of parents, Mr. and Mrs. Stanley Skipwith and Mr. and Mrs. Charles Rector, refused to send their children to Junior High Schools Nos. 136 and 139 on the ground that these two schools offered inferior educational opportunities as compared with those offered in the schools whose pupil poulation was largely white. They asserted that this inferiority of educational facilities was caused by two conditions: de facto racial segregation and discriminatory teacher staffing. Finally, they contended that as a consequence of the situation in the two schools

the children attending them were being denied equal educational opportunities in violation of the equal protection of the laws guaranteed by the 14th amendment of the Constitution.

The board of education argued that these constitutional objectives were not properly before the court and must be addressed to the commissioner of education. The court held, however, that it had jurisdiction to consider the constitutional issues involved in the case, stating: "The board of education contends that one arm of the State—this court—must blindly enforce the unconstitutional denial of constitutional rights of another arm of the State—the board of education. Such a proposition is abhorrent to the American doctrine of supremacy of the law * * *."

The court found that de facto racial segregation exists in the junior high schools of New York City. The 2 schools involved in the case had a student population of 100 percent Negro and Puerto Rican. There are 7 additional junior high schools in New York City in which the student population is 95 percent Negro and Puerto Rican. In 40 junior high schools the student population is 95 percent white. Among the 127 junior high schools in New York City there are 16 schools with more than 85 percent Negro children and 52 schools with more than 85 percent white children. School segregation, the court observed, decreases the motivation of minority children and impairs their ability to learn. The court cited Dr. Kenneth Clark, distinguished psychologist and social scientist, who said:

"It is my considered judgment and opinion as a consequence of extensive study of segregation in schools, both in those regions of the country where segregated schools were maintained previously by law and in regions of the country where segregation in schools exists as a consequence of residential segregation or mores, that the segregated schools and the general characteristics usually found associated with the segregated schools depress the ability of children to learn, as reflected in low achievement scores, in low IQ scores, to the extent that these IQ scores are the result of what the child has or has not been taught."

The court found, too, that discrimination in the staffing of the segregated school does exist, that schools attended by Negro and Puerto Rican children are taught by less qualified teachers, and that such children, as a consequence, suffer educational disadvantages. The court noted that as of September 11, 1958, the schools with 85 percent Negro and Puerto Rican children had an average percentage of vacancies of 49.5 percent, while the percentage of vacancies in schools with 85 percent white children was only 29.6 percent. Moreover, a far greater percentage of positions in the segregated schools were filed by substitute teachers—not qualified licensed teachers.

Responding to an observation made by a school official that the board of education had no power to transfer licensed teachers, the court pointed out that the report of the commission on integration, adopted by the board of education in 1957, stated unequivocally that teacher assignment should be based on the needs of the schools rather than the preferences of the teacher. The board has no right to permit teachers to choose the schools in which they want to teach. The assignment of teachers is a governmental function and cannot be delegated to the teachers themselves. The court stated:

The board of education can no more plead not guilty than could the police commissioner if he allowed patrolmen to choose not to accept dangerous or unpleasant assignments.

Finally, the court held that the board of education has the constitutional duty to provide equal educational facilities for all the children of this city. Obviously it is not the duty of the court to decide how the board of education should achieve this; these are educational problems which the board must deal with. But they are no more difficult than the problems faced by cities like Washington, D.C., Baltimore, and Louisville, which have changed from segregated to desegregated school systems:

"Here, as there, determination, resourcefulness, and leadership can bring the situation in the New York City school system into line with the constitutional guarantee of equal protection of the laws. Until then, the board of education has no moral or legal right to ask that this court shall punish parents, or deprive them of custody of their children, for refusal to accept an unconstitutional condition which exists in the schools to which the board has assigned their children.

"I hold the defense on grounds of inferior educational opportunities in those schools by reason of racial discrimination to be established and to bar an adjudication of neglect.

"These parents have the constitutionally guaranteed right to elect no education for their children rather than to subject them to discriminatorily inferior education."

The implications of Judge Polier's decision are plain and should help to clear the confused atmosphere surrounding the problem of segregated schools. First, she makes it clear that the board of education in New York City cannot delegate to the teachers the right to decide what school they will teach in. No city can surrender its obligation of providing capable teachers for all of its schools. Second, the decision gives judicial cognizance to the existence of widespread de facto segregation in the northern schools and recognizes the evils that flow from the perpetuation of this system. It states: "The record in this case fully sustains the contention that the separation of children by race, whether it be the result of governmental action, or of private housing segregation, creates factors inimical to the full and equal educational opportunities."

Implicit in this statement is a recognition that school boards must not only seek to eliminate overt acts of segregation but must also take affirmative action to achieve genuine integration. They must view educational integration not merely as a social problem but as an integral part of their responsibilities in administering public education. In brief, they must recognize that one of the primary goals of public education in a democracy "is to promote ethnic and racial integration as a positive educational experience of which no child should be deprived."

The decision of Judge Polier goes a long way in giving the stamp of judicial acceptance to these far-reaching educational ideas. Its acceptance as the law of the land is an essential step if we are to achieve real integration in education for all children.

Forestry Conservation in Republic of Israel

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 12, 1959

Mr. NEUBERGER. Mr. President, mankind has devasted forests all during his occupancy of earth. One of the first great stands of timber to pay the toll for our recklessness was the mighty Cedars of Lebanon, of Biblical fame.

Yet, in the Middle East, where these rich groves once were destroyed, efforts are being made at conservation and restoration. This is especially true in the Republic of Israel, where a strong sense of social consciousness moves the people and their leaders in government. We in Oregon have a special interest in this situation because Oregon, with some 433 billion board feet of standing timber, is the No. 1 lumber-producing State in this Nation.

Therefore, Israel's achievements in the realm of forestry fascinated Roy J. Beadle, editor of the editorial page of the Oregon Daily Journal of Portland, when he recently toured that burgeoning new land. In an article published in the Journal of February 2 Mr. Beadle has noted succinctly Israel's program to become, once more, a forested land—to recover from the devastation of past centuries, long before the creation of the Republic of Israel.

Because conservation of trees and forests is a major obligation of the Congress and our Government as a whole, Mr. President, I ask unanimous consent that Mr. Beadle's article, entitled "More and More Trees Vision of New Israel," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREES AND MORE TREES VISION OF NEW ISRAEL

(By Roy Beadle)

TEL AVIV, ISRAEL.—In ancient times Israel had many forested areas.

Well preserved woodlands were reported to have existed through the eras of the Roman and Byzantine occupations and up to the time of the Moslem conquest.

Then came the increase of the goat, called the curse of the Middle East. The Bedouin invasion, the Moslem civil war and the Crusades brought in their wake the cutting down of trees. During the time of the Ottoman Empire, taxes were levied on trees and on the planting of new ones.

Despite this, as recently as a century ago, what is now northern Israel had many trees, but goat-grazing, neglect, forest fires and heavy use of the ax in two world wars made heavy inroads.

Toward the end of the Turkish rule, Jewish settlers began planting eucalyptus forests, and in the period of the British mandate large areas were set aside for forest plantations.

Since establishment of the state of Israel, a stepped-up program of reforestation has been carried on.

No one from Oregon can be impressed by the trees he now sees in Israel, although the roadsides everywhere are lined with eucalyptus, part of the reforestation program.

But the Government is bent on making Israel once more a forested land. It wants trees for timber production, roadside beautification, protection against soil erosion, sand dune fixation and control of water flow.

Dr. Rene Karschon, forestry official at the Government's forestry department headquarters at Nathanya, north of Tel Aviv, told me Israel now must import 90 percent of its timber. He foresees the day when it will be able to produce 30 percent of its requirements.

What commercial tree harvest Israel now has, largely from the fast-growing eucalyptus, goes into fence posts, agricultural

stakes, telephone poles and packing cases for agricultural products.

The Government's program ahead is to plant 10 million trees a year for the next 10 years.

The forestry headquarters station at Nathanya is also a central nursery, where 2,000,000 saplings are being grown. It has a wood utilization plant and forestry research institute.

Here I met R. D. Carpenter of New York, in Israel with the U.S. overseas mission to advise the Israelis on wood utilization. He is helping them improve their methods of preserving wood. Carpenter, who had been with the U.S. Forest Service for 15 years, is acquainted with C. Herbert Stone, our regional forester. I had hoped to meet Ahmed Goor, Israel's chief forester, with whom Stone had gone to school at Yale, but Goor is out of the country.

Israel has 8 forestry districts and another 10 or 12 tree nurseries. Trees grow faster here than in Oregon, and only 1 year is required to grow saplings big enough to plant.

Israel has a program to interest its children in trees and observes an annual Arbor Day in the latter part of January, when the youngsters do ceremonial planting.

Emergency Resolution of Cleveland City Council for Program of Public Works

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. LAUSCHE. Mr. President, notwithstanding recent indication, in several phases of our economy, that a widespread upturn in business and employment could be expected, obviously there remain many soft spots where conditions are critical and may become worse. This is set forth in an emergency resolution, recently adopted by the Cleveland City Council, and which I call to the attention of the Senate; and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 248-59

An emergency resolution memorializing the Senate and the Congress of the United States to take immediate steps to institute a program of public works so as to provide employment for those persons who are suffering economic hardships resulting from the present recession

Whereas, due to the present economic recession, unemployment, not only within the city of Cleveland but throughout the entire country, has risen to numbers reminiscent of the depression of 3 decades ago; and

Whereas means of sustenance could be provided to the unemployed and their families by creating employment through the inauguration of a public works program which shall be of benefit not only to the unemployed but also to all citizens throughout the Nation; and

Whereas this resolution constitutes an emergency measure providing for the usual daily operation of a municipal department: Now, therefore, be it

Resolved by the Council of the City of Cleveland:

SECTION 1. That the Senate and the Congress of the United States be and the same is hereby memorialized to take immediate steps to institute a program of public works so as to provide employment for those persons who are suffering economic hardships resulting from the present recession.

SEC. 2. That the clerk of council be and he hereby is requested to transmit a copy of this resolution to each of the Senators and Congressmen representing the State of Ohio.

SEC. 3. That this resolution is hereby declared to be an emergency measure and provided it receives the affirmative vote of two-thirds of all the members elected to council, it shall take effect and be in force immediately upon its adoption and approval by the mayor; otherwise it shall take effect and be in force from and after the earliest period allowed by law.

Adopted February 2, 1959.

JACK P. RUSSELL,
President of Council.
THAD FUSCO,
Clerk of Council.

Approved by:

ANTHONY J. CELEBREZZE,
Mayor.

FEBRUARY 4, 1959.
Effective February 4, 1959.

America's Respect for Old Soldiers Seems To Be Fading Away

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. YARBOROUGH. Mr. President, to paraphrase a much-used Army proverb: "America's respect for old soldiers never dies, it just fades away."

Right now, Americans are breaking a promise which we made to the men and women of our Armed Forces. It was a mutual trust and they kept their bargain. They worked for the safety of our homes and families as a deterrent force and, when necessary, we called on them to go into battle and they did so. They kept their part of the agreement, but by not paying equal pay to some 99,000 retired members of the armed services, we seem to be letting our respect for these people fade away. In addition, our respect for ourselves must be fading too in that we failed to keep our word, failed to keep faith with these people who believed in us when we outlined an Armed Forces retirement program.

Under the military pay bill, passed by the 85th Congress in 1958, members of the Armed Forces who retire after May 31, 1958, receive pensions based upon a percentage of the current pay for persons on active duty, which is higher than the percentage granted those already retired. A straight 6 percent increase was granted those who retired prior to that time.

Thus, two persons who were in the same service—perhaps faced identical dangers—and retired at the same rank can be paid on different scales. This goes against the old tradition of pay according to a percentage of the pay for persons on active duty.

I have joined in cosponsoring a bill to equalize the pay of retired members of the armed services. This bill carries out the recommendation of the Cordiner Report that retirement pay scales be refigured each time laws pertaining to them are changed. It has been endorsed by a number of military and veterans' organizations. It will help keep the retirement program abreast of economic conditions of the future.

When the call to face death to defend our country came, these military personnel did not fade away. And we now should not fade away when we have a chance to demonstrate our respect and gratitude for them, and what they did.

Mr. President, in support of my statements, I request unanimous consent to have printed in the Appendix of the RECORD an article which was published in the Army, Navy, Air Force Journal for Saturday, February 7, 1959, under the heading "Pending Pay Legislation Would Cut Losses to 99,000 Retired Prior to 1 June 1958," and a comparison table which accompanies the article under the heading "Here's What Retired Pay Injustice Costs," with the letter of transmittal to me from the Army, Navy, Air Force Journal, dated February 6, 1959.

There being no objection, the letter, article, and table were ordered to be printed in the RECORD, as follows:

ARMY, NAVY, AIR FORCE JOURNAL,
Washington, D.C., February 6, 1959.

The Honorable RALPH W. YARBOROUGH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR YARBOROUGH: Recently your office inquired if the Journal had ever published statistical tables comparing the difference in pay for members of the Armed Forces retired prior to June 1, 1958, and those retired after that date.

We were able to furnish you with comparative statistics in the more senior grades, but discovered that we had never published a table such as you had in mind. The idea, however, appeared to be an excellent one and we have now compiled statistical information showing the differences in pay. These tables and an article pointing up the disparity between pay for the two categories of retired military personnel will be published in our February 7 issue.

I am enclosing tear sheets for your information, and with the thought that you may desire to insert the article and tables in the CONGRESSIONAL RECORD as a ready reference for other Senators who are interested.

Sincerely,

LOU STOCKSTILL,
Legislative Editor.

[From the Army, Navy, Air Force Journal, February 1959]

PENDING PAY LEGISLATION WOULD CUT LOSSES TO 99,000 RETIRED PRIOR TO JUNE 1, 1958

Approximately 29,000 officers, 10,000 warrant officers, and 60,000 senior sergeants retired prior to June 1, 1958, will win pay increases if Congress approves legislation authorizing recomputation of retired pay on the basis of the 1958 Military Pay Act scales.

The cost of the plan has been estimated in the Senate at about $30 million. If this figure proves correct, approximately one-third of the total will go to Army, Air Force, and Marine Corps colonels and Navy captains.

At the time of the pay hearings last year, there were 7,117 colonels/captains on the

retired list with 30 years' service and another 3,283 with 20 to 29 years' service. Those with more than 30 years would receive an increase of $93.85 per month if the proposed retired pay plan is enacted; those with 20 years' service would receive an increase of $49.67 per month.

Together, the yearly cost for both groups would be in the neighborhood of at least $10 million.

The biggest single increase, $391.51 per month would go to Adm. Arthur W. Radford, U.S. Navy (retired) and to four-star officers who served as Chief of their service.

The second biggest increases would go to other full generals and admirals ($260.26), lieutenant generals and vice admirals ($188.76), major generals and rear admirals of the upper half ($156.76), and one-star officers ($112.33) with 30 years' service.

For those retired with 20 years' service, the increase would amount to $123.51 per month for four-star officers, $76.71 per month for three-star officers, $108.45 per month for two-star officers, and $136.89 per month for one-star officers.

Officers in pay grades O–1, O–2, and O–3 (except for those with 4 years' enlisted service) would receive no increase as a result of the legislation. A savings clause contained in the 1958 Military Pay Act would, however, prevent them from taking a reduction.

Among those with 4 years' enlisted service, who retired after 20, the increase would be nominal, ranging from $1.57 per month to $5.90. Those with 4 years' enlisted service who retired in pay grades O–1 and O–2, after 30 years' service, would receive monthly pay increases of $2.35 and $8.85, respectively.

All warrant officers in the 20-year-service category would receive increases ranging from $7.69 to $20.03 per month. However, only W–4's and W–3's in the 30-year-service group would benefit. W–4's would receive $14.58 per month and W–3's $14.44.

No increases would go to enlisted men retired prior to June 1, 1958, with 30 years' service and only those in pay grades E–7 and E–6 would benefit in the 20-year-service category. In the latter group, E–7's would win an additional $13.77 per month and E–6's would receive a 31-cent monthly increase.

Majors and lieutenant commanders retired with 30 years' service, before the effective date of the new pay law, would benefit only slightly from the legislation. Officers in this group now receive $471.28 per month if retired before June 1, 1958. Those retired after June 1 receive $472.50. Thus, the former group would receive an increase of only $1.22 per month.

Here's what retired pay injustice costs

30 YEARS' SERVICE

	Before June 1	After June 1	Difference
Chief of Staff	[1] $1,014.74	$1,406.25	$391.51
O–10	[1] 1,014.74	1,275.00	260.26
O–9	[1] 936.24	1,125.00	188.76
O–8	855.74	1,012.50	156.76
O–7	768.92	881.25	112.33
O–6	644.90	738.75	93.85
O–5	533.29	581.25	47.96
O–4	471.28	472.50	1.22
O–3	409.27	393.75	−15.52
O–2	328.65	285.00	−43.65
O–1	297.65	235.50	−62.15
Commissioned officers with over 4 years' active enlisted service:			
O–3	409.27	401.25	−8.02
O–2	328.65	337.50	8.85
O–1	297.65	300.00	2.35
Warrant:			
W–4	431.67	446.25	14.58
W–3	365.06	379.50	14.44
W–2	334.06	330.00	−4.06
W–1	292.72	292.50	−.22

Footnote at end of table.

Here's what retired pay injustice costs—Con.

20 YEARS' SERVICE

	Before June 1	After June 1	Difference
O–10	[1] $676.49	$800.00	$123.51
O–9	[1] 623.29	700.00	76.71
O–8	541.55	650.00	108.45
O–7	450.61	587.50	136.89

W–2	197.90	208.50	10.60
W–1	178.61	195.00	16.39

[1] These officers were authorized by the 1958 Pay Act to recompute their pay on active duty base pay of $1,276.40 for 4-star officers and $1,176.40 for 3-star officers, plus 6 percent.

Our Government Must Live Within Its Income—A Letter From Martin Dies

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. DOWDY. Mr. Speaker, I have a letter from our recent colleague, the Honorable Martin Dies, which is addressed to the Texas delegation in Congress, but which I feel deserves and demands the attention of every Member of the House and Senate.

It states economic facts which cannot be controverted. I respectfully request that the letter be incorporated in the daily RECORD.

The letter follows:

OUR GOVERNMENT MUST LIVE WITHIN ITS INCOME

To the Texas Delegation in Congress:

DEAR FORMER COLLEAGUES: One of the most serious, if not the most serious, issue which faces our Nation is inflation. Whether we can survive the economic, military, and subversive aggressions of communism will depend to a large degree upon our willingness as a nation to stop inflation. Inflation has already robbed our dollar, savings, pensions, annuities, insurance policies, social security, etc., of more than one-half of their purchasing power and real value. It has increased the cost of Government more than 100 percent, thereby raising taxes more than 100 percent. As the dollar buys less and less each year, the cost of national defense rises more and more, thereby seriously crippling this country and the free world in their life-and-death struggle for survival against the disciplined forces of communism.

One of the chief causes of inflation is the Government spending more money in appropriations than it receives in taxation. This policy is responsible for our national debt of 280 billions. The more money a government owes the less its obligations are worth. One of our Government's obligations is its paper money, which is a promissory note to pay the bearer gold, or, in the case of silver certificates, silver at some time in the future. These notes are by law made the medium of exchange which gives some advantage over ordinary notes. However, just as the value of notes of individuals and corporations are determined by their solvency and financial condition so is the value of the currency notes of the Federal Government determined by the solvency and financial condition of the Government.

Since our Government has gone in debt more than all the other governments in the world and since Congress continues to spend more money than it takes in, thereby piling up more debt for our children, the money obligations of our Government have been falling in value year by year for a long time. If this keeps up for a few more years our money will be worthless and the savings of our people for old age, sickness, and for their children will be wiped out. This is more than a possibility. It is a certainty if Congress continues its spending spree. If there is any doubt about this, read the history of nations in ancient and modern times. The handwriting is on the wall for all to read but the blind.

This is a period in the early stages of inflation when the owners of equities such as stocks, land, commodities, etc., appear to either hold their own or profit from inflation. This doesn't last long. As history shows, the owners of such equities are finally wiped out. Under inflation stocks earn less and less dividends and ultimately their value is based upon dividends. Taxes on real property mount ever higher because of inflation until it makes ownership of real property unprofitable. In France and Germany, where inflation was unchecked, the people vainly sought refuge through every type of investment. They all came to the same end—bankruptcy.

The truth is that no one profits in the end from inflation except communism, and everyone is finally destroyed.

Because of these fundamental but, unfortunately, little understood truths, it is evident that your greatest duty to the people of Texas is to insist by speeches and votes that our Government live within its income and that deficit spending during these times of peace and prosperity must stop.

Is it asking too much of Congress to do what we as citizens are compelled to do?

For the sake of our country and our children we ask you to vote and speak against deficit spending.

Sincerely yours,

MARTIN DIES.

Kosciuszko: Polish-American

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. McCORMACK. Mr. Speaker, today, February 12, is the birthday of a great Polish-American patriot. Tadeusz Kosciuszko was one of those unique European statesmen whose thinking was far beyond his contemporary lifetime.

Above all, Kosciuszko was a Democrat in the tradition of Jefferson and Lafay-

ette. He implicitly believed in man's desire and ability to grow, develop, and become strong under the democratic form of government. Throughout his long life—February 12, 1746, to April 2, 1817—Kosciuszko devoted his entire energy and talent to furthering this belief in practical form.

Aside from Kosciuszko's leadership in Poland as well as in all of Central Europe in the cause of national and individual freedom, this great man played one of the most significant roles of any individual in America's fight for independence. He came to the United States in 1776 as a young man and distinguished himself as a brilliant military strategist, especially in New York and at the battle of Yorktown. As recognition of his services, General Washington promoted Kosciuszko to the rank of Colonel of Artillery and made him his Adjutant. In 1783, after American independence was firmly established, Kusciouszko was rewarded for his services to the cause of U.S. independence with the thanks of Congress, the privilege of American citizenship, a considerable annual pension with landed estates, and the rank of brigadier general. A year later he returned to his native Poland for many years he led the struggling Polish people in their unending battle for independence. In 1796 he came to the United States for a second visit and lived in Philadelphia until May 1798. Gaining new insights into the democratic process, he returned to Europe and made one last, but fruitless attempt to restore the soverignty of his homeland at the Congress of Vienna. At length he retired to his estates. His last act before his death on April 2, 1817, was typical of a lifetime devoted to the freedom of the individual and belief in the dignity of man. He freed all the serfs in his care, insisting only on the maintenance of schools on the liberated estates.

Today, with a world so torn with fear and ideological conflict it is well that we in the United States pause to pay tribute to a great military leader, a great statesman, and a great American. His energy, his insight and his unfailing belief in man as a rational political being provide a contemporary lesson for us all. Poland still fights in the name of Kosciuszko. America remembers.

The Cadillac for Joseph W. Martin, Jr.

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, February 12, 1959

Mr. LAUSCHE. Mr. President, recently I received a very pointed letter from Mr. E. H. Heinbaugh of Canton, Ohio, in which he expresses his complaint over incidents of free handed spending by Congress.

The letter is typical of others I have received on the same subject.

I ask unanimous consent to have the letter and the newspaper article referred to be printed in the Appendix of the RECORD.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

CANTON, OHIO,
January 17, 1959.

Hon. FRANK J. LAUSCHE,
Washington, D.C.

DEAR SIR: Attached you will find a clipping from the Cleveland Plain Dealer of January 17, 1959.

This kind of thing makes me sick. In order to pay my income taxes, I have to drive a 1956 auto. Is it possible that his highness Mr. MARTIN can't ride in an automobile that isn't air conditioned, could he not ride in a Buick or even a "Chevvy?"

If they must have a "Caddy," would not a regular model be nice enough?

Someday the legislators of this great country of ours are going to go too far with their foolish spending. It seems the more you make available to them, the more silly things they can think up to spend it for.

I pay taxes for schools, hospitals, care of aged, preparedness, etc., cheerfully, but I don't like this kind of thing and there are many that feel as I do.

From one who has voted for you many times.

E. H. HEINBAUGH.

MARTIN RECEIVES $11,000 CADILLAC

WASHINGTON, January 16.—Ousted Republican Leader JOSEPH W. MARTIN, JR., ended up better off today than all the congressional leaders at least in one respect: He had the newest chauffeur-driven Cadillac limousine.

The shiny, new air-conditioned, fully equipped limousine complete with white-wall tires and extras purred up to the Capitol today. Congressional sources said it cost the taxpayers $11,000.

The House decided last Monday that MARTIN should continue to be provided with a chauffeur-driven car at taxpayers expense, even though Republicans had ousted him as their floor leader.

Some lawmakers had assumed that MARTIN would keep his 1956 limousine and that a new one would be ordered for the new Republican leader, Representative CHARLES A. HALLECK, of Indiana.

As it turned out, HALLECK and MARTIN both were ordered new Cadillac limousines. HALLECK's has not yet arrived.

Anniversary of the Birth of Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. DULSKI. Mr. Speaker, February 12 marks the 213th anniversary of the birth of Thaddeus Kosciusko, who contributed greatly to the battle for freedom both in his native Poland and in America.

Born in Poland in 1746 and educated in the military schools of Poland and France, Kosciusko came to our shores during the dark days of the Revolution and unselfishly devoted his great ability to the establishment of freedom and independence in America.

To the cause of the struggling colonies Kosciusko brought three things: Scientific knowledge, strength of character, and unwavering enthusiasm for the cause of liberty. His contribution to the struggle for American independence was rivaled only by his fight for the freedom of his native Poland.

Today all the people of America join with Americans of Polish descent in paying tribute to this great Polish patriot. His name will live always in the hearts of all people who believe in justice, freedom, and self-government.

Extension of the Draft

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. CARTER. Mr. Speaker, I have cast my vote against H.R. 2260, the resolution which proposes to extend the present draft law for a period of 4 years and which was overwhelmingly passed by the House of Representatives. Only 20 Members of the House voted against the bill, although you and I know that there were many more who did not, deep in their hearts, favor the extension of a national conscription. This fact in itself may be indicative of the inordinate amount of influence that the past 20 years of military presence has imposed on our thinking. True, this military presence has been a most necessary one, but one nevertheless that should be continuously reevaluated in the light of these rapidly changing times.

I do not propose, Mr. Speaker, that there is no longer a need for military forces. I think that we all recognize such a need is self-evident. The question is, what kind of military forces do we need? We are constantly told that the Armed Forces need highly professional, highly trained, highly skilled, highly technical, and highly motivated personnel in this age in which we live. Are those the words that describe the draftee? I think we all realize that they are not. Furthermore, I think we all realize that the average draftee never receives the incentives that will convert him into the type of person fitted by these descriptive words. The so-called incentive pay bill of the last Congress was badly misnamed. The only incentive that can be read into this bill is based on the assumption that everyone who enters the Armed Forces is convinced he will become an admiral or a general. We know that such an assumption would be entirely erroneous. Since the flag positions, which were really the only ones to substantially benefit from the incentive pay bill, are usually available only to graduates of the service academies who, presumably, are already provided with necessary incentives, there actually re-

mains little or nothing for the conscriptee or volunteer to entice him to become a career military man.

Mr. Speaker, the draft has been with us for almost 20 years now, far too long. We all know it is not being fairly and impartially administered and is far from universal in its effect. Only one of the three armed services is actually using it to any extent. So the true purpose of the draft is to act as a club to force young men to enter the Armed Forces. Those who volunteer for the Navy and the Air Force are only indicating their desire, not to faithfully serve those particular arms, but rather to avoid the rigors of Army life. Those who wait for the draft are simply saying, in effect, that they want to take the quickest way out. In either instance, the psychological approach of these young men to military service is the exact opposite of what it should be, and what I think it can be. Without the draft, the armed services would be forced to make a military career the attractive thing that it must become in order to get the type of individual they proclaim to be so necessary in this technical era. They would have to look elsewhere for the cooks, sweepers, chauffeurs, and assorted coolie labor for which today's conscripts are being used.

Mr. Speaker, I have been in youth work for a number of years, and I also have two teenage sons. I think we can all recall from our own lives and experiences, as well as those we have observed, the fact that there is a naturally occurring amount of uncertainty and indecision during the years approaching adulthood. Our draft law is simply aggravating this uncertainty and is, in fact, a substantial contributing factor to our national problem of juvenile delinquency. Our destiny and survival may very well rest in the heads and hands of the youth which are today subject to the draft. If the pitched battle for survival comes, it must surely come, it seems, within the next 30 years, or even sooner. From every quarter, voices cry out that we need scientists, educators, philosophers, artists, and political leaders to revivify the essences and guts of Americanism, and to meet the challenge of communism all over the world. But what do we do to the very number from which these people are to come? We cast over them the dark cloud of frustration and uncertainty in the form of the draft. We discourage, delay, and, in some cases, deny the steps that will lead them to lives of leadership and service in their chosen field and on a high level. Our youth can not help but wonder why we have huge armies that train and retrain, while Asian, Middle Eastern, and South American nations continue to fall under the influence, if not the domination, of communism. These youth have a vague feeling of uneasiness, to which they are probably unable to give expression in most cases, that perhaps we have here an enemy who must be fought in other ways. They are told that we are engaged in an ideological conflict for men's minds. Yet many of our youth who are sufficiently endowed to prepare themselves for this conflict are conscripted for a period of years, in which they perform menial tasks, and they either lose the impetus or the opportunity to sufficiently prepare themselves for the defense of democracy. A further perplexing factor to our youth is the fact that our Nation's leaders, whom they feel certainly must be wise men, fail to furnish them the opportunities and inspiration, even the example, as to how this enemy should be fought. Could it be that the vistas of our leadership are too limited and too interwoven with the traditional ideas of what constitutes national power to see that we are immolating much of the potential of our youth on the altar of national conscription.

Let us liberate our youth, during that period of unique vitality, to follow whatever constructive paths they may choose. Let one of these choices be a career in an attractive Military Establishment where only the dedicated and proficient volunteer can exist.

It is my sincere hope that we can eliminate these shackles and hindrances which are so repugnant to the basic Amercan concept of individual freedom and initiative, which has always been the keystone of our greatness.

Krebiozen Showdown

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1959

Mr. LIBONATI. Mr. Speaker, the Krebiozen controversy remains at the "do nothing yet" dead center stage; its test committee conferences never seem to reach a true solution as to the selection of an honest method to be used to scientifically test the drug in its reaction on the cancer patient.

Meanwhile, thousands die of the malady and other thousands suffer the poisoning agonies of the putrefaction of live body tissues of the victim approaching death. No one seems to care. Certainly, no one in the million dollar fundraising cancer clinics are excited over the almost miraculous 9-year record of the Krebiozen Research Foundation's medical records; and reports of the 500 doctors who used Krebiozen in the treatment of cancer patients, all terminal cases. Yes, other doctors told loved ones, "It is hopeless, the patient will die shortly, nothing can be done. It's only a matter of time."

But there are real God-fearing men in the medical profession who love humanity and live by the sacred oath of Hippocrates.

They used Krebiozen, some secretly, in order to escape the vicious opposition of their fellows, and these kept a steady vigil over the sick, registering every change in the patient. These records are the undeniable testimonials to the scientific value of Krebiozen in cancer study:

First. Krebiozen relieved pain when sedatives failed.

Second. Krebiozen reduced the size of the carcinoma in certain types of cancer cases.

Third. Krebiozen stimulated the appetite of the patient to partake of food, thus gaining natural strength.

Fourth. It caused bed patients, 8 months abed, to leave their beds and become ambulatory.

Fifth. Krebiozen is biologically active.

Sixth. Krebiozen is the key to the arrestment and control of cancer.

Seventh. Krebiozen is one of the answers to a study of new scientific areas and methods in the fight on cancer which will ultimately result in a cure for cancer.

FEBRUARY 1, 1959.

DR. J. R. HELLER,
Director, National Cancer Institute, U.S. Public Health Service, Bethesda, Md.

DEAR DR. HELLER: First, I should reiterate that the proposal for giving Krebiozen a fair test in the cancer patient made by Senator PAUL DOUGLAS on the floor of the U.S. Senate in August 1958 was immediately accepted by the Krebiozen Research Foundation and by me (A. C. Ivy) the research adviser of the foundation.

The proposal was accepted by me without hesitation because it is based on the principles we have advocated since 1952. First, it provides for the appointment of a three-person arbitration type of committee, consisting of (1) an appointee of the U.S. Public Health Service, (2) an appointee of the Krebiozen Research Foundation who would be myself, and (3) a biostatistician who would be selected by the U.S. Public Health Service and me. Second, it provides that the committee would design a study which would give me the opportunity of demonstrating unequivocally whether Krebiozen is sufficiently beneficial in certain types of cancer patients, so that I, by judging from changes in the cancer patients, could distinguish the patients who received the contents of ampules containing Krebiozen from those patients which received the contents of ampules containing no Krebiozen. Third, the proposal provided that I would serve with physicians appointed by the committee or U.S. Public Health Service in the selection and treatment of the patients, but neither I nor anyone connected with the study would know the identity of the ampules. Fourth, the proposal provided that after completion of the study I, on the basis of a report of the observations on patients, would state which set of ampules contained Krebiozen. Fifth, the proposal provided for the publication of the observations.

Senator DOUGLAS concluded his speech with the statement that he believed his proposal was fair. We also believe that his proposal is scientific and fair.

The USPHS has not accepted Senator DOUGLAS' proposal, but has made a new proposal of its own. Without committing myself to accept the proposal of the USPHS, I agreed to explore it because I believe it was made in good faith.

The USPHS proposal contains three basic provisions. First, it provides for the appointment of an "independent committee" of five members, of which I am not a member. Second, I shall be appointed a consultant to the committee. Third, a double-blind type of controlled study of Krebiozen shall be made, the detailed methods to be designed by the committee.

The proposal of the USPHS has been explored with the following progress to date. First, a committee of five has been tentatively selected for consideration. I have agreed that the five men tentatively selected are good scientists and that they are individually honest men. I know three of them quite well. But I know only one of the

three well enough to know that he would stand for the right regardless of pressure. By this I do not imply that the others would not stand for the right regardless of pressure. Second, I have agreed to state the conditions under which I would serve as a consultant to the committee should the Krebiozen Research Foundation and I agree to accept the proposal made by the USPHS.

I have formulated and attach my conditions. They are in accordance with the principles I have been proposing since 1952 for settling the Krebiozen controversy.

The conditions in brief provide that I would take part in the design of the study which would be of the "blind type," and would take part in the selection and treatment of the patients. The attending physician and I, who would treat and observe the patients and make the records, would be given two or more lots of ampules labeled "A," "B," "C," and so forth, for administration to the patients, the key to the code being sealed and held by Senator DOUGLAS. At the end of the study, I would write a report at the end of which I would conclude which lot of ampules contains Krebiozen on the basis of the observed improvement of the patients. This conclusion would be checked with the key of the code held and sealed by Senator DOUGLAS. The report of the findings would then be published in a medical journal.

The conditions which I have formulated are based on the fact that I am the individual who has had the most extensive experience with the administration of Krebiozen to cancer patients of many types and stages and at the same time have devoted the most study to the observations made and reported by numerous physicians to the Krebiozen Research Foundation. To turn over any test to one or more individuals who are not thoroughly qualified by specific experience with a new therapy would not be a test. It would be only another experiment carried on by novices with the new therapy.

If my conditions are acceptable, the only remaining question would be the desirability and necessity of a three-man arbitration type of committee with me on it, as proposed by Senator DOUGLAS, or of a five-man committee without me on it, as proposed by the Public Health Service.

I should say that the alternative proposal made by the Public Health Service has not been considered by me to be a rejection of Senator DOUGLAS' proposal. I believe the counterproposal was made in good faith because the officials of the Public Health Service actually thought that a committee without me on it would be more acceptable to a majority of the scientific community. In other words, unless the double-blind test is done under direction of a so-called independent committee, the results would not be accepted by a majority of the professional guild. But, it may be asked: Who is going to guarantee the absolute independence or lack of prejudice of each of the members of a so-called independent committee?

What does the suggested need for an independent committee to insure the acceptance of the results by a majority of the professional guild, imply? Does it imply that the majority of the professional guild is biased or prejudiced? Does it mean that they would not accept results obtained by a double-blind test performed under conditions which are devoid of, and which cannot be suspected of, permitting the operation of conscious or unconscious prejudice? Should it be our desire to satisfy the majority of a guild, or should it be to satisfy the interests of truth, science, and humanity as soon as possible?

Obviously, it is implied that my presence on the committee would make the results suspect by the majority of the scientific community. Would my presence on an arbitration type of committee deprive the committee of its independence? Would not the results obtained by an arbitration type of committee using an experimental method in which prejudice cannot operate speak for themselves when published?

Suspicion seems to exist on both sides of this matter. One side does not want to agree to a test performed by a committee with me on the committee, and the other side does not want to agree to a test performed by a committee without me on the committee.

To neutralize such suspicion it became necessary for me to propose the performance of a double-blind test by an arbitration type of committee. I have made such a proposal repeatedly since 1952. Senator DOUGLAS also detected the suspicion on both sides and proposed an arbitration type of committee. He has proposed and has served on such committees throughout his career.

Why should anyone object to the appointment of a committee with both sides represented on it?

Someone has said "sides" should not exist in science. But the fact is that they do exist and the history of science shows that progress is made only on the basis of scientific controversy. But the controversy and skepticism should be constructive and not barren or destructive. Unfortunately, and too frequently, too much of the skepticism has been destructive in nature. In the case of Krebiozen there has been an impasse since 1952. An inexcusable, unfortunate, unscientific, inhumane impasse.

The Krebiozen side will accept the results of a test conducted by an arbitration type of committee but not the results of a so-called independent committee. The anti-Krebiozen side will accept the results of a so-called independent committee but not those of an arbitration type of committee.

This situation has been permitted to continue by responsible scientific and professional organizations and governmental groups, presumably interested in scientific and human welfare. It has continued to exist regardless of the fact that the results of a test conducted by an arbitration type of committee using the double-blind type of test cannot be rationally suspected. Furthermore, the Krebiozen side of this controversy has been clamoring for such a test since 1952.

The test has been denied because of various excuses, false rumors and fallacious analogies. For example, it has been said that I should not be on the so-called independent committee because one cannot be a party litigant and at the same time a judge. That is obviously a fallacious analogy offered in ignorance or with the intent to mislead. To use such an analogy, without the intent to mislead, is to manifest a lack of understanding of the meaning of an arbitration type of committee and a "double-blind test" in which the person who knows the most about the therapy is allowed to take part. I desire only to demonstrate, by the use of an unequivocal method, that Krebiozen has merit in the treatment of cancer.

The basic question, as I analyze the situation is: Can Dr. A. C. Ivy, working under strictly controlled conditions where an honest bias or prejudice cannot operate, demonstrate that Krebiozen has merit? I ask only the opportunity to demonstrate that I can.

Suspicion can only be dissolved by the appointment of an arbitration type of committee which will prescribe fair conditions for a fair test in which bias or prejudice cannot operate. No other way is known or has ever been tried in such a situation.

Therefore, I am forced to agree with the Krebiozen Research Foundation that for a test of Krebiozen to be fair I should be a member of an arbitration type of committee and be a party to the administration of the therapy and the interpretation of the results under conditions where bias cannot operate.

This group reiterates its acceptance of the principles outlined in the proposal of Senator DOUGLAS and is anxious to explore his proposal with you and to place it into action as soon as possible.

With best wishes I am,

Yours sincerely,

A. C. IVY,
Ph. D., M.D., D. Sc., LL. D., F.A.C.P.

CONDITIONS UNDER WHICH I WOULD SERVE AS THE CONSULTANT TO THE COMMITTEE PROPOSED BY THE USPHS SHOULD THE PROPOSAL BE ACCEPTED BY THE KREBIOZEN RESEARCH FOUNDATION AND BY ME

METHOD FOR THE PRESERVATION ON THE ANONYMITY OF THE DIFFERENT SETS OF AMPULES

Two or more sets of identically appearing ampules, one set containing Krebiozen and the other set or sets containing No. 9 light mineral oil (Standard Oil Co. of Indiana) would be given to Senator DOUGLAS. The Senator would arrange for the two or more sets of ampules to be marked with letters of the alphabet, such as A for one set, B for a second set, etc. He would be the only person to possess the key to the code. His signed statement as to the key to the code, or their designation by letters of the alphabet would be placed in a well-sealed envelope in a safe to which he or an alternate in case of his disability shall have access.

Each ampule in the A lot or A set would be labeled "A," and each ampule in the B lot would be labeled "B," etc. The ampule in each lot would be placed in identical appearing cardboard containers. In order to avoid errors in labeling, the lot of ampules containing Krebiozen would be sent to Senator DOUGLAS for labeling with the code letter of his selection on one date, and the amuples containing only mineral oil would be sent to him later, after he has labeled the lot containing Krebiozen.

The sets of ampules would be placed in a safety deposit vault of a bank or trust company, requiring two keys for its opening. One key would be kept by a representative of the committee of the USPHS, and the other by me (A. C. Ivy) so that the ampules may be removed jointly as required for use in the treatment of patients.

After a report of the study on patients had been prepared by the committee and by me (vide infra) and I had concluded which set of ampules contain Krebiozen, Senator DOUGLAS would reveal the key to his code.

MY RELATION TO THE DESIGN, CONDUCT, AND PUBLICATION OF THE STUDY

1. A study of the sort under consideration cannot be properly designed and conducted unless the objectives are clearly defined and accepted.

It is understood that the true objective of this study is to determine by the most probative method possible, whether Krebiozen is of any value in the treatment of cancer, or whether the favorable changes observed after the administration of Krebiozen to numerous cancer patients, are due to delayed effects of prior therapy or to spontaneous natural causes, resulting from variations in the natural resistance of the host to cancer.

It is understood that the objective is not to determine whether Krebiozen is a cure for cancer, or whether it is better than other forms of treatment now being used. I make this negative statement because such "straw men" or false assumptions have been proposed for the purpose of destructively criticizing past efforts.

It is understood that the most probative method for testing a new treatment of a disease (a) utilizes the experience and understanding of the person or persons who know the most about the new treatment and (b) an experimental design in which the

honest bias of enthusiasm and conviction, or the prejudice of barren or destructive skepticism, or the prejudice of face saving cannot operate.

The objective of this study is not to determine whether persons, without experience and understanding of a new therapy, can obtain favorable results. That is a secondary objective. I make this negative statement because it has been used recently as an argument against the proposal of an arbitration type of committee and a double-blind test. For example, it has been said that the test proposed by me (also that of Senator DOUGLAS) would not yield results which would demonstrate that other physicians could obtain the same results. That is a reasonable objective, but it is not the purpose of the proposed test. We now have plenty of evidence showing that many physicians obtain favorable results with Krebiozen, a matter to be considered in due season. Furthermore, who has taken a vote to determine whether a majority of the scientific community would not accept the results obtained by an arbitration committee (with me on it) using a double-blind type of study devoid of the operation of prejudice. I agree that it would be desirable to obtain results by the ordinary methods used by a majority of a scientific community. But when prejudice prevails, such methods may not be probative; then unusual probative methods must be used. In the case of Krebiozen it is known that malignant prejudice exists. (See app. I).

These objectives are important for two reasons: One reason is to test therapeutically an important scientific theory or hypothesis (see app. II); the other reason is humanitarian, namely, to establish as soon as possible whether the product called Krebiozen has any therapeutic merits in the treatment of cancer in man, and, if so, to develop the product and make it available to the physicians of cancer patients.

2. It is understood that I would be notified and expected to attend all meetings of the committee.

3. It is understood that I should have the right to approve or disapprove the type of controlled study or experimental design, in regard to whether it is devoid of the operation of prejudice and is designed to attain the objective set forth above. It is understood that I shall provide a list of signs and symptoms which would represent a minimum list to be observed by measures and subjective reports.

4. It is understood that only one type of tumor patient would be selected for study. The type much preferred by me and the Krebiozen Research Foundation, would be proven cases of primary brain tumor; cases which have been written-off by the neurosurgeon or neurologist. Such patients are preferred because they most consistently show a favorable response a few weeks after the initiation of Krebiozen therapy. The second preferred type of tumor would be cases of breast tumor with metastases to the bone but without extensive metastases to the lung. The patients should have proven refractory to the therapies usually tried in cancer therapy.

5. It is understood that the type of tumor and patient selected for treatment would be subject to my approval because I know the approximate percentages of those types of tumors and patients who respond favorably to Krebiozen as it is now available for use.

6. It is understood that the patient would be a patient of the attending physician designated or appointed by the committee.

7. It is understood that the contents of the ampules, would be administered by me or in my presence, as a consultant to the attending physician designated by the committee. It is understood that I could designate some physican to administer the drug, as a substitute consultant for me, should I become incapacitated. This is to make certain that no error is made in the lot and number of ampules the patient had been designated to receive and to avoid lapses in therapy due to unavoidable absence.

8. It is understood that I would determine the dosage rate each patient is to receive at the start of the treatment and the increases or decreases to be made after the start of the treatment. (Krebiozen is not given according to a rule-of-thumb method.) The reason for the increase or decrease would be recorded on the patient's chart by me or some physician designated by me in the presence of the attending physician designated by the committee.

It is understood that, if after 2 or 3 months there is no improvement in the condition of the patient, I shall in the presence of and with the consulation of the attending physician designated by the committee, determine whether the lettered ampule the patient has received should be changed to a letter ampule of a different lot, or whether the patient's tenure in the study be ended.

It is understood that the continuance or introduction of new adjunctive therapy, such as analgetics, sedatives and physical therapy, should be determined by the attending physician designated by the committee in consultation with me.

9. It is understood that all therapy and recommendations of therapy and all observations including my own or those of my substitute would be recorded in the patient's official record.

In addition, it is understood that I should have the right to make notes on the diagnosis, complications, past therapy, and progress of the patient, after the start of the proposed new therapy, from the official record of the patient. I desire to possess such notes for the purpose of study relative to making changes in the dosage rate of the contents of the ampules. A copy of these notes would be given to the committee.

10. It is understood that it would be preferable to have all the patients treated in one clinic in one city and certainly not more than two cities.

11. It is understood that at the conclusion of the study, as determined by the design of the experiment, I would prepare a report of my observations and would conclude, on the basis of the observations, which set of ampules contain Krebiozen. My conclusion then would be checked with the code prepared and placed previously in a safe by Senator DOUGLAS, and favorable or unfavorable it would be understood to be the criterion of the activity of Krebiozen.

12. The results would be announced jointly by Senator DOUGLAS, the National Cancer Institute, and the committee, and within 6 months thereafter published as a scientific report in the Journal of the National Cancer Institute or some other appropriate publication.

A. C. IVY.

APPENDIX I

I painfully regret the necessity of calling attention to the following proven facts or facts which can still be proven and indicate the extent of malignant prejudice regarding Krebiozen. It is necessary because many persons are not acquainted with these facts and it is only because of the existence of these facts that it became necessary to propose an arbitration type of committee to give Krebiozen a test under conditions devoid of the possibility or suspicion of the operation of bias or prejudice. These facts are the cause of the controversy and of the need of an unusual test method to end the controversy.

1. A dishonest (in part) and superficial (in toto) report on Krebiozen was published in the J.A.M.A., October 1951. These charges were established under oath and never denied under oath at the hearings of a commission of the General Assembly of the State of Illinois.

2. I (A. C. Ivy) was suspended from the Chicago Medical Society under false charges, an action later admitted by the president of the society to have been a mistake.

3. It was rumored throughout the medical world in the United States that "Dr. Ivy was off his rocker," "had suffered a minor stroke." The truth is that during the period of my alleged affliction I was the author or coauthor of approximately 65 scientific articles printed in medical journals on subjects other than Krebiozen; I have spoken on subjects other than Krebiozen at numerous medical scientific meetings, and have been on six lecture tours in Europe and three round the world including Australia. Incidentally I also took part in raising $45 million worth of medical buildings for the West Side Medical Center in Chicago.

4. A committee appointed to study the observations collected by the Krebiozen Research Foundation did not consider or evaluate the reports of the observations of three physicians, two of whom are associated with university tumor clinics, the other being the pathologist of a hospital in Chicago.

5. One cancer specialist working in a university tumor clinic treated 40 patients with proven cancer with Krebiozen. He has been prevented by his chief from publishing his observations. Even up to as recently as December 1958, he has asked permission to publish them.

6. I had three articles on Krebiozen accepted for publication by a medical journal and they were sent to the printer to set into type. Later they were rejected because the publisher did not wish to experience difficulties due to pressure from certain AMA officials.

7. I was invited by the editor of a lay magazine with a large circulation to write a brief of the story of Krebiozen. I prepared the article and it was accepted for publication by the editor with much praise. It was sent to the printer, but then returned because of pressure exerted by two AMA officials.

8. Physicians working in a large cancer clinic have written that they had tested Krebiozen and found it to be inactive; whereas they had never had any Krebiozen to test. Numerous similar stories have been told about Krebiozen.

9. One well-known physician was removed from a hospital staff because he used Krebiozen; later because he was a friend of a local newspaper publisher who came to his assistance, he was reinstated and permitted to use Krebiozen.

Other physicians have been threatened, if they should use Krebiozen.

10. The therapeutic trial of Krebiozen has been banned by numerous hospitals, though it is distributed to physicians for clinical trial according to the regulations of the Federal Food, Drug and Cosmetic Act.

11. At two hospitals, part of the records of two of our "7-year cures" have been lost. At another hospital the surgeon has refused to provide to a physician a copy of the surgical and pathological report of a "6-year cure." And, these were honorable men.

12. An associate professor of medicine at a medical school under pressure gave up his study of Krebiozen and renounced the observations he had reported to the Krebiozen Research Foundation.

13. Recently I was invited to report our observations to a well-known cancer society. I accepted the invitation and was thanked for accepting. Later the program committee under pressure withdrew the invitation.

14. Former Surg. Gen. Leonard Scheele (USPHS) agreed with me, Dr. Ivy, several years ago to the effect that the situation regarding Krebiozen was so prejudiced

that it would be practically impossible to obtain an unprejudiced report by an independent committee of medical or cancer specialists. I believe hidden and open pressure would be brought to bear on the members of such a committee. I have been told orally and in writing that the pressures against me would cease if I wrote and published a report to the effect that Krebiozen had no significant value.

15. Numerous other incidents revealing almost incredible prejudice in unexpected places could be cited. For example, certain AMA officials lodged charges against Judge and Dr. Durovic with the Immigration Office to prevent them from becoming citizens of the United States of America. And, on the occasion of their taking the oath of citizenship an Immigration official read publicly these charges and reported that after extensive investigation they were found to be entirely false.

APPENDIX II

THEORY

I believe that that the existence of natural defenses in the mammalian body against cancer has been firmly established, and that these defenses may be affected favorably or unfavorably. One type of defense mechanism is illustrated by the role which autacoids, or hormones, or the glands of internal secretion play in the excitation or inhibition of the growth and spread of certain types of cancer cells before they lose their physiological property of responding to such growth controlling chemicals. Another type or group of autacoids is more primitive. They may be referred to as "local autacoids" which are resident in all the cells of the body, particularly in the reticuloendothelial cells, and are locally concerned (a) in regulating the normal repair of extracellular or intracellular injury, (b) in the prevention of the development of benign and malignant tumors, (c) in the inhibition of the local "invasion" of the cells of malignant tumors into adjacent normal tissues, and (d) in the inhibition of the growth of the malignant cells which enter the blood and lymph streams and lodge in the capillaries of distant organs.

The former type of autacoids has been exploited therapeutically in cancer for some 15 or 20 years. The latter type has not been developed and exploited therapeutically except in the case of Krebiozen. Only very recently has it been studied therapeutically in mice in the laboratory.

Krebiozen was produced on the basis of the hypothesis that it represents a product of the reticuloendothelial cells which is concerned with one of the primitive types of body defense against abnormal growth. The experimental use of products purporting to be "immunological agents" and of Krebiozen in animals and patients with cancer represent the therapeutic exploitation of the second type of body defense against cancer. The development of the Krebiozen hypothesis will undoubtedly lead to very fruitful therapeutic knowledge; Krebiozen as we understand it today is probably only an opening wedge.

Mr. Jack Mabley, the Chicago Daily News feature columnist, in a recent highly informative article, treated the Krebiozen question fairly.

[From the Chicago Daily News, January 31, 1959]

KREBIOZEN SHOWDOWN—IS IT A FAKE OR A MIRACLE?

(By Jack Mabley)

Scores of people in this country—dozens here in Chicago—who were in the agonising final stages of cancer, are leading healthful, useful lives today. They are free of cancer.

They have been, or are being treated with Krebiozen.

Krebiozen is given to cancer patients only after doctors have termed the cases terminal, when there is no hope.

In 70 percent of these cases Krebiozen is effective. Sometimes it only relieves the unbearable pain, lets the patient live his final weeks in relative peace.

Sometimes it brings total recovery.

HE'S CRUSADING FOR KREBIOZEN

These statements were made to me by John M. Davis, president of one of the Nation's major construction companies.

Davis is devoting virtually all of his time to crusading for Krebiozen. He is president of the Committee for a Fair Test of Krebiozen, 343 South Dearborn.

He has impressive evidence. He can produce a parade of recovered victims. More than 300 doctors in this country are administering Krebiozen to cancer victims.

A careful record is kept of each treatment and the 70-percent effectiveness is documented.

The names of most of the doctors who administer this drug are kept secret because they fear retribution from the American Medical Association.

This association has declared that Krebiozen is worthless.

The American Cancer Society sides with the AMA. It has refused to conduct a test of the drug and has gotten into a bitter brawl with the committee for a fair test.

EFFECTIVE, SAYS DR. IVY

The most prominent backer of Krebiozen is Dr. Andrew Ivy, professor of physiology and head of the Department of Clinical Science at the University of Illinois.

Dr. Ivy has never wavered in his belief that Krebiozen is an effective weapon against cancer.

He is not only one of the most distinguished medical scientists in this Nation; he is one of the scrappiest men in Chicago.

He now is fighting for a fair test of the drug. If the test confirms his beliefs, the Government would be able to approve general use.

Dr. Ivy believes that literally hundreds of thousands of cancer victims would be spared the horror of the disease.

Powerful forces are fighting the test.

If Krebiozen is proved effective, the AMA and the Cancer Society will suffer irreparable damage.

CONSPIRACY IS CHARGED

Charges have been made that businessmen who sought control of Krebiozen, and failed, have conspired with the AMA to discredit the drug.

The charges, if not true, are extremely libelous. Those who made the charges keep repeating them, in print and orally, and they have not been sued for libel.

The controversy over Krebiozen has been simmering for several years and is about to erupt. A showdown must come.

Someone is terribly wrong. Either the drug is a fraud or one of the worst scandals in the history of the American medical profession is about to explode.

Boy Scout Week

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1959

Mrs. BOLTON. Mr. Speaker, this is Boy Scout Week when we look back over the 49 years that scouting has existed in America. Twenty-six million people have been touched by it; nearly 5 million lads have joined up—Cub Scouts, Boy Scouts, Explorers, and so forth, learning what it means to be God-fearing citizens of a free land.

This is what a Scout subscribes to when he joins up:

On my honor—

I will do my best to serve God and my country.

To help other people at all times.

To keep myself physically strong, mentally awake, and morally straight.

Strong meat, perhaps—but it builds strong youth and fine men.

Nor are we the only country in which scouting flourishes. There are 7,589,183 Scouts and leaders in 67 countries of the world and there is a constant interchange among them. Could there be a better road to understanding? Could there be a better way to tie us all together under God?

Edgar Guest has painted a very descriptive picture entitled "The Boy," which I include as follows:

A possible man of affairs,
A possible leader of men,
Back of the grin that he wears
There may be the courage of ten;
Lawyer or merchant or priest,
Artist or singer of joy,
This, when his strength is increased,
Is what may become of the boy.

Heedless and mischievous now,
Spending his boyhood in play,
Yet glory may rest on his brow
And fame may exalt him some day;
A skill that the world shall admire,
Strength that the world shall employ,
And faith that shall burn as a fire,
Are what may be found in the boy.

He with the freckles and tan,
He with that fun-loving grin,
May rise to great heights as a man,
And many a battle may win;
Back of the slang of the streets,
And back of the love of a toy,
It may be a Great Spirit beats;
Lincoln once played as a boy.

Trace them all back to their youth,
All the great heroes we sing,
Seeking and serving the truth,
President, poet, and king,
Washington, Caesar, and Paul,
Homer who sang about Troy,
Jesus the greatest of all,
Each in his time was a boy.

The Federal Budget

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1959

Mr. CUNNINGHAM. Mr. Speaker, this is an appropriate day to recall a statement by Abraham Lincoln which represents one of the guiding principles in his private life and a basic tenet of his approach to government

In 1843, Mr. Lincoln said:

As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so it must be with a government.

Certainly no one can dispute the effect of continued borrowing on the finaces of an individual. No one can hope to live forever by borrowing, for he will in truth be eaten up by interest.

It is likewise true that governments cannot continue to live by borrowing. We are in our third decade of the era of deficit spending. Since 1930 there have been only 6 years in whieh the Federal Government has lived within its income. Yet in the recent years this country has recorded unparalleled growth and prosperity, and in such times of record-breaking income, both individuals and governments must seize the opportunity to retire debts.

We are faced this year with a precariously balanced budget. It is doubtful that the budget will remain balanced in view of the action by Congress on the first few spending bills which have been brought before the two Houses. Many responsible persons in and out of Congress feel that unless there is bold action to balance the budget this year and in the immediate future, there will never again be a balanced budget.

I share the view that we are reaching a financial crisis, that if we are to remain a nation with strong economic policies and a sound dollar—or perhaps I should say a sound 50-cent dollar in view of past inflationary spirals—we must act boldly and strongly.

Accordingly, I am introducing a resolution on this anniversary of Lincoln's birth which would set the wheels in motion for a constitutional amendment to require a balanced budget except in war or other grave emergency.

I do not feel a sense-of-Congress resolution or any other act of Congress can do the job, for it is agreed that an act of one Congress does not necessarily bind succeeding Congresses. We must put this resolve—if the people express their desire for it—in such a way that it cannot be circumvented in future years.

My mail shows a growing concern by persons throughout the country about inflation and deficit spending. I know other Members who also report the same trend. People realize you cannot live forever on borrowed money and they know that Uncle Sam cannot either.

I urge my colleagues to let the people decide through their State legislatures whether they want to continue deficit spending and inflation or whether we will live within our income. Let the people decide and then we will do their bidding.

An Address by Hon. M. A. MacIntyre, Under Secretary of the Air Force

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a very interesting and informative address delivered by Hon. M. A. MacIntyre, Under Secretary of the Air Force, before the Yale Law School Alumni Association, at the Waldorf-Astoria, New York City, on January 30, 1959.

The address follows:

Gentlemen: You are a part of a privileged group—the people of the United States. This group to which you belong has the highest material standards of living in the world. It has, within the past 50 years, absorbed and harnessed, to a degree which no others have, the automobile, the radio, and the airplane. It is now somewhat indigestibly absorbing TV, air conditioning, and advanced electronics. But it has yet to put in perspective, real or imaginative, the rockets and missiles of the space age which is upon us.

Like all other breakthroughs in human knowledge and reasons, we know they are usable for good or for evil, for peace or for war. To such alternate ends has the automobile been directed—and the airplane.

On the vistas opened by the space age to peaceful purposes I will not dwell. They are, however, legion in imagination and had we time we could dream together.

But it is the more immediate military significance of this age that I should like to discuss with you. I say immediate because trips to the moon, while perhaps essential to assure a knowledge of outer space and an ability to deny to others its uses for other than peaceful purposes, are still somewhat ahead of us in time. But the rocketry which creates the capability for orbitting satellites and probes to the moon and beyond is here right now. And it has present convertibility to the launching of intercontinental ballistic missiles with atomic warheads.

It is, therefore, appropriate and exceedingly timely that we be realistic about these weapons; their effects upon our other weapons; our military capabilities, and the policies which such capabilities can and must support.

First of all as to the characteristics of the missile itself. In range it will suffice to span the distance from the United States to Russia, East or West, and vice versa. It will travel such distances in approximately 30 minutes. The shorter range, the so-called IRBM, or intermediate range ballistic missile, will travel its 1,200-to- 1,500-mile range in 10 to 12 minutes. While initial warheads will not be as large as those carried by long-range bombers they will be many times more powerful than the Hiroshima bomb. Their accuracy, dependent on radio or all-inertial guidance, is a matter of experience but can be well within the destructive range of their warheads. Their overall reliability—that is, the chances of a successful launch, flight, and impact in an expected circle of probable error in one continuous operation—is, as you might expect, dependent likewise on experience, but could be very high. However, high probability of accuracy is more important than reliability of launch. Two or three missiles can take care of one target if the accuracy is sufficient.

These are formidable dimensions of speed of attack, warhead power, accuracy, and reliability. Clearly, the warhead size, degree of accuracy, and degree of reliability will become more refined and we must, in our own self-defense, seek the utmost refinements with the greatest intensity. The sputniks and lunik alone reveal the power and guidance which others have already successfully achieved.

Clearly, any of us can conclude, from our own test shots of Atlas, our first ICBM, and the sputniks, Explorers, and lunik, that operational intercontinental ballistic missiles are around the corner. Unlike the initial atom bombs, we will not be the only possessor. How many we or they will have or could have and by what dates I do not propose to discuss. Such matters involve not only intelligence but alternative considerations of operational concept and assumptions as to accuracies. They affect numbers but are immaterial to other important general implications which are being drawn, some erroneously, which I will discuss.

These implications must, in particular, be measured against our expressed national policy of depending upon an ability to retaliate, instantly, by means and at places of our choosing. It would be wrong to assume, however, that this means we must take the first blow on the continental United States. The President himself has stated that he sees no reason for saying we necessarily have to accept a major nuclear attack on the continental United States before we can act.

It is conceivable the first blow at us might not involve the continental United States as it could be a blow at the forces of an ally. We are, in short, under all circumstances undertaking to have a capability to exercise retaliation at our discretion. This is the heart and soul of what is spoken of as the deterrent. And militarily the basic ingredient is the capability to destroy, or substantially so, those major forces which could destroy us—not just some forces, or the peripheral forces. All our forces—land, sea, and air—contribute in varying degree to this deterrent. The force which today contributes in the greatest degree is the Strategic Air Command and its bombers. This alone today can reach to and destroy the inner core bomber forces and military targets that represent the only forces which militarily might prevail over us.

It is only natural that, in the transition of thought from these present day bombers to missiles having the characteristics I have described, some might draw the implication that our deterrent can rest solely on the possession of forces which, after initial attack upon us, could survive to assure retaliation by general devastation. This I believe would be a diluted deterrent. And I come to this conclusion by reason of the intensive nature of the concept, whether or not it be assumed that bombers give way to missiles, under sea or underground, as the backbone of such survival forces. For the danger of the concept is this: The survival forces that could indeed effect general devastation are so relatively small that they might not be capable of the substantial destruction of the major military forces of intercontinental bombers and missiles available to devastate us. Even though we are firm in our principle to strike only in retaliation for injury inflicted upon us, we must have this capability of destroying our enemy's ability to destroy us, or our deterrent can never be exercised except at the expense of our own destruction and our opponent would know this.

As Henry Kissinger and others have pointed out, an effective deterrent only exists if there are the forces to carry it out, the will to do so, and the belief of the opponent that both the forces and the will exist. But will an opponent believe that we would unleash our forces if our military capability is known by him to be limited to devastation capability and is not sufficient to prevent him from devastating us in return? And even if he did believe us, would we be as firm in the face of peripheral prods at the Berlins and Formosas or at the bargaining table?

It would, therefore, seem that we cannot allow the missile age to deflect us from attempting, within the confines of that age, to maintain the capability of neutralizing the bomber and missile forces that could devastate us. This will be difficult and many different weapons and means must be considered—including the airplane, the submarine, and the missile. The composition of such a force is, of course, on a quite different premise and many of its elements may indeed

be vulnerable or unsuitable for a pure survival force, expected only to exact a toll of devastation in retaliation for a nuclear blow struck at us.

The role of the airplane, which may more and more itself become a missile platform, is quite flexible for an infinite variety of attacks, particularly upon targets whose locations are not accurately known. It provides the means to bring human perception and judgment closest to the target. It is susceptible in quantity, of 15-minute alert and in lesser quantity of airborne alert. Whether, and the extent to which such measures plus dispersal now well under way, improve the bomber posture depend to great degree on the equally timely receipt of warning. The ballistic missile early warning we are building in the far north and other measures are designed to achieve this objective. The anti-ICBM missile on which ARPA and the Army are working and which is a problem of great difficulty could further add protective coverage. These considerations serve to highlight other less obvious but very important as well as correct implications of the missile age.

Until the advent of the missile, forces which could survive an attempted direct attack on them, generally speaking, were of the same character as those which would be usable prior to any direct surprise attack. But the compression of time and distance brought by the missile involves a closer and separate look at the before forces and the after forces.

It has been suggested that the missile age involves a further withdrawal to fortress America rendering overseas bases and installations useless. The emphasis, of course, is upon the compression of time for attack at shorter ranges than in the case of the continental United States. There seems to be also the countersuggestion that since the missile age may bring an assured retaliatory stalemate of devastation there is more need than ever for bases from which to be prepared for local aggression.

It is, of course, conceivable that it might become impossible for any one power to prevent retaliatory devastation by another. This is another way of stating that one cannot substantially neutralize the military forces of an enemy, which I do not now concede. But in any event, it is difficult to see how this increases the likelihood or scope of what are loosely called limited wars. Limited wars, there may certainly be, where the capability of one participant is limited as to the nature or number of weapons possessed. These, however, seem extremely limited and outside of the outright Communist bloc where the limitations are solely imposed by the discretionary will of the dominant partner, now and in the future. There is, of course, the exception of Communist China as a present and continually growing special case. Possible, if we were to assume a stalemate in capability of devastation among the major powers, encouragement of satellites or the growing independence of Communist China could precipitate more intense indirect aggression and local conflicts. Certainly our experiences when in possession of a strong deterrent cannot lead us to believe that we will need any less bases under a stalemate.

Part of the very reason I do not make the concession of a possible stalemate is the existence of those overseas bases and forces. Our allies and our forces among them, scattered throughout the world, represent a necessary target for our potential enemy that is a far more complex job successfully to attack by surprise than would be the continental United States alone.

Let me now, if I may, briefly summarize what I think is good defense thinking in the missile age.

First, our national policy does not require, nor does any intrinsic military deficiency, that if an aggressor makes an attack upon us or our allies overseas, we must grant him the advantage of an attack on the continental United States before launching our nuclear missile retaliation.

Second, were we to accept a military posture that limited our forces only to those which, after a surprise missile attack on the continental United States, would be sufficient to enable us to effect general devastation, we would then possess a deterrent, but a less believable one than when the capability to neutralize his major military forces of intercontinental bombers and missiles is possessed.

Thirdly, the missile age requires forces measured separately for capability to neutralize substantially the military forces of a potential enemy and for assurance of general devastation after surprise attack upon us.

Fourthly, whether or not the before attack missile age forces can be created and whether or not, therefore, a stalemate is created, limited conflicts controlled by limited capacities or limited willingness of indirect aggressors will require allies and bases throughout the world either to meet the prods under a stalemate or to complicate the surprise attack burden of a common potential enemy.

Abraham Lincoln—Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. ZABLOCKI. Mr. Speaker, we have gathered here today in the Halls of the Congress to observe the 150th birthday anniversary of the 16th President and one of the greatest sons of our country, Abraham Lincoln. On this day, also, we commemorate the birthday of a famous adopted son of our country, and a hero of the Revolutionary War, Gen. Tadeusz Kosciuszko.

In their backgrounds, Lincoln and Kosciuszko were far apart. Lincoln was born in a log cabin in Kentucky, received little formal education, and advanced from his humble originis to the highest office in our land.

Kosciuszko, in contrast, was born in Poland, of a well-to-do family, and received excellent education. He was a graduate of the Military Academy in Warsaw and the Military School of Artillery in Paris. Unlike Lincoln, he was principally a soldier.

But in spite of their divergent backgrounds, Lincoln and Kosciuszko were alike in their love and liberty and justice, and in their belief in the dignity and basic equality of men.

It is these convictions which they shared, and for which they lived and died, that have earned them our love, gratitude, and honor.

The lives of these two men, and their achievements, are well known to all of us. I shall not endeavor to repeat them. I would, however, like to bring out one point which seems very significant, and very pertinent to the problems which our Nation, and the rest of the free world, face today,

Both Lincoln and Kosciuszko were involved directly in tremendous struggles to assure the freedom, and the unity, of our Nation. And they both clearly realized, and so indicated in their speeches and writings, that those wars were not fought solely for the sake of the then-living generations. Those wars were fought so that generations to come could enjoy liberty, justice, and progress in a free, democratic, and united nation.

We, too, are involved in a great and terrible conflict: the conflict between the free world and communism. The outcome of this conflict may well determine the survival of our Western Civilization, and the survival of the priceless heritage which came to us through the efforts and sacrifices of men like Lincoln and Kosciuszko.

We must realize and remember, therefore, as they did so clearly, that what is at stake in this conflict is not only our own future, but also the future of our children and of our children's children for many generations to come. Our actions today will determine the framework of the society in which they will live for decades and even centuries to come.

With God's help, and a firm stand and willingness to sacrifice on our part, we may preserve our heritage and pass it on to our children, so that they too will be able to enjoy liberty and justice.

This is our responsibility. God give us strength that, inspired by the example of Lincoln and Kosciuszko, our Nation today and in the days to come may live up to that responsibility.

Treasury Bows to Market—Avoids Long-Term Issues

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. MULTER. Mr. Speaker, for many years I have been urging that the Treasury Department increase the interest payable on U.S. savings bonds—E bonds—at the same time waiving the payment of income taxes on such bonds provided that the bonds are not redeemed for at least 10 years after their maturity.

On January 7, 1959, I again introduced bills which would accomplish the foregoing. They are H.R. 596 and H.R. 597, respectively.

The following article by Leslie Gould, financial editor of the New York Journal-American, points up the necessity for enactment of these measures. The article appeared in the New York Journal-American of January 30, 1959:

TREASURY BOWS TO MARKET—AVOIDS LONG-TERM ISSUES

(By Leslie Gould)

The U.S. Treasury in its newest financing—$15 billions—faced realities and passed up for the time being any further switch of the debt into long-term securities.

The two previous long-term offerings—last spring and earlier this month—missed the market.

DEBACLE IN BONDS

Last year's long term issue resulted in a demoralized market, from which it has yet to recover. The crackup last spring and summer was one of the worst debacles in bond market history.

The long term bonds sold earlier this month are selling below the offering price even after a 2-day rally in governments.

The Treasury could hardly take another crack on the head or a kick elsewhere on the anatomy.

NEXT FINANCING APRIL

The new financing is all in short term securities—3-year 4 percent notes and 1-year 3¾ percent certificates. This is a "roll-over." The new securities will be issued only in exchange for maturing issues. There will be no cash subscriptions.

Outside the regular short term bill offerings—none of which will be for cash under the new Treasury policy—there will be no more Treasury financing until April. The Treasury, to meet payrolls and other cash needs will have to come into the market then.

EIGHTY AND ONE-HALF BILLION DOLLARS DEBT DUE

The Treasury in the year ahead has more than $80½ billion in securities maturing, including the issues to be swapped for the new offering. This $80½ billion also includes nearly $2 billion in E-bonds, and $1¾ billion in savings F and G bonds.

The Treasury is on the spot, largely as a result of its failure 5 and 6 years ago to refinance more of its debt into long term issues. Then it could have financed at around 2½ percent. Now it has trouble getting money at 4 percent.

The Federal Reserve has had a role in this, putting up money rates.

LITTLE GUY GETS ONLY 3¼ PERCENT

What the Treasury and the Federal do sets the pattern for the money market. The public fails to realize this, and when investors see Government bonds dumped because of the changing interest pattern they put part of the blame on a flight from the dollar. If there ever is a real flight from the dollar, the Treasury will be in trouble. So, will everyone else.

One thing the Treasury can never explain is why a little E savings bond investor can get only 3¼ percent for his money—and then only after holding his bonds more than 8 years—while large bonds nearly 9 years—while large institutional investors now can get 4 percent.

Unemployment Still No. 1 Domestic Problem

EXTENSION OF REMARKS
OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 12, 1959

Mr. SANTANGELO. Mr. Speaker, this year I have received many letters asserting that inflation is the great No. 1 domestic problem. The President in his budget message proceeds on the assumption that inflation is our greatest danger. By legerdemain or juggling, he has apparently submitted a balanced budget. Other people contend that international communism is our greatest problem. I know that the fear of inflation and the fear of international communism are disturbing a great many people. However, in my area, the problem of unemployment is a serious one. The problem of unemployment appears to me to be the major domestic problem in my congressional district. My opinion is fortified by the results of a questionnaire which I forwarded to the voters of my district during the early part of January. In response to one of the questions, I received a very alarming answer. I asked the following question:

In connection with your standards of living, are you employed full time, employed part time, unemployed, or retired?

I have tabulated the answers and I find this alarming situation. Sixty-four percent of the people declared they are employed full time, 8 percent indicated that they are employed part time, 8 percent are unemployed, and 12 percent stated that they are retired.

It appears, therefore, that the domestic problem of unemployment is still a major problem in my area. This is in the great city of New York where the country feels prosperity abounds. The percentage above, if projected, indicates that my area is suffering from lack of employment, either fully or partly. Sixteen percent of those who responded to my questionnaire declared that they are not employed full time. An additional 12 percent are on fixed incomes inasmuch as they are retired.

The problems of my district apparently are problems throughout the United States. We must not relax in our efforts to expand our economy and to provide measures for the relief of the unemployed. Throughout the United States reports are heard that unemployment is still the No. 1 domestic problem.

In the February issue of the magazine, The Laborer, there was this illuminating editorial. I set it forth for the reading of all those who wish to know what is going on. After reading it, they will be better informed as to what they should do:

Unemployment, someone once said, is like an iceberg. The chunk that rises above the surface—the actual unemployed—is only a small part of the story. Resting quietly beneath the jobless waters are the bewildered, hungry faces of millions of children and dependents of the unemployed worker.

As the year 1958 rang down, the U.S. Department of Labor's Bureau of Statistics issued its last report for the old year on the number of unemployed—4,100,000, or 6.1 percent, of the labor force.

Coinciding with the release of unemployment figures, President Eisenhower issued his seventh state of the Union message to Congress. The theme running through the entire message was the need to balance the budget. During the reading of his message the President was applauded some 27 times, but the only unanimity of applause in the heavily Democratic Congress occurred when the President stated that there would be no retreat on Berlin.

HOPE OFFERED

When the President had finished his message the consensus was that Congress had a major task ahead on the economic front.

One hope for restoring jobs to the unemployed came soon after Congress convened last month when Representative ALBERT RAINS, Democrat, of Alabama, introduced an omnibus housing bill.

If passed, the bill would provide $500 million a year for 3 years for slum clearance and urban renewal, with a clause providing an additional $100 million accelerator fund to be added at any time. This compares with the administration's proposal last year for a $250 million annual program, with the Federal share declining in later years. The bill would also remove some restrictions on the public housing program; provide $500 million for the Federal National Mortgage Association's special assistance program for purchase of some housing mortgages; set up a new loan program for housing for the elderly, and provide $500 million for the college housing loan program.

Another area where the unemployed can hope to find employment is in airport construction (see January 1959 Laborer). The Democrats in the Senate have already listed Federal aid to airports as a top priority on their 1959 calendar. Also, the Democratic leadership has promised dollars and cents aid to depressed areas of our country.

A recent edition of a leading business magazine has predicted a half billion dollar economy by early 1960.

Early in its story, the magazine announced that the economy is "moving up again, somewhat anxiously and hesitantly, but in a healthy and broad-based way." Near the end of the article, there was a section on unemployment. One of the reasons given for the rise in unemployment during the postwar years was technological advances. It was noted that technological unemployment, not a serious threat to wage earners yet, can expect to be felt more and more in 1959.

AUTOMATION BLAMED

One of the industries hardest hit by technological advances has been the auto industry.

A Michigan State University professor, reporting on the large number of layoffs in this industry, says that he has firsthand knowledge of "auto workers with 12 years' seniority who haven't been called back to work yet. The feeling is that only those with 10 years or more seniority will go back to work this year." Others evidence of the inroads automation has made on this industry is the fact that auto makers are turning out cars with only 75 percent as many machine tools as it used in 1953.

The hardships presented by automation should be a joint labor-management problem and should look to a solution from these two groups.

Relief for the displaced worker could be sought through a program to help the worker find new employment elsewhere or to retrain him, if he is capable, in the new technology. Those who cannot be retrained and are not young enough to look elsewhere for work should be retired at an earlier age.

Studies conducted by the Department of Labor in industries where automation has made the biggest inroads, e.g., the baking and chemical industries, have brought out one salient fact—the necessity to give workers sufficient notice of an impending automated program. Many workers then have a chance to make up their minds whether they will train for new jobs, take downgraded jobs at the same pay, or find other employment opportunities.

The year 1959 offers a clear cut challenge to all members of organized labor to see that the unemployed worker does not remain a mere cipher lost in an impersonal maze of statistics.

For the record, we will here cite the December 1958 report of the Department of Labor on unemployment and then next year perhaps we can return to these figures to check for any signs of improvement.

The increase in unemployment was the largest since June 1958 when 500,000 workers were added to the jobless rolls.

WORKWEEK INCREASED

Manufacturing employment dipped by 50,000 to 15.7 million mostly because of seasonal declines in canning and food processing.

The factory workweek increased three-tenths of an hour to 40.2 hours, bringing average weekly factory earnings to $88.04, a new high.

Insured unemployment for the week ending December 27 was 2,811,467.

Estimates indicate that about 200,000 persons exhausted their regular jobless benefits in December, compared to 180,000 in November.

As this issue of the Laborer was going to press, the President submitted his budget to Congress. In the $77 billion balanced budget the President called for:

A breathing spell in starting new public works projects. Federal expenditures for public works in fiscal 1960 would be the highest in history, but the President said "no additional funds are proposed in 1960 for starting new water-resources projects, general office buildings, and veterans' hospitals."

A glowing picture was painted of the employment of our people and resources at high levels, but no mention was made of the unemployment problems facing our country. The budget message further proposed an end to the emergency spending to extend jobless benefits and stimulate homebuilding. The President said a new plan for loans and grants to depressed areas will be submitted to Congress shortly.

An increase in interest rate on GI home loans from 4¾ to 5¼ percent.

Federal aid for school construction was not mentioned in the budget message and it is assumed that there will be no Government funds for this purpose. However, Arthur Flemming, Secretary of Health, Education, and Welfare, said "the issue is not foreclosed."

Estimated receipts in the budget were placed at $77.1 billion and expenditures at $77.03 billion, for a surplus of $70 million. If realized, it would be the third Eisenhower budget in balance. Four have shown a deficit.

Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. McCULLOCH. Mr. Speaker, I have today introduced a bill to implement the seven recommendations made by the President in his civil rights message of February 5, 1959.

This proposed Civil Rights Act of 1959 constitutes a moderate, practical, sound, and, I believe, generally acceptable step forward.

First. Title I would make it a criminal offense to interfere with the exercise of rights or the performance of duties under orders of U.S. courts in school desegregation cases.

Second. Title II of the bill would make it a Federal offense to cross State lines to avoid prosecution or confinement for destroying or attempting to destroy by fire or explosive any structure used for educational or religious purposes. This legislation will clarify the authority of the Federal Bureau of Investigation to assist local enforcement authorities to track down the perpetrators of such offenses.

Third. The President has said that the right to vote is the keystone of democratic self-government. Title III of my bill will require election officers to retain and preserve for 3 years all records and papers which come into their possession relating to elections involving candidates for Federal office. The measure will also authorize the Attorney General to demand their production for examination and copying with recourse to the courts in the event of noncompliance.

Fourth. In establishing the Commission on Civil Rights, the 85th Congress provided that the Commission shall terminate its existence not later than 2 years and 60 days after the date of the enactment of the Civil Rights Act. This would mean that in the absence of an extension the Civil Rights Commission would, at the latest, cease to exist early in November of this year. The President has recommended, and title IV of this bill will accomplish, a 2-year extension in order that the Commission may adequately perform the job for which it was created. The bill also provides for the President and the Congress to be advised in an interim report to be submitted not later than September 1, 1959, as to Commission activities as of that date.

Fifth. Title V will give legislative stature and independent existence to a Commission on Equal Job Opportunity Under Government Contracts. The 15 member Presidential Commission would be authorized to continue and to expand the work which has been done in recent years to promote equal job opportunity in the performance of Government contracts without regard to race, creed, color, or national origin.

Sixth. Title VI of the bill would appropriately amend Public Laws 815 and 874 of the 81st Congress, which authorize Federal payments to school districts which provide free public education to children whose parents reside or work on Federal property not subject to State or local taxation to include children of members of the Armed Forces whether they reside on Federal property or not. This title will also authorize the acquisition of certain school buildings as rental property, to be used for providing for children of military personnel education necessitated by the closing of the public schools.

Seventh. The final substantive title, title VII, will authorize the Federal Government to provide technical assistance to States which prior to the Supreme Court decision of May 17, 1954—Brown against Board of Education—maintained segregated schools and which seek to comply with the decision of the Supreme Court. It would accomplish this purpose by making Federal grants available to the States. Also, at the request of the States or local agencies, the Commissioner of Education would be authorized to provide technical assistance and information in the development of desegregation programs and upon request of such officials will initiate or participate in conferences dealing with the educational aspects of problems arising from desegregation of public schools.

As indicated at the outset of this statement, I am convinced that this bill is a sensible, middle course which the Congress should look upon with favor. I sincerely hope it will receive consideration at an early date.

The 20th Anniversary of Marian Anderson's Concert on the Steps of the Lincoln Memorial

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. BRADEMAS. Mr. Speaker, today Members of Congress have joined in tribute to the man whom many Americans regard as the greatest figure in the history of our country, Abraham Lincoln.

We have heard a distinguished American, Carl Sandburg, speak on the 150th anniversary of the birth of a man who has been described by Walt Whitman as "the grandest figure on the crowded canvas of the drama of the 19th century."

Mr. Sandburg declared just a few days ago that Abraham Lincoln took the word "liberty" as precious, saying in 1858:

Our reliance is in the love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere.

Not only, Mr. Speaker, is 1959 the 150th anniversary of the birth of Abraham Lincoln. It is also just 20 years ago that Lincoln's memory was honored in a concert on the steps of the Lincoln Memorial, a concert given by one of the grandest figures on the crowded canvas of the drama of our century, Miss Marian Anderson.

It seemed to me most fitting that Miss Anderson, one of the world's greatest musicians and one of America's finest citizens, should be invited to sing at the joint session of Congress today when we commemorate the birth of Abraham Lincoln. For this reason, last month I wrote a letter to the chairman of the Committee on Arrangements on the Joint Session urging that Miss Anderson be invited. I am pleased to say that I understand the committee did extend to this great lady an invitation and that only the pressures of the late hour prevented her being with us today.

I wish to insert in the RECORD at this point my letter to the chairman of the committee:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 29, 1959.

The Honorable FRED SCHWENGEL,
House Office Building,
Washington, D.C.

DEAR MR. SCHWENGEL: I am writing to you in your capacity as Chairman of the Committee on Arrangements on the Joint Session of Congress for the commemoration of the 150th anniversary of the birth of Abraham Lincoln.

It is my understanding that your committee has invited former Presidents Herbert Hoover and Harry S. Truman to take part in the ceremonies of February 12, 1959, and that your committee has also arranged for participation in the ceremonies of the distinguished American poet, Mr. Carl Sandburg,

and the distinguished American actor, Mr. Frederick March.

I wish to congratulate you and your colleagues on your plans for honoring the memory of this towering figure in our country's history.

I should like to suggest, however, that you invite another distinguished American to take part in the activities of February 12—Miss Marion Anderson, one of the world's greatest musicians and one of America's finest citizens.

I was among those who on May 26, 1957, watched Marion Anderson receive the honorary degree of Doctor of Laws from the President of Saint Mary's College, Notre Dame, Indiana. The degree citation read in part:

"Arturo Toscannini said of Marian Anderson that a voice like hers happens once in a hundred years. The distinguished composer Sibelius protested that the roof of his house was too low for her voice * * * Chiefs of State representing their people have celebrated her public triumphs. At the invitation of our own Government, Marian Anderson has sung to honor the visit of royalty, the return of a hero from a war and the inauguration of a President."

Miss Anderson has indeed served our country nobly and in many capacities, most recently as an Alternate Delegate to the General Assembly of the United Nations. She won much friendship for the United States by her 1956 and 1957 concert tours in Europe and the Far and Near East.

Her accomplishments are many and could be multiplied and, as the President of Saint Mary's College said in 1957, "All these achievements Miss Anderson has accomplished in a spirit of profound Christian faith."

It was just 20 years ago, in 1939, that Marian Anderson gave her now legendary Easter concert before 75,000 persons in Washington, D.C. She sang from the steps of the Lincoln Memorial.

I believe it would be most fitting for your committee to invite Miss Anderson once again to sing in the shadow of Lincoln's memory as the Members of both Houses of the Congress of the United States join to pay tribute to the man who is the symbol of America's dedication to freedom.

I hope, sir, that you and your colleagues on the committee will invite Miss Anderson to take part in the ceremonies of February 12, 1959, before the joint session of Congress.

With highest regard and best wishes, I am,

Sincerely yours,

JOHN BRADEMAS,
Member of Congress.

Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. RABAUT. Mr. Speaker, February 12 marks a very special day for all of us who cherish freedom in our hearts. I am proud to join in commemorating the birthday anniversary of Tadeusz Kosciuszko, who fought for freedom on two continents.

Kosciuszko was born in Poland on February 12, 1746. Benefiting from an education in Poland and in France, the 30-year-old captain of artillery joined with the American patriots of 1776 in support of the great moral and political principles set forth in the Declaration of Independence.

A skilled military leader and a tireless fighter for human liberty, he served with distinction at Saratoga, Yorktown, and Charleston. Through his talents he became a brigadier general in the Continental Army.

When it seemed that there was hope for the cause of freedom in his native Poland he returned to join the struggle. Although the small but inspired Polish army fought gallantly against the Russian hordes, defeat was inevitable. After an imprisonment of 2 years in Russia, he returned to America in 1797 for a brief visit. He formed a close friendship with Thomas Jefferson who wrote of him:

I see Kosciuszko often. He is the purest son of liberty among you all that I have ever known.

The next year he returned to Europe to champion once more the cause of Polish independence. He died in exile in Switzerland in 1817.

To Kosciuszko, the gallant fighter for the cause of human freedom, we offer this tribute to perpetuate his memory and our gratitude.

Birthday of a Great Patriot, Leader, and Revolutionary War Hero: Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. STRATTON. Mr. Speaker, today, February 12, we commemorate in this country not only the anniversary of one of our great national leaders, the great emancipator, Abraham Lincoln, but also we commemorate the anniversary of a great American Revolutionary War hero and patriot, who came from his native land to help us with the liberty for which we are today so grateful, Thaddeus Kosciuszko.

It is indeed significant that the fight for freedom and democracy which brought about the independence of this country caught fire across the seas and rallied to American standards outstanding men from other countries who shared our sentiments. One of the greatest of these was Kosciuszko, an outstanding military engineer, whose efforts contributed toward the military fortifications at West Point in 1778, and who played a prominent part in the decisive Saratoga and Carolina campaigns of the American Revolution. In recognition of his great service to American independence, Kosciuszko was made a brigadier general in the American Army by Congress on October 13, 1783.

After he returned to Poland, Kosciuszko, with the same spirit of freedom, became one of the great champions of Polish independence, leading his countrymen in uprisings against their Russian and Prussian oppressors.

But the brave Polish fight for independence faced heavy odds from totalitarian aggressors, and General Kosciuszko was driven out of his homeland and died in exile in Switzerland in 1817.

On this anniversary of his birth let us pause today, Mr. Speaker, to pay honor to the memory of a great and gallant Polish officer who left home, friends, and fortunes to serve the cause of freedom in this country. May his memory remind us that the cause of freedom is indivisible, and that when the freedom of any country is menaced the freedom of all men is menaced.

Just as Kosciuszko left home to fight for American freedom, may we in days to come dedicate our energies and resources to the end of restoring freedom from Communist oppressors to the Polish homeland which he loved so well and served so faithfully.

Restoration of the Historic Relationship Between Pay of Active Officers and Pensions of Retired Officers of the Armed Services

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. BALDWIN. Mr. Speaker, I would like to call attention of the Members of the House of Representatives to the following editorial which appeared in the February 10 issue of the Washington Post, Washington, D.C. This editorial sets forth effective and convincing arguments as to the need for restoring the historic relationship between the pay of active officers and the pensions of retired officers of the armed services. I have introduced H.R. 703 to accomplish this objective. Many other Members have introduced similar bills. I hope that this legislation can be given an early hearing by the Armed Services Committee.

MILITARY PAY AND PENSIONS

Thirty-one Senators and 25 Representatives have opened a campaign to remedy a serious defect in the military pay bill passed by Congress last year. Their objective is an amendment to the legislation that would restore the relationship between pay of active officers and military pensions. The law ought to be changed in fairness to officers already retired and in consideration of the importance attached to retirement benefits by men pursuing military careers.

Congress modified a 100-year-old military tradition that retirement benefits should be related to active duty pay when it provided 6-percent increases in benefits for officers who had retired before June 1, 1958, and continued the pay-benefit relationship only for persons retired after last June 1. The Cordiner Committee report on military pay noted that "military retirement and its firm tie-in with active duty compensation is perhaps the most powerful long-term career incentive existing within the military compensation system."

It would cost $30 million this year to restore this relationship, and the cost would decline in succeeding years as death de-

creased the number of retired officers affected. This is not too high a cost when it is measured in terms of a strengthened career military service and the moral obligation to officers who retired in years past.

Agricultural Production Payments

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. POAGE. Mr. Speaker, a few days ago I received a very courteous letter from the president of the Ellis County Farm Bureau in Texas. Attached to this letter was a pamphlet attacking the direct or compensatory payment approach as a basis for a farm program.

Since there is obviously much misunderstanding as to this program as well as to the alternatives that are available and especially since I have introduced a direct payment plan for cotton, I have felt that I should attempt, as best I can, to explain the proposal and to point out some of the answers which will suggest themselves to the charges in the pamphlet.

I have written a rather comprehensive letter on this subject to Mr. Joe B. Shirley. The letter, which is self-explanatory, follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 11, 1959.

Mr. JOE B. SHIRLEY,
President, Ellis County Farm Bureau,
Waxahachie, Tex.

DEAR MR. SHIRLEY: Your letter of the 6th, together with the attached statement or circular condemning production payments as "a long step toward socializing agriculture" was just received. I deeply appreciate the fine, fair attitude which you and the other members of your local bureau expressed. I recognize that the production payment approach, like all other agricultural programs with which I am acquainted, has imperfections and weaknesses, but for a good many years I have been trying to compare the strength and weakness of various programs and I think that it must be on a comparative basis that we must make our decisions. If I am right on this, we must then answer these questions: (1) What programs are available? and (2) Which program offers us the most?

Basically there are but three approaches to the farm problem:

First, there is the philosophy of laissez-faire—no controls and no supports. This is what the President and Mr. Benson both strive to achieve, although they would not reach their goal immediately. This means that we would abandon all controls over agriculture and all efforts to support agricultural prices and farm income. It has a very strong appeal for most people and I think that I would support such a course were the farmer not the only element in our economy who is called upon to operate without any stabilization of his income.

If it were possible for the farmer to buy in a completely free market, uninfluenced by governmental regulations, minimum wages, price floors, Government profit assuring contracts, etc., then I think that I would be compelled to agree that the farmer should have no more protection than is accorded to labor, industry, and commerce, but we do not live in that kind of a dream world. The farmer buys in a market of administered prices—that is, prices that are determined in a large degree by governmental actions. Certainly the minimum wage laws directly affect the price of what a farmer pays for a tractor. Certainly the policy of guaranteeing remunerative contracts to the producers of missiles, atomic weapons, etc., adds to the farmer's taxes. Certainly the Railroad Retirement System adds to the freight bill on everything that the farmer buys, as well as everything that he sells, and he pays the freight both ways. The average income of people on farms is today only $1,027, while the average income of people not living on the farms is $2,040. In other words, the average person on the farm is making just one-half as much as the person not on the farm and one-third of all of the income of people on the farms comes from nonfarm sources.

To deliberately adopt a policy that would still further decrease this pitifully small farm income, while holding nonfarm income to its present levels, is so contrary to my feeling of right and wrong that I cannot seriously consider going back to the freedoms of 1932.

The second basic approach to the farm problem is that of the Agricultural Adjustment and Soil Conservation Act of 1937 (fundamentally the present system). It consists basically of an attempt to balance supplies with demand; first, by controlling the acres of crops produced, and, second, by removing any remaining surplus into Government warehouses through a nonrecourse loan. In the case of cotton and wheat the loan establishes the market price. This is our present system. It has, of course, undergone a great many changes as to the exact degree of controls and the level of Government assistance (the loan). Its distinguishing mark, however, remains the same—the use of a nonrecourse loan to secure for the grower the desired level of support.

Mr. Benson, the President, and Mr. Shuman have all urged that this supplemental governmental support should be reduced, and it has been reduced very materially during the present Eisenhower administration. The amounts paid farmers for their cotton, corn, and wheat is far less than it was. The reduction in the rate of Government loan has not, however, achieved any of the promised savings to the taxpayers.

It has not reduced Government costs. Prior to January 1, 1953, the loan support program of our six basic commodities had cost the U.S. Government nothing for the entire 20 years previous. On the contrary, the Commodity Credit Corporation had accumulated a small profit of $13 million as a result of its support of these commodities. Since 1952, and through 1958, the losses of the Commodity Credit Corporation have amounted to approximately $2,500 million in its support operations involving the six basic commodities.

This reduction in the support prices has not reduced surpluses as it was claimed that it would. On the day Mr. Benson became Secretary of Agriculture the stocks and commodity loans of the Commodity Credit Corporation amounted to $2,452 million. On January 1 of this year the stocks and loans of Commodity Credit Corporation totaled $8,710 million and the President's message to Congress said that by July 1 they will exceed $9 billion. In other words, flexible supports, always flexing downward, have not only aggravated the farmers' problems; they have been terribly expensive to the taxpayer.

I am well aware of the fact that the American Farm Bureau Federation has urged that we cut our supports entirely loose from the parity concept and, instead, let them drop year by year to a point 10 percent below the level of prices for the preceding 3 years. For any commodity, the price of which is actually supported, this means progressive reduction until we reach a point as low or lower than the support price itself. It could only require a few years to make every support price which fixes the market price totally ineffective. In his message to Congress the President supports this approach but asks that it be speeded up.

He asks authority to lower supports 25 percent below the market price "in recent years." In the case of every basic commodity this would mean that in 1 year he would eliminate all effective supports and would drop the support price to a figure below the present market price. We don't have much need for support prices when we can get more on the market.

Obviously, if it were possible to bring the supply of farm commodities to a sufficiently low level, it would be possible in most cases of commodities, except cotton, to raise the price to almost any desired figure, but as a practical matter farmers do not have the resources to accept the drastic cuts that would be necessary. With its far greater resources the oil industry has used this device very successfully. It is called "proration" in our oil laws.

I stated that at this time it would not be practical to reduce the production of cotton to a point where we could force the price to a remunerative level, because to do so would result in a greatly increased use of synthetic fibers. Our mills would simply use less cotton. This, of course, is not true in the case of wheat, where the public is not going to turn to corn meal, even though the price of wheat were doubled. It is for this reason that I have felt that we stood in special need of a better system of maintaining cotton income, but I think it is clear that our present method of maintaining all farm prices is ineffectual. On this point I agree with the President and with Mr. Benson, although I think that their active sabotage of the program has come a long way toward proving the case that they wanted to prove.

Third. We now come to what seems to me to be the only alternative—that is, direct compensatory payments to adjust the difference between farm income obtained in the open competitive market and the level of income which has been predetermined to be the nearest attainable approach to a fair income.

This is not, as Mr. Benson and Mr. Shuman have tried to indicate, some new plan, nor was the inclusion of such proposal in the plan suggested by former Secretary Brannan anything new or unique. At that time this method had been used in the case of sugar for something like 15 years before Mr. Brannan suggested that it be expanded, and it was only about 5 years after Mr. Brannan made this suggestion that the present Secretary of Agriculture proposed that this method should be used to support the price of wool. It is doubtless a pure coincidence that wool and sugar are major crops in the State of Utah—but I am sure that Secretary Benson would not knowingly advocate a program which be considered to be either wicked or ineffective for the farmers of his home State.

The sugar program, which has been in effect for 22 years, uses production quotas to prevent the overall quantity of sugar from becoming too great and direct Government payments to make up the difference between the world price and 98 percent of parity. It has resulted in a very stable market for sugar, very acceptable returns to the producers, and reasonable prices to consumers. The wool program, the extension of which our own Texas sheep and goat people vigorously supported this year after having opposed the original bill, does not involve any production controls because there is no foreseeable danger of growing more wool than we want, but

it has resulted in returns to wool growers in excess of 100 percent of parity and has enabled woolen fibers to sell at price levels competitive with foreign wool and with synthetic substitutes. It was presented to the Congress by the present Secretary of Agriculture, who seems to feel that it would be quite wicked to use a similar program for cotton.

I recognize that there are a great many difficult details involved in working out a comprehensive program for all crops. I think that anyone can point out defects and difficulties in the administration of any such program. I have not tried, or at least I have not been successful in producing, an overall payment program that I want to present as worthy of public support, but I have worked out the details of a compensatory payment program for cotton which I am happy to defend. I have proposed that we go ahead with cotton because it cannot use some of the other programs as effectively as can other commodities. This is because of the competitive situation to which I have already made reference.

That there may be no misunderstanding, the bill I have introduced on cotton, H.R. 3684, does not undertake to increase the amount of money that we are now authorized to spend. I would like to see every commodity bring the farmer a full 100 percent of parity. Until we can do that, I don't think we have met our full obligation, but I also recognize that it is important to protect our taxpayers. This bill only proposes to support the price of cotton at 82 percent of parity—approximately the support level of the past year. The best calculations I can make, this can be achieved without any increase whatever in our expenditures, but it would mean that all of the money spent in the way of subsidies would go directly to the producer—the American producer—the farmer.

As it is now, we are paying out vast sums in direct subsidies—more than one-half billion dollars during the first year of the present cotton support program, but that one-half billion dollars did not go to the farmers. Most of it went to pay storage and carrying charges. I don't know why our taxpayers should be burdened with this storage. The President says that the present program is going to result in storage charges of more than a billion dollars a year and undoubtedly if we continue the existing program, those costs will increase and not decrease. The direct payment program would eliminate all storage charges except on commodities that we have already accumulated. That would be a tremendous saving to start with.

Another matter of importance is that these vast expenditures are not providing competitively priced cotton for American mills. Our cotton is not competitive with synthetics in the mills of Carolina, but we are subsidizing cheap cotton into the mills of Italy, Germany, and Japan. What is there about a subsidy to these foreign mills that makes it sound and just, while a subsidy paid directly to American farmers is, in the opinion of the writer of the sheet you enclosed wicked and immoral?

I am not going to undertake to discuss the whole problem of supports for all agricultural commodities, but I do want to attempt to discuss the criticisms contained in the sheet you sent me as they relate to the cotton program which I have proposed in H.R. 3684 and which I am sponsoring.

The crux of the support provided by this bill is found in the provisions requiring the Secretary to make equalization payments to the first buyer of cotton from a "cooperator." This means the first purchaser of cotton from the farmer, and the payment required is the difference between the average market price for the preceding calendar week and 82 percent of parity. The bill contains provisions to protect the Government from payments to any buyer who has not passed the payment on to the producer and provides a limitation of $5,000 on the payments made to any one producer in any 1 year. This means that the largest producer will still receive payments on about 200 bales of cotton and that everyone who produces less than that amount would receive payments on all of his cotton.

The bill provides that we will maintain a minimum national acreage allotment of 16 million acres, which will be increased if the demand for cotton increases. So long as the present existing surplus exists, the allotment will be decreased by the equivalent of 1 million bales, this for the purpose of eliminating the surplus Mr. Benson has built up. As a matter of protection against losing anything good that we have, the bill will retain an emergency loan provision at not more than 3 percent less than the estimated average world price. Obviously, no one would take advantage of such a loan except as a means of financing holding operations. The bill does make provision for continuing the existing loan level if for any reason funds are not made available for carrying out the provisions of the act. I believe you will immediately see that many of the objections raised in the circular are not applicable to this bill.

The first of the so-called basic objections raised by the author of the circular is that direct payments "would stimulate production, depress market prices, and make farmers dependent on congressional appropriations for all their net income." This bill does not encourage excessive production—in fact it retains all of the production limitations that we have at the present time and in spite of repeated statements by Mr. Benson, Mr. Shuman, and others to the contrary, the assurance of a high price for cotton has never resulted in overproduction. On the contrary, our largest crops have been grown when prices were low and when it was known in advance that they were going to be low. The largest cotton crop this Nation has ever had was produced in 1937, with a support price of 52 percent of parity. According to the logic of this circular, we should have imported cotton in 1937. There have been many years since that time when there have been much higher prices and when there was no control on the production of cotton, but we have never approached the production of those low price years. The reason is that when a farmer who is growing cotton or any other cash crop in a one-crop country (and that is where most of our basics are grown) finds that he is faced with a lower price, he tries to make up in volume what he expects to lose in price. I believe that wheat farmers, tobacco farmers, peanut farmers, and others will react exactly like cotton farmers react and will try to maintain their family's living standards through increased production when they see lower prices coming. In my opinion, this assumption that a fair price for farm products will automatically result in overproduction is the fatal defect in the Bensonian philosophy. If Mr. Benson and Mr. Shuman are correct in this assumption, how do we account for the tremendous increase in surpluses that have been produced by our farmers in the last 6 years, during which time farm prices have been constantly declining? Of course, the reference to depressed market prices is entirely dependent upon the assumption that supports would result in overproduction.

The complaint that it would make farmers depend upon congressional appropriations has no more validity when applied to a direct payment program than it has to the present program. Our present loan support program is entirely dependent upon congressional appropriations. So is any other program that depends upon the Government. A direct payment program, costing the same amount of money as the loan program, is no more dependent upon congressional appropriations than the existing program. In either case, Congress must appropriate money to keep the program going, and it is an insult to the intelligence of the American farmers to suggest that they do not know that the present program is dependent upon congressional appropriations. How do we get the money to pay our present export subsidies; how do we get the money to pay the losses of Commodity Credit Corporation, if it is not from congressional appropriations; and what would happen to the present program if congressional appropriations stopped?

Point 2 in the circular criticizes the Talmadge plan because it is limited to the six basic commodities, but point 3 condemns the expansion of a program to cover all commodities as being tremendously expensive. I have not introduced a compensatory payment bill for anything except cotton, but I think that some of the figures that are used to condemn a general compensatory program are quite misleading. Of course, the cost depends upon the level of support one achieves, but I think we might get some idea about what the cost will be by considering the fact that the total gross farmers received from marketing of all farm products in 1958, including livestock and milk, amounted to somewhere between $25 billion and $32 billion (there is a difference in the figures of the Department and the Census Bureau). Let us take the larger estimate. The average price of all farm products was approximately 82 percent of parity. If we guaranteed the average of all farm income at 82 percent of parity, as provided in my bill, for cotton, this should have involved no cost at all in 1958 except to bring up some of the lowest priced items. This, of course, is a far cry from the $8 billion to $16 billion suggested by the circular. As a matter of fact, $16 billion is just about exactly one-half of the total gross value of all farm products. Since it would only take an increase of 20 percent from the value of all farm products to bring the average to 100 percent of parity, it seems to me that somebody has been figuring with a very dull pencil. Of course, I know that last year's price level is not stable. Mr. Benson says it will go up, but I rather expect it to go down, and on the six basic commodities the shift from our present loan-supported prices would naturally tend to reduce the world price and make the spread somewhat greater, but I think you can readily see that these figures seem to be for propaganda purposes only.

The fourth objection is that this program would result in cheap food. As far as I can see, cheap food is highly desired. It seems to me that if we are going to spend tax money on an agricultural program that it makes more sense to let that tax money result in lower prices to the consumers rather than using their money to force up the very prices those same citizens must pay. I don't think that we can long expect to have the support of the consumers of the big cities for a farm program that is based upon and must inevitably result in forcing their prices to higher levels. While I am firmly convinced that our consumers are buying the greatest bargain of history in the food they consume, I think that Secretary Benson has done a magnificent job of convincing them that they are being robbed, and, as I see it, the chances of losing congressional support for a farm program are far greater if we continue to rely on forcing up consumer prices than if we offer our consumers a program in which they will at least feel that they have some selfish interest.

Of course, the last statement on page 3, "Because it would encourage inefficiency, its ultimate effect would be high priced food to consumers," is a gratuitous and unsubstantiated conclusion that nobody will attempt to establish on the basis of fact. Have the wool and the sugar programs re-

sulted in a decrease in the efficiency of Utah farmers?

Point 5 is the one that is discussed at greatest length by the author of the pamphlet and is doubtless the basis of much of the real opposition to this proposal. The author of the pamphlet states that "Production payments would lead to a ceiling on opportunity in agriculture and a leveling of producer income." He bases this conclusion on the assumption that any direct payment bill would have a limit on the size of the payments, and he assumes that any such limit would be bad. I think he is correct in assuming that Congress is going to place a limit on the size of payments whether they are made through direct payments or whether they are made through a continuation of the present program. I think the American people are about fed up with seeing one wheat grower draw $330,268 and one cotton farmer draw $1,167,502, and this is particularly true when these large producers are so frequently heard to proclaim that if the Government would leave them alone they could produce and sell cotton for 20 cents and wheat for $1. I think it is true that some of these large producers, Mr. Benson's "efficient farmers," can produce and sell commodities substantially lower than the average sized farmer can. Therefore, it seems to me to be logical that we should extend our help to those who need the help rather than to those who say they do not need it. But in the final analysis a limitation on the amount of payments is no essential part of a direct payment program and should stand or fall on its own merits.

The sixth objection, "Any temporary advantages that might accrue to individual farmers as a result of a payment program would be short lived," seems to be open to the same criticism that applies to the last part of the first point—that is, exactly the same suggesions can be made in regard to the present program. Certainly our present cotton allotments have value to the extent that they result in increasing the income of the holder of the allotment. These advantages can be transferred by sale of the land under the present law just as truly as under a direct payment. As a matter of fact, they have been incorporated into the capitalization of farm values. This is particularly true of tobacco allotments. I can see no way where it can be fairly argued that direct payments would change this threat unless it is admitted that the direct payments would be more advantageous to the farmer and therefore more valuable. If that is true—and I think it is—it seems to me to be a good argument for using the direct payments.

The seventh and last criticism of course relates only to those programs that involve payments on the domestic portion of production. The bill I have introduced applies to all cotton grown regardless of where it is sold. I don't think it makes a great deal of difference to the producer where his cotton finally goes. What he wants to know is what he is going to get for it. I might, however, point out that spokesmen for the American Farm Bureau Federation have repeatedly urged the payment of a direct subsidy on all cotton that is exported. Certainly this involves a much more serious basis for criticism as dumping then would the payment of subsidies at home, and it does not put the money where I think it should go—that is, into the pockets of the farmers.

I have gone into a considerable amount of detail, discussing the effect of this program and the objections that the pamphlet you enclosed has made because I know that you are seriously and sincerely interested as cotton producers, and I believe that you should hear both sides of this argument. I may have overlooked some important points. If I have, I will be glad for you to suggest them to me. On the other hand, if I have been able to answer any of the points raised by the opponents of this bill, I hope that the Ellis County Farm Bureau will avail itself of the much advertised democracy of the Farm Bureau system and express your local views in favor of the program that will be of the greatest benefit to Ellis County cotton producers. If you don't agree that that is a direct payment program, ask yourself what system will better serve your needs. If you find a better program, support it and let me know what it is. I want to support it too. And finally, carefully note that the unsigned author of the pamphlet did not suggest anything better. It, therefore, seems to me that as far as this article is concerned, all you have to choose from is the production payment plan, or a continuation of the present program with low supports, reducing farm income, high priced, and consequently noncompetitive, cotton, reducing the market for cotton at home and a direct subsidy system for the benefit of foreign purchasers.

Thanking you, and with best wishes, I am,

Yours sincerely,

W. R. POAGE,
Congressman.

National Advertising Week

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. AVERY. Mr. Speaker, this being National Advertising Week, I think it is most appropriate to bring to the attention of the Members a letter I received from Robert Kearns, sales manager, WIBW radio and WIBW–TV, Stauffer Publications, Topeka, Kans. While Mr. Kearns topic is mainly advertising taxes, he does clearly state the role advertising plays in the growth of our economy. I strongly urge that each Member take the time to read Mr. Kearns' comments.

The letter follows:

WIBW, WIBW–TV,
Topeka, Kans., February 2, 1959.

Hon. WM. H. AVERY,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR BILL: Recently, I had occasion to write to your attention in regard to a subject of advertising taxes. We have known each other for many a year and as you know, this profession provides my income as well as the income of many thousands of Americans. Undoubtedly, this subject will rear its head throughout this session of Congress or some session of Congress in the next several years.

Recently, I was reading a book entitled, "The Story of Advertising," written by James Wood and in this volume I ran across some interesting things in regard to the subject. I will quote from page 112:

"The dual taxation of newspapers through most of the 18th century and the first half of the 19th century acted restrictively on advertising in the English press. The taxes first levied in 1714 were increased at various times so that by the year 1804 the newspaper tax was 3 pence, and the tax on every advertisement inserted in a newspaper was 3 shillings and sixpence. The principal effect of these taxes on knowledge was to keep the news from the many and to keep the products of British manufacturers, multiplying under the stimulus of the industrial revolution which overtook England between 1760 and 1800, from reaching wide domestic markets."

It has been written as you know, BILL, by some great men in this field that advertising is information and from the paragraph quoted about the trials and tribulations of advertising taxes which, by the way, in the year 1836 was reduced, I believe that certainly in our lifetime could put a curb on industrial expansion and growth. Advertising has a prime duty and responsibility of keeping America's economy on a growing cycle and letting more and more people know about new products and urging them to buy these products so that prosperity continues to grow in this very wonderful land.

I thought I would pass along these few thoughts so that in the event you had the opportunity to speak on behalf of the advertising profession that you would have a source of information.

Thank you very much for past courtesies and lots of good luck in 1959.

Sincerely,

BOB KEARNS,
Sales Manager.

Housing for the Elderly

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. FASCELL. Mr. Speaker, I have introduced today a housing bill which should be of substantial assistance in relieving the shortage of housing for elderly persons and in increasing rental housing and related special health facilities for elderly families. My bill is directed toward the accomplishment of two objectives:

First. Assistance in obtaining more liberal FHA financing for the construction of rental and sales housing, especially designed in whole or in part for our senior citizens; and

Second. Provision of adequate health and medical facilities as an integral part of such elderly family housing projects.

This bill makes a substantial amendment to the existing FHA program for Section 213 cooperative housing, and in addition, provides for an entirely new FHA insured-loan program for elderly family rental housing and for nursing homes. The program for improving the financing of elderly family rental housing is set forth in a new section proposed for inclusion under Title II of the National Housing Act, as amended.

This new section, 229, would increase the dollar limits on insured loans for elderly family rental units and provide for insurance of a loan up to the full replacement cost of a project as estimated by FHA. A significant change from existing law is that this bill provides for FHA insurance of loans for both profit corporations and nonprofit organizations. Present law is limited to nonprofit operations.

In my bill, the maximum interest rate would be 4½ percent and a priority of occupancy is assured for elderly persons or families—60 years of age or over. At

least 50 percent of the units in such a project would have to be especially designed for occupancy by elderly persons.

By special definition, the mortgage on an elderly family rental project would be able to cover structures and facilities designed for assisting the elderly occupants in the care of their health. These special facilities would be such structures as infirmaries, inpatient or outpatient health facilities, therapeutic facilities or such other facilities as the Commissioner of FHA might approve and deem adequate to serve the elderly occupants of the project.

In addition, my bill amends the existing law on cooperative housing to provide than an FHA section 213 cooperative housing mortgage, for either sale or rental housing, can cover the cost of special facilities which are of the type I have just described. In this way, a cooperative housing project which, in many areas of the country, is an ideal vehicle for the supply of low-cost, liberally financed housing suitable for our senior citizens, will be even more able to serve their needs. Existing law already permits cooperative rental projects to cover needed commercial and community facilities. It makes sense, therefore, to add this further provision and thus make possible in its most beneficial way, the availability of cooperative housing for our elderly families.

In one further way, this bill should prove of real assistance for elderly family housing projects. I have included provisions in this bill which have already received the approval of the other body, covering a new program for the insurance of a loan for the construction of a nursing home especially directed toward the care of elderly persons. In my bill, I have included in addition, however, a provision directing the FHA to encourage the construction of such nursing homes at or near the site of elderly family housing projects. In particular, I am anxious for the facilities made available by these FHA programs to result in coordinated and integrated projects of most benefit and economical use for our elderly families. Wherever possible, I feel, that projects of housing designed for our senior citizens should be set up so as to become a fully equipped community for their better enjoyment of life.

I would hope in the future that a program can be devised, using private financing and private construction but with the insurance provided under the FHA programs, so that our large, single family housing projects under the basic section 203 of FHA, can be developed as planned communities including the facilities and services, with FHA financing aid, if needed, that seem best suited to the majority of the occupants for which the project is built.

Let me note that the amendments to existing law which are contained in this bill and the provisions of a proposed new program for FHA rental housing, are no burden upon current budget proposals in any manner whatsoever. At the most, in the long distance future, there is, of course, a contingent liability as now exists on all FHA insured loans. Experience has demonstrated conclusively, however, that the security of the construction, coupled with the debenture system of FHA, are more than adequate, together with its very substantial financial reserves, to protect the Government's interest, without drain, in any way, upon taxpayers.

Railroad Workers' Benefits

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BROYHILL. Mr. Speaker, a committee of this distinguished House is currently considering a measure vital to the interests of the railroad workers of America. It concerns increased retirement and unemployment benefits to bring them to an equality with retired career civil service employees and those under the social security system who have attained the age of retirement or have suffered economic setbacks through the loss of jobs.

It is my sincere hope—actually my expectation—that this important bill will soon be reported favorably and that the Congress will discharge its responsibility imposed by the Railroad Retirement Act to remove the injustice currently prevalent respecting the railroad workers. I know that this disadvantage was not premeditated. It was merely an oversight on the part of the Senate and House, which in increasing retirement and unemployment benefits to other classes of workers, neglected those railroad employees who are so necessary to a healthy national economy and a strong national defense. It is axiomatic that too often the wheels of justice grind slowly.

My purpose is not to be repetitious. It is rather to impress on this distinguished body the necessity of correcting at this session of the Congress the omission we have made with respect to the railroaders. With that thought in mind and with the permission of the House I shall here include my remarks made before the Interstate and Foreign Commerce Committee during hearings of a number of bills, including one which I introduced, designed to bring these workers to a par with other workers enjoying additional benefits under the civil service and social security systems.

My testimony before that committee follows:

This distinguished committee has before it today important proposals affecting hundreds of retired workers of the Nation's railroads. Across the Potomac, in the congressional district I have the honor to represent, is located one of the largest railroad yards in the world. I personally know many men and women employed in Potomac yards. I know their problems and I know these problems are shared by their fellow workers in all parts of the United States.

Today there are wagging the cow's tail. Discharging our responsibilities respecting Federal and social security employees we have increased their benefits to bring them more into line with the cost of living. But to date we have neglected the railroad workers, who are also our responsibility. We have assumed this responsibility through the enactment of the Railroad Retirement Act and the Railroad Unemployment Insurance Act. Without action by the Congress, retired and unemployed railroad employees must continue to drag behind those in the Government service and those covered under the Social Security System.

The railroad workers are not fat cats. They are people who are in an income bracket comparable to many other groups who devote most of the fruits of their labor to current expenses. They are dependent on adequate retirement and unemployment insurance to meet these situations. If there are savings, they are indeed meager. Little opportunity is offered to set aside funds for old age and emergencies.

Now, I am appreciative of the economic difficulties of the eastern railroads. Competition has reduced their earning power. They have been compelled to curtail certain types of services. But such difficulties are inherent in our system of free enterprise. Business has its ups and downs. That is to be expected.

In my own business—the building industry—we are sometimes faced with the necessity of reducing original prices to sell homes. But that is not the fault of our construction workers and we certainly do not make them the victims of our failure to properly evaluate the housing market. It is my hope that the economic plight of the eastern railroads will improve and that if necessary the Federal Government will lend some sort of helping hand. Rail transportation is essential to our national welfare. We must do what we can to make it economically healthy.

The necessity of liberalization of the congressional acts affecting our railroad workers is further emphasized by the long-range actuarial deficit now existing in these programs. We must restore to a sound actuarial footing.

Mr. Chairman, I am pleased to follow your footsteps in presenting a companion bill to yours in order to accomplish the aforementioned purposes. The same measure was the subject of a number of bills introduced in the 85th Congress. It was passed by the Senate last August, but was not called up for floor action in this House in time to receive proper consideration before adjournment.

The bill contains a number of benefit improvements under both the Railroad Retirement Act and the Railroad Unemployment Insurance Act. But, to my mind, the primary purpose which will be accomplished under the bill will be to put both of these systems on firmer financial bases.

The railroad retirement system has been operating at a deficit for the past several years. This situation must be corrected without delay if we are to maintain a retirement system in which the railroad workers of this Nation can place their confidence. Under the bill, it is proposed to increase the tax rate and raise the maximum wage base sufficiently to finance the benefit increases contained in the bill, as well as to help liquidate the present actuarial deficiency in the railroad retirement fund.

Taxes would be increased from a current rate of 6¼ percent on railroad employers and employees to 6¾ percent beginning with the current year and to 7¼ percent commencing in 1962. Thereafter the tax rate increases would match those taking place under the social security old-age and survivors insurance program.

The wage base maximum would be increased from $350 to $400 a month. This would put the railroad retirement system on a par with the social security system, which, under amendments enacted last year, covers earnings up to $4,800 a year.

The financial basis of the railroad unemployment insurance system would be strengthened to provide funds for the additional benefits proposed in the bill and to take care of the current deficiency which

exists also in this fund. This would be accomplished by increasing the tax base from $350 to $400 a month and changing the tax rate to provide for a range from a minimum of 1½ percent to a maximum of 3½ percent, depending upon the current balance in the railroad unemployment insurance account. Minimum annual earnings needed to qualify for unemployment benefits would be raised from $400 to $500 a year.

The benefit increases proposed under the Railroad Retirement Act include a general 10-percent increase in monthly pension and retirement payments. When the 85th Congress came to a close it had granted pay or retirement increases for practically every group whose rates of compensation are established by law, with one major exception—the retired railroad worker. Civil service retirees were granted a 10-percent increase, those under social security 7 percent. It is no more than simple justice that the retired railroad worker, who has borne the brunt of increased living costs to the same degree as his retired neighbors, be given equal treatment.

Other major changes proposed in the Railroad Retirement Act are:

1. Lowering the retirement age for women employees with 10 to 30 years' service and wives of retirees to age 62 with a reduction in annuities. This would allow the same privilege of receiving a reduced annuity now available to women under social security. The same privilege would be offered to male workers at age 62 with 30 years of service.

2. Raising the maximum compensation used in computing benefits from $350 to $400 a month for services rendered after this year.

3. Allowing those retired on account of disability to earn up to $1,200 a year in casual or intermittent employment without loss of benefits.

4. Allowing survivors living in foreign countries to earn up to $1,200 a year, the same as survivors in this country. Under present law survivors living outside the United States, principally in Canada, are allowed no benefits for any month in which they work 6 days.

Under the Railroad Unemployment Insurance Act benefits increases would range from 50 cents to $1.70 a day depending upon rates. The maximum benefit would be $10.20 a day as compared to the present $8.50.

The bill would also extend the benefit year, or the periods during which unemployment benefits may be paid to an employee. These extensions apply principally to workers with considerable railroad service. Those with over 15 years would be extended another 130 days of benefits, those with 10 to 15 years another 65 days.

I sincerely hope that this measure will receive the thorough consideration of the Committee on Interstate and Foreign Commerce at its earliest convenience. I am sure that after having done so, the committee will issue a favorable report upon it, so that the urgent necessities for strengthening the finances of both of these systems and bringing their benefits in line with present living costs will be met.

Chaplain Nash P. Geany Honored

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. GAVIN. Mr. Speaker, on the evening of January 30, the Reserve Officers Association of the United States gave its Chaplain of the Year Award to an outstanding man of God who has rendered outstanding service to the Armed Forces of this Nation, Chaplain Nash P. Geany, deputy staff chaplain, Eastern Transport Air Force—MATS—McGuire Air Force Base, N.J.

This award has some significance to this body which has a great responsibility for the men and women in the military services. The ROA is due some recognition, and appreciation, for thus encouraging the oft-forgotten chaplain in his work.

I include herewith ROA's statement relative to the presentation of the Chaplain of the Year Award:

Chaplain Geany has been selected for the Reserve Officers Association's Chaplain of the Year award for his outstanding contributions to the religious and moral welfare of military personnel and their dependents as well as his charitable activities in civilian communities.

During the 38 months he served at Rhine-Main he evidenced a dynamic ministry and pursued his salutary works with a persevering industry in proportion to his many gifts.

His impressive physical stature commands attention. His outstanding speaking ability emphasizes the leadership qualities inherent in a dedicated servant of God.

It is a colloquialism to state that Chaplain Geany has a heart as big as he is yet this has never been more true of any chaplain.

His charitable concern embraces all ranks and all faiths. His solicitude for the welfare of children in local orphanages and the aged in old folks homes made a valuable contribution to the improvement of German-American relations.

Chaplain Geany has been termed a "chaplain's chaplain." This complimentary title has been earned by his practice of caring for the needs of chaplains arriving or leaving the European theater via his installation.

No matter how late the hour, Chaplain Geany at all times generously extended hospitality and accommodations to chaplains en route to their assignments.

The association presents its 1959 Chaplain of the Year Award to this outstanding representative of the chaplain apostolate.

Profit-Sharing Fund Pays $289,000 to Retiring Truckdriver

EXTENSION OF REMARKS
OF
HON. DON. L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. SHORT. Mr. Speaker, a lot of lipservice has been given to various profit-sharing plans in the past, but in industry as a whole these plans do not appear to have obtained the attention they deserve. As an illustration of this, I would like to include with my remarks an Associated Press story from Chicago pertaining to the big dividends a Sears-Roebuck profit-sharing fund is now paying to retiring workers.

The article follows:

EMPLOYEE GETS $289,000 ON $5,928 PROFIT SHARE

CHICAGO, February 11.—A profit-sharing fund started by Sears, Roebuck & Co. 43 years ago is paying big dividends to retiring workers.

James M. Barker, chairman of the board of trustees of Sears, profit-sharing fund, said today a study of the fund's operations showed these returns to workers who participated in the program and retired during 1958:

Employees who retired after more than 40 years' service and who had contributed $6,321 to the fund withdrew an average of $154,767. Among these was a truck driver with 44 years of service, who amassed $289,000 on a total of $5,928 invested in the profit-sharing pool.

The average withdrawal of workers with 35 to 40 years of service was $123,054 for a $6,092 investment; $93,019 for 30- to 35-year workers who invested $5,791; $67,089 for 25- to 30-year workers with a total investment of $4,899; $36,695 for workers who contributed $3,593 during 20 to 25 years' employment.

Employee members of the fund contribute a straight 5 percent of their wages and salaries up to a maximum of $500 a year. The company contributes up to 10 percent of its net income before taxes.

Resolution Adopted by the Illinois General Assembly

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. LIBONATI. Mr. Speaker, I have received a communication from the members of the Illinois General Assembly enclosing a copy of the house resolution 23, as adopted in the 71st General Assembly of the State of Illinois, relative to an amendment to Public Law 85–316, which would provide for the entry of members of many families whose petitions have piled up and created a backlog within the fourth preference quota and would facilitate the reuniting of such families.

I am in full accord with this resolution, which follows herewith.

STATE OF ILLINOIS,
Springfield, February 10, 1959.

HON. ROLAND VICTOR LIBONATI,
Member of Congress,
Washington, D.C.

DEAR CONGRESSMAN: As authorized, I am enclosing herewith a copy of House Resolution 23 as adopted in the 71st General Assembly of this State.

Sincerely,

CHARLES CARPENTIER,
Secretary of State.

HOUSE RESOLUTION 23

Whereas there are many Americans who have filed petitions with the immigration authorities of the United States for the entry of their sons, daughters, brothers and sisters, which petitions are classified in the fourth preference quota of the Immigration and Nationality Act; and

Whereas of the four preference quotas established by the Federal Immigration and Nationality Act, the first, second and third quotas are allotted 100 percent of the total annual entry quota; and

Whereas as a result, those persons who fall within the fourth preference section must depend for entry into this country upon deficiencies in the first three quotas; and

Whereas there is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never come; and

Whereas thousands of discontented people abroad, whose hopes are first raised and then dashed, certainly cannot believe in the good will we try to engender through our foreign policy, and thus become easy prey to the propaganda of unfriendly nations; and

Whereas Congress has recognized and alleviated a similar problem through Public Law 85–316, which includes a provision for reuniting spouses and minor children of aliens legally residing in this country whose petitions were approved prior to July 1, 1957: Therefore, be it

Resolved by the House of Representatives of the 71st General Assembly of the State of Illinois, That this house respectfully request the Senate and House of Representatives of the United States to amend the provisions of Public Law 85–316 to include cases which fall within the fourth preference quota, in order to provide for entry of the many thousands, petitions for whom have piled up in a backlog in prior years; that in order not to create another problem of separated families, those applicants who are married and have families be permitted to bring them; and that a suitable copy of this preamble and resolution be sent by the secretary of state to each Congressman and United States Senator from the State of Illinois.

Adopted by the house, February 3, 1959.

PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.

Wanted: Four Million Jobs

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. OLIVER. Mr. Speaker, it is time that some notice be taken of the state of unemployment in New England. Although the recession has eased in other parts of the Nation, economic recovery in the New England States is lagging behind.

It is my belief that this economic problem has remained unnoticed long enough, and that it is time something be done. The economy of New England, and especially of Maine, can best be helped by stimulating, through badly needed Federal programs, the gross national product.

Automation has had its part in addition to the contraction of the textile industry, in increasing the unemployment ratio, and now some steps must be taken to create new jobs for those who find themselves out of work. Certainly, I do not agree that unemployment should become a permanent fixture in our economy. I feel that the long-range program of renewing the economic vitality of our country should take precedence over the present concern in some quarters with balancing the budget at all costs.

Following is an editorial taken from the Boston Daily Globe on February 9 which brings the problem of unemployment in New England into clear focus:

WANTED: FOUR MILLION JOBS

It was Disraeli who first heaped abuse on statistics, and Mark Twain was happy to quote him. Statistics can be a long word for a lie. But in the 20th century we live by such figures. They are the instrument to tap the pulse of our economy so that we may smile and turn away from the patient's bedside, or purse our lips and frown and rummage in our store of specifics. Here the patient is employment, and he isn't doing too well. His temperature is way up and his pulse is way down, particularly in New England, while the doctors have stood by admiring somebody else's chart.

This region was hard hit in the 1957–58 recession. It still drags its heels behind the recovery wagon, chiefly because the durable goods industry suffered so badly. New England lost 200,000 jobs between December 1956 and May 1958 and has recovered only 52,000 of them. If the slack is going to be taken in, it will require imaginative leadership and joint action of private industry and the States.

The fact is that the national employment picture is not bright, and it is against this background that New England must appraise her own bleaker picture. The national seasonally adjusted unemployment rate, which stood at 5.0 in December 1957 was at 6.1 in December 1958. That was after 8 months of so-called recovery. Recovery it was, but not sufficient. Because of our developing technology, which makes for job displacement, a more rapid rate of recovery from such setbacks is required than has previously been the case.

The Bureau of Labor Statistics consistently declines to make any predictions. Certain of its figures speak for themselves in that they indicate the magnitude of the task before the American economy. If the present rate of productivity increase is to be maintained, the economy must provide at least 2,750,000 new jobs each year. Of these, 750,000 are for new entrants to the labor field, such as high-school or college graduates. The 2 million is the figure demanded by the annual increase in our productivity rate, an estimated 3 percent.

But above the 2.5 million so-called hard core of unemployed, there are at present 1,250,000 jobless who, statistics say, want to work and should be working. This means that to bring the economy into ideal balance for 1959, 4 million new jobs must be found this year. This in turn means that we must increase the national product by an estimated $40 billion this year. There the Bureau of Labor Statistics stops, but the next step is not too difficult. The national product is not increasing at that rate.

The U.S. economy has two new major forces pressing on it. One is automation and the other is international leadership. The first promises that consistently fewer man-hours will be needed for an increasing national product, which in turn must be sold; and the second necessitates our strengthening allies who become competitors for the markets where we must sell that product. For the first time in history the dollar volume of our automobile imports has exceeded our exports.

The problem of reducing existing unemployment, of finding jobs for the newcomers each year brings to the labor force, and of creating new and adequate jobs for those persons displaced by automation is not going to yield to a purely fiscal solution. New England has the national problem superimposed on her own. Regional consideration of both cannot begin here too soon.

Realism on REA

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HIESTAND. Mr. Speaker, the morning Post and Times Herald reports a stirring defense of REA on the part of certain political leaders, who urge the convention of the National Rural Electric Cooperative Association to fight with beer bottles, if necessary, to keep the advantages they now have under the law. They were urged to fight for the right to borrow Federal funds at 2 percent, though the Government has to pay 4 percent for that same money.

It is interesting to note that some of these very cooperatives who are borrowing money at 2 percent, rather than let it lie idle in the bank until used, put it into Federal securities at 4 percent, thereby making money off their loans from the Government.

No one denies the magnificent achievement of the REA in the past, but a very able editorial in the same Post and Times Herald the day before, clearly points out that the time for this racketeering could and should be terminated.

I ask unanimous consent to include the editorial:

[From the Washington Post and Times Herald, Feb. 9, 1952]

REALISM ON REA

The convention of the National Rural Electric Cooperative Association which begins today in the National Guard Armory will generate much criticism of the administration's power policies. President Eisenhower's private power predilection is not above criticism, of course, but the reexamination of the REA program which the administration is seeking surely is needed. The program has fulfilled its original goals of 1935 and there is a real question whether the Government should continue its present REA role.

At a relatively small cost to the Federal Government the REA loan program not only has brought the benefits of electricity to rural America, but it has also greatly expanded the market for electrical appliances and other equipment. Hundreds of thousands of Americans who may have never been on a farm have been indirect beneficiaries of this far-sighted program.

But should the Government continue to provide extremely low-cost loans to REA co-ops that are going concerns and in many cases have become highly successful electric utilities? Once an REA co-op is established ought it not to seek its capital in the open market as other utilities do?

When Congress set up the REA loan program in 1935 to bring electricity to farmers only 11 percent of the persons who lived in rural areas had electric lights and power. Today 95 percent of them enjoy such service. Now the REA loans, which still bear an interest rate of only 2 percent, are being used to expand and improve existing co-ops. President Eisenhower has recommended that REA financing be gradually shifted to non-Government sources.

Perhaps the Government should not completely withdraw from REA financing. There may be some situations where direct Gov-

ernment loans are still needed, but it would seem reasonable for the Government to limit its participation generally to the insurance of loans or some other indirect device which would let the REA co-ops build on their own strong foundations with a minimum of Federal aid. The not inconsiderable resources of the NRECA and the very size of its convention, which will be attended by more than 7,000 delegates, indicate the strength of the REA co-ops.

Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. KOWALSKI. Mr. Speaker, February is the month of heroes. To Americans the greatness of Washington and Lincoln is called to mind. To Lithuanians there are joyful recollections of independence, heroically won, only to be bitterly lost in the tragic recent past, but still celebrated in this month of honor. And to Polish people all over the world there is no date in memory more notable than February 12, the birthday of the great Polish statesman, military engineer extraordinary, democrat and patriot of two continents: Thaddeus Kosciuszko.

Never was there a man more inclined to dream of the impossible, yet at the same time so capable of fulfilling his dreams. Born into the mid-Eighteenth Century world, at a time when Poland was plagued by foreign armies, Kosciuszko grew up burning with the desire to drive the foreigners, once and for all, from Polish soil. Was this a practical dream? Was it practical to expect the people of a nation with no natural boundaries and little in the way of political unity to expel and hold at bay the arms of Europe's mightiest nations? Perhaps not, but Kosciuszko nonetheless conceived this dream and clung to it as long as he lived.

Kosciuszko's role in the American Revolution is legend. No sooner had he entered upon the miiltary scene than his talents at fortification construction earned him wide renown. The defenses erected at Ticonderoga early in the war were his work, and his removal from that post and a revision of the defenses there brought forth an anguished cry from a superior officer, who prophesied disaster unless Kosciuszko returned. The protest was prophetic for, in Kosciuszko's absence, Ticonderoga fell to British assault.

Not wanting to commit the same blunder a second time, the American Army authorities now turned over their main defensive operations to Kosciuszko. At Saratoga he laid out defenses that enabled the Americans to overwhelm the British attack. This victory, in turn, won for America her alliance with France and her recognition as an independent nation by Louis XVI.

Now fully cognizant of the abilities of this engineering genius, the Army appointed Kosciuszko to oversee the defense of the Hudson River, with headquarters at West Point, the so-called Gibraltar of the Hudson. Kosciuszko's work at West Point was the longest and most important of his undertakings in the United States and is inseparably connected in the American mind with his name. Little is now left of his fortifications, but the monument raised in his honor by the American youth, with the inscription: "To the hero of two worlds," remains a grateful tribute to his memory.

That the military students of the United States can look back to West Point as their alma mater is in great measure Kosciuszko's doing. When it was first resolved to found a training school in arms for the young men of the States, Kosciuszko urged that it should be placed at West Point, and suggested the spot where it now stands.

When he sailed from American shores in 1786, Kosciuszko left behind an enviable record. Living up to his constant dream of democratic achievement in the face of heavy odds, he had assisted in the liberation of a colonial people from the yoke of the most powerful military nation in the world. His remuneration had been slight, but that was no matter—a dream had been fulfilled.

Kosciuszko now returned to Poland in the hopes of serving the Polish people as he had served the Americans, and on the occasion of the reorganization of the Polish Army in 1789 he was appointed major general. The stage was now set for the closing drama of his career and his final contribution to the world's awkward struggle for perfection.

The democratic tidal wave generated by the American Revolution was now rushing upon Europe and compelling members of every class and creed to line up, either on the side of the revolutionary doctrine of the rights of man, or in defense of ancient European laissez-faire traditions. When this tidal wave struck Poland in May of 1791, Kosciuszko immediately announced himself as a democrat, calling upon the people to establish constitutional government. He was with the forces that carried the day.

A constitutional and hereditary government was established; burghers were granted equal civic rights with the nobility, and the condition of the peasants was ameliorated. At long last it appeared that political unity had come to Poland; that finally there existed the basis for the growth and success of a Polish state supported by the people. But such a development would deal a death blow to the designs of conquest of those who had fed so long on Polish weakness, including the neighboring state of Russia.

In consequence of this, Russia invaded Poland in May of 1792 and Kosciuszko, for the second time in his career, found himself engaged in the forefront of the world's battle for democracy. But on this occasion the odds were impossible. Notwithstanding Kosciuszko's brilliant generalship, the Polish Army was overwhelmed after two months of some of the most gallant fighting in military history.

When Poland was partitioned following the war, Kosciuszko withdrew from the army and retired to Leipzig. But the next year he was back again, leading an insurrectionary army against the Russians with astonishing success until, once again overcome by the heavy odds, he was defeated for the final time.

What had Kosciuszko's military performance achieved for Poland? The cynical might observe that nothing was accomplished. But life is not so simple as to be governed solely by skirmishes won and lost on a battlefield. Kosciuszko's brilliant, courageous, and idealistic attempt to drive the foreign invader from Polish soil, in the name of democracy, created a tradition, which persists to this day; a tradition that will never be eradicated.

In his zeal for democratic government, Kosciuszko was following in the footsteps of the United States. But that was not always the order of things. In April 1817, 6 months before he died, he issued a letter of emancipation to the serfs on his estate in Poland. It was to be almost half a century before the United States was able to emulate this departing gesture of one of Europe's truly great democrats, Thaddeus Kosciuszko, the "hero of two worlds."

A Plea for U.S. Diplomatic Relations With the Vatican

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. ANFUSO. Mr. Speaker, one of the most forceful and compelling forces in the struggle against communism and one of the strongest influences for peace in the world today is the Vatican. We are living in a most difficult age, a challenging age which calls for wise leadership and effective action if freedom is to survive. We must leave no stone unturned in meeting this challenge. By our refusal to establish diplomatic relations with the Vatican, however, we are ignoring a very important center of information and intelligence. In so doing, we are harming ourselves and the cause of freedom to a very considerable extent.

The late President Franklin D. Roosevelt realized the importance of maintaining diplomatic relations with the Vatican when he sent Ambassador Myron Taylor there as his emissary. The results of Mr. Taylor's mission were highly satisfactory to the interests of our Government and our people, because it enabled us to obtain certain political and economic intelligence which we would not have had otherwise.

Today the free world is in a life-and-death struggle with the evil forces of communism. If communism should emerge triumphant, it will make little difference whether we are Catholics, Protestants, or Jews—all believers, regardless of creed, will be doomed. Under such circumstances, it stands to reason that we should all be united in our

efforts against those who seek to destroy us. In that case, it is unthinkable that any reasonable man would raise objection to the United States being represented by a diplomatic mission at the Vatican.

It is a very strange situation to me when I see full-fledged U.S. diplomatic missions in the Soviet Union and in the satellite countries of Poland, Rumania, Hungary, Czechoslovakia, and Bulgaria, but no such representation at the Holy See. At the time of the Hungarian revolt in 1956 we condemned the Communist regime of that country and we protested against the brutalities of the Soviet troops in Hungary, but we did not withdraw our diplomatic missions from Budapest or from Moscow. When people in this country asked why this was not done, we were told by responsible Government officials that we would lose important listening posts behind the Iron Curtain.

While that is very true, we are ignoring an important listening post at the Vatican which could be no less valuable to us. There our mission could obtain vital information from all parts of the world, including from countries behind the Iron Curtain, which flows daily into the Vatican in large volume. My experience as an intelligence officer with OSS during World War II had taught me that the Holy See is au courant with everything that is going on in the world, and sometimes was even more informed than we were.

Such antiquated reasons that having a U.S. envoy at the Vatican would be showing special favoritism toward one particular religion or that the Pope would rule the White House are too ridiculous for our day and age. We are interested in preserving the security of our Nation and of the free world; we are interested in maintaining peace in the world and genuine understanding among the nations. It is, therefore, most logical to stand together in a common cause with all those forces who think as we do, who seek the same goals, who are fighting the same enemy. In other words, as I see it, it would constitute a step in the direction of greater unity of the free world which believes in the supremacy of the Almighty God as against godless communism which seeks the enslavement of the whole world.

About 3 years ago, at Christmas, 1955, the late Pope Pius XII held audiences with members of the diplomatic corps assigned to the Vatican. He discussed with them the possibility of reaching an accord between the East and the West on nuclear disarmament, but he noted at the time that it was impossible for the Vatican to undertake international mediation "when two of the greatest powers are not represented at the Holy See." The Pontiff was referring to the United States and Soviet Russia, neither of whom maintain diplomatic relations with the Vatican.

Mr. Speaker, we are in the unenviable position of being classified with Communist Russia as the two great powers in the world today lacking diplomatic representation at the Vatican. What a strange position for us to be in at a crucial time such as this, when we claim to be the moral leader of the free world. It is a fact that the Vatican maintains diplomatic relations with some 50 countries throughout the world. Among them are such Protestant countries as Great Britain, the Netherlands, West Germany, and others, who find it advantageous to have official representatives attached to the Holy See.

Our failure to be represented at the Vatican leaves us in the same category with Soviet Russia—as well as with Communist China, which has no representation there—which is not only a paradoxical and embarrassing situation for us, but it also creates considerable doubt in the minds of our friends and allies who are inclined to regard our attitude as immature action unbefitting a great nation.

This is a situation which needs to be corrected. In the past, the maintenance for separation of church and state was advanced as a major argument against recognition of the Vatican. Such an indictment in connection with Vatican representation is wholly fantastic. All of us are deeply aware of the constitutional and historic role of religion in American life. I dare say that the American people would not brook a distortion of that role any more than it would approve religious bigotry and intolerance. Consequently, the establishment of diplomatic relations with the Vatican would be entirely in accord with our Constitution, our history and our traditions. It is motivated solely by the desire for the promotion of world peace and understanding.

Fortunately, the successor to Pope Pius XII, the present Pontiff, Pope John XXIII, is pursuing the same attitude toward the attainment of world peace, and the same desires for achieving understanding among the nations of the world. At a time when from many corners of the earth we hear the voices of doom and destruction, the voice of Pope John is one of calmness and comfort. We must help strengthen it, so that it does not remain a voice crying in the wilderness.

Whether we like it or not, we are at war with Communist Russia on all fronts. They are bent on destroying the free world, and particularly the faith of the free world in a Supreme Being. I regard this as a most propitious time to establish relations with the Holy See, in view of Pope John's elevation to the Papal Throne and his strong appeal for unity in the ranks of Christendom.

As a member of the House Committee on Science and Astronautics, I am particularly concerned about the challenge being made to the invincible powers of God. I would think that religious men of all faiths would want to work together to prevent the atheists not only from destroying our bodies, but also our souls. It so happens that the Vatican is today the only existing world religious center having diplomatic relations with other nations—the only nations not represented are the United States, Soviet Russia, and Red China. If other faiths had a similar world organization, I would be the first to advocate diplomatic representation in such a body.

For these reasons, I am now introducing a resolution which calls for the immediate establishment of diplomatic relations with the Vatican through the appointment of an envoy as a gesture of our friendship and our desire to help promote world peace and greater understanding. In sending a diplomatic mission to the Vatican, the United States would demonstrate to the world that it has the highest esteem for the Catholic Church and the broad principles of religious freedom for which it stands. The Vatican is most certainly in a position to serve as a force for unity and strength of the free world. Let us seek its wise counsel, its moral strength, its worldwide support.

Of What Use Is Scouting?—What Does It Really Do for Boys?

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mrs. BOLTON. Mr. Speaker, many people this week are asking, Of what use is scouting? What does it really do for boys? No story I have ever seen tells so much as this story of two mothers—reprinted by the Los Angeles Examiner from the American Weekly of February 6, 1955—which, under unanimous consent, I include with my remarks:

MURDER—AND TWO MOTHERS

(By Will Oursler)

In the bright morning sun, two boys rolled in the dust, locked in combat, while a handful of bystanders watched and cheered. One boy was Mexican, the other Negro. Suddenly a knife flashed in the hand of the Mexican lad, glittering an instant and plunging down The Negro boy gave a cry and twisted away and lay still. The onlookers were frightened. Someone cried out that the boy was dead and the police were coming and they had better run.

For some months this area of Los Angeles—the adjoining districts of Aliso Village and Pico Gardens—had been a trouble spot, with its mounting postwar population, its overcrowding, its poverty and filth and crime and interracial conflicts.

Police officials, social agencies, church groups, and special project workers of the Boy Scouts had waged an intensive drive to improve conditions. But the drive had made slow progress in the face of indifference. In the past 6 months there had been 57 arrests of youth in the area for crimes that included armed robbery, burglary, rape, assault with deadly weapons. Now it was murder.

Word of the stabbing raced through the area. Both boys had been members of rival gangs. Both gangs held secret conclaves, one to map plans for vengeance, the other tactics of defense. Nor was the threat of trouble limited to the gangs. Groups of adults began gathering in small meetings, behind closed doors and drawn shades. A tense, wordless terror closed in. Some of the noisier troublemakers were calling an indignation meeting—to decide how to strike back.

The peril was immediate, and a young man named Andy Sais, who had fought derision and indifference for months as a Boy Scout worker trying to launch Scout troops in the

area, decided on a daring countermeasure against this impending riot.

The Negro boy had been in one of the troops Sais had been trying to start. The Mexican boy had been one Sais had hoped to interest in scouting. Sais paid a visit—to the Mexican boy's mother.

He found her alone in the house, sobbing hysterically, repeating over and over, "What can I do? He killed him. What can I do now?"

Sais told her gently, "I want you to come with me—to meet that boy's mother."

Together the Scout worker and the Mexican woman walked the ominously quiet streets to the home of the slain Negro boy. The mothers, one grieving for the loss of her boy, the other for what her boy had done, met and talked. They agreed that there should be no more violence.

Word of the meeting of the two mothers swept through the troubled neighborhood. They had met and wept together, people said. There was no hate between them.

The indignation meeting was still on. But Sais called together—as a second step—his own "gang," all the Scouts he had been organizing into troops over the past months. He talked to these boys—some of them also members of the rival gangs—about the Scout law of friendliness to all people and all creeds and all races.

The mass meeting was held as scheduled. But there was no threat of violence. The story of the meeting of those mothers—and the conclave of the Scouts—had cleared the air. With the men and women at this unusual town meeting were some of their own youngsters—boys of various factions within the district, seated side by side, as Scouts. Sais talked and men and women began to stand up and talk about what they could do to make it a better place, this district, for their children to grow up.

Steps were begun with authorities to launch, not the punishment, but the rehabilitation of the boy whose tragic deed had upset the community. Church groups and social agencies pitched in to aid this lad and others, and in the months that followed a completely new era dawned in the area where hoodlumism and crime had flourished.

Half a dozen Scout troops were fully organized under Sais, and performed literally hundreds of neighborhood good turns—boys of all creeds and races working together, cleaning out alleys and fire hazards and school yards, repairing and painting school buildings and churches, collecting clothes and food for needy families.

There were many in the city who found it hard to understand how such a miracle could sweep over a neighborhood of trouble—particularly after the slaying of a boy. But a Scout worker and two mothers understand.

February 12, 1959, a Day of Homage for Gen. Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. REUSS. Mr. Speaker, at a time in our history when the emphasis on military and defense requirements is so constant as to be commonplace, it is especially fitting that we pay more than ordinary homage to a great soldier who rendered extraordinary military service to this country at a time when men of his kind were few and far between, and very much in demand.

I speak of course of Gen. Tadeusz Kosciuszko, the great Polish-American hero of the Revolutionary War. Both his exceptional service as a military commander in the Saratoga and Carolina campaigns of the Revolutionary War and his engineering feats as the man who built the fortifications at West Point mark his for greatness.

Today, it is imperative that we recall the great example set by General Kosciuszko for yet another reason. After the Revolution this popular hero returned to his native Poland to champion his own people's fight for independence. This is a fight that is not yet over, a fight that could well benefit from the likes of another Tadeusz Kosciuszko.

Mr. Speaker, it is with a deep sense of gratitude and admiration that I join in this salute to General Kosciuszko on the anniversary of his birth 213 years ago.

The Nebraska Farmer Magazine Has Reported History of State From Lincoln's Day Until Now

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. McGINLEY. Mr. Speaker, one of the most memorable and lovable characteristics of Abraham Lincoln was his sedate, but sharp sense of humor. There is a story behind the naming of Nebraska's capital city—Lincoln—which I think would have amused Mr. Lincoln, had he been living at the time.

The Platte River, in its east to west course cuts the State of Nebraska into approximate halves, north and south. Early territorial politics—1854–67—were colored with a sectional rivalry over location of the territorial capital site. The first acting Governor, Thomas B. Cuming, chose Omaha, north of the Platte, as the territorial capital rather than another historic Missouri River town, Bellevue, south of the Platte.

The location controversy continued and became hotter as Nebraska became a State on March 1, 1867. One of the acts of the first State legislature in 1867 was to make a final capital site determination.

The South Platte members, many of whom were Democrats, were in the majority in the first State legislature and were determined to relocate the capital city. They had chosen the small inland village of Lancaster on Salt Creek, because of the expected wealth of the salt reserves in that area.

Forced to strategy, the North Platte group, who hoped to retain the capital of Omaha, offered an amendment to rename the village of Lancaster as "Lincoln." By this maneuver, the northern members hoped to make the relocation measure distasteful to the South Platte Democratic members and thus break up the political strength of the South Platte majority.

However, the South Platte members accepted the amendment and on July 29, 1867, the little village of Lancaster, on Salt Creek, was officially designated as the State capital and renamed as the city of Lincoln.

Thus did the controversy over this minor issue cease, as it were, by accident, and symbolized the later acceptance of Abraham Lincoln by all parts of the Nation as a good and great man who saved the Union of the United States of America.

It is then, Mr. Speaker, further proof that men of vision make history both by their direct efforts and by the force of their being.

On this anniversary of the birth of a man of principle and foresight, I would like to bring to the attention of my colleagues another birthday. This birthday is of an institution born in the mind of man of many Lincoln-like attributes.

This year marks the 100th anniversary of the Nebraska Farmer, a farm magazine that reported the history of the State from Lincoln's day until now.

Its founder was Robert W. Furnas. He was a farmer, fruitgrower, horticulturist, soldier, politician, and newspaperman.

When that first edition was published, the Territory was vast in size, with most of the people living along the eastern boundary of the Territory. There were 24 counties represented in the Sixth Territorial legislature in 1859. Nebraska City was the largest town, with a population of 1,922. Omaha's population was 1,883.

Furnas continued to publish the magazine until going to war in 1862. He returned to his publication and was elected the second Governor of the State in 1872.

This was the heritage of the Nebraska Farmer and it reflected as almost a creed: ruggedness, adaptability, honesty.

Its pages were dedicated to the farmer of Nebraska. It was interested in his economic welfare, his opportunity for education, his right and privilege of good government.

And the Nebraska Farmer has never lost that personality.

Another man was to rise over the horizon of Nebraska history and shine with the strength and brightness of a Nebraska summer day upon the people and the land. He was Sam McKelvie, born on a homestead in the State he loved.

He guided the Nebraska Farmer for half a century, was to become Governor of the State at the age of 37 and bring into focus the greatness of agriculture and to especially enshrine the sandhills of Nebraska as the greatest cattle land in America.

As the farmers of Nebraska struggled against adversity so did this publication. The anniversary issue relates an era in the history of the Nebraska Farmer which could have spelled its doom or—as was the outcome—nurtured the publication on the sparse diet of adversity and the strengthening qualities of austerity.

A period of depression hit business in Nebraska in 1921. In 1923, Sam McKelvie was broke. It was a despondent Sam who boarded a train for Omaha to try to tap one of the fading hopes of obtaining the $50,000 needed to keep the business going.

Walter Head, president of the Omaha National Bank, listened to this man's plea and heard the publisher expound his belief that the Nebraska Farmer could come back.

The banker and friend of Sam wrote out the check and said:

Sam, Nebraska needs a good farm paper. Let's keep the Nebraska Farmer going.

Sam's name was the only security ever offered to protect that loan.

There are many more stories of the growth of the Nebraska Farmer under the guidance of Sam McKelvie. Too many to relate here.

The Nebraska Farmer is like a jewel of many facets. Its organization is a family in a real sense. The employees own stock in the company and its almost negligible turnover in employees is testimony of the loyalty and devotion of its people. Sam's will provided for the employees to own the business.

Like Sam McKelvie, its present president and publisher, Glenn Buck, came up from the ranks. He started over 30 years ago as an advertising salesman.

The Nebraska Farmer story is in the finest traditions of Americana. It was and is interested in progress but not plunging; government but not political power; education but not preachments.

It is the true chronicle of Nebraska history.

The Press and Its Influence

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, the kind of government, the amount of tax paid by the citizen, the service he gets, depend to a large extent upon the press, upon what the editors and the columnists, influenced as the latter all too often are by pressure groups, print.

The lobbyists and the pressure groups, through their paid representatives, wield a tremendous influence here in Washington—while the average citizen must depend upon his chosen representative, often with little time of his own to give to the study of proposed legislation.

It is unfortunate that the Congress and Washington do not have in the District a daily publication which represents the thinking of the country as a whole.

The situation here is somewhat similar to that which existed when the United States of America sought, through the press, to give people abroad a view of American thinking.

What did the then administration do to convey American thought to, for example, London?

It purchased and distributed copies of the New York Times and the New York Herald Tribune. Certainly, both are influential publications—but represent not at all the thinking of the people west of New York.

Apparently, those wanting to convey American ideals to the people of other lands do not have the slightest conception of the needs, the desires, the ideals of the people outside of the great State of New York, which, it might be said, is dominated by people from other lands.

Fortunate indeed are we that we have throughout the country not only thousands of weekly publications whose editors represent their communities, but we have dailies, many in towns of less than 100,000 people, which speak for millions of Americans.

There are seven such publications in the Fourth Congressional District of Michigan.

Typical of the group is the News-Palladium of Benton Harbor, Mich., a daily which, by actual comparison, carries as great a volume of real news as do many of the publications in cities of 200,000 population.

An editorial from the News-Palladium of February 10 gives that publication's conception of a newspaper's duty. It reads:

THE NEWSPAPERS' DUTY

Eugene C. Pulliam, publisher of two newspapers in Indianapolis, Ind., and two in Phoenix, Ariz., uttered some pretty definite political observations in a recent speech before the California-Nevada Associated Press Association, meeting in San Francisco.

The essence of Mr. Pulliam's remarks was that if the Republican Party is to be saved from political suicide, it must cease trying to exist as an echo of Democratic theories and practices.

Urging newspapermen to remember that their most important responsibility is the preservation of the Republic and individual freedom, the Hoosier publisher complained that this country has been drifting toward a one-party system for the last 5 or 6 years. The drift, he added, has been due to Washington bureaucrats.

Pulliam asserted that both parties have the same elements, that neither stands for anything definite and unequivocable. "There is no difference between the Republican and Democratic parties as far as their governmental objectives are concerned," the Associated Press executives were told. "No wonder the Republican Party got dumped in the ash can last fall. It is no longer a national party with definite principles. It has abandoned the very people who gave it power and position in this country for the first time in 20 years. * * *"

The net result, Pulliam stated, has been a steady drift toward a welfare state and "now both parties are dedicated to some type of it."

To a great degree, the publisher went on, it is up to the newspapers to teach the people that in 5,000 years of history it has been proved that socialism has failed miserably in every country where it has been adopted. This is true today in Soviet Russia.

The press will not always win popular support by upholding the principles of iniative, capitalism and genuine freedom not tied to paternalism, but neither will the press earn or deserve influence or confidence if it evades its duty in speaking out for its convictions.

In the field within which it operates, this newspaper has not intentionally or deliberately ever ducked what was deemed to be an issue requiring a stand, local, State, or National. We have no doubt made enemies, but we think we have made more friends, as our circulation figures show.

We believe this country must again have two strong parties representing divergence of opinion. If this does not come about more and more confused voters will feel that the choice they have is insignificant.

Tadeusz Kosciuszko, Hero of the American Revolution (1746–1817)

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. DINGELL. Mr. Speaker, the success of the American Revolution was assured by the unrelenting efforts and untold sacrifices made by the people here struggling for their independence. Other peoples, not native to this country, but equally great fighters for the cause of liberty, also contributed significantly to the successful culmination of that historic and glorious event. Tadeusz Kosciuszko of Poland, that intrepid, gallant and gifted soldier of freedom, was one of those whose personal participation in the American Revolution marks him as one of the great heroes of his day.

This great man was born into an impoverished family on February 12, 1746. At the age of 13 he lost his father, but his yearning for education led him to the Royal School at Warsaw in 1765. He was graduated with the rank of captain in 1769, and was awarded a scholarship to France where he studied at the famous military school at Mezieres, specializing in artillery and engineering. In 1776 he was in Paris when he heard of the American Revolution. That stirred his imagination; he saw his chance for action in a good cause, and with borrowed money he sailed for America. He arrived in Philadelphia in August and immediately applied for military service. He was admitted, and charged with the drawing up of plans for fortifying the Delaware River. The immediate success of this work earned him a commission as colonel of engineers in the Continental Army.

In the spring of the following year he joined the Northern Army at Ticonderoga. Later the fortifications he erected at Saratoga contributed greatly to the brilliant victory of our forces there. During the next 2 years he was placed in charge of the building of fortifications at West Point. Subsequently he took part in the Battle of Charleston, and was among the first of the Continentals to enter that city after its evacuation by the British. On October 13, 1783, in recognition of his outstanding services, Congress made him a brigadier general.

Having served this country and its noble cause successfully and brilliantly, in July of 1784 he returned to Poland, hoping to carry on the fight for the freedom of his countrymen there. For more than 20 years he continued his brave but unfortunately futile efforts for Poland's freedom and was fated to die in exile in Switzerland on October 15, 1817.

Today, on the anniversary of his birth, we solemnly honor his memory. We do this not only because he fought for our independence, but also because he was a gallant and unwavering champion of the universal cause of human freedom.

The Real Lincoln

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mrs. DWYER. Mr. Speaker, there seems to be an ironic rule of history at work when it comes to dealing with great men.

It might almost be said that the greater the man and the farther removed in time he is from our own generation, the more freely he is quoted and the more loosely he is interpreted.

Thus, few people in our Nation's history have been more vigorously embraced by representatives of more diverse points of view than has Abraham Lincoln.

In a very real sense, this is a tribute to Lincoln's greatness. He was a unifier, a builder, a man who loved his fellow men regardless of political differences.

In another sense, however, this is unfortunate. For it obscures what Lincoln really believed and sometimes what he really said and meant.

And worst of all, it tends to hide the real Lincoln—a man from whom other men in all ages have much to learn.

It behooves us, then, to see him now as he really was. In this, our purpose may be better served by examining the characteristics of the man Lincoln, rather the words and the policies by means of which the public figure Lincoln dealt with the concrete political realities of his particular time

Granted the importance and the wisdom of what he said and what he did, we must do Lincoln the justice of dealing with him in the perspective of his time. And this means restraining ourselves from using his words to serve our own ends.

The irony in this should be apparent. For Lincoln was addicted to the truth. It has been said of him that he was morbidly preoccupied with truth—morbid, perhaps, because to few of his contemporaries, as too few of ours, gave evidence of valuing it as highly.

Lincoln was a man with a passion to be understood. He abhorred indirection, despised glittering generalities, shrank from evasion and ambiguity.

His respect for man's mind led him to rely on demonstration, rather than on emotional appeal, to convince those with whom he dealt.

His outward style—his manner, his taste and his writing—reflected the inner Lincoln: self-contained, direct, clear, sometimes terse, precise, simple, and undecorated.

He was a realist, about himself and about others. He lacked sentimentality of any kind. And he would, it is certain, have scorned those who, however sincerely, have sentimentalized him. For he recognized that sentimentality destroys a man's integrity, fuzzies up the truth about him, and makes him a pliable instrument for the service of others' interests.

Lincoln was no storybook hero, no romantic fool. He was a difficult, complex human being, the material of true greatness.

He valued excellence. He recognized it in others. He understood the painstaking, laborious price of achieving it, and willingly paid that price. And, afterward, he appreciated honestly what he knew to be his own great worth.

This self-control, this mastery of himself—no easy accomplishment for this giant of many moods and passions and ambitions—was the source of his strength and his mastery of others.

Was Lincoln really modest and humble? Not in the conventional sense of false self-effacement or self-righteousness, but genuinely so, as on ewho knew and understood himself as he really was.

He was a great man—a man for our age and every age.

The Significance of Lincoln's Birthday

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following excerpt from "The Faith of America," by Mordecai Kaplan, J. Paul Williams, and Eugene Kohn:

THE SIGNIFICANCE OF LINCOLN'S BIRTHDAY

This day is gratefully dedicated to the remembrance of Abraham Lincoln, who led the United States through 4 years of civil strife to keep the Nation one, and who used the power of his office to free the Negroes from slavery. His memory is both an inspiration and a challenge. It inspires us to dedicate our lives as he did his, to freeing the bound. It challenges us to make of our country a land in which all men are accepted by their fellow men for what they are and for what they can make of themselves.

We are wont in family life to accept our brother; we assume his right to be himself, to seek him own welfare in his own way; we ask of him only that he share with us a common devotion to the family. So let us in our public life accept our fellow man in brotherhood. Let us acknowledge his right to his own interests, his own beliefs, his own loyalties. Let us ask of him only that he share with us a common devotion to the cause of all humanity.

Ours is a nation built by men of different races, different faiths, different cultural traditions. To recognize all of them as our brothers is to show respect for their right to be different from us. It is to learn to value the special contribution which each can bring to the common cause. It is to welcome his cooperation in the building of a common civilization. That civilization should be great enough to embrace all the diversities among us. Let us make America safe for differences and liberate all those who today are oppressed by unbrotherly prejudice and rancor. Thus and then only can we honor the memory of Abraham Lincoln and bring victory to the cause for which he lived and died.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 27, 1959

Mrs. KELLY. Mr. Speaker, from the time of Catherine the Great to 1917, Ukraine, like Poland and Georgia, was submerged as a nation in the czarist Russian Empire. During this period, autocratic czardom suppressed and attempted to eradicate the culture and the national identity of the Ukrainian people. It attempted to demolish what we in the West esteem as praiseworthy, Ukrainian traits and qualities, notably their invincible desire to establish the natural rights of man and to exercise these rights in a self-determined and independent Ukrainian state.

Toward the end of World War I, the glorious opportunity for the expression of these God-given rights and for the full exercise of the Wilsonian principle of national self-determination presented itself with the collapse of the Russian Empire. On January 22, 1918, the Ukrainian National Republic was proclaimed and a new day was ushered in for the second largest Slavic nation in Europe. That memorable day is a landmark in Ukrainian history and it will always remain a bright spot in their entire history. It is celebrated annually as a national holiday and although the Republic did not last more than 2 years when it was overrun by Soviet Russia—R.S.F.S.R.—that short period has left its indelible impression of freedom on all Ukrainians. All of them would like to observe this historic anniversary but not all Ukrainians are permitted and privileged to do so. To 40 million Ukrainians who have suffered under the Soviet regime since 1920, that supreme privilege is denied in their homeland. But in the free world we gladly join in this celebration of Americans of Ukrainian origin, on this 41st anniversary of Ukrainan Independence Day.

The following editorial from the Washington Star and the news story from the Washington Post and Times Herald are worthy tributes:

[From the Washington Evening Star, Jan. 23, 1959]

UKRAINIAN DREAM

At this time 41 years ago, after having ben held captive for centuries by the Rus-

sian Czardom, the ancient and highly civilized Ukrainian people—who now number about 40 million—reestablished themselves as an independent nation. But their new status, their new freedom, was short-lived. For the imperialistic Bolshevik revolutionists soon moved into their land and subjugated them all over again. Even so, throughout the four decades that have since passed they have maintained their own language and separate identity within the Soviet Union, and great numbers of them still yearn and strive for complete self-rule. In fact, although it has mercilessly repressed them, the Kremlin itself has recognized their special position in many ways, including the arrangement under which their make-believe "autonomous republic" is fictitiously represented in the United Nations by a delegation of its own.

As things stand today, of course, it may seem almost quixotic that any of these people should still harbor hopes for real autonomy. But the same used to be said of other independence-seeking nationalities—such as the Irish—and what needs to be remembered in matters of this sort is that the world is always changing. Tyrannies, after all, not only rise, but also fall, and so it is not utterly inconceivable that the Ukrainians will once again attain—permanently—the liberty they enjoyed for just a little while in 1918. In any event, as one of their spokesmen has written, large segments of them can be counted upon to keep alive their "undying movement" to restore their country to full self-mastery "as a vital and indispensable element in a free Europe and in a free world."

[From the Washington Post and Times Herald, Jan. 23, 1959]

HOUSE MARKS BIRTHDAY OF UKRAINIAN REPUBLIC

The 41st anniversary of the independence of the Ukrainian Republic was commemorated yesterday in brief remarks and ceremonies in the House of Representatives.

Representative JOHN W. MCCORMACK, Democrat, Massachusetts, House majority leader, and Representative DANIEL J. FLOOD, Democrat, Pennsylvania, led House Members in praise of the Republic, which was gobbled up by the Soviet Union shortly after its independence was declared.

They were joined in their remarks by Representatives FRANCIS E. WALTER, Democrat, Pennsylvania, and Representative MARGUERITE STITT CHURCH, Republican, Illinois. A resolution has been submitted in the Senate by Senator PRESCOTT BUSH, Republican, Connecticut, to have the President proclaim each January 22, a day to honor the republic's independence.

Earlier yesterday, FLOOD was host to Lev Dobriansky, Georgetown University professor and chairman of the Ukrainian Congress Committee, at picture-taking ceremonies. Also attending were MCCORMACK and Representative MICHAEL A. FEIGHAN, Democrat, Ohio, and BARRATT O'HARA, Democrat, Illinois.

Address on 100th Anniversary of Lincoln's Birth by Booker T. Washington

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, January 12, 1959

Mr. BROOMFIELD. Mr. Speaker, all of us were proud and pleased with the program today celebrating the 150th anniversary of the birth of our great President, Abraham Lincoln. At this time, I would like to call to the attention of my colleagues the words of another great American who had words of praise for President Lincoln. These remarks were made 50 years ago to this day by Booker T. Washington, born a slave but who became a great, free American who has served as an inspiration to all of us. The Booker T. Washington Goodwill Building Commission at Tuskegee Institute in Alabama has asked my help in inserting his remarks in the RECORD, which I am most happy to do at this point:

AN ADDRESS ON ABRAHAM LINCOLN DELIVERED BEFORE THE REPUBLICAN CLUB OF NEW YORK CITY, FEBRUARY 12, 1909, BY BOOKER T. WASHINGTON ON THE 100TH ANNIVERSARY OF LINCOLN'S BIRTH

Mr. Chairman, ladies and gentlemen, you ask that which he found a piece of property and turned into a free American citizen to speak to you tonight on Abraham Lincoln. I am not fitted by ancestry or training to be your teacher tonight for, as I have stated, I was born a slave.

My first knowledge of Abraham Lincoln came in this way: I was awakened early one morning before the dawn of day, as I lay wrapped in a bundle of rags on the dirt floor of our slave cabin, by the prayers of my mother, just before leaving for her day's work, as she was kneeling over my body earnestly praying that Abraham Lincoln might succeed, and that one day she and her boy might be free. You give me the opportunity here this evening to celebrate with you and the Nation the answer to that prayer.

Says the Greak Book somewhere, "Though a man die, yet shall he live." If this is true of the ordinary man, how much more true is it of the hero of the hour and the hero of the century—Abraham Lincoln. One hundred years of the life and influence of Lincoln is the story of the struggles, the trials, ambitions, and triumphs of the people of our complex American civilization. Interwoven into the warp and woof of this human complexity is the moving story of men and women of nearly every race and color in progress from slavery to freedom, from poverty to wealth, from weakness to power, from ignorance to intelligence. Knit into the life of Abraham Lincoln is the story and success of the Nation in the blending of all tongues, religions, colors, races into one composite Nation, leaving each group and race free to live its own separate social life, and yet all a part of the great whole.

If a man die, shall he live? Answering this question as applied to our martyred President, perhaps you expect me to confine my words of appreciation to the great boon which, through him, was conferred upon my race. My undying gratitude and that of 10 millions of my race for this and yet more. To have been the instrument used by Providence through which 4 millions of slaves, now grown into 10 millions of free citizens, were made free would bring eternal fame within itself, but this is not the only claim that Lincoln has upon our sense of gratitude and appreciation.

By the side of Armstrong and Garrison, Lincoln lives today. In the very highest sense he lives in the present more potently than 100 years ago; for that which is seen is temporal, that which is unseen is eternal. He lives in the 32,000 young men and women of the Negro race learning trades and useful occupations; in the 200,000 farms acquired by those he freed; in the more than 400,000 homes built; in the 46 banks established and 10,000 stores owned; in the $550 million worth of taxable property in hand; in the 28,000 public schools existing, with 30,000 teachers; in the 170 industrial schools and colleges; in the 23,000 ministers and 26,000 churches.

But, above all this, he lives in the steady and unalterable determination of 10 millions of black citizens to continue to climb year by year the ladder of the highest usefulness and to perfect themselves in strong, robust character. For making all this possible, Lincoln lives.

But, again, for a higher reason he lives tonight in every corner of the Republic. To set the physical man free is much. To set the spiritual man free is more. So often the keeper is on the inside of the prison bars and the prisoner on the outside.

As an individual, grateful as I am to Lincoln for freedom of body, my gratitude is still greater for freedom of soul—the liberty which permits one to live up in that atmosphere where he refuses to permit sectional or racial hatred to drag down, to warp and narrow his soul.

The signing of the Emancipation Proclamation was a great event, and yet it was but the symbol of another, still greater and more momentous. We who celebrate this anniversary should not forget that the same pen that gave freedom to 4 millions of African slaves at the same time struck the shackles from the souls of 27 millions of Americans of another color.

In any country, regardless of what its laws say, wherever people act upon the idea that the disadvantage of one man is the good of another, there slavery exists. Wherever in any country the whole people feel that the happiness of all is dependent upon the happiness of the weakest, there freedom exists.

In abolishing slavery, Lincoln proclaimed the principle that, even in the case of the humblest and weakest of mankind, the welfare of each is still the good of all. In reestablishing in this country the principle that, at bottom, the interests of humanity and of the individual are one, he freed men's souls from spiritual bondage; he freed them to mutual helpfulness. Henceforce no man of any race, either in the North or in the South, need feel constrained to fear or hate his brother.

By the same token that Lincoln made America free, he pushed back the boundaries of freedom everywhere, gave the spirit of liberty a wider influence throughout the world, and reestablished the dignity of man as man.

By the same act that freed my race, he said to the civilized and uncivilized world that man everywhere must be free, and that man everywhere must be enlightened, and the Lincoln spirit of freedom and fair play will never cease to spread and grow in power till throughout the world all men shall know the truth, and the truth shall make them free.

Lincoln in his day was wise enough to recognize that which is true in the present and for all time: that in a state of slavery and ignorance man renders the lowest and most costly form of service to his fellows. In a state of freedom and enlightenment he renders the highest and most helpful form of service.

The world is fast learning that of all forms of slavery there is none that is so harmful and degrading as that form of slavery which tempts one human being to hate another by reason of his race or color. One man cannot hold another man down in the ditch without remaining down in the ditch with him. One who goes through life with his eyes closed against all that is good in another race is weakened and circumscribed, as one who fights in a battle with one hand tied behind him. Lincoln was in the truest sense great because he unfettered himself. He climbed up out of the valley, where his vision was narrowed and weakened by the fog and miasma, onto the mountain top, where in a pure and unclouded atmosphere he could see the

truth which enabled him to rate all men at their true worth. Growing out of this anniversary season and atmosphere, may there crystallize a resolve throughout the Nation that on such a mountain the American people will strive to live.

We owe, then, to Lincoln physical freedom, moral freedom, and yet this is not all. There is a debt of gratitude which we as individuals, no matter of what race or Nation, must recognize as due Abraham Lincoln—not for what he did as Chief Executive of the Nation, but for what he did as a man. In his rise from the most abject poverty and ignorance to a position of high usefulness and power, he taught the world one of the greatest of all lessons. In fighting his own battle up from obscurity and squalor, he fought the battle of every other individual and race that is down, and so helped to pull up every other human who was down. People so often forget that by every inch that the lowest man crawls up he makes it easier for every other man to get up. Today, throughout the world, because Lincoln lived, struggled, and triumphed, every boy who is ignorant, is in poverty, is despised or discouraged, holds his head a little higher. His heart beats a little faster, his ambition to do something and be something is a little stronger, because Lincoln blazed the way.

To my race, the life of Abraham Lincoln has its special lession at this point in our career. Insofar as his life emphasizes patience, long suffering, sincerity, naturalness, dogged determination, and courage—courage to avoid the superficial, courage to persistently seek the substance instead of the shadow—it points the road for my people to travel.

As a race we are learning, I believe, in an increasing degree that the best way for us to honor the memory of our emancipator is by seeking to imitate him. Like Lincoln, the Negro race should seek to be simple, without bigotry and without ostentation. There is great power in simplicity. We as a race should, like Lincoln, have moral courage to be what we are, and not pretend to be what we are not. We should keep in mind that no one can degrade us except ourselves; that if we are worthy, no influence can defeat us. Like other races, the Negro will often meet obstacles, often be sorely tried and tempted; but we must keep in mind that freedom, in the broadest and highest sense, has never been a bequest; it has been a conquest.

In the final test, the success of our race will be in proportion to the service that it renders to the world. In the long run, the badge of service is the badge of sovereignty.

With all his other elements of strength, Abraham Lincoln possessed in the highest degree patience and, as I have said, courage. The highest form of courage is not always that exhibited on the battlefield in the midst of the blare of trumpets and the waving of banners. The highest courage is of the Lincoln kind. It is the same kind of courage, made possible by the new life and the new possibilities furnished by Lincoln's proclamation, displayed by thousands of men and women of my race every year who are going out from Tuskegee and other Negro institutions in the South to lift up their fellows. When they go, often into lonely and secluded districts, with little thought of salary, with little thought of personal welfare, no drums beat, no banners fly, no friends stand by to cheer them on; but these brave young souls who are erecting schoolhouses, creating school systems, prolonging school terms, teaching the people to buy homes, build houses, and live decent lives by fighting the battles of this country just as truly and bravely as any persons who go forth to fight battles against a foreign foe.

In paying my tribute of respect to the great emancipator of my race, I desire to say a word here and now in behalf of an element of brave and true white men of the South who, though they saw in Lincoln's policy the ruin of all they believed in and hoped for, have loyally accepted the results of the Civil War, and are today working with a courage few people in the North can understand to uplift the Negro in the South and complete the emancipation that Lincoln began. I am tempted to say that it certainly required as high a degree of courage for men of the type of Robert E. Lee and John D. Gordon to accept the results of the war in the manner and spirit in which they did, as that which Grant and Sherman displayed in fighting the physical battles that saved the Union.

Lincoln also was a southern man by birth, but he was one of those white men, of whom there is a large and growing class, who resented the idea that in order to assert and maintain the superiority of the Anglo-Saxon race it was necessary that another group of humanity should be kept in ignorance.

Lincoln was not afraid or ashamed to come into contact with the lowly of all races. His reputation and social position were not of such a transitory and transparent kind that he was afraid that he would lose them by being just and kind, even to a man of dark skin. I always pity from the bottom of my heart any man who feels that somebody else must be kept down or in ignorance in order that he may appear great by comparison. It requires no courage for a strong man to kick a weak one down.

Lincoln lives today because he had the courage which made him refuse to hate the man at the South or the man at the North when they did not agree with him. He had the courage as well as the patience and foresight to suffer in silence, to be misunderstood, to be abused, to refuse to revile when reviled. For he knew that, if he was right, the ridicule of today would be the applause of tomorrow. He knew, too, that at some time in the distant future our Nation would repent of the folly of cursing our public servants while they live and blessing them only when they die. In this connection I cannot refrain from suggesting the question to the millions of voices raised today in his praise: "Why did you not say it yesterday?" Yesterday, when one word of approval and gratitude would have meant so much to him in strengthening his hand and heart.

As we recall tonight his deeds and words, we can do so with grateful hearts and strong faith in the future for the spread of righteousness. The civilization of the world is going forward, not backward. Here and there for a little season the progress of mankind may seem to halt or tarry by the wayside, or even appear to slide backward, but the trend is ever onward and upward, and will be until someone can invent and enforce a law to stop the progress of civilization. In goodness and liberality the world moves forward. It goes forward beneficently, but it moves forward relentlessly. In the last analysis the forces of nature are behind the moral progress of the world, and these forces will crush into powder any group of humanity that resists this progress.

As we gather here, brothers all, in common joy and thanksgiving for the life of Lincoln, may I not ask that you, the worthy representatives of 70 million of white Americans, join heart and hand with the 10 million of black Americans—these 10 million who speak your tongue, profess your religion—who have never lifted their voices or hands except in defense of their country's honor and their countrys' flag—and swear eternal fealty to the memory and the traditions of the sainted Lincoln? I repeat, may we not join with your race, and let all of us here highly resolve that justice, goodwill, and peace shall be the motto of our lives? If this be true, in the highest sense Lincoln shall not have lived and died in vain.

And, finally, gathering inspiration and encouragement from this hour and Lincoln's life, I pledge to you and to the Nation that my race, insofar as I can speak for it, which in the past, whether in ignorance or intelligence, whether in slavery or in freedom, has always been true to the Stars and Stripes and to the highest and best interests of this country, will strive to so deport itself that it shall reflect nothing but the highest credit upon the whole people in the North and in the South.

Lincoln Benedicto: Catawba College Cuban

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 9, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include three newspaper articles and one letter to the editor, which tell a compelling story of a young Cuban patriot in the United States, a 22-year-old university student who has found himself in the position of defending his country's recent revolution to his friends in this country. He has been doing a fine job of it as I am sure you will agree when you read his story. Mr. Speaker, I am proud to introduce to you, to the other Members of the House of Representatives, and to the general readers of the CONGRESSIONAL RECORD, Mr. Lincoln Benedicto:

[From the Salisbury (N.C.) Sunday Post, Jan. 18, 1959]

STUDENT TELLS OF BATISTA CRUELTIES

(By Bill Jackson)

"They drove nails into people's heads. They crucified them by nailing them to the walls. They gouged out their eyes, cut out their tongues. They pulled toenails from toes, fingernails from fingers."

As the young Cuban talked, he pulled himself closer to the edge of his chair. Then he exclaimed, "There is nothing exaggerated in what I say. It is the whole truth."

For Lincoln Benedicto, 22, a senior in political science at Catawba College, had just received a letter from home. It was the first in 5 weeks, and originated from Benedicto's home town of Holguin, in Cuba's now-famed Oriente Province. The writer was the young student's mother.

He grasped the envelope in his hand as he talked. This letter had descriptive passages that made the sounds of Castro's guns seem to echo in the very room in which the student sat. One paragraph had driven home a spine-chilling revelation: The Benedicto homeplace in Holguin had been used as a headquarters for Castro's revolutionary movement in that town of 90,000.

ARRESTED

"My mother served as a liaison between the revolutionaries in the hills and visiting newsmen from other countries," said Benedicto. "In mid-October of last year, she was arrested by the Batista regime and threatened with death."

His mother had been alone in the house; the father had been dead many years. Then, a daughter moved in with her three children, and Benedicto speculates this was because his sister knew of many contacts she could make with the rebels.

"The house is a big one by the average American standard, and could easily accom-

modate 40 persons," Benedicto related. "It was located about three blocks from the city square. Mother ran a filling station nearby."

A personal tragedy confronted the young Cuban as he read one portion of the letter. When he first entered this country as a young high school sudent in 1951, attending the Blue Ridge School at Hendersonville, he became acquainted with a young man from Ecuador. A warm friendship evolved, and on graduation the South American returned to his native soil and accepted a job as reporter on a newspaper in Quito, Ecuador's capital city.

Desiring a personal interview with Castro for a newspaper story, the reporter was sent to Cuba bearing official papers documenting him as a newspaper correspondent. He went directly to Holguin and made contact with Benedicto's mother. She arranged for the clandestine rendezvous with the rebels in the hills of Oriente Province.

KILLED

On obtaining his interview with the rebel chief, the reporter returned to Holguin. He was immediately assassinated by Batista followers.

The mother also revealed the tragic story of a young lawyer, known as Captain Herrera, who had stayed in her home for some time engaged in undercover work for the rebels. One day, while visiting at another home, agents of the S.I.M. (Service of Military Intelligence) arrested the lawyer. Rather than face the impending torture by government agents, he hanged himself.

One of the sordid pictures painted by the mother's words in her letter was that of photographs taken by rebel cameramen and circulated in Oriente Province. Shown in these photographs were neighborhood dogs roaming about the countryside with parts of human bodies in their mouths.

When the S.I.M. entered the Benedicto home in October, they arrested her and told her she would not live long if she did not confess her past deeds and divulge all information relating to her work with the rebels. She protested strongly and maintained her innocence. By the intervention of influential friends, she was set free.

After this, she closed the big house in Holguin and traveled with her daughter and children to Victoria de las Tunas, where they lived until the overthrow of Batista.

"Like many Cubans," said Benedicto, "my mother took a big gamble. Unlike the fate of many Cubans, the gamble paid off, and she's alive today."

He defended the current series of firing squad executions that are taking place in Cuba. "The American people and American politicians have objected strongly to these executions," he said, "but they have forgotten about the massacres and crimes committed by the Batista regime. At the time of these terrible inhumanities, there were no objections from the United States about Batista's treatment of the rebels and their sympathizers. The Americans have forgotten all of this."

Political Science Student Lincoln Benedicto, aptly named after another political scientist, Abraham Lincoln, came to Salisbury and entered Catawba College on the advice of a friend from Brevard. He is president of the International Relations Club at Catawba.

"Not long ago the money from home stopped coming and I was unable to finance my education," he said. "Being an alien, I had to obtain permission from the U.S. Immigration Service in Washington in order to work and earn money to pay my tuition. They don't readily give such permission, but Mr. Cooper (Peter Cooper, public relations director) wrote them a letter and they gave in."

He worked in many jobs, even dug ditches as a laborer. He now works at the Winn-Dixie Store "doing a little bit of everything."

"I haven't been home in 4 years," he said. "I haven't had any desire to go home with things the way they were. I wanted to remain in the United States to study English and try to understand the American people. It has taken me 6 years to understand them."

In an appearance before the Salisbury Rotary Club last August, Benedicto made a speech in which he predicted the strong arm of Fulgencio Batista would break within 6 months. Recent events have proved him to be an expert in crystal ball gazing.

"I now have another prediction to make," he said last week. "The only remaining dictator in Latin America will fall before the might of the oppressed people when the Dominician Republic follows the example of Argentina and Cuba and topples General Trujillo. I believe this will come within the next 3 years."

[From the Catawba College Pioneer, Feb. 7, 1959]

CUBAN STUDENT REVEALS VIEWS ON REVOLUTION

(By Richard Dorn)

Probably the loneliest man on today's international scene is Cuban Rebel Chief Fidel Castro Ruz. For five and one-half years, the countries of the free world have turned hopeful eyes toward the balmy island of Cuba in expectation that a new democracy would rise out of the fray. The rebels did win out. The world rejoiced.

Then the execution of Batista's henchmen began and a deluge of criticisms and bitter protests rained down around the head of Fidel from those same sources that had a few days before praised him and recognized his new government. The United States, in particular, has termed the executions as "regrettable," "inhuman," "sadistic." Castro says: "I am determined to show no mercy."

LINCOLN INTERVIEWED

In an effort to obtain an unadulterated Cuban viewpoint on the Cuban situation, we have interviewed Lincoln Benedicto. Lincoln's mother and sister worked in the rebel underground during the course of the revolt and one of Lincoln's closest friends was assassinated by Batista's police.

When questioned about his views concerning the executions, he replied: "I am not in favor of capital punishment. The Constitution of Cuba does not sanction it, but at the same time I believe that these executions are serving a necessary purpose. I know what the people feel in this matter and how they think. If Castro did not execute those connected with Batista's regime, I am sure that the people would take the law into their own hands and do it for him. Things would get out of hand; they would kill innocent people. Castro's way is best. It does not spill innocent blood."

Lincoln also pointed out the reason for the peoples' hatred of Batista and all those connected with him. He recounted stories of torture of the most inhuman kind and sadistic terrorization inflicted on Cuban citizens by the Batista government. The army even went so far as to ship the dismembered bodies of the students home to their mothers as examples of what happens to rebel cohorts.

QUOTES FROM CASTRO

Fidel Castro has been quoted as saying that he wants no position in the government. "Power does not interest me, and I will not take it." Still, he dictates the every policy of his present provisional military government and metes out justice via kangaroo courts. The liberal onlooker, Puerto Rico's Muñoz-Marín labels these actions as "a bad thing happening in the midst of a great thing," but what will happen after the executions are accomplished? Will democracy replace military law in Cuba?

Here's what Lincoln has to say: "I believe that Fidel Castro is sincere when he says he wants no part of the government. He is not the President of Cuba; Manuel Urrutia is. Castro is carrying out the responsibilities of the government. Urrutia handles the diplomacy. He is a good man for President because of his long experience with Cuban law and his high democratic ideals. Military law will no longer be necessary within 18 months to 2 years from now just as Castro predicts. Castro has promised democracy and he will give it."

CASTRO PRESIDENT?

"I think Castro will eventually become President of Cuba, not because he wants to be President, but because the people will demand it of him. Castro is capable and would adhere to democratic principles."

In answer to questions about Raul Castro and Ernesto Guevarra and the Communist leanings, these two rebel leaders have shown, Lincoln would only say this: "To one man communism may be just another form of government. To another it may be a totally nonexistent form of government." Lincoln denied any possibility of the Communists gaining any voice in Cuban affairs and was quick to point out that although 5 of the approximately 13 seats on the newly formed National Labor Union Committee were grabbed by Communists, they have since been "relieved" of their positions.

LINCOLN WELL-INFORMED

Lincoln's study is a virtual library of information on the Cuban revolt. To write here all that he has had to say about the situation would be impossible. The accounts that he is able to relate about the atrocities committed by Fulgencio Batista and his killer cops against the Cuban people are endless. If you have any doubts about the validity of the feelings of the Cuban people, spend a few minutes with Lincoln in his study. He'll show you newspaper clippings, references of testimony in the U.S. CONGRESSIONAL RECORD, relate to you shocking accounts of brutality received firsthand via letters from his mother. It will be an enlightening experience.

NORTH IREDELL LEGION HEARS CUBAN CATAWBA COLLEGE STUDENT ON CASTRO

(By McK. R. Long, Sr.)

Lincoln Benedicto is a political science student at Catawba College, and is president of the International Relations Club at Catawba. He gave the legion an account of the atrocities of the Batista junta, more compact and brief than he has given elsewhere to the press in this State. These closely resemble the horrors inflicted by Nasser on the Israelis, castration and rape, and the known liquidation of 20,000 innocent people. Mr. Benedicto acknowledged that 400 war criminals had been given the gun by Castro's warrant, but insisted it had been done by due process, the disparity between atrocity killings by the Cuban tiger, and Castro's judicial life taking, revealed moderation by Castro.

Again and again he appealed for understanding by the American people, who had been misled by press accounts, in their opinions as to the Castro revolution, which he described as a triumph of democracy. Doubtless when he hears Castro likened to a designing Nasser, the Nasser of the Caribbean, he feels resentment; since General Fidel has about him a cabinet, and has set up rule under President Manuel Urrutia, Mr. Benedicto believes that his hero will follow the constructive line of Magsaysay in the Pacific, and not the Mahomet-like line of the Egyptian dictator. One can see how he boils and writhes with protest, as the press

glibly predicts what Castro will do, when he is only in the process of doing it. Why not give a great liberator the chance to truly show his hand, he asks. Why not concede that to lead a country out of such misery and oppression would tax the abilities of the greatest man—Washington or Bolivar? These are his thoughts, even when his speech is convulsed with patriotic anguish, and remembrance that his own mother was arrested only last October by Batista agents, her life threatened, and Mao-like pressure brought on her to inform against the cause. To know how he feels one would have to be aware that his own home, which can house 40, in Holguin, a town of 90,000, was headquarters for the Castro movement in Oriente Province. His mother, like the mother of Andrew Jackson who patched the breeches of the old continentals, fed them, nursed them and finally died because of them, bred in the son a desperate furor for freedom. A heroic mother makes a passionate partisan of a son. Sonora Benedicto was and is the sort of woman who made America possible.

And her son, who works hard in the summer to finish his course in law, is a worthy brave devotee to the cause. Benedicto believes with all his soul, that his bearded leader, a huge man of 6 feet 2, is "the noblest Roman of them all," that he knows where he is going, the reforms he will bring, and that America and the world, should give him time to work things out. No one hearing him can say no to that. Personally, we believe most legionnaires wish Castro well, and that if he stabilizes Cuba permanently, it will help all South America.

[From the Charlotte Observer, Feb. 5, 1959]

THE CUBAN EXECUTIONS?—MERE JUSTICE

The meaning of words is not in the words; it is in us.

What did the Cuban revolution mean to the American people and the rest of the world? It only meant another revolution in Latin America to get rid of another dictator.

To us Cubans it meant victory, freedom, peace, joy, mourning, tears, and the destruction of a rotten rule and a group of vicious, cruel, implacable, and blood-thirsty men who killed over 20,000 innocent people.

Is there anything wrong with firing squadrons in Cuba? Perhaps to the rest of the world it is the wrong thing to do. But why don't the same people stop criticizing and start thinking of the executions committed by Batista's followers without any mercy when the revolution was growing in power and size?

This very same group of men was not content with shooting the young, as well as the old, without even giving them a fair trial, but also torturing them with the most horrible, despicable, cruel, barbaric, and inhuman ways ever seen in society.

Now that Castro's men are carrying out executions the people's mind revolts and criticizes this procedure.

Have people thought for a minute how many innocent Cubans will die if these executions are not carried out? The relatives of those who were killed will take the law into their own hands. Then what will the American people have to say about it?

The people of Cuba are asking for these executions and even saying that the Government is acting too leniently against the war criminals.

The American people talk about bringing legal charges and have these men put to trial. But what better legal charges can be brought against these soulless human beasts, when relatives and friends have seen them killing their own people and have brought the legal charges before the rebel jury?

Why are some people protesting the executions in Cuba when they did not even bother to mention the massacres of Batista's regime—a reign of terror which has brought mourning to thousands of Cuban homes and tears to mothers' eyes at the right of the mutilated bodies of their sons.

It is my opinion that some people are only concerned with the present, but forget to go back to the past and judge some of its truth.

Since when has the Congress of the United States acquired or bought the rights to manage the domestic affairs of Cuba?

Some Congressmen who did not even bother to stop the selling of arms to the Batista regime, which killed thousands of Cubans, now take the floor and bring charges against the blood bath in Cuba. What role are these men trying to play now? Do they hope to achieve national popularity through such hypocrisy?

For too many years, too many individuals in this country who do not even understand the difference of cultural traits, have stuck or tried to stick their nose into the domestic affairs of other countries in this hemisphere.

The 26th of July revolution led by Fidel Castro and his follower is the best thing that has happened to Cuba since its proclamation of independence.

There has been speculation about the new regime sympathizing with communism and even heading toward another dictatorship. These convictions without doubt have been the ideas of some professional criticizers whose thoughts and opinions have gone beyond their imaginations.

Let the people of the United States know that Urrutia is running the internal affairs of Cuba and Castro is the chief of a dignified armed force.

Let the vultures of Batista criticize Castro and his cannon policy. These human beasts have no longer power or a clean voice. They have already spotted their name with innocent blood—the blood of their own people.

The Cuban revolution had and has a different meaning to us Cubans. We know the meaning of our thoughts, feelings, and words.

Unfortunately these same actions are not understood and are even confused by outsiders with a different concept of ideas and judgment.

Let Senor Urrutia and the Cuban Congress run the internal affairs of the island. Let our leader Senor Fidel Castro Rux be our guide, our democratic hope.

These feelings of ours are not in the feelings of others; they are in us, they are our feelings.

LINCOLN BENEDICTO.

Constitutionality of 14th Amendment

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. HARRIS. Mr. Speaker, there has been much discussion over the years as to whether or not the 14th amendment to the Constitution was adopted in accordance with constitutional processes.

On last Thursday, February 5, 1959, one of the distinguished and able members of the house of representatives of the 62d general assembly of the State of Arkansas, the Honorable Talbot Feild, Jr., addressed the Arkansas State Legislature in a most provocative speech on this question. At the same time, he introduced a proposed amendment to the Constitution of the United States, dealing with this subject.

Our forefathers, framers of the Constitution of the United States, in their wisdom provided the right of petition. In petitioning the Congress to consider his proposal, Mr. Feild has given us the benefit of a great deal of research. In a most commendable manner, he points up the difficult problems which are causing so much concern among our people today and proposes a method which he conceived that would resolve these difficulties and would accordingly relieve the imponderable and frustrating concern with so many of our people.

It is with this thought, Mr. Speaker, and under unanimous consent to extend my remarks, that I include the speech of Mr. Feild as he gave to the general assembly of our State:

Mr. Speaker, ladies and gentlemen of the house, a moment ago I introduced a proposed amendment to the Constitution of the United States. By your leave I have been granted the privilege of speaking at this time on my proposal. For this privilege I am indeed grateful. We were recently assembled here in an extraordinary session of the general assembly by virtue of a constitutional call issued by our Governor, the Honorable Orval E. Faubus. We considered and enacted laws to regulate the administration and financing of public schools and education, and made appropriations for such purposes.

Additional proposals pertaining to our schools we must soon take under advisement. Before considering any of them we should turn our attention to the 14th amendment, for in the end, only the Constitution of the United States can resolve our crisis. What does it say? We must understand the 14th amendment. It was this amendment that was supposedly interpreted by the Supreme Court of the United States in 1954 when it also took into consideration psychology and sociology. And, in basing its 1954 decision on the 14th amendment it did so on the assumption that the 14th amendment was constitutionally valid. We are only concerned with the last phrase of section 1 of the 14th amendment. It reads as follows:

"No State shall deny to any person within its jurisdiction the equal protection of the law."

In the case styled *Brown* v. *Board of Education of Topeka*, decided on May 17, 1954, for the first time since our country was founded our Supreme Court based one of its decisions upon alleged psychological and sociological authority to sustain its view of what the 14th amendment should mean. And, it did this although the highest courts of 23 of the States which adopted the 14th amendment have held that it did not abolish segregation. Neither did the 39th Congress that proposed the 14th amendment, nor a single one of the States that considered it, understand that the 14th amendment, of and by itself, outlawed segregation by race in the public schools. Moreover, the 39th Congress which unconstitutionally submitted the 14th amendment simultaneously passed a law establishing segregated schools in the District of Columbia. At that very time the 39th Congress refused to accept a proposed constitution by South Carolina which included a provision requiring racial integration in the schools. But why, after more than 90 years since the 39th Congress was in session, has the Supreme Court of the United States decided to charter a course more radical, extreme, and unconstitutional than that which Congress inaugurated, submitted, and approved? Is it because those who would destroy our constitutional system of three coordinate branches of Government and States rights see the Negro voter as an avenue through which to accomplish their

purpose and centralize more power in Washington? In the 1954 decision this particular language was used:

"Such considerations apply with added force to children in grade and high schools. To separate them from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone."

That ambiguous language suggested and resulted in this phraseology being incorporated into Act 7 of the 2d extraordinary session of the 61st General Assembly of Arkansas, which became effective on September 12, 1958:

"Whereas, the Supreme Court of the United States predicated its school integration decision upon the psychological effect of segregated classes upon children of the Negro race, and at the same time, ignored the psychological impact of integrated schools upon certain white children who observe segregation of the races as a way of life; and

"Whereas, legislation is necessary in order to protect the health, welfare, well-being, and educational opportunities for such white children;" etc.

In the Brown case all decisions of the Supreme Court prior thereto which had interpreted the 14th amendment to permit the separate but equal doctrine were overturned, but not the hopes of the Republican Party.

The Emancipation Proclamation by President Abraham Lincoln furnished a dramatic appeal to the Negroes of that day and when the War Between the States ended, Negro voters were brought en masse into the Republican Party. There they stayed until 1936 when a majority of them moved over to the Democratic Party, then under the leadership of President Franklin Roosevelt. It is no secret today that the Republicans are trying to win back a majority of the Negro vote outside the South. President Dwight Eisenhower made wide gains among Negro voters in the North in 1956, but still his Democratic opponent, making the same appeals for their votes, secured 2 out of every 3 Negro votes cast outside the South. Yet in the 1956 election, which followed the 1954 Supreme Court decision overturning the separate but equal doctrine, Eisenhower's share of the vote in 35 congressional districts having more than 10 percent Negro population climbed only from an average of 42 percent in his first election to 47 percent. After soldiers were sent to Little Rock the Republican Party strategy board thought it would climb much higher. However, we all know that they were proven wrong by the returns of the general election last November. Nevertheless, based on the 1956 November elections and voting patterns established thereby 4 million Negro voters hold the balance of power in 14 key States outside the South. In those States the number of Negroes ranges from 4.6 to 15.6 percent of the voting age population, as follows: California, 4.6; Indiana, 4.8; West Virginia, 6.4; New York, 6.5; Oklahoma, 6.6; Pennsylvania, 6.7; Ohio, 6.8; New Jersey, 6.9; Michigan, 7.5; Illinois, 8.1; Kentucky, 8.2; Missouri, 8.3; Delaware, 13.3; and Maryland, 15.6. The total electoral vote in those States is 261. Needed to win the White House, 269. In 1948 it was the announced purpose of the States' Rights Party with Strom Thurmond as its presidential candidate to secure enough electoral votes to throw the election into the House of Representatives where each State would have only one vote. Thurmond received 39 electoral votes and almost succeeded because the loss by President Harry Truman of 16,807 votes in Illinois and 3,555 in Ohio would have resulted in the President being elected in the House. There the voice of the South would carry more political weight than the scattered Negro votes outside the South. Two Presidents have been chosen by elections in the House of Representatives. They were Thomas Jefferson in 1800 and John Quincy Adams in 1824.

As our present-day political parties, the Democratic and Republican, were founded by Thomas Jefferson and Abraham Lincoln, respectively, let us direct our attention to their attitude concerning our pressing problem. Thomas Jefferson was the author of our immortal Declaration of Independence. He was our third President. He favored freedom for Negroes, but he also favored deportation and colonization. He had much to say in regard to the race problem. In one instance he said:

"Nothing is more certainly written in the book of fate than that these people are to be free; nor is it less certain that the two races, equally free, cannot live in the same government. Nature, habit, opinion have drawn indelible lines of distinction between them. It is still in our power to direct the process of emancipation and deportation peaceably and in such slow degree as that the evil will wear off insensibly, and their place filled up by white laborers."

In his fourth joint debate with Douglas, Abraham Lincoln thus spoke in September 1858, the 50th year of his life:

"I will say then, that I am not, nor have I ever been in favor of bringing about in any way the social and political equality of the white and black races—that I am not, nor ever have been in favor of making voters or jurors of Negroes, nor of qualifying them to hold offices, nor to intermarry with white people, and I will say in addition to this that there is a physical difference between the white and black races which I believe will forever forbid the two races living together on terms of social and political equality, and inasmuch as they cannot so live, there must be a position of superior and inferior, and I, as much as any other man, am in favor of having the superior position assigned to the white race."

In that same debate he said, "I will add one further word, which is this: that I do not understand that there is any place where an alteration of the social and political relations of the Negro and the white man can be made except in the State legislature—not in the Congress of the United States."

As President he received a delegation of approximately 500 free Negroes at the White House in Washington on August 14, 1862. After preliminaries were over President Lincoln explained that money had been put at his disposal by Congress for the purpose of colonizing people of African descent, a cause he had long favored. Then he said:

"You and we are different races. We have between us a broader difference than exists between almost any other two races. Whether it be right or wrong I need not discuss; but this physical difference is a great disadvantage to us both, as I think.

"Your race suffered very greatly, many of them by living among us, while ours suffer from your presence. In a word we suffer on each side. If this is admitted, it affords a reason, at least why we should be separated.

"Even when you cease to be slaves, you are far removed from being placed on an equality with white people. On this broad continent not a single man of your race is made the equal of a single man of ours. Go where you are treated best, and the ban is still on you. I cannot alter it if I would. * * * See your present condition, the country engaged in war, our white people cutting one another's throats, and then consider what we know to be true. But for your race among us there would be no war, although many men engaged on either side do not care for you one way or the other. It is better for us both, therefore, to be separated."

It has been 96 years since President Lincoln thus expressed himself. Perhaps we should clearly and frankly examine our attitude today in the South. Our position is clear. The basis of our civilization is the vitality of our culture. It has been preserved by our unwritten law.

The sending of troops to Little Rock was only the beginning of what the South is to face in the months ahead. The chief counsel for the NAACP, Thurgood Marshall, was reported in the Arkansas Democrat on October 3, 1957, to have told an overflow audience of 2,000 at a Negro church:

"We've got the other side licked, its just a matter of time. The period of peace and quiet has passed. Whichever State continues to defy the law will have to answer in court. We will finish the fight * * * and not for one moment deviate from our tactics and our goal." And he said that the goal is the elimination of every form of segregation in every form of life in every part of the country.

In our deliberations here we must enact measures which will present a law-abiding stand for the principles set forth in the Constitution of the United States and the constitution of Arkansas. Let no one tell you that the Supreme Court of the United States can amend the Constitution of the United States. Only the States can amend the Constitution. We hear much of late concerning the supreme law of the land. What is it? Article VI of the Constitution tells us. It is often urged that it is what the Supreme Court says it is. That is far from the truth. It would be true if article VI read, "The Constitution as interpreted, modified, and revised by decrees of the Supreme Court, and the laws of the United States which shall be made in pursuance thereof," etc., "shall be the supreme law of the land." But there is no reference to the Supreme Court in article VI and, of course, the words as interpreted, modified, and revised by the decrees of the Supreme Court do not appear therein. There is much evidence indicating that even those strongest advocates of an all-powerful Supreme Court are becoming concerned as more and more citizens realize that decisions of the Supreme Court are not the supreme law of the land. The Associated Press, under a New York dateline of last December 12, reported Senator JACOB K. JAVITS, Republican, of New York, as saying that a constitutional amendment is needed to settle once and for all that the Supreme Court has the final say on the constitutionality of any law. And, he was quoted as saying, "The Constitution does not now specifically vest the Supreme Court with authority as a final tribunal to declare an act of Congress or a law of a State to be contrary to the United States Constitution, but tradition, historical acceptance, and the continuity of the Court decisions for over 150 years have confirmed this authority."

Every citizen must speak out. Jefferson lighted the path for the Democrats, and Lincoln did the same for the Republicans. The power of the Supreme Court must be curbed, Congress must act, the States must act, and recent decisions must be reversed. The 1954 decision is insignificant in comparison with other recent ones. Among many new concepts adopted by the Court are the views that a witness need not answer even though he knows where an atomic time bomb is hidden which may blow up an entire city; that persons may preach openly the forcible overthrow of our State and Federal Government; that the various States may not punish those who would overthrow the Government by force; that permit confessed rapists and other criminals to go scot free on technicalities; and that restrict the power of Congress itself to get information needed for legislative purposes. Curbing the Supreme Court should become the business of all 49 States. Both Jefferson and Lincoln often spoke out against the Supreme Court of the United States. They both favored law and order as we well know, but they well realized that a reckless Su-

preme Court could pervert the Constitution and destroy our Republic.

They said the exact opposite of what the six judges of the Eighth U.S. Circuit Court of Appeals said in their majority opinion delivered in St. Louis on August 18, 1958, in implying that "popular opposition" to Supreme Court rulings could be made the basis for Court injunctions. In effect this is in violation of the first amendment to the Constitution of the United States for it would end free speech and free assembly once a Federal court order was put into effect on an issue in public controversy.

Certainly we should recall what Abraham Lincoln said 100 years ago with reference to the Dred Scott decision of the Supreme Court. It is important to remember that the Dred Scott decision established the false idea that the Court could hold anything unconstitutional for any reason suitable to the Court, whether warranted by the express words of the Constitution or not. Using as authority Chief Justice Marshall's assertion that the Court had a right to declare a law unconstitutional, the Court went far beyond anything dreamed of by Marshall. From the Dred Scott decision sprang the notion, still prevalent, that the Supreme Court is the highest of the three branches of Government, although the Constitution established the three branches as coordinate and equal. Presumptuous and extravagantly despotic, the Court proclaimed, in effect, not only supremacy over the two other branches of Government, but superiority over the will of the people. In magnanimous language the Court announced that questions of "peace and harmony of the country required a settlement of them by judicial decision." It was this case, then that really made of the Supreme Court a superlegislature without responsibility—one above the constitutionally elected legislature of the people. About this decision of the Supreme Court President Lincoln said:

"If this important decision * * * had been before the Court more than once, and had there been affirmed and reaffirmed through a course of years, it then might be, perhaps would be, factious, nay, even revolutionary, not to acquiesce in it as a precedent.

"But when, as is true, we find it wanting in all these claims to the public confidence, it is not resistance, it is not factious, it is not even disrespectful, to treat it as not having quite yet established a settled doctrine for the country."

Thomas Jefferson on one occasion had this to say:

"It has long, however, been my opinion, and I have never shrunk from its expression * * * that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary; and irresponsible for impeachment is scarcely a scarecrow—working like gravity by night and by day, gaining a little today and a little tomorrow, and advancing its noiseless step like a thief, over the field of jurisdiction, until all shall be usurped from the States, and the Government of all be consolidated into one.

"To this I am opposed; because when all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government or another, and will become as venal and oppressive as the government from which we separated."

Recently, on October 3, 1957, the Honorable Stanley F. Reed of Kentucky, a retired Associate Justice of the United States Supreme Court, who participated in the 1954 decision, made a speech before the State Bar of California. In that speech he quoted the view expressed by President Andrew Jackson in a message to Congress on July 10, 1832. President Jackson said:

"The authority of the Supreme Court must not, therefore, be permitted to control the Congress or the executive when acting in their legislative capacities, but to have only such influence as the force of their reasoning may deserve."

It is not only the South that is alarmed over today's Supreme Court. Almost 2 years ago, the Chief Justice of the Supreme Court of Arizona made a speech in Phoenix before the Hiram Club. He declared that the present Court (and I quote him) "is a greater danger to our democratic form of Government and American way of life than any forces alined against us outside our boundaries." And in regard to the 1954 decision, he said:

"Regardless of what we as individuals may think about the justice or injustice of segregation, I here assert without hesitation or reservation that the decision was not based upon logic or law.

"I further charge that the processes followed in reaching the decision's conclusion violate all procedures of due process known to American jurisprudence."

In 1957, a special committee, the committee on Federal-State relationships as affected by judicial decisions, was appointed by the National Conference of Chief Justices. This special committee submitted its conclusions in a resolution submitted to the Conference of Chief Justices in Pasadena, Calif. On August 23, 1958, by a vote of 36 to 8, with 2 members abstaining and 4 not present, the resolution was adopted. Therein on 12 occasions they pinpoint the 14th amendment and in one instance gently but pointedly stated:

"We do not believe that either the framers of the original Constitution or the possibly somewhat less gifted draftsmen of the 14th amendment ever contemplated that the Supreme Court would, or should, have the almost unlimited policymaking powers which it now exercises."

At another place in the report one could not fail to read with alarm the following:

"It has long been an American boast that we have a government of laws and not of men. We believe that any study of recent decisions of the Supreme Court will raise at least considerable doubt as to the validity of that boast."

The special committee that was headed by Chief Judge Frederick W. Brune of the Maryland Court of Appeals, included top judges from seven Northern States and three Southern States. Although our own Chief Justice Carlton Harris was not present at the conference he was quoted by the Associated Press on October 5, 1958, as having said that the resolution cogently expressed his sentiments. The Gazette Press Service under a Pasadena, Calif., dateline reported that the resolution accused the Supreme Court of making hasty, impatient, decisions without proper judicial restraint and acting as a policymaker.

The crisis existing in the Commonwealth of Virginia as well as the situation confronting us of Arkansas and the rest of the Nation has mainly resulted from the 1954 decision which has attempted to change the long-respected interpretation of the 14th amendment. Yet, that amendment was never constitutionally ratified. In fact, it was not even constitutionally submitted by the Congress to the States. Let us turn back the pages of history. After the death of President Lincoln, President Andrew Johnson pledged to carry out the policies of his predecessor. Two months before the end of the War Between the States Congress passed the 13th amendment and at the close of the war it was being considered by the various States. Following Lincoln's plan, white loyal governments were organized in the South. Certain conditions were required of the defeated Confederacy. They were met and all the newly elected legislatures ratified the 13th amendment. Thus, in the summer of 1865 the Southern States were formally and officially counted back in the Union. Yet in December of the same year the duly elected Representatives and Senators from the Southern States were not admitted to their seats in the 39th Congress. They were blocked by Thaddeus Stevens, a Congressman from Pennsylvania. So, with the 39th Congress unconstitutionally excluding the Representatives and Senators, Congress did not on June 16, 1866, by sufficient valid votes submit the 14th amendment to the various State legislatures for ratification. Even the language of the article V of the Constitution of the United States that governs the method of amending the Constitution clearly sets forth "that no State, without its consent, shall be deprived of its equal suffrage in the Senate."

The 14th amendment was promptly rejected and ratification failed. Let us examine the vote of the legislatures of the Southern States at that time. The following States rejected the 14th amendment as hereinafter indicated:

Rejection

	House	Senate	Date
Texas	70 to 5	21 to 1	Oct. 13, 1866
Georgia	147 to 2	38 to 0	Nov. 9, 1866
Florida	49 to 0	20 to 0	Dec. 3, 1866
Alabama	66 to 8	28 to 3	Dec. 7, 1866
North Carolina	93 to 10	45 to 1	Dec. 13, 1866
Arkansas	68 to 2	24 to 1	Dec. 17, 1866
South Carolina	95 to 1	Rejected	Dec. 20, 1866
Virginia	74 to 1	27 to 0	Jan. 9, 1867
Mississippi	88 to 0	do	Jan. 25, 1867
Louisiana	Unanimous	Unanimous	Feb. 5, 1867

Tennessee had ratified the amendment in July of 1866, although public sentiment in the State was against ratification. Outside the South, six States also failed to ratify the amendment. They were New Jersey, Ohio, Kentucky, California, Delaware, and Maryland. Since there were then 37 States in the Union, 28 were necessary for ratification. Only 21 had responded favorably, Oregon withdrew its ratification before adoption was proclaimed. Failure of the amendment to be ratified infuriated Thaddeus Stevens and his followers. They decided they would force the South to ratify the 14th amendment so they passed in the Congress a Federal law that abolished all the Southern State governments and placed the South under military rule. President Johnson vetoed the act, but in March of 1867 they passed it over his veto containing the provision that no Southern States could be readmitted to the Union until the 14th amendment had been ratified. The South was divided into five military districts with a general in command of each.

During this period of military control designed to force the Southern States to ratify the 14th amendment, a newspaper editor in Mississippi named McCardle exercising his freedom of the press guaranteed by the first amendment to the Constitution of the United States, wrote strong protesting editorials. He was arrested by Federal troops and held for trial before a Federal military

commission. The Supreme Court had theretofore held that the military did not have jurisdiction to try civilians if the civil courts were available. The military ignored that decision, so upon being denied a writ of habeas corpus by the lower Federal court he appealed to the Supreme Court. After the case had been argued before the Supreme Court and a decision was awaited, what do you suppose happened? The Congress quickly passed a law depriving the Supreme Court of jurisdictions in such appeals. Although President Johnson vetoed the law it was passed over his veto and the Supreme Court then held that the Congress had the power to withdraw the appellate jurisdiction of the Supreme Court at any time. So, you see another example of how the Constitution of the United States was disregarded in order that the 14th amendment could be forced into the Constitution.

It was the duty of each commanding general to provide for the election of delegates to a constitutional convention. Large numbers of illiterate Negroes sat in all the conventions which were mainly controlled by the carpetbaggers and scalawags to adopt new State constitutions and govern the State elections. Nothing Hitler or Stalin ever did in conducting elections in Germany or Russia was any worse than what then happened in the South. The Negroes were brought into the Republican Party. Terror reigned over the South. There was really no law. Few southern white people were permitted to vote. The voting and the counting of the ballots was a farce. Negroes, carpetbaggers and scalawags were swept into office under the banner of the Republican Party.

We are here assembled in the 62d general assembly, but it was the 17th general assembly that is recorded as ratifying the 14th amendment for Arkansas. There never was any 17th general assembly. Mr. Speaker, the records should be corrected. The so-called members of the so-called 17th general assembly were never elected, nor were they legally appointed or selected. Staples in his book, "Reconstruction in Arkansas," has reported:

"The voting took place not in or near the county concerned, but on the streets of Little Rock. It was charged that when it was deemed necessary to have a county represented, William Fishback would pick out some fellow to represent it, let him vote, certify the election, and let the member take his seat in the legislature. A member of the legislature claiming to represent Hempstead County died, and his successor was seated before the man was scarcely buried. Nixon, the representative-elect from Franklin County, was killed while on his way to Little Rock; and in a day or two before an order for an election could have reached the county, a distance of more than 100 miles from the capitol, a man appeared and took his seat as representative from Franklin County."

I hold in my hand photostatic copies of the four pages comprising the Weekly Arkansas Gazette dated April 7, 1868. It reports firsthand how those who called themselves the elected representatives of the people, with the aid of a locksmith, gained entrance to the capitol building, prepared it for their legislative session, and how they went about voting to ratify the 14th amendment by the unanimous vote of 56 to 0 in the house and 23 to 0 in the senate. On the front page of this paper this is written:

"Were the people of Arkansas free citizens of the Republic, enjoying the rights and privileges sought to be guaranteed to all under the National Constitution, if civil law were recognized and the fundamental law framed by the people held sacred, then we would not be compelled to witness with humiliation the overthrow of our State government and the setting up of the rule of a few conspirators of bad character backed by a horde of ignorant black dupes.

"The instrument under which they claim to be a legislature, has been rejected by the people by a large majority."

Is there any wonder that the legislatures then ratified the 14th amendment? Here is the ratification by States:

	House	Senate	Date
Arkansas	56 to 0	23 to 0	Apr. 6, 1868
Florida	23 to 6	10 to 3	June 8, 1868
North Carolina	82 to 19	34 to 2	July 2, 1868
South Carolina	108 to 12	23 to 5	July 9, 1868
Louisiana	Ratified	22 to 11	Do.
Alabama	94 to 3	33 to 0	July 13, 1868
Georgia	89 to 71	Ratified	July 21, 1868
Virginia	126 to 6	34 to 4	Oct. 7, 1869
Mississippi	87 to 6	23 to 2	Jan. 7, 1870
Texas	Ratified	Ratified	Feb. 18, 1870

Even when Secretary of State Seward by official proclamation dated July 28, 1868, declared the 14th amendment ratified he did so with reservations. If ratification by all of the southern States be counted, and there were Virginia, Mississippi, and Texas recorded as ratifying after adoption was declared, there is strong evidence that even the unconstitutional ratification failed by one State. Let all American citizens ponder and forever remember these two facts: First, not a single member in any State legislature of the United States, North or South, who belonged to the Democratic Party, voted for ratification of the 14th amendment; and second, in every State legislature, North or South, where the Democrats outnumbered the Republicans the 14th amendment was rejected. In the bitterness of defeat the South offered no further contest. It was to remain helpless under military occupation and rule for 10 years. Nevertheless, the issue was raised but the Supreme Court said the action was political, not justiciable. As recently as 1939 the Supreme Court again indicated that it would not look into the political departments of the Government. Involved was the question of whether a State legislature that had once rejected an amendment could later ratify it. The Court's refusal was based on the fact that the Secretary of State alone is authorized to make the determination. Yet, the right of a State, by action of its legislature, to change its mind at any time before the proclamation of adoption is issued by the Secretary of State has been confirmed in connection with other constitutional amendments.

Following the unconstitutional adoption of the 14th amendment the illegally elected Representatives and Senators were seated in Congress. Thaddeus Stevens and his Republican colleagues were gleeful for it seemed to them that they had indeed achieved a brilliant coup and that with their control of the Negroes the Republican Party would always remain the dominant party of the South. It is because of what happened during this tragic era that even today many among us refuse to vote for any candidate of the Republican Party. Finally, under the coordinated efforts of resourceful and capable southern leaders, the South held the balance of power in the presidential election of 1876, and Rutherford B. Hayes, a Republican, was elected. President Hays withdrew the last Federal troops from the South in 1878. But the sordid story of these tragic years which was worse than the 4 years of war has been handed down from generation to generation so that even today the Republican Party receives little consideration in the Southern States.

Already racial conflicts are spreading throughout the United States. It could well be, if no solution is forthcoming within the next few years, that Congressmen from Northern and Western States will appeal in the Congress to their southern colleagues for assistance and votes in order that they may solve their own racial problems.

From Washington, D.C., came the report in the fall of 1958 that its integrated public school system contained 78 percent Negro children. In 1930 the percentage of Negro children was only 27.1 but it is now predicted that by the fall term of 1961 the percentage will be 90. That is only 2 years away. And, in December it was reported that public school officials in the District of Columbia are faced with a staggering problem of babies born to unmarried schoolgirls under 16 years old and increasing venereal infection of schoolboys and girls through the age of 17. There were 896 reported cases of the disease for the 12-month period ending June 30, 1958.

We will soon be preparing to act upon the measures which have been submitted for our consideration. Beyond the passage or defeat of these proposals we, and everyone, should be hopeful of a constitutional solution. Today I submit to you and to the Nation, a solution. The solution hereinafter proposed is, in my opinion, constitutional. Violence and chaos cannot be permitted. The Constitution of the United States must be upheld. We must all be law-abiding citizens.

The history of the adoption of the 14th amendment has been reviewed. Fortunately the Constitution of the United States provides that any citizen may petition the Congress or the legislatures of the various States to propose amendments to the Constitution of the United States. My proposal is a proposal that should appeal to all citizens, whether from North or South, sense of fair play and justice. It will afford citizens of every State an opportunity to take a stand for the Constitution, for compliance with the constitutional processes, and for upholding the law—the supreme law of the land, if you please. Let me now read the proposal to you.

1. The chairmen of the standing committees of the Congress of the United States shall each, within 30 days of the ratification of this article as an amendment, appoint one member to a Commission to be known as Commission on the Constitutionality of the 14th Amendment, not withstanding other provisions of the Constitution vesting appointive power in the executive branch of the Government.

2. No person shall be appointed who shall have not obtained the age of 45 years and been 30 years a citizen of the United States and for 20 consecutive years been engaged in the general practice of law.

3. Within 60 days of said appointment the said Commission shall begin hearings to determine the constitutionality of the deprival of equal suffrage in the Senate of the 39th Congress, the submission, and ratification of the 14th amendment to the Constitution of the United States, prior to the date of December 31, 1870.

4. Within 18 months of said appointments a formal written report of the findings of said Commission shall be filed with the Secretary of State of the United States and copies thereof made public.

5. Upon the filing of a finding that there was an unconstitutional deprival of equal suffrage in said Senate, or said submission, or ratification then said amendment shall after 30 days become null and void, unless within 30 days a national referendum be called as provided herein.

6. Within 30 days of the filing of said findings the Secretary of State shall upon the application of the legislatures of five States call for a nationwide referendum to be conducted on the first Tuesday following a period of 120 days from the filing of the findings in accordance with the laws of the various States. There shall appear on the ballot only "Approve Commission finding" and "Disapprove Commission finding." Should the Commission finding disclose an unconstitutional action in either of the three instances then upon a majority vote of

all those voting in the 49 States to "Approve Commission finding" said amendment shall become null and void. Should the Commission finding not disclose an unconstitutional action in either of the three instances then upon a majority vote of all those voting in the 49 States to "Disapprove Commission finding" said amendment shall become null and void. The result of said election shall be final, decisions of the Supreme Court notwithstanding.

7. The Congress shall promptly provide adequate compensation for members of said Commission, its staff and all other expenses.

It has been suggested that a nonprofit association be formed for the purpose of explaining and circulating this proposed amendment so that it might be proposed and passed in at least the necessary two-thirds of the legislatures of the 49 States. Congress would then have to call a Convention for the consideration of the proposed amendment.

The fathers of many of us here today survived those tragic years, and the story of those dark and horrible days of Reconstruction are known to all of us. We are all aware of the complex problems we face. Because life, liberty, and the pursuit of happiness was denied the people of the South during reconstruction there has been kept alive within all of us the frightening knowledge of what disaster would befall the United States should strife and turmoil within our country contribute to the weakening of our defenses against enemies of our Republic.

In closing, I say we must dedicate ourselves to the preservation of the United States of America. Our Republic was founded upon a deep and abiding faith in God. May our labors and efforts in these trying days be blessed by divine guidance so that the Stars and Stripes shall forever wave over the land of the free and the home of the brave and that life, liberty, and the pursuit of happiness shall never vanish from this wonderful country of ours, the United States of America.

How Many Latin Americans Have Died Under U.S. Guns?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 3, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ernest Galarza, Ph. D., former Director of Labor and Economic Affairs for Latin America of the Pan American Union, which appeared in the Gazette and Daily, of York, Pa., on January 27, 1959:

A GREAT BETRAYAL: AMERICA'S COUNTERFEIT DEMOCRACY

(By Ernest Galarza, Ph. D.)

WASHINGTON.—It seems to me that recent protestations by the State Department to the effect that it had not been sympathetic with the Batista government of Cuba require some critical examination.

It recently was quoted widely as declaring that it had objected repeatedly to what it called the Batista government's misuse of military aid provided for the defense of the Western Hemisphere as a whole. It also pointed out that arms shipments were halted last spring.

Yet Batista's record as an unscrupulous political buccaneer has been public knowledge for 20 years. The terror that he has maintained in Cuba since he last seized power was enforced with U.S. military equipment and in the presence of a U.S. military mission.

Was the American Ambassador finally moved to compassion last spring when our arms shipments stopped? I believe that the real reasons for this change have still to be made clear to the American people.

The truth that starkly faces the Cuban people is that our diplomatic and military agents in Cuba, representing the awful might of our country, coexisted comfortably with Batista's terror.

The importance of this fact comes into focus when one realizes that the people of Cuba are not alone. Throughout Latin America the coexistence of our democratic piousness with insolent, bloody military dictatorship has been exhibited.

Our arms, mostly obsolete for military operations against a great power, are still modern enough to shoot down civilians in the streets, the factories, and the jails. They have gone to Odria in Peru, Somoza in Nicaragua, Perez Jimenez in Venezuela, and Trujillo in Santo Domingo, to mention only a few.

Surely State Department representatives arguing now on behalf of our democratic government will not plead that the Department did not know what was going on. I, for one, cannot believe that such massive ignorance is possible with diplomats. But if it is possible, then those who permitted so much damage from such vast incompetence ought to get out.

I say damage in many contexts. Who can compile the roster of those who have been murdered, tortured, and maimed in the last 10 years in the jails of Santiago de Cuba, Havana, Bogota, Caracas, Lima, Buenos Aires, Cuidad Trujillo, and Managua? Are they hundreds, thousands, or tens of thousands who, since Pearl Harbor, have been summarily executed in Latin America, without trial or appeal, because they disagreed with dictators we had armed?

How many trade-union leaders have disappeared without trace for trying to do what 50,000 union representatives do every day in the United States? How wide and deep is the damage done by the system of indentured labor to which the Governments of the United States and Mexico, acting through their diplomatic agents, have agreed by consigning half a million Mexican workers every year to the corporation farms of our country?

There are many Latin Americans who love the United States and its democratic promise with a passionate devotion. I am one of them. But many of the men who have been officially the stewards of our relations with Latin America have undermined that promise.

And the gap between many of these officials and Latin America widens into suspicion, bewilderment, and finally hatred. Our expected democracy has frequently been counterfeited in this process.

I have had the opportunity to observe at close quarters this counterfeiting process at work—and with increasing nausea. During World War II, when the issue between democracy and totalitarianism was at deadly heat, we mobilized the support of Latin America to our cause.

This mobilization was economic, military, and moral. A new agency was created in our Government for the specific purpose—the Coordinator of Inter-American Affairs. And never before or since have we done so much to stir in the minds of the Latin American people so burning a desire for the American democratic promise.

But, even as the war progressed, our arms were used to destroy trade unions, suppress civil liberties, and crush constitutional government. And these means were justified to the end of maintaining war production to defend democracy.

Hostilities ended; and not long afterward our ally General Penaranda, of Bolivia, massacred the tin miners of Catavi with his regiments and our arms. We rewarded the general with an honorary degree from Columbia University—an ingenious public relations touch suggested by the Coordinator of Inter-American Affairs. Penaranda was an illiterate professional militarist.

In the Senate's forthcoming investigation of our relations with Latin America, I hope we shall pick up the thread of our wartime commitments. I think we shall find that we have acted as though World War II gave American business an insider's chance to "move in."

Militarily, we have continued selling arms to dictators who didn't mind our moving in as long as they could collect fortunes in tribute and loot. Morally, we have abandoned democracy to dubious battle with those we armed with money, prestige, and guns.

I do not think it is possible to condone the wave of counter-terror which is now sweeping Cuba, because it is never possible to condone terror. To challenge terror, to discredit it morally, to shackle it, and finally to destroy its threats to individual and political fulfillment, has been the great historic task of democracy. We may, therefore, rightfully call upon Castro to put an end to the wholesale killings now taking place in Cuba. We may ask him to use the power he now has to bring a new Cuba into life, rather than bring the old one to its death.

But in asking this, we must face ourselves as well as Castro. We must admit that when Castro asks us where we were in not protesting when Batista's Tigers killed systematically—and for pay—he is raising legitimate questions. For what Castro asks, and through him all of Latin America asks, is this:

Are we opposed to terror only when people, out of a closed and furious despair, rise and kill their tormentors? Is there an acceptable kind of terror, when it is practiced by political henchmen of ours such as Batista, Somoza, Trujillo, and Perez Jimenez?

Or are we opposed to terror anywhere and everywhere? And, if so, are we willing to join hands at last with those who have suffered from terror, and who only want, as we have promised them, our sympathy, our understanding, and our active material and moral support to establish the democracy that challenges, shackles, and finally destroys terror?

Behind the blind passion of the momentary terror in Cuba, there are, I believe, demands of the human spirit that have been mutilated and betrayed. I believe that with the Cuban people, as with many other people of Latin America, these are just demands.

Unless we begin to help the democratic aspirations of these people instead of continuing to hinder, we shall end by losing their trust and friendship completely—and we shall deserve it.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Williams of Delaware, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Cotton, and Curtis.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Langer, Aiken, Capehart, and Carlson.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Gruening, Moss, Dworshak, Kuchel, Goldwater, Allott, and Martin.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Langer, Dirksen, Hruska, and Keating.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Cooper, Dirksen, Case of New Jersey, Javits, and Prouty.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Neuberger, Yarborough, Clark, Jordan, Carlson, Langer, and Morton.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Neuberger, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Case of South Dakota, Martin, Cooper, Scott, and Prouty.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Morton, and Keating.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, Fairfax Hotel.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS JUSTICES ASSIGNED TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Texas School Arouses Envy of Observers

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. JOHNSON of Texas. Mr. President, nearly everyone talks about the need to improve our educational system. But the citizens of San Angelo, Tex., are doing something about it. In fact, they were doing something about it long before the launching of the first Soviet satellite dramatized our problems.

In the fall of 1955, school officials in San Angelo set about to establish a bold, new program for grade-school education. These early efforts are now producing gratifying results, as an Associated Press article, published in the Chicago Sunday Tribune of February 8, points out.

I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS SCHOOL AROUSES ENVY OF OBSERVERS—PROGRAM IS RADICALLY DIFFERENT

SAN ANGELO, TEX., February 7.—Word is getting around that this west Texas city has come up with something radically different in public school programs.

Even the most violent critics of American education are impressed by the curriculum. School people come to take a look at the physical layout, and walk away talking to themselves in envy.

As the word spreads, the mail pours in: "How did you do it?"

The school authorities here do it by letting their imaginations run wild, then taking infinite pains with the details. They keep the best of the old, and try the most promising of the new—and all the time they work toward just one goal: The best possible education for every child, regardless of his capabilities.

LEARN MORE AND MORE

This approach has touched off a chain reaction in San Angelo. As the pupils learn more in the lower grades, the courses in the upper grades must be beefed up to hold their interest.

Consider, for instance, the limited teaching of science in the elementary grades.

In the fall of 1955, Robert H. Mayfield, curriculum project director, set about to find a new approach to make a grade school science program effective.

For 2 years Mayfield and his assistant, a physics teacher, Claude C. Wooley, studied the problem. They held long conferences with the teachers of grades one through six, then called in junior high teachers to insure continuity of the program.

COVER SIX AREAS

It was first decided to cover six major areas of science in each of the first six grades. These are nature (biology, zoology), the universe (astronomy, space meteorology), the earth (geology), simple machines (levers, inclined planes, wheels, and pulleys), electricity and magnetism (door bells and compasses), and heat, light, and sound.

Few grade schoolteachers could handle such a program. It was necessary to teach the teachers how to teach science.

This was taken up in a series of teachers' handbooks which outline just what scientific concepts are attainable by the pupils in each grade.

Next came the mobile library-laboratory units. Each unit is in the form of a desk and is designed especially to deal with one of the six major study areas listed above.

HOW PROGRAM WORKS

The program was ready to go in the fall of 1957. This is the way it works:

At least once each week, a mobile unit is wheeled into every grade-school classroom in San Angelo. The teacher, from her handbook, has decided what experiment she can conduct to illustrate best the day's lesson.

A card file in the desk shows her just where to find each item of equipment needed. Another card file shows her how to carry out the experiment, the observations to be made, and the conclusions to be reached. A third card file lists suggestions for the pupils, outlining separate projects they can tackle on their own; and pegged to their levels of achievement.

SIX UNITS ROTATE

A complete set of six units, covering all six of the major areas of studies, is assigned to a group of six buildings. Each 6 weeks the units are interchanged within the buildings. Thus while the pupils in one school are studying simple machines, those in another school are studying electricity and magnetism.

The libraries which are part of the mobile units are not pegged to any one reading level.

START NEW COURSE

Mayfield estimates each unit has an original cost of $600 and the annual cost of maintenance and improvement is about $125. Since one unit serves six buildings during a year, that $600 provides each school with about $3,600 worth of equipment.

Last year the new science program was in effect only in grades one through six. This year a new course was started for the seventh grade, introducing science of measurement, elementary astronomy, botany and chemistry, functional anatomy, and heat, light, and sound.

That same course is also being taught to this year's eighth graders. Since the seventh graders are getting it this year, a new course must be ready for them when they start the eighth grade next year.

This system, while it obviously improves the teaching of science, has some built-in work-makers. It seems likely that the whole science curriculum, from first grade through high school, must be overhauled.

BOOST ALL ALONG LINE

"By the time kids have 8 years of science as we are teaching it," says Mayfield, "they're going to be too far advanced for what is now ninth-grade science. We're going to have to boost this thing up all along the line."

This comment bears out what Superintendent George B. Wadzeck says about the San Angelo system: "In 15 years, the kids with the IQs of 75 (well below average) are going to be learning as much as the average student is today."

Mayfield emphasizes, however, there is no desire to produce a high school graduating class composed strictly of budding scientists.

"This is a science exposure program," he says. "We want to expose the student to science the same way he is exposed to measles. Just like the measles, it won't take on all of them."

WARY OF NEW IDEAS

The grade school science program is just an illustration. Every course of study in the San Angelo schools is being developed in the same way—and it isn't easy.

Teachers with many years' experience are sometimes loath to adopt new ideas. Students who have their hearts set on being engineers, although they can't add 2 and 2, don't like being told they can't take physics because their math grades aren't high enough.

Address by Hon. Alan Bible, of Nevada, Before the Almas Temple Shrine Club, Washington, D.C.

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. SPARKMAN. Mr. President, recently the distinguished senior Senator from Nevada [Mr. BIBLE] made a very interesting speech before the Almas Temple Shrine Club in Washington, D.C. I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ALAN BIBLE, ALMAS TEMPLE SHRINE CLUB, WASHINGTON, D.C., FEBRUARY 13, 1959

Fellow nobles, I deem it a real pleasure and a distinct honor to be afforded the opportunity of speaking to the Almas Temple Shrine Luncheon Club today—and, before going any further, I bring you the warmest expressions of goodwill from Kerak Temple in Reno, Nev.

In a world that seems bent on devising means to bring about its own destruction, it is refreshing to participate today among men of good will, who espouse the high principles of peace and understanding.

Only this week I had the pleasure of reading the definition of a Mason and a Shriner—from no less an authority than George E. Stringfellow, imperial potentate of the Shrine of North America.

A Mason, he said, is a man who believes in God and practices that belief. A Mason is a man who believes in brotherly love and practices his belief. A Mason is a man who uses the symbols of the builder to set for himself and his brethren a code of life which refines his thoughts, purifies his sympathy, and broadens his outlook, it amplifies his

friendship, exalts his morality, and tames his passions.

Mr. Stringfellow described a Shriner as a Mason who realizes the work of his craft—exemplifying the high code of morality—requires refreshment. In obtaining that refreshment, Shriners adopted the code, 59 years ago, of pleasure without intemperance, hospitality without rudeness, and jollity without coarseness.

We live today in a world of tensions. The ever-quickening tempo of our times would seem to exclude anything but the mad rush for material gains, yet I have detected in frequent trips through our land a spiritual reawakening and a rebirth of tolerance that give ample evidence of a brighter future. Surely the great work of the Shrine in behalf of crippled children—regardless of race, color, or creed—epitomizes to the fullest extent the fact that charity is not a forgotten virtue.

As Americans we must summon all of our collective strength to meet the challenges posed by Soviet Russia and its ill-disguised efforts to gain world domination. But in this life-and-death race for survival, we must not for one instant lose sight of our dependence upon divine providence for spiritual guidance and the constant realization that "man does not live by bread alone."

Unquestionably, these are times that demand the utmost cooperation and effort of all citizens toward making our country stronger in a material sense. Equally important, in my opinion, is the need for even greater effort to utilize more fully our vast resources of the spirit. Only by so doing can we demonstrably prove to all the world that strength really does come from unity.

Although most of you here today are familiar with the event, I am sure you will not mind if I recall the valiant epic of the four chaplains who, with arms linked, perished with their ship in the North Atlantic in World War II, after giving their own life preservers to others.

I read this magnificent story in a book called "Sea of Glory," by Francis Beauchesne Thornton. The four chaplains were George Lansing Fox and Clark V. Poling, Protestant ministers; Father John P. Washington, a Catholic priest, and Alexander D. Goode, a Jewish rabbi.

The chaplains and their unit were en route to Greenland early in 1943—in the terrible days of German submarine supremacy, when the U-boats unmercifully menaced our shipping lanes and made that particular run a thing of danger and terror.

Their ship was a lumbering old freighter, capable of 10 knots at best. Precisely at 1 a.m. of a February morning, the cold Atlantic silence was broken by a shattering explosion as a German torpedo found its mark amidships. As Mr. Thornton described it: "Everywhere about the ship in the terror-ridden interior and on the crazily tilted deck, the four chaplains moved among the men with helpful words, giving some the strength to live and some the courage to die."

When pandemonium was at its height, when it became apparent that the ship would soon sink, those chaplains gave their life preservers to other men and made the heroic decision to stay with the ship. As the author states: "Catholic, Jew, and Protestant each proved that night that courage knows no distinction of creed, bravery no division of caste."

Here we see exemplified the highest type of courage and self-sacrifice. There are other kinds of courage, too, and I refer particularly to the courage to live. While we feel that the present age confronts us with problems of almost staggering proportions, we should remember that every generation in our history has had problems—and we have always had men of courage who would rise to the challenge.

Yesterday we observed the 150th anniversary of the birth of such a man. If any person had cause on many occasions to despair and throw in the sponge, it was Abraham Lincoln. His political career was a succession of set-backs. He was defeated for the legislature, he was defeated twice for Congress and twice for the Senate, and he was defeated for nomination as Vice President in 1856. His election to the Presidency in 1860 thrust upon him a burden that was almost insupportable, yet his faith propelled him through the darkest hour in our country's history. Lincoln firmly believed that God had entrusted him with a mission, and in this knowledge he gained the strength that sustained both him and the Nation for which he labored. Lincoln had his watchword. It was stated simply, "With God's help, I shall not fail."

This is a creed all of us could well adopt today, not as a mere utterance but as something to put into practice in our daily lives. As Masons we should strive all the more to translate our precepts into our everyday living—to fight bigotry and intolerance wherever we find it, to inculcate into our youth the importance of fair play, to broaden our horizons beyond our own little circumscribed areas; in short, to give proof that we are alert to our responsibilities as citizens of the greatest country on earth.

In this respect, the great poet, Edwin Markham, wrote:

"We are all blind, until we see
That in the human plan
Nothing is worth the making if
It does not make the man.
Why build these cities glorious
If man unbuilded goes:
In vain we build the work, unless
The builder also grows."

If we are to move forward and maintain our place as leaders of the free world, if we are to leave a legacy of strength and determination for our children—indeed, if we are to survive at all in an age of potential destruction—we must shoulder today's burdens and responsibilities—willingly, resolutely, and courageously.

Fortunately, the great majority of Americans are turning more toward the truths of religion which spell out a code of conduct that can only lead to a stronger country and happier citizens. A look at Russia makes the contrast all the more startling. There we have the sordid spectacle of an ideology which demands that personal honor and integrity be subjugated to the state—not only in the field of government, but in art, literature, science, medicine, and all lines of endeavor.

We in America are bountifully blessed with the resources needed to keep our defenses strong. To complement this pool of resources, I believe we should all draw more upon that even greater reservoir of the spirit that has abounded in our country since its founding more than 180 years ago.

As Masons committed unequivocally to upholding freedom and justice, not only in America but throughout the world wherever tyranny rears its head, we should be leading the way in man's constant battle for human betterment. We should be more than lodge members. We should be articulate spokesmen in a world that sorely needs a voice of hope—and courage—and truth. To fulfill the obligations of our order we can do no less—to fulfill our responsibilities as Americans we must do more.

Television Booster Stations

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HORAN. Mr. Speaker, under privilege to extend my own remarks in the RECORD, I would like to include a news report by Mr. Frank W. Vaille, an able reporter for the Associated Press for the West, which appeared in the Wenatchee Daily World, Wenatchee, Wash., recently. This article concerns the problems we are having in attempting to protect the rights of people in remote areas, particularly in the mountains, where deep canyons prohibit the reception of direct radio TV impulses:

HORAN, MAGNUSON SEEK TV SOLUTION

Two Washington Congressmen are soliciting views of other western Members on a proposed bill to solve the knotty problem of television booster stations.

The bipartisan move has been undertaken by Representatives DON MAGNUSON, Democrat, and WALT HORAN, Republican, in the wake of continued opposition by the Federal Communications Commission to booster station operations.

The Commission Tuesday extended until June 30 its deadline for operators of VHF (very high frequency) boosters to convert to UHF (ultra high frequency) translators. Boosters and translators are TV systems that serve small isolated areas.

The Magnuson-Horan proposal would create within the Commission a community television bureau to study technical and financial problems faced by small communities in obtaining TV service.

All applications for UHF translators or any other facilities which may be authorized for operation in the future would be referred to the bureau for study and recommendation.

As used in the bill, the term "small community" is defined to be one with fewer than 25,000 inhabitants.

The bill takes no position as to whether the Commission should or should not license the VHF boosters it now frowns upon. It does say, however, that should the Commission decide to license such operations, it will waive for stations in existence prior to 1959 the present requirement that construction licenses be obtained before construction is started.

One theory behind the new approach is that the present controversy between the Commission and operators of booster stations, mainly in the West, result in part from a lack of understanding by both sides as to the problems faced by the other.

Through creation of the bureau, it is felt, both sides will obtain a better understanding of the problems and come to an acceptable decision.

I would also like to include the following article which appeared in the Wenatchee Daily World newspaper describing just how much it would cost the people in my State to convert from VHF boosters to UHF translators:

COMPLETE UHF CHANGE WOULD COST $11 MILLION

PATEROS.—The Washington State Television Reflector Association estimated today

that it would cost $11 million to convert all the reflectors and home sets in the State to UHF.

Francis Adams, president, said this cost included converting community transmitting antennas from VHF to UHF and converting individual sets and home antennas.

Adams said the association was urging citizens to write their Congressman in protest against the costly changeover being demanded by the Federal Communications Commission.

"Let Congressmen know we can't afford it," he urged.

Along with these news reports, I would like to include a brief résumé of the problem which now faces those of us in Congress, the Federal Communications Commission as well as those I want to continue to have the privilege and benefits of television.

One of the primary purposes of the Federal Communications Commission is to provide good, as well as economical television reception for the people of America. In my congressional district, however, hundreds of TV screens, operated by means of VHF booster stations, were dimmed recently by an FCC decision.

As I have indicated, the topographical terrain in my State is wide and varied—from the flat, rolling plains of the wheat country to the rugged mountains in the entire northern and western portions.

When television first came into being years ago, almost everyone became interested. Nearly every family acquired a television set. Three television stations began operations in Spokane and have been providing good TV ever since.

But, some of our people, living in the valleys and canyons or in small isolated communities, found that their sets simply could not get the picture. As a result, they began looking for ways to bring the signal into their homes.

The first solution was found in community antenna television operations. A private organization simply brought the TV signal into the sets of their subscribers via the cable. The picture was satisfactory and the cost, in localities where there were enough patrons, was not too prohibitive. But, in the small, isolated communities—maybe 20 or 30 families—the CATV system was ineffective simply because there were not enough subscribers to make it economical and practical for the companies.

Thus, other solutions were sought.

I believe the next method employed was the UHF translators. These facilities picked up a signal and retransmitted it on the ultra high frequency band. There were two basic objections to the UHF translators, however. The cost made it impossible to put them to practical use in the small communities. Besides this, they had never been tested in the rugged mountainous areas.

Finally, another method was found in the VHF boosters. These boosters were similar to the translator operations except they operated on a different band of the television spectrum. The boosters were relatively inexpensive and they provided a good picture even in the rugged hills. Folks in my district cooperated in erecting their booster stations. They pooled their money, their work, and their ingenuity and put up their towers. Then they watched television.

The Federal Communications Commission, however, announced that these boosters could not be licensed because they were causing interference and they could not find a way of regulating their operations. They recommended that UHF translators be substituted. The people protested this action and as a result, the FCC allowed the boosters to remain in operation until a complete investigation was accomplished. This survey was made although I do not believe it was complete. UHF translators were not put to practical test in the mountains; no consideration was given to the economic impact on the small, rural, or isolated communities and it was never proven that all VHF boosters caused interference. As a result of their investigation, the FCC declared the boosters to be illegal operations and ruled that they be discontinued. Ninety days were allowed for the booster districts to file an intention of conversion to UHF translators or to shut down. To many people, this was a cruel blow. Many protests were received, once again, from both the television viewers and from the Members of Congress. The FCC then extended their 3-month conversion period to 6 months.

I wish to make it clear that the FCC is faced with a terrific task in trying to solve this problem. But, the problem is not solved by any means. This situation does not exist only in my district, but in many sections of the country. Recently, I, along with several colleagues in the House and Senate, introduced a resolution which states that it is the sense of Congress that the FCC should authorize the operation of VHF booster facilities where it is a matter of public convenience and necessity and where such operation does not actually cause objectionable interference. I am hopeful that the Interstate and Foreign Commerce Committee will see fit to call for an on-the-spot investigation to be made into this situation to determine if they actually cause interference and, also, if UHF translators will work.

Perhaps this problem could be solved if all the facts were considered. In my opinion, this problem could and should have been prevented. In order that future, similar situations do not arise, I have introduced a bill which would establish a Community Television Bureau in the Federal Communications Commission. This Bureau would study the technical and financial problems involved in bringing television service to the residents of small communities and rural and isolated areas. They would also consult with and advise small communities on such problems. I feel that this would help to establish a good relationship between the viewers and the Federal Communications Commission and would enable them to settle their problems on a mutual basis.

I do hope that my colleagues will lend their full support to these measures in an effort to provide all of the people of our country with satisfactory television.

What Are Missiles For?

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Are Missiles For?" which appeared in the February 6 edition of the Washington Post.

I found it to be a very challenging commentary on the status of our missile program and the importance of keeping abreast in the arms race. The editorial points out quite correctly that only with an adequate defense program can we hope to negotiate realistically with the Communist bloc in an attempt to reduce the dangers of a hot war.

I commend the editorial to the attention of my colleagues in the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT ARE MISSILES FOR?

What is the fundamental purpose of the American missile and defense program? In the immediate sense the purpose, of course, is to deter attack upon the United States and its allies—or, if worst comes to worst, to destroy the warmaking capability of the enemy. But in the larger sense, surely, the purpose of this country's defense efforts is to make possible realistic negotiations with the Soviet Union and Communist bloc to remove some of the causes of friction and reduce the danger of nuclear annihilation.

Such negotiations in a mutual interest, if they are practicable at all, probably must proceed from a basis of rough parity of military power. Fruitful negotiations proved impossible when the Russians were in a position of military inferiority; every device of Soviet diplomacy and propaganda was directed toward frustrating the sort of discussion in which the Soviet Union might be at a disadvantage.

The opposite side of the coin is that if the Russians were in a position of military superiority, the United States and its allies themselves would be at a disadvantage in seeking beneficial negotiations on arms control and some useful accommodation on Germany and European security. We have already witnessed the attempts of the Soviet leaders to throw their weight around in the wake of their success with the intercontinental missile. Their boasts do not necessarily connote an intention to provoke a war, but obviously the Russians are not going to make significant concessions if they think that they can frighten the West into accepting their asking price.

The meaning of all this, in terms of the present argument over the missile program, is that what the administration says and does now can have a great influence on the Soviet attitude toward negotiations. Lamentably, the impact of most of the official statements so far has been to weaken the bargaining position of the West.

Secretary McElroy has acknowledged that it is administration policy to accept a numerical inferiority in intercontinental missiles over the next few years, on the stated assumption that other weapons and means of delivery will keep a balance. The real explanation, evidently, is the effort to maintain a fictitious budget balance. Such arguments conspicuously omit comparisons of Soviet

and American intermediate missiles as well as this country's neglected limited war capability.

Admittedly the present liquid-fuel missiles such as Atlas are primitive and cumbersome when contrasted with the more sophisticated types under development. Conceivably the administration's hope is to overcome any numerical inferiority quickly when such solid-fuel missiles as Minuteman and Polaris become available. But there is no guarantee that some new budget drive will not limit an effort to regain parity. Overly futuristic planning, moreover, ignores the effects of inferiority over the next several years.

More recently Mr. McElroy has shifted ground to make it appear as if the United States will nearly equal the Soviet Union in intercontinental missiles this year. This approach both misleads the public and begs the question, for it conceals a calculated decision to accept numerical inferiority in the not-distant future. It is very unlikely that the Russians are deceived by such a maneuver; indeed, some of their recent intransigence at Geneva and elsewhere may reflect an awareness of American intentions. The real victims are the American people who have not been told the straight facts about the country's defense position.

It is therefore quite understandable that many Members of Congress, including some of the administration's stanchest Republican supporters, are seriously worried by the missile numbers game and by their inability to get frank information. Senator CLIFFORD CASE made the point in his comment on the assurances by the chairman of the Armed Services Committee about the testimony of General Twining, himself under restraints: "How much better * * * if the public generally knew the grounds for his confidence—and the grounds for the apprehension for the future that he also expressed."

Inasmuch as judgments are involved, it is very difficult to obtain a single flat version of objective truth in the missile muddle. But one thing that congressional leaders who are disturbed by the lack of candor can do is to question more pointedly the responsible military officers concerned and to insist that the administration gag rule be cast aside. Another thing they can do is ask to see the intelligence estimates upon which administration policy is based and to make their own evaluation. Intelligence is an inexact science, but there is a long record in the administration of distorting the meaning of available intelligence under a gloss of optimism.

The most basic responsibility, however, is that of the administration—to its own constituents, the American people, and to the cause of world peace. One would have thought that the ghastly miscalculation in advance of the first Soviet sputnik would have placed the administration on guard against the disastrous psychological impact of American inferiority. The net effect of the present refusal to state and face the facts could well be to undermine the chance of real negotiations and, apart from the danger of inviting Soviet adventurism, to blight the hope of a secure peace.

NEA Not Serving Education

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. THURMOND. Mr. President, in this age of specialization, education has come to be one of the most crucial issues of our time. Not all who work in this field are contributing to the best interests of our Nation. The able editor of the Greenville News of Greenville, S.C., has pointed this out most realistically in an editorial entitled "NEA Not Serving Education," published on February 15, 1959. I ask unanimous consent that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEA NOT SERVING EDUCATION

Among the thousands of special interest groups lobbying in Washington, none is more active than the National Education Association.

The association supports a sizable staff which, in addition to buttonholing Congressmen, grinds out an endless stream of news releases, handsomely printed and costly brochures, motion pictures, and other propaganda material.

All this is designed to persuade all who will look or listen that the country is doomed unless the Federal Government undertakes a massive aid-to-education program immediately.

At best, much of this stuff is wasteful. Occasionally, it is downright deceptive.

An example arrived at our desk the other day. It was a brochure entitled "Can America Afford Better Schools," and an accompanying news release summarizing the pamphlet. Both exhibit the same characteristics of slanted, misleading statements, distortions, and deliberate omissions.

Both are patently designed to prove that local and State efforts can never—no never—be sufficient to support a decent school system, and that the only possible alternative is Federal aid to education.

As an example of how this point is dragged in through the back door is the following statement:

"Right now, the Federal Government with its efficient, streamlined collection system brings in almost 3 out of every 4 tax dollars."

Nowhere does the association argue the point that the Federal tax system is efficient or streamlined. It merely states that it is, and then goes on to use the statement to bolster another point.

Of course the Federal Government's tax system is neither efficient nor streamlined. It is archaic, unjust, wasteful, discriminatory and staggeringly complicated as every Collector of Internal Revenue within recent memory has publicly testified and as every Member of Congress will admit.

It is part of the National Education Association's creed, however, that nothing the Federal Government does can possibly be wrong, and nothing State and local governments do can possibly be right, and so the facts are abandoned.

Unless the Federal Government assumes a reasonable share of school costs, the association's most recent publication asserts several communities, none of whom are identified, face some really hair-raising tax increases. Of course, it never occurs to the pundits of NEA that these increases might be averted if the Federal Government would decrease some of its taxes and allow that money to go instead to State and local treasuries.

This serves also to illustrate another of the association's blind spots. School costs are bound to go up, it declares, and if local and State agencies remain the chief support of schools, then local taxes are going to increase, which is bad.

But won't Federal taxes go up, too, if the Federal Government attempts to meet those costs? And isn't that just as bad? Not, apparently, to the National Education Association.

This is the basis for all the liberal, free-spending arguments. Government money—that is, Federal Government money—is as free as the air; it comes from nowhere, at no cost, and it can be spent and spent and spent.

The fact is that, as has been proven time and again, the more efficient way to both collect and disburse tax moneys is at the local level. This avoids the hidden costs of bureaucratic proliferation, unsupervised projects of dubious value, and mistakes of judgment due to lack of familiarity with local problems.

This newspaper firmly believes that a greater effort, financially and otherwise, is due our schools. We have urged, and will continue to urge, that school patrons in Greenville County support the increased local taxes so vitally needed for the future of our children.

If that effort is made, we are confident that our schools can perform the tasks they should, the National Education Association to the contrary notwithstanding.

It is little short of tragic that the association should dissipate its efforts, not to mention the dues of its well-meaning members, in belittling local support of the Nation's schools. In so doing, it is not serving the best interests of education.

The fact is that State and local governments can and should meet their own educational needs, and they can do it better and more cheaply than it could be done under any program administered by a vast new Federal bureaucracy.

Greenville County, and the State of South Carolina are a case in point.

Considering the many handicaps under which we have labored, the long war period when no schools could be built and the rapid increase in the school population, we have done well up to now. We need to do more, of course, and we presently face something of an emergency which has been gradually building up.

But we can meet the emergency; we believe we will do it; and we believe further that we will go on to meet the needs as they develop in the future.

A week from Tuesday the voters of the Greenville County School District will express their views on a proposed local bond issue to supplement State funds for the building program. It is a crucial vote, and it might have a bearing on whether we continue to manage our own schools and educate our children in our own way, or gradually turn them over to the Federal Government with heaven knows what results.

In the interest of presenting all the facts, News Reporter Gil Rowland, who is a former teacher, has made an intensive study of the schools and has a background of years of reporting news of education, has prepared a nine-part series on our present school situation.

To those who express an interest in education and who say they have not been fully informed, we commend this series of stories, which starts today. Anyone who reads them and thinks about them and, if he desires, checks behind them at the source, will be prepared to cast an intelligent vote on February 24.

Getting Along Abroad

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BENNETT of Florida. Mr. Speaker, for many years I have been intensely

interested in all efforts that our country can make to present America to those who live elsewhere, in the best possible light. My experience as a soldier in foreign lands in World War II underlined for me the need for building friendships among the peoples of other lands, preferably friendships based upon personal contacts and mutual understanding and respect. I can remember very well that as we left New Guinea and approached the Philippine Islands early in 1945, we were given by the Army simple, understandable and interesting reading material to orient us and to allow us to be more truly friends of the people we were to meet and assist in their efforts for freedom. Despite all the good work our Diplomatic Corps may be able to do toward establishing good relationships with people in foreign countries, they could never make anywhere near the impact that is made by numerous Americans traveling abroad.

In the first Congress in which I served—the 81st—I wrote to the Department of State and urged that a program of this nature be established within the Department of State. I suggested printed material, moving pictures aboard tourist liners, and other devices. Through the years that have followed, I have persistently interested myself in this and I am glad to record that both the Truman and Eisenhower administrations made very significant steps forward in this field.

There have been two substantial difficulties in this. One is that there has been a feeling in the Department of State that the Government of the United States should not be the chief source of such activity, and the other difficulty has been the obvious one of trying to evade lecturing people on what they should do. The two difficulties are interlocked. I have never had much sympathy with those who feel that the Federal Government should not be active in this field. Characteristic of the Department's position through the years is the following statement from an August 5, 1950, letter to me from the Department of State:

> It is definitely felt that the Department should not put itself in the position of trying to tell private individuals how to behave when traveling abroad.

Similarly I heard from the Department of State on March 4, 1953, as follows:

> It has been found from experience that participation by non-government organizations and groups in this type of venture is of great psychological benefit and eliminates the element of "propagandizing" the American public.

I am glad to see that this reluctance on the part of the Department of State has been giving way to a more realistic appreciation of the urgency of the matter and to the needs of the security of our country. Although there has not been a complete abandonment of the early reluctance by the Department, there has been a gradually increasing emphasis on what can be done in this field. The person-to-person program now underway is outstanding, although still not doing all that it should do.

I am happy to include at this point in the RECORD an excellent publication published by the Department of State this month entitled "Getting Along Abroad." This is largely the result of the dedicated public service of Miss Frances G. Knight, Director of the Passport Office of the Department of State. The publication reads as follows:

GETTING ALONG ABROAD

The passport of the United States is a valued credential. It requests that in the countries you intend to visit there be provided you, as an American citizen, safe passage, lawful aid, and protection in case of need. As the holder of this passport, you will be the guest of our neighbors and friends in the world family of nations.

Year after year increasing numbers of our citizens travel to foreign countries. In most of these lands there exists a reservoir of good will for the United States, but in some areas our country and its aspirations are less well understood. To all the varied peoples of these many countries, the bearer of an American passport represents the United States of America.

Most Americans know that they will get better results and enjoyment from their travels abroad if they conduct themselves with the same restraint, understanding, and good manners they would expect from visitors at home. Most Americans who travel abroad are aware that their conduct as guests in a foreign country can have an important bearing on the good will of other nations toward the United States. Consequently they try to understand and appreciate the economic problems, customs, restrictions, and regulations of the lands they visit.

Many citizens also try to learn something about the countries they intend to visit before they get there. In that way they are better able to appreciate the contributions of those countries to the world's culture. They seek to respect the local laws and try to avoid inadvertent acts or misinterpretations which could be embarrassing. They familiarize themselves with local customs, such as the manner in which people dress in churches, restaurants, theaters, and other public places. In short, they show abroad the same consideration for others that they do at home and, consequently, they are our most effective and welcome ambassadors of good will.

As you travel abroad, the respect you show for foreign laws and customs, your courteous regard for other ways of life, and your speech and manner help to mold the reputation of our country. Thus you represent us all in bringing assurance to the people you meet that the United States is a friendly nation, dedicated to the search for world peace and to the promotion of the well-being and security of the community of nations.

Also from the Department of State is the following publication entitled "Do's and Don'ts Information and Travel Tips." This 1959 publication is also the product of Miss Knight and her fine staff and it reads as follows:

"DO'S AND DON'TS INFORMATION AND TRAVEL TIPS"

LOST PASSPORTS

Every year the Passport Office spends considerable time and effort in tracing lost passports, issuing limited passports to citizens who lose or misplace them, and warning citizens against altering or mutilating their passports. Travelers are cautioned to protect their passports from loss, mutilation, or misuse.

DO'S AND DON'TS FOR EVERY TRAVELER

Safeguarding passports, checking their validity, and acquiring visas are the responsibilities of passport bearers. This is true in all countries in the world. As a potential traveler, the following information is brought to your attention. Observance of these suggestions may save you embarrassment, delay, expense, or difficulty with officials of foreign governments.

Do sign your passport as indicated on page 2 of the passport. It is not valid unless it is signed by the bearer.

Do fill in the information required on the inside front cover. In case of accident, or other circumstance, it may be necessary to contact designated agent or next of kin.

Do register it if you must mail it.

Do keep it safe. Your passport is a valuable document. Its loss or disappearance can cause you considerable delay and expense.

Do notify the Passport Office, Washington, D.C., if your passport is lost or stolen; or, if abroad, notify the nearest American consul.

Do check the validity of your passport before you travel. If in doubt, consult the Passport Office or the nearest American consul.

Do check the visa requirements of the countries you plan to visit. This is your responsibility.

Don't led your passport for use by a friend or stranger. Remember that it is an official Government document for use only by the person or persons to whom it is issued.

Don't use your passport as collateral or pledge.

Don't alter, insert, or overwrite any information or entry in the passport. If a change is necessary, it must be made officially by authorized Government agents.

Don't tamper with the passport picture. Insist on getting a good one and then accept it as part of your official identification.

Don't use the passport as a notebook, scrapbook, or autograph book.

Don't pack it in your luggage. When traveling, keep it readily available but safe.

Don't tear or substitute pages in your passport.

Death of Maj. Gen. Thomas E. Rilea, Commandant of Oregon National Guard

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. NEUBERGER. Mr. President, one of Oregon's outstanding soldiers and military leaders, Maj. Gen. Thomas E. Rilea, died recently in our State at the age of 63. Mrs. Neuberger and I knew him well, because as adjutant general of the Oregon National Guard, he had many contacts with our State legislature and with the Federal Government. He was typically a product of our State, and I can remember visiting his pioneer parents in the remote hamlet of Agness, far up the canyons of the beautiful Rogue River.

The Oregon Daily Statesman of Salem of February 5, 1959, paid a merited and deserved editorial tribute to the late General Rilea under the title of "All His Life a Soldier." Because the editorial so appropriately epitomizes this illustrious son of Oregon and leader of our National Guard, I ask unanimous consent, Mr. President, that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALL HIS LIFE A SOLDIER

All his life from age 18 on Tom Rilea was a soldier, and a good soldier. He enlisted in the Oregon National Guard in 1914, and remained a member of the guard until his death Tuesday at age 63, save for the periods when the guard was summoned into Federal service. For him that was three times, first when he served as bugler for his regiment when it stood guard on the Mexican border in 1916, next in the First World War when he rose from rank of regimental sergeant to captain, and third in the Second World War when he was assistant commander and for a time acting commander of the 41st Division in whose training he had played an important part. After field service in the action in New Guinea he was called back to Australia to administer the great supply base at Sydney. He returned home under physical disability which required his hospitalization for a time. On discharge from Federal service in December 1946 he assumed the office of adjutant general to which he had been appointed in 1941 to succeed the late Maj. Gen. George A. White. Named brigadier general in 1931 at age 35 he was advanced to major general in the National Guard in 1948.

General Rilea was devoted to the Army and to the guard. Under his leadership the Oregon National Guard has rated high. He insisted on high standards of performance and gave due recognition to achievement. High military honors have been his; and now in death he merits the high commendation of the people of Oregon for service well performed.

Reds Map Your Death

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article, by Louis Francis Budenz, entitled "Reds Map Your Death." The article appeared in the February 7 issue of the Manchester (N.H.) Union-Leader.

Although the article is sobering reading, it is vital reading for all of us, because it gives further evidence of the constant plotting and planning by the Soviet Union for the destruction and enslavement of this country. Certainly, for all who can and will read, there is clear and ample warning of the Soviet blueprint which plots for us economic strangulation as a substitute for military destruction. We must gear ourselves immediately for as effective a defense against this economic warfare as we have geared ourselves for in the case of defense against military aggression.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REDS MAP YOUR DEATH

(By Louis Francis Budenz)

Long before the 21st Congress of the Communist Party of the Soviet Union convened in Moscow last week, advance Red acclamations for its projected proposals ringed the globe. The Communists everywhere beheld in this congress the promise of big things, and above all, the ability to get America to dig its own grave.

Every outstanding occurrence in the "motherland of the toilers" occasions expressions of devotion to Soviet Russia among the comrades everywhere. This is strikingly the case with the party congresses of the mother party, because at these congresses the dictator of the world's Reds tells his followers in all lands how they are to think and what they are to do.

When the national committee of the Communist Party of the United States hailed the congress from afar, in special greetings to the party of the Soviet Union, that was not surprising. When it proclaimed the congress itself to be a momentous event, that was also to be expected. And it was to be noted that the American Reds concentrated on the glories of the 7-year plan which Khrushchev had brought forward and which was to be approved at the congress.

The plan was effusively saluted as a guarantee of peace and peaceful coexistence, in the fact that it would bring about a stimulus to the growing number of exchanges and visits, such as that recently made by Mikoyan.

Most significantly, these greetings of the American party omitted any reference to the boasted purpose of the plan, to outstrip the United States in production by 1965 or 1970. The corollary of that end was also omitted, namely, the eventual achievement of communism and therefore the necessity for world Soviet dictatorship and the obliteration of the United States as a nation.

Without doubt, this omission was intentionally carried through, so that the party here could not be accused of plotting with Moscow to degrade the United States, which is precisely what is being done.

The party leaders here had certainly read and digested the preview of the congress appearing in the December issue of International Affairs and entitled "Great Vistas." There we read that it is evident from Khrushchev's advance theses that the 21st congress will make a decisive contribution to the victory of the new Communist system over the old, capitalist order. It is proclaimed to be a milestone along the path under which "the glorious Communist Party of the Soviet Union is bringing this happy time, the era of communism, nearer to our day."

And so we learn further from International Affairs: "The theses of Khrushchev's report (released for study in advance of the congress) show that the Soviet Union has entered a new phase—the phase of the large-scale building of a Communist society—in its transition from socialism to communism."

And thus, the comrades are fired with the frenzied notion that the promise of Marx and Engels—that "an earthly paradise" would come into being as a result of the Soviet dictatorship—is coming true.

But every comrade knows that this Communist society, which constitutes the "earthly paradise," cannot be achieved in full until the world Soviet dictatorship is first established. And thus it is that when Khrushchev envisages such an upsurge as will relegate to the second place "all capitalist countries, and chiefly the United States and then looks forward to communism," he is calling the Reds everywhere to a worldwide crusade for the sabotaging and subjugation of all opponents of the socialist system.

It is most singular that the omission registered by the Communist Party here of any mention of this oncoming communism, so that the party cannot be accused of planning our ruin, finds its reflection in a similar omission of this promise in the general press of the Nation. As often as such incidents have occurred in the past this latest is a startling one, as it fails to let the American people know that the whole scheme of "cultural exchanges," Mikoyan visits, and other such peaceful enterprises open the door for widespread industrial and political espionage intended for our destruction."

This open pledge by the 21st Red congress to effect our demise by strangulation appears in other features of Khrushchev's report, which has also been omitted from the general press. With these we shall deal later. For the moment the intrigues of the 21st congress of the Communist Party of the Soviet Union furnish a warning to us that if we wish to save ourselves we must immediately insist that Washington end all relations with the Soviet world.

Huntington, W. Va., Is Lauded by Senator Randolph as All America City

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. RANDOLPH. Mr. President, each year 11 U.S. cities are selected by a jury of distinguished citizens and experts on government impaneled by the National Municipal League to receive awards presented under the joint sponsorship of the league and Look magazine for outstanding action in bringing about civic improvements.

West Virginians were happy when one of their cities—Huntington, the county seat of Cabell County, situated on the Ohio River—was honored with a place on the 1958 All America City team.

It seems timely to mention that Clarksburg, W. Va., was so recognized in a previous year.

Presentation of the award was made at appropriate ceremonies in the city of Huntington the evening of February 10, 1959. It was my privilege to have accepted an invitation to participate in the program. Weather conditions prevented me from making the air trip from Washington. I had prepared comments for the event, copies of which were made available to the chairman of the award committee and presented to officials of the city of Huntington.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, extracts from my salute to the officials and citizens of Huntington on the occasion of the celebration of the All America City Award which was so justly deserved.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM STATEMENT ISSUED BY U.S. SENATOR JENNINGS RANDOLPH ON THE OCCASION OF THE HUNTINGTON, W. VA., ALL-AMERICA CITY AWARD CELEBRATION, FEBRUARY 10, 1959

The fine people of Huntington—officials and voters together—have given dramatic evidence of the continued vitality of democracy. Too frequently today we Americans, as private citizens, are inclined to respond to the problems that face us with complaints rather than constructive efforts. Too often the complaint is followed by the purely rhetorical question: "But what can the mere individual do?"

Yes, the people of Huntington have answered that question in unmistakable terms. They have shown with eloquent testimony the resources of the individual citizen when he or she joins others in a voluntary and cooperative venture. And, in so doing, they have translated the ideals of modern democracy into the realities of Huntington today.

Democracy means more than merely a way of electing one's representatives. It means more than the traditional 18th century regard for individual liberties.

Modern democracy means, first of all, the participation of the individual in public affairs. And, secondly, it means that public affairs encompass more than matters of Government policy alone. In a modern society the quality of democracy must permeate all of our cultural institutions; it cannot be restricted to elections and the matter of the ballot alone. This ideal condition of democracy the fine and faithful folk of Huntington have achieved in fact as well as in principle.

In Huntington's new schools, swimming pools, art gallery, and hospitals, as well as the new form of city government—in all of these, and more—it is clear that its people have, through citizen effort, defined the meaning of a democratic culture in the 20th century.

May the rest of West Virginia and the Nation read the lesson of the past 10 dynamic years in Huntington.

Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. SCOTT. Mr. President, numerous statements have been made recently commemorating the long struggle of the Ukrainian people for freedom. I have read with great interest the very fine address made by the Honorable Robert Gray, Secretary to the Cabinet, before the Ukrainian Congress Committee in Philadelphia on January 24. I believe it should receive wider notice and attention, and ask unanimous consent for the address to be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY THE HONORABLE ROBERT GRAY, SECRETARY TO THE CABINET, BEFORE THE UKRAINIAN CONGRESS COMMITTEE IN PHILADELPHIA, PA., JANUARY 24, 1959

I hope I can express fully to you my pleasure at being with you tonight and the honor I feel in being associated with this meeting of free men and women, assembled in rededication to the sacred cause of liberty.

This anniversary which stirs the hearts of freemen everywhere has its background in history a hundred years ago when Taras Shevchenko, the Ukrainian people's greatest poet, pleaded for human liberation. Based on a rich historical heritage which had developed during the preceding 11 decades in spite of repressive Russian rule, this occasion tonight was then born.

A great deal has happened to the world of freemen in the century that has passed. In our own country, it was less than 100 years ago that Abraham Lincoln was first elected to the Presidency. At that time, 31 million Americans were America, and ahead of them lay a struggle which would challenge not only our survival as a nation, but democracy's survival as an instrument of government for freedom-loving people. Today America is the fortress of freedom, not only for the 175 million citizens who proudly call themselves Americans, but for countless millions in lands other than our own.

What has brought the United States to her position of leadership among the nations championing freedom's cause? What has inspired this youth among the great powers of the world to take on with such missionary zeal the task of serving and relieving the oppressed peoples of the globe? To answer those questions, our natural inclination is to turn to our own fight for liberty and the heritage of the Pilgrim fathers and the spirit of 1776. But there are none alive today who heard the original toll of the Liberty Bell, and our compassion for those in freedom's fight might also be dead if it had not been rekindled by subsequent forces down through the years. The most powerful of these forces is the new blood which has been transfused into this Nation from every nationality on earth, bringing with it the traditions and the creeds and the colors and the religions and the artistic talents of the peoples all over the globe. And bringing with it, too, fresh awareness and compassion for the oppressed of the world's citizenry.

America's reputation as the melting pot of nationalities comes not from some shallow slogan which reads well in the international press, but has had no effect on us as a country. The numbers migrating to this country since our struggle for freedom have not been in token amounts but of flood proportions. Our records go back only to 1820, but from that year to the beginning of this one, over 41 million foreign nationals have migrated to our shores. This gives America the right to call herself the fortress of freedom. This is her badge of honor and this is her greatest point of pride.

If you have not done so, treat yourself to the opportunity of greeting an immigrant on the day his papers become final and as a citizen he takes the oath of allegiance to the United States for the first time. I guarantee you it will be a long time before you again take your citizenship for granted.

Perhaps the melting pot is a poor simile to use in describing the assimilation of these foreign nationals and their Americanization, for it implies that the wide variety of ingredients that go into the pot are completely uniform when they come out, and have lost all individuality and all identification with foreign lands. Thank God this is not so, for America would be a great loser if it were. What takes place in the Americanization of a new citizen is not a canceling out of old family ties and heritage backgrounds, but the superimposing of a first allegiance to the United States. There is no more fiercely patriotic group in our country than those who, through naturalization, have gained their citizenship the hard way—studying our history, becoming acquainted with our laws, and making declarations of loyalty and allegiance which many natural-born citizens have never been called upon to make. But these citizens have brought with them more than a burning loyalty to their new land. They have brought with them and have passed on to the natural-born citizens who are their sons and grandsons, the rich heritage of other lands and the knowledge of the oppressions, the hardships, and the struggles of other peoples.

I hope you begin to see how each of us in this room tonight is here identified. I am positive that the great majority of you have never been to the Ukraine. I am equally sure that the majority of you are natural-born Americans. You meet as Americans of Ukrainian extraction, proud of your heritage and background and aware that your responsibility for keeping alive the hope of the oppressed peoples of the Ukraine, for working in their behalf, and in making America aware of their plight—aware that all this is among your patriotic duties as American citizens.

May I tell you the greatest truth I have learned in 3 years in Washington? As a citizen of Nebraska, I used to indulge myself in that favorite American pastime—that luxury of life in a democracy—grousing about my government. I would say "Why don't they do this or that," or "They ought to"—they, they. But I have learned a big truth in my days in the Capital and it is this: In a democracy, we—you and I and our fellow Americans—we are the "they" in government. Our Government will serve us well only if we serve it well. It will be intelligent and well informed only if we are. It will have a conscience only if we do. This is why I urge every individual to take a more active, intelligent, patriotic part in government. We must keep interested and informed in the affairs of our Nation and we must keep our Nation interested and informed in the affairs of the world.

To this end, your efforts in keeping your Government aware of the plight of the Ukrainians is good citizenship of the highest order.

Absorbed into the Soviet Communist bloc following a series of invasions and bloody battles in 1919 and 1920, the people of the Ukraine today are forced to work for the aggrandizement of the Soviet Communist State. Long known as the breadbasket of Europe, the Ukraine is now the breadbasket of Russia. She is producing 70 percent of Russia's sugar and a quarter of her grain. She provides Russia with half of her coal and half of her iron ore. Yes, Russia benefits greatly from the captive lands and peoples in her empire. But for her it must be a disquieting thought to realize that non-Russian peoples are the majority peoples of the Soviet Union. This is the weakest link in the Soviet plan for world conquest, and one of the great threats to Soviet imperialism today is the strong nationalist feeling in the Ukraine.

The people of the Ukraine became one of the first peoples to be subjugated by communism. Following this event, the world began to realize that in Communist expansionism, free peoples everywhere faced one of the worst types of aggressive imperialism. Communism is the grave enemy of freedom and national independence. Wherever it penetrates, it agitates, subverts, and destroys. The system itself is based on mechanistic conformity, both in terms of human beings and national groups. It turns men into cogs in the materialistic machine, thinking and acting under central dictatorship.

Thus the men in the Kremlin have been implementing the Marxist-Leninist blueprint for world conquest. The Soviet threat is as old as communism. Thirty-five years ago Lenin said, "First we will take Eastern Europe, next the masses of Asia, and finally we will encircle the last bastion of capitalism, the United States." This Lenin statement charts the strategy, and it has been like a polar star to the succession of rulers in the Kremlin. To Russia, world domination was and world domination is, the goal.

International communism seeks domination through the use of every conceivable weapon—propaganda, subversion, infiltration, offers of Trojan Horse economic assistance, and outright aggression. It uses these weapons singly or in various combinations.

America cannot stand alone in this kind of world. Since 1945 we have entered into collective security treaties with 42 other nations. This system of collective security with its massive defensive strength has

brought to a halt outright armed aggression and has given assurance to nations exposed to attack. With our allies we face aggressors in the world with this resolve: We believe that there is strength in guided motives as well as in guided missiles but we will make whatever sacrifices are necessary to back up those principles with the necessary manpower, material, missiles, and money.

We are in an age which holds great hopes and at the same time grave perils for mankind. In our nuclear world there is no acceptable alternative to persevering in our quest for a durable peace. But the peace we seek is a peace founded on justice, freedom, and economic and social progress—a true peace, based upon the eternal values which are the foundation of our enlightened civilization.

Freedom is the most precious of these eternal values. The whole political history of the human race is the unfolding of the never-ending fight for freedom, and as long as there are people in the world who are not free, that fight will go on. History, with its oft-repeated record, can give little satisfaction to the Russians, for it repeats this story over and over. No oppressed people has remained forever enslaved.

President Eisenhower has said, "All history testifies that the memory of freedom is not erased by the fear of guns, and the love of freedom is more enduring than the power of tyrants." Meanwhile, freedom-loving people everywhere owe it to the cause of liberty to continue to keep alive before the world's conscience the great injustice of the subjugation of some of the peoples of the earth. America must work to sustain the faith of the Ukraine and the faith of her people in the ideals of freedom. May God give his rich blessing on the cause for which you work and on you all. Thank you and goodnight.

Russian Actions Compared to Mikoyan Treatment

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was published in the Nashua Telegraph, one of New Hampshire's leading newspapers, on Thursday, February 10, 1959.

Editor Fred H. Dobens, editor of the Nashua Telegraph, an outstanding newspaperman and a fine American, points to the tape recording of how the Russians plotted to shoot down an unarmed U.S. transport plane as a justification for my disapproval of the red carpet treatment recently given to Mikoyan in this country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES RIGHT AGAIN

New Hampshire's Senator STYLES BRIDGES was almost alone among his colleagues, a few weeks ago, when he scored the red carpet treatment given Anastas Mikoyan, Russian leader, by U.S. businessmen. BRIDGES was called everything by some, principally for attempting to throw a roadblock into possible peaceful U.S.-Russian relations.

The tape recorder incident, showing how Russians deliberately shot down a U.S. plane seems to indicate that they never will have good relations with us and that Senator BRIDGES has sized them up pretty well, all along for many years.

He says:

"On January 17, 1959, I rose on the floor of the U.S. Senate to deplore the red carpet treatment accorded Deputy Premier Mikoyan by some of our industrialists and Wall Street bankers. I also decried the action of some of my senatorial colleagues who had seen fit to honor and to lunch with Mikoyan under the very dome of the U.S. Capitol, that citadel of freedom and beacon light to the free world. I stood almost alone on the floor that day in upholding my position but I was not disturbed because I knew full well that it would eventually be justified.

"I yet did not realize how soon my stand would be vindicated. Today's shocking and incontrovertible revelation by our State Department should be proof enough to anyone that Soviet duplicity and ruthlessness are still the order of the day and that Mikoyan's visit was one more cheap Soviet ruse. My patriotic blood was never more stirred than when I heard the tape recording of the Russian duck shoot, over Armenia, of our unarmed transport plane. Feeling as I do myself, the feelings of the mothers, fathers, wives, children, and friends of our airmen must be indescribable.

"In my Senate speech, I noted that 6 bodies of the 17 men aboard had been returned to us and I called upon Mikoyan for an accounting of the other 11. Mikoyan was also questioned by our State Department. In the light of the disclosed evidence, Mikoyan's replies that 'the plane had crashed' and that 'the Soviet Government had given all the information it had' only reveals continuing Soviet perfidy of the highest order.

"I could only wish that all who feted Mikoyan and all who thought the Russians could now be trusted in negotiation should have continually dinned in their ears the tape recording of this act of murder which was applauded by Soviet commanding officers and high officials."

Missions or Missiles—This World or the Moon?

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. HORAN. Mr. Speaker, under permission granted me to extend my own remarks in the RECORD, I would like to include a sermon by the Rev. Clay Cooper, of Spokane, Wash. I think that Reverend Cooper has pointed out some things that are well worth our heeding.

The sermon follows:

MISSIONS OR MISSILES—THIS WORLD OR THE MOON?

(Sermon delivered by Rev. Clay Cooper on Horizons Unlimited, the missionary radio network of Vision, Inc., Spokane, Wash.)

"And Christ said unto them, 'Go ye into all the (this) world and preach the Gospel to every creature.'" (Mark 16:15.)

"The heaven, even the heavens, are the Lord's: but the earth hath He given to the children of men." (Psalms 115:16.)

There's a lot of talk about getting a man to the moon. Had you taken a pair of scissors and deleted everything from the morning press that had to do with moonshots, satellites, and communism you'd probably have had shredded newspaper for breakfast. In fact, getting to the moon all but monopolizes the imagination of tens of millions of Americans. The whole atmosphere is filled with "oh's and ah's" every time the next Russian sputnik rockets into the sky.

With all this furor about getting a man to the moon, it had better be soon, or there will be a lot of disappointed scientists—and a lot of dissipated dollars. Everybody knows it's borrowed billions we're spending to get a man up there, but few seem to comprehend one grave danger in this wild, headlong scamper to keep pace with the Reds in their probes into outer space. We are so all-fired concerned that the Russians may beat us there we are actually stampeding into a crash spending program, seemingly unaware that we are about to satellite ourselves into bankruptcy.

This is a reminder that while striving for the moon, we could be losing the earth. And let us not be deceived, that's what the Commies want more than anything else. This world, the one right down here, every hemisphere of it—lock, stock, and pickle barrel. And we are falling for their "other world" diversionary tactics head over heels. And they are expert in the field. Remember how they focused our attention elsewhere while they were carving Korea? While we were parleying in Geneva, they were parceling Vietnam. While our eyes were glued on Lebanon, they were chipping away at Matsu and Quemoy. While we were digging out from under the rubble there, they were opening the Berlin front. Now, they draw our attention to worlds above as a feint to decoy us away from this world below, the real focal point of their prime and ultimate objective. It's this world they want. They don't want the moon half so much. What would they do with it after they got it? Let people everywhere pray God to jar us from this trance, for that's what it is, a profound state of abstraction of mind and spirit which is causing us, like the children of Hamelin, to follow the siren notes of Red Pied Piperism. It is leading us, in this hypnotic state, off into oblivion by diverting our attention from the world to the moon.

For us to act suddenly and unconcertedly from some common panic-impulse or technological inferiority complex, and in a hasty, frightened manner, is exactly what the Russians are hoping we will do. If we can be stampeded, like a herd of cattle, into a race for the moon, this world is theirs. They are playing for high stakes, the world, this world, bear in mind . . . not the Moon or Mars. And unless we wise up to their strategy of diverting our attention away from their real pearl, it will wind up being another case of "while we were busy here and there, it was gone." If they can keep us engrossed with the moon, they'll have a lot less trouble engulfing the earth.

It's time we stopped chiding ourselves about Russia having attained the conquest of outer space. A misnomer, if there ever was one. "Penetration" is a far more suitable word, and penetration falls far short of conquest. And besides, if (I say if) the Moral Governor of this universe interprets this penetration as an intrusion on His preserve, His domain—as some hold—let us be glad the Russians have this questioned honor. Perhaps there was more of God in our failures than in their successes. Many conscientious people feel, most sincerely, that such aspirations are rank presumption

with a tinge of Tower of Babel added. They base their convictions on such verses in Holy Writ as, "The heaven, even the heavens, are the Lord's; but the earth hath He given to the children of men." Psalm 115: 16.

Now, what is to be our attitude? A negation of the scientific achievements of the Kremlin's crowd? A minimization of the fact they are farther down the road than we are in certain fields of technology and the use of psychological weaponry? Shall we pooh-pooh their sputniks and asteroids? Keep our fingers crossed and hope we can catch up with them before they can absorb us, or annihilate us?

Laboring under the notion that whoever gets up there "fustest with the mostest" will decide the fate of the world, is to act under sheer delusion. News of a landing on the moon would leave two-thirds of the people of the world cold. What could landing a man on the moon possibly mean to a starving man in Morocco? News of the landing of the Son of God on this planet, one starlit night, would mean a lot more, and this is the news the majority of mankind is waiting to intelligently hear for the first time. Or, having heard, understand by witnessing in you and me the reality of the Transforming Truth "that makes men free." We need to keep in mind it's not something we shoot from earth up into the heavens, that is going to save the world. It is rather someone, who came down from heaven to earth. That was the pivotal point in history. Not the launching pad at Cape Canaveral, but the manger at Bethlehem, and the night the Saviour descended from the upper world (wherever it is), to grace this planet and bring personal salvation with the promise of the "life that now is, and that which is to come."

It is a source of amazement that so-called Christian nations are frantically competing with Communists in quest of the moon. Let the Reds reach unknown worlds first, if they will. We are to major on this one. This world is to be the world of our main concern, this world with all its known people and their known problems. Seeking to plant the Stars and Stripes on the pock-marked moon, when the blood stained banner of the cross has yet to be lifted over more than half of this terra firma, falling victim to a celestial megalomania, under the planned and announced prodding of the Reds, all oblivious to our terrestrial mission, could prove the fatal mistake.

We are not to get side-tracked. Nowhere is the Christian—individual, church or Nation—commissioned or commanded to go to some other world, but there are multiplied commands to go, or make it possible for others to go, with the transforming message, the blessings and provisions of Christianity "into all this world." We are to keep on the job of telling it (and living it), until it rings in the ear of every living man. It is our solemn responsibility to see to it that that message with all its wondrous significance is brought to him. Herein lies the very heart and core of the troubles of this crises-ridden age, our having not been enough mission-minded in the past. Now we are crowded into being missile-minded.

This, then, is the message every God-fearing nation needs to hear. Sending men and missiles to the moon, is not half so important as sending missionaries to Madagascar and Martinique. Why should we spend billions to learn if there are men on Mars, when we already know of millions of miserable men in Mexico and Mozambique? People who cry for our recognition of their poverty of body and spirit? People needing and deserving our attention? Pointing a needle-nosed Atlas or Jupiter, into the azure, is not nearly so convincing to a crippled Asian leper, or a syphilitic-blinded child in Africa, as the needle on the end of the syringe in the missionary doctor's hand. That needle holds hope of a better world for him, something an orbiting satellite cannot do. And he represents about a billion and a half people in a similar or worse condition. The have-not nations of the world look to us expectantly, and we must beware lest we frustrate the purposes of providence in the race to space while neglecting the men at our gates.

I leave to the theologizer and politicians the moral and political issues involved in going to other worlds, but as the utter need and necessity of our "going into all the (this) world with the Gospel," in obedience to the command of Christ, there can be no argument. If we had our job all done, down here; if the great commission, as given by Christ, had now reached completion; if we had now successfully prosecuted the cause of world missions; if the world, this world, were now saturated with truth; if disciples had now been made of every kindred, tongue, tribe, and nation, that would be a horse of another color. But, the world predicament being what it is, if it's a toss between trillions for missiles and trifles for missions, a man on the moon or a missionary on Madagascar, we must not hesitate to choose the better part. Not that this is an appeal to scrap every reasonable security measure. It is not. But it goes beyond keeping our powder dry and our fingers crossed. To keeping our knees bent.

Finally, this is an appeal to Christian nations to take care lest they be duped into majoring on missiles and minoring on missions, and wake up too late to realize that while they were looking at the moon, they lost the earth. Let Russia's sputniks encircle the sun, we'll keep our arms around this world. And if our own beloved Nation should go down, serving and saving humanity, obediently trying to fulfill the great commission, honoring and trusting God, then glory be. It's certain she'll go down if she doesn't.

Lessons of the Mikoyan Visit

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Christopher Emmet entitled "Lessons of the Mikoyan Visit," which was published in the January 31 edition of America magazine.

I found the article to be a very informative résumé of the visit of the Soviet Deputy Premier as well as a forthright commentary on the lavish treatment accorded him on his recent visit to this country. I believe Mr. Emmet performs a distinct service by his forthright presentation of the facts surrounding the Mikoyan visit last month.

I was so impressed with Mr. Emmet's approach to this situation that I am using this means to bring it to the further attention of the American people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LESSONS OF THE MIKOYAN VISIT
(By Christopher Emmet)

It is universally conceded that the visit of Anastas Mikoyan, Deputy Premier of the U.S.S.R. to our country has been a great public-relations success. Qualified observers like Edward R. Murrow and Harrison Salisbury go further and point out that it is also a political success for the Soviet Union. There has been almost no political reaction, except from refugees, or publicity to balance the skillful utterances of the deputy Soviet leader and the praise heaped upon him by his hosts, who include many of the leading industrialists of the country as well as Senators and leading State officials, notably the newly elected Governor of California.

A luncheon was also given for Mikoyan by James Carey, secretary of the United Electrical Workers, which was attended by Walter Reuther. However, George Meany, president of the AFL–CIO, refused to attend because he would "not sit down with the representative of a nation under whose guns hundreds of working people die each day." Other notable dissenters from the chorus of praise were Congressman WALTER H. JUDD of Minnesota, famous as a former medical missionary and authority on China; Al Hayes, president of the Machinists International Union; Richard Cardinal Cushing, Archbishop of Boston; and Senator STYLES BRIDGES, of New Hampshire, all of whom condemned the fulsome receptions. Later the roster of critics received a notable addition in the person of former President Harry S. Truman in an article published by the North American Newspaper Alliance on January 19.

HATS OFF TO A BUTCHER

The critics do not oppose serious negotiations with the Soviet Union. What they do object to is fraternization with the spokesman of a bloody-handed dictatorship which is responsible for the torture and death of untold tens of millions, which holds 100 million East Europeans in bondage today, and which has placed a gun at our heads at this very moment by its ultimatum on Berlin.

It has been wrongly reported that Mr. Mikoyan had withdrawn the Soviet ultimatum. All he did was to refuse to call it an ultimatum. He did not change an item in the Soviet plan nor change the date on which it will be put into effect. Therefore, his call for counterproposals under the threat of the ultimatum amounts to blackmailing us into offering at least some new concessions. We cannot negotiate with the deputy Soviet leader in honor or on equal terms until that threat has been withdrawn. Still less is it a time to fraternize with him, overwhelm him with hospitality, and give him the impression that the American people are indifferent about Soviet crimes and aggressions, in which Mikoyan personally participated in Hungary.

What is happening is not negotiation. It is not even a dialog, where two sides are presented. It is a triumphal tour by Mikoyan, during which he is given a platform from which to cajole and deceive audiences of leading citizens throughout the country. Harrison Salisbury in the New York Times on January 10 reported: "Mr. Mikoyan's remarks won him a rousing ovation by an audience of over 300 of Chicago's most important lawyers." The following day he wrote: "The fact is that * * * he is having an impact on many leading Americans."

The customs of politeness and hospitality prevent his hosts on these occasions from stating the free world's point of view with any force or frankness, even if they were capable of it. And anyway, how many private American citizens are equipped to debate political questions with the No. 2 political leader of the Soviet Union? The audience is allowed to ask him questions, but considerations of courtesy censor the questions also.

How, for instance, can one politely ask Mr. Mikoyan why he participated in the betrayal of General Maleter, who was captured while negotiating under a flag of truce in Hungary,

where Mikoyan handled the preliminary negotiations; or whether it is true that Mikoyan shot Beria in the back of the head, as Khrushchev told a delegation of visiting French Socialists? How can one politely say that the Soviet Government has violated a hundred treaties, promises, and agreements and, therefore, cannot be trusted? The result is that the American side of the debate automatically goes by default and the tour takes on the aspects of a Soviet political as well as personal triumph. That is why such discussions should be left to trained diplomats, whose function it is to negotiate for specific, limited and self-enforcing agreements.

Some who welcome Mr. Mikoyan's visit advance the argument that he will see with his own eyes America's immense economic strength. This is supposed to make him return to Russia resolved to sin on more. But why should anyone imagine that Mikoyan, for generations the leading economic administrator in the Soviet Union, underrates the power of America's economy? Mikoyan, who was in charge of the distribution of United States lend-lease to Russia during the war, should know better than anyone else the miraculous feats of American production and technology, which rushed vast quantities of desperately needed arms and materials to Russia across mountains and even over the submarine-infested Murmansk run. He certainly knows that those supplies saved the Soviet regime and his own job.

Mikoyan did not come here to look at America's economic strength but to look for America's political weakness. He wants to find how far the American people will continue to support the heavy risks and sacrifices needed to stand behind their allies in Berlin and elsewhere. If he finds no evidence of real resentment toward Soviet policies among the American elite whom he meets every night, why should he attempt to change them?

Mikoyan is asking us to trust his government at the very moment when it is proving itself once again to be unworthy of trust. Most of what Mikoyan says is an indirect appeal to American industrial leaders, and to all others who will listen, to repudiate the announced policy of our Government. He appeals for trust and the leading lawyers of Chicago applaud him, just after the President's state of the Union message reminded us that because the Soviet Union has broken innumerable agreements we cannot make new agreements unless they are self-enforcing.

But the visit is something more than a propaganda effort to butter up and soften up American public opinion. Mikoyan has another angle which may kill three birds with one stone. He hopes that his visit will deceive the captive peoples behind the Iron Curtain, including the Russians, about how Americans really feel. When Mr. Mikoyan met Secretary Dulles, the American photographers naturally took pictures of the two men. But Mikoyan's Russian photographers concentrated on getting shots of the American cameramen begging Mikoyan for just one more picture. These Soviet photographs, and others showing smiling receptions to Mikoyan, are being used in every newspaper, moving-picture house, and TV newsreel behind the Iron Curtain to give the impression of Mikoyan's popularity in America, and thus discourage further resistance.

In the Nazi regime, Herman Goering occupied a position roughly parallel to that of Mikoyan in the U.S.S.R. Goering, too, played a great role in the economic organization of a totalitarian state. He, too, was more friendly and flexible with foreigners than the other Nazi leaders, and his joviality and flexibility were used to persuade the Federation of British Industries to make their infamous agreement with Goering on the eve of the Munich Conference. One of the arguments the British appeasers used to justify these deals was that they would strengthen the peaceful elements in the Nazi government, supposedly represented by Goering. Mikoyan's apparent reasonableness is being used to fool Americans in the same manner today.

Another grim parallel suggests itself: Is it conceivable that American public opinion would have "stood still" for a similar triumphal visit to the country by Goering during the days of our cold war with Hitler before Pearl Harbor, or any time after the Munich Conference? And yet, before the attack on Poland in September 1939—in which Soviet Russia joined—the record of Nazi crimes and aggressions had been trivial compared to that of the Soviet Russia of today. Mikoyan has been the beneficiary of all those crimes, for he has not only survived but advanced with each new turn of Soviet politics. For instance, he negotiated and administered the economic agreements under the Hitler-Stalin pact which helped the Nazi war effort during the first 2 years of the war—and then distributed United States lend-lease.

THOSE WHO PROTEST

Because of all this we are grateful to the humble refugee pickets who alone have tried to remind the American people of the fundamental issues between the Soviets and ourselves. Although their methods of protest may not always be well chosen (who in conscience can blame them?), we believe their attitude is more representative of the way the average American really feels than that of Mr. Mikoyan's wealthy hosts.

Adlai Stevenson has appealed for an end to these hostile demonstrations on the ground that he and other leading American citizens were well received in the Soviet Union. Mr. Stevenson's analogy would be more apt if he, too, had participated in breaking treaties and betraying the freedom of small nations. Mr. Mikoyan has turned what was announced as a private, informal vacation into a triumphal state visit at the very time of the Berlin ultimatum. And what of the recent stoning of the American Embassy in Moscow with the connivance of Soviet police?

Nothing need be added to this editorial comment from the New York Mirror of January 13:

A sickening paragraph about Anastas I. Mikoyan comes under the byline of Harrison E. Salisbury in the New York Times:

"The outbursts [against Mikoyan] have begun to take on more and more the aspect in miniature of the disorders that attended Vice President RICHARD M. NIXON'S tour of South America last spring."

Rot. Demonstrations against Mikoyan are by people whose kin and friends were murdered in the Soviet rape of Hungary, a crime in which Mikoyan played a bloody, double-crossing role.

Whom did NIXON murder? The Communist rigged riots against him were directed at the United States for Communist purposes.

Mikoyan is entitled to formal courtesy and physical protection, no more. Any attempt to gloss over his brutal crimes is an insult to humanity and the ideal of human freedom.

Maj. Gen. William J. Donovan

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful letter written by David K. E. Bruce, our Ambassador to the Federal Republic of Germany, which appeared in the New York Times of Sunday, paying tribute to the life of Maj. Gen. William J. Donovan.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TRIBUTE TO WILLIAM DONOVAN—GENERAL'S QUALITIES OF LEADERSHIP, VIVID PERSONALITY RECALLED

(The writer of the following letter is U.S. Ambassador to West Germany.)

To the EDITOR OF THE NEW YORK TIMES:

The news of Bill Donovan's death is a profound shock to all of his associates, friends, and acquaintances. It hardly seems possible that this ageless man, this almost elemental force of nature, has been removed from our immediate contact.

Wherever there was a stir, and especially whenever—all too frequently—trouble brewed, Donovan was there. He was an adventurer, in the best sense of the word, in the modern world.

Imagination and the quality of great leadership were his dominant characteristics. The word "impossible" was not in his lexicon. What man had done was only a springboard from which to vault into the unknown.

CAREER OF OSS

I was most closely familiar with him during more than 4 years' service in his Office of Strategic Services organization. There he was the inspirer of more than 30,000 people. All were fish in his net, tumbled together in what, organizationally, appeared to be chaos.

His mandate was almost unlimited in the field of clandestine activities. Nor did any chief ever as readily respond to such a challenge. Something had to knit together beings so disparate, recruited for tasks so indefinite. The polarization came from one individual—Donovan.

In the midst of the gravest preoccupations, with a task so comprehensive as, at times, to appall his subordinates, the general remained unruffled, calm to deal with the exigencies of worldwide covert operations, but able to turn what seemed an equal concentration on the marital, or extramarital, problems, the health or illness, the financial tribulations or any other concerns of those who worked for him.

He contracted enmities, but never as readily as he made friends. Giving complete loyalty himself, he commanded it from others.

He taxed his brain and body without mercy. In his sixties, he was still a threatening opponent on a squash court. Sleep he scarcely considered a necessity but an imposition by nature on man's obligation for self-improvement. For him no moment was an occasion for idleness. On uncomfortable and dangerous airplane flights he was usually discovered amusing himself with a German, French, Spanish, Italian, or other grammar, unless he was concocting a complicated scheme to harass the enemy.

EXCITEMENT OVER IDEAS

His personal charm was disarming. His sympathies were almost universal. He could not abide cowardice, being so constituted that this weakness was incomprehensible to him.

His imagination was unlimited. Ideas were his playthings. Excitement made him snort like a race horse. Woe to the officer who turned down a project because, on its face, it seemed ridiculous, or at least unusual. For painful weeks under his command I tested the possibility of using bats—taken from concentrations in western caves—to destroy Tokyo. The general, backed by the intrigued President Roosevelt, was only

dissuaded from further experiments in this field when it appeared probable that the cave bats would not survive a trans-Pacific flight at high altitudes.

He was a torchbearer of much that was most luminous during American participation in wars. In civil life he was adamant in the protection of our liberties and traditions.

I feel I can speak for thousands of others who served him during his great period in saying that I wish we had adequately conveyed to him during his lifetime the deep affection and admiration we always entertained for him.

DAVID K. E. BRUCE.

BERLIN, *February 9, 1959.*

Oregon Reviews 100 Years of Statehood, Looks Forward to Another Century of Progress

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. NEUBERGER. Mr. President, celebration of a historical milestone represents an opportunity both to recall the past and assess the future. The occasion of Oregon's centennial has stimulated such dual analysis by two of my State's leading newspapers, the Oregonian and the Oregon Journal. Both papers have contributed significantly to Oregon's development; both comment from a rich background of service to the people of Oregon. Therefore, I ask unanimous consent that an editorial titled "Oregon Has Come a Long Way" from the February 8, 1959, centennial issue of the Oregon Journal and an editorial headed "Reading, Living History" from the Oregonian's centennial issue of February 11, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Feb. 8, 1959]

OREGON HAS COME A LONG WAY

This is Oregon's year to celebrate, joyfully and proudly, 100 years of statehood.

It is a time to look at history—from the days of British, French, Spanish, Russian, and American exploration, more than a century and a half ago; through the great fur-trading era, when McLoughlin and Astor, Bonneville and Wyeth probed the wilderness, built forts, sought quick riches by bartering with the Indians who had filtered down into the Northwest from Asia, via the Aleutians, 10,000 years before.

It is a time to review the deeds of the hardy men who attended the "divide" meeting at Champoeg, who acquired 2,500,000 virgin acres in donation land claims, cleared the trees away, built towns, schools, churches, mills, river boats, roads and railroads, pioneered the agriculture, horticulture, lumber, textile, and fishing industries, and passed successfully through provisional and territorial governments to statehood. That was the real beginning.

As times goes, it seems only yesterday that the first settlers came over the Oregon Trail in the 1840's and 1850's—first a handful, then by hundreds, then by thousands—seeking their fortunes in a benign green land.

Yet when you weigh the progress Oregon has made, when you see the strides we've taken in industry, in food raising and processing, in transportation, education and the arts, in taming great rivers, in developing world trade, it seems centuries ago.

It's a long way we've come—from the trading posts and missions to great cities and the teeming ports; from covered wagons to jets; from tiny sawmills in the wilderness to giant woodworking plants; from crude blacksmith shops to light metal plants; from oxen to atomic energy; from Indian canoes to oceangoing freighters and the tug-barge combos that ply our rivers.

It's a wonderful story, all in all, this story of the 33d State in the Union.

And we'll tell this story to the world this year, in the Exposition and International Trade Fair and the International Garden of Tomorrow. We'll read it in pagentry, in music and drama, in historical and commercial displays. We'll sell it anew to ourselves and our several million visitors, some of whom will see for the first time our magic mountains, our great rivers, our friendly cities, our teeming industries—and will want to come again.

Part of this centennial story is told today in the Journal's centennial edition, which in itself is a tribute to Oregon's glorious past, its leadership in commerce and industry and the arts, its future opportunities. Each is unexcelled.

So we repeat: This is Oregon's year to celebrate, joyfully and proudly, 100 years of statehood. They've been exciting, wondrous years. They've been good to us all.

[From the Oregonian, Feb. 11, 1959]

READING, LIVING HISTORY

One certain, positive benefit to flow from the observance of Oregon's Centennial year will be the instruction of Oregonians in their history and their heritage. This is not to imply that we are merely taking note of events that are dead and gone, that the act of celebration of 100 years of statehood is no more than the contemplation of those 100 years and what went before. Quite the contrary, the real value in a knowledge of history is to obtain thereby a perspective on the present and future.

If there were no Oregon future, there would be no sense in reviewing the Oregon past. If there were no Oregon future, there would be no purpose in an Oregon centennial. While we read history, we make history, and, if it were not so, the reading of history and the commemoration of its milestones would both be a waste of time.

When Oregon had been but 3 years a State, a man who understood the uses of history had this advice for his countrymen: "Fellow citizens," said President Abraham Lincoln, "we cannot escape history. We * * * will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the last generation."

So it is for Oregonians who this week have both the birthday of Abraham Lincoln, Thursday, and the 100th anniversary of statehood, Saturday, from which to draw the inspiration that can come from the knowledge of great events and great deeds of the past. We, too, will soon be a part of that past. Will we so build that future generations will find it worthwhile to reflect on this period in our history? That is the question of the centennial year. How it is answered will determine whether or not Oregon is worthy of its past.

The natural wonders that attracted the explorers and settlers to Oregon in the dawn of its recorded history remain wonders in the 20th century. The Columbia River is not the Northwest Passage of legend, but it is a water system in some respects second to none other on the continent. The rich land that drew men and their families the breadth of the country has been found to be even more exceptional where its specialties have been discovered and exploited. The trees are here, some of them dating from other centuries; and history has taught lessons of silviculture and moderation in harvest.

We are heirs to a marvelous land and a dramatic tradition. The full potentialities of our endowments have scarcely yet been realized. No other corner of the Nation is more appealing in an age of dwindling resources of space, land and water. No other region promises more certainly the fulfillment of human desires in an era of ever-increasing leisure. No people anywhere can call up, from a look backward into history, a more powerful inspiration for achievement in the future.

The people of Oregon need blame only themselves if Oregon's second century is not better than the first. It should be—vastly so—not merely in material progress, but in the more profound aspects of living. It will be if Oregonians read their history with understanding.

Lt. Col. Richard J. Meskill, an Active Servant of His Country and His God

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. YARBOROUGH. Mr. President, I am sure all agree that high ideals are a wonderful things, but unless these beliefs are translated into actions, they have no effect.

My home State of Texas, and this Nation, suffered a great loss recently with the untimely death of Lt. Col. Richard J. Meskill, U.S. Army, retired, in San Antonio, Tex. Colonel Meskill was a man who not only held to his high beliefs, but governed his actions accordingly. He served his Nation and his God honorably and well.

During his active military career, Colonel Meskill distinguished himself in international riding and shooting championships. He continued to serve this Nation with the U.S. customs service and later as postmaster at Texas City, Tex., until his retirement in 1952.

He was a charter grand knight of the Father Roach Council, Texas City Knights of Columbus, and a charter member of the St. Mary's Holy Name Society, Texas City, and a Third Order Dominican.

In addition, he held offices in the Postmasters Association of Texas and the Retired Officers Association.

Colonel Meskill's life can well serve as a guide for others. He lives on in the fine lives of his family. One of his sons, Mr. Dick Meskill, is editor of the Alamo Messenger, official Catholic newspaper of the archdiocese of San Antonio.

Mr. President, as a special recognition of this fine life, I request unanimous

consent to have printed in the Appendix of the RECORD an article on Colonel Meskill which appeared in a recent issue of the Alamo Messenger, under the heading, "Ordinary Presides at Funeral Rites for Colonel Meskill."

There being no objection, the article was ordered to be printed in the RECROD, as follows:

ORDINARY PRESIDES AT FUNERAL RITES FOR COLONEL MESKILL

Archbishop Robert E. Lucey presided at solemn funeral services for Lt. Col. Richard J. Meskill, 72, U.S. Army, Retired, in St. Peter Prince of Apostles Church on January 20. Colonel Meskill died in Brooke Army Hospital January 17 after an illness of several months. His home was at 111 Windmill Road in St. Mary Magdalen's Parish.

Father Carlos J. Quintana, of St. Peter's Parish, was celebrant of the requiem mass, assisted by Father Joseph L. Daspit, C.M., of Assumption Seminary, and Father John Kukral, of Texas City, as deacon and subdeacon, respectively. Msgr. Alexander C. Wangler, of the Alamo Messenger, was master of ceremonies.

The sermon was preached by Father Charles M. Sacco, of Beaumont. Attending in the sanctuary was Auxiliary Bishop Stephen A. Leven. Other members of the clergy attended in the transect of the church. The archbishop gave the final absolution after expressing his condolences to the family of Colonel Meskill.

Colonel Meskill had retired as postmaster of Texas City, April 30, 1952, after a period of 7 years' service. Prior to that he served with notable distinction in the Army, having won several international and interallied horsemanship and shooting championships following World War I.

Following his military retirement in 1930, Colonel Meskill served as inspector with U.S. Customs Service until May 1945, when he was appointed by President Harry Truman to fill the vacancy in the Texas City Postoffice.

Colonel Meskill was charter grandknight of the Father Roach Council, Texas City Knights of Columbus, and an active member of the Postmasters Association of Texas, and the Retired Officers Association, in both of which organizations he held offices.

He was also a charter member of the St. Mary's Holy Name Society, Texas City, and a Third Order Dominican.

He is survived by his wife, Mrs. Cora M. Tarpey Meskill, daughter of a pioneer Texas City family, and by two sons, Richard J. Meskill, Jr., and William D. Meskill; and by daughters, Sister Miriam, V.I., Houston, and Misses Cora E. and Catherine Jane Meskill, both of San Antonio.

In addition to listed survivors, Colonel Meskill is survived by three sisters, Mrs. M. J. Herwood, Los Angeles; Mrs. Mary Chamberlain, Springfield, Mass.; and Miss Josie Meskill, Ireland; and by three brothers, Dan Meskill, Bronx, N.Y.; John and James Meskill, County Cork, Ireland.

Honorary pallbearers were Carl Nessler, K.H.S.; George Carrague, John C. Gee, and Richard Carroll, all of Texas City, and Judge Andrew A. Hickey, of Alta Loma, and former postmaster, Raymond A. Stewart, of Galveston, as well as Felix Stehling, Fredericksburg, and Paul C. Pfeiffer, San Antonio.

Active pallbearers were James A. Whalen, K.S.G.; Chester Griffin (Texas City), Albert Greene, John Fox, Edward Culligan, and Maj. Gen. Neill C. Johnson, all of San Antonio.

Interment was in Fort Sam Houston National Cemetery with full military honors. Zizik-Kearns Funeral Home was in charge of arrangements.

Oregon Commemorative Stamp Released at Historic Astoria

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. NEUBERGER. Mr. President, on Saturday, February 14, Oregon celebrated its centennial, commemorating the 100th anniversary of statehood. Quite appropriately, the Post Office Department has issued a 4-cent Oregon statehood centennial commemorative stamp, which was first placed on sale February 14 at the post office at Astoria. An initial printing of 120 million copies of the centennial stamp has been made, and it is estimated that more than 500,000 first day covers were issued by the Astoria postmaster, Neil L. Morfitt, and his fine staff.

It is indeed appropriate that historic Astoria, at the mouth of the great Columbia River, with Fort Clatsop National Memorial located nearby, was chosen as the city for the first day issue. The Oregon centennial stamp, printed in a blue-green color, emphasizes the rear view of an unhorsed covered Conestoga wagon, typical of those used over the Oregon Trail by early settlers, with Mt. Hood to the right. There has been some public criticism of the stark realism of the stamp design.

Mr. President, on behalf of the Post Office Department, Mr. L. Rohe Walter, special assistant to the Postmaster General, gave the dedication address for the Oregon centennial postage stamp at Astoria. I ask unanimous consent to have printed in the Appendix of the RECORD the Post Office Department release on Mr. Walter's able speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TALK BY L. ROHE WALTER, SPECIAL ASSISTANT TO THE POSTMASTER GENERAL, OREGON STATEHOOD COMMEMORATIVE STAMP CEREMONY, ASTORIA, OREG., FEBRUARY 14, 1959

We are gathered here today in Astoria, Oreg., the site of the first post office and customhouse on the Pacific coast, to dedicate a U.S. postage stamp commemorating the 100th anniversary of the statehood of Oregon.

We do so with gratitude to the sturdy people of this scenically beautiful and highly productive State, who, over the years have made and are making such remarkable contributions to the national heritage and welfare of the United States.

As we look back, we recall that in May of 1792, an American sea captain, John Robert Gray of Boston, Mass., sailed his ship, the *Columbia*, up the river of the west to become the first to drop anchor in the inland waters of this vast and legendary body of water.

Claiming this area for his new Nation and naming the river after his ship, Captain Grey and his hardy crew penetrated lands which for generations had intrigued and mystified the greatest explorers from many lands, including Sir Francis Drake, who had seen this wilderness in 1579 and poetically named it New Albion.

Thirteen years after Captain Gray's trip, the famed explorers Lewis and Clark, under direct authority of President Jefferson to determine direct and practicable water communications across the continent, for the purpose of navigation, reached the headwaters of the Columbia.

Their published accounts, as the first explorers to reach Oregon by an overland route, created national interest leading to the establishment, in 1811, of John Jacob Astor's Pacific Fur Co. and an awareness by many others of the lucrative potentials of this region.

From those early days to the present, Oregon's history is replete with the names of individuals whose deeds form an inspiring story in the growth of our Nation and of the Beaver State, the 33d to be admitted to the Union.

Typical of these great leaders who have contributed to Oregon's welfare were the "white-headed eagle," Dr. John McLoughlin, who for 20 years governed this area from his home, Fort Victoria; Hale Jackson Kelly, the ex-Boston schoolmaster whose lectures and writings contributed so much to the encouragement of emigration to Oregon that he earned the title "Father of Oregon"; and, of course, the missionaries of many faiths who left comfortable and established parishes to teach Christian religion and ethics to the Indians, to build churches and missions, and to implant the teachings of faith in God, so necessary in the development and progress of a new and free land.

Joining with them, of course, were the pioneering thousands of men and women who, in the Oregon-or-bust wagon trains, made the long, arduous, and dangerous 2,000-mile trek along the Oregon Trail from the banks of the Missouri to the virgin lands of this great State.

The nearly 2 million Americans who now live in your 97,000 square miles of beautiful mountains, rich river valleys, and seashore coasts, and your impressive cities, represent the sturdy pioneers of many lands who saw, and achieved here the fulfillment of their individual desires for freedom under a democratic form of Government. And each left his special imprint upon his—and your—free land.

You today, as those who preceded you, are men and women possessed of great strength; of abiding faith; of calm but courageous understanding; of infinite wisdom and vision.

All America—and the world for that matter—is aware of the contributions your great State of Oregon has made in the fields of fishing, shipbuilding, national defense, public education, hydroelectric power, food products, and the beef cattle and sheep industries.

To the fisherman, the hunter, to those who enjoy the quiet beauties of nature or the zest of vacationing beside fresh-running streams, in rugged mountain country, in fertile valleys, or along sandy ocean beaches, Oregon is an unparalleled attraction.

In this Oregon statehood centennial stamp the Post Office Department has tried to symbolize the history, the beauty, and the richness of Oregon. By issuing 120 million of these stamps, we hope to remind not only Americans but all peoples of the contributions the State of Oregon has made to their progress and welfare.

The design of this beautiful new stamp was the inspiration of the noted artist, Robert Hallock, of Newtown, Conn., who is present here today.

After first-day sales here in Astoria, 120 million Oregon statehood stamps will go on sale throughout the Nation in 36,000 U.S. post offices. As part of the centennial celebration, it is our hope these stamps will also serve as invitations for Americans to

visit the Oregon Centennial Exposition and International Trade Fair, opening in Portland, Oreg., on June 10.

In concluding, it is my privilege to now present albums of these new 4-cent Oregon statehood stamps, autographed by Postmaster General Arthur E. Summerfield, to a group of distinguished Americans.

Health-for-Peace Bills

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. SPARKMAN. Mr. President, my colleague, the distinguished senior Senator from Alabama [Mr. HILL], has long been recognized as the Senate's "Mr. Health." His dedication and devotion to the cause of medical research and to public health have won him acclaim throughout the country. Programs which he has sponsored have been beneficial to people in every nook and corner of this land.

In keeping with this record of concern for the public welfare, the senior Senator from Alabama is now sponsoring a proposal which would expand U.S. support of international medical research. Fifty-nine Senators were pleased to join with him. I am happy to be one of them. Through Senator HILL's health-for-peace plan, we can take another step forward toward that international understanding which is so necessary if world tensions are ever to end.

An excellent article written by Dr. Howard A. Rusk regarding this proposal was published in the Sunday edition of the New York Times of February 8, 1959. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ANALYSIS OF SCIENTIFIC TEAMWORK BEHIND THE HEALTH-FOR-PEACE BILLS

(By Howard A. Rusk, M.D.)

Last Monday Senator LISTER HILL, Democrat of Alabama, reintroduced in the Senate his bill to expand U.S. support of international medical research. In a strong show of bipartisan support, 59 of Senator HILL's colleagues joined him in cosponsoring the legislation.

Representative JOHN FOGARTY, Democrat of Rhode Island, has also reintroduced a similar bill in the House of Representatives.

This legislation, known popularly as the health-for-peace bill, would create within the National Institutes of Health a new National Institute of International Medical Research with an annual appropriation of $50 million.

These funds would be used to encourage and support research and the exchange of information on research, the training of research personnel and the improvement of research facilities throughout the world.

The bill would authorize grants to support such activities ranging from research in basic science to research in rehabilitation. Grants could be made to foreign and American universities and research organizations and to voluntary and governmental international agencies such as the World Health Organization.

Under the plan, a National Advisory Council for International Medical Research, composed of nongovernmental leaders, would establish policies, make recommendations and approve grants and loans under the program.

COUNCILS WOULD ADVISE

The existing specialized advisory councils on heart, cancer, arthritis and metabolic diseases, neurological diseases and blindness, vocational rehabilitation and similar specialized fields would advise the new National Advisory Council for International Medical Research on specific projects within their particular area of interest and competence.

The program would not replace any of our current programs of multilateral international health activities through the World Health Organization or UNICEF or any of our bilateral activities conducted through the International Cooperation Administration.

Nor would it supplant the research programs being conducted through the International Cooperation Administration.

Nor would it supplant the research programs being conducted in the United States through the National Institutes of Health. It would enhance these activities and at the same time provide a mechanism and funds for uniting science throughout the world in a greatly expanded global attack on disease and disability.

The key factor in grants from the new National Institute for International Medical Research, over and above the usual criteria applied to research projects, would be their international implications.

Although there are innumerable corollary values in Senator Hill's proposal, it is based primarily on recognition of the fact that medical research is so highly complex and interrelated that victory over any disease or disability can be achieved only through the research results of many scientists throughout the world.

FULL OF EXAMPLES

The history of medicine is replete with examples of this.

It was a Dutch scientist in 1676 who first revealed the world of micro-organisms. An English physician, Edward Jenner, who observed in 1796 that vaccination prevented smallpox, provided the basis for modern immunological concepts.

Iwanowski, a Russian, identified the first virus in 1892. Two Canadians, Sir Frederick Banting and Charles Best, were the first to isolate insulin in 1921.

The Spanish neuroanatomist, Santiago Ramon y Cajal, and the Italian histologist, Camillo Golgi, shared the Nobel prize in 1906 for their work on the structure of the nervous system.

The list goes on and on—penicillin from England, cortisone from the United States, rauwolfia from India, sulfonamides from Germany.

The health-for-peace bill is a direct outgrowth of the proposals of President Eisenhower in his 1958 state of the Union message for a science-for-peace plan to attain a good life for all. As the first step in such a plan, President Eisenhower at that time invited the Soviet Union to join in the current 5-year program for the global eradication of malaria.

The President then stated our willingness to pool our efforts with the Russians in other campaigns against cancer and heart disease and the other scourges of mankind. "If the people can get together on such projects," he said, "is it not possible that we could then go on to a full-scale cooperative program of science for peace?"

DISCUSSED IN MOSCOW

It was to discuss the proposals for a greatly expanded international medical research program that Senator HUBERT HUMPHREY, Democrat of Minnesota, went to Moscow in early December for his now-famous 8-hour interview with Soviet Premier Nikita S. Khrushchev. The first 2 hours of the interview were spent discussing international medical research.

In a statement issued in Moscow after the interview, Senator HUMPHREY reported the Soviet Premier had given enthusiastic approval to the proposal.

He said further: "During my interview with the Premier I had noted that areas of disagreement between our respective foreign policies remain broad and deep. It does not appear that, for a considerable time, these differences will be resolved. In the meantime, we need to learn how to work together, and the best place to start is in the nonpolitical area. The world is hungry for some evidence of effective Soviet-American collaboration. One of the best areas in which to start is in the field of health."

The fact that 59 other Senators joined with Senator HILL in cosponsoring his health-for-peace bill indicates that a majority of the Senate agree with the statement of Senator HUMPHREY on the need for such a program and with Senator HILL that his proposals would help meet that need.

They realize that not only will such a program improve international understanding but also may well provide a breakthrough on the killing and crippling diseases that plague mankind.

Every citizen in the United States has a personal stake in this program.

The enthusiastic congressional support of the health-for-peace bill gives dimension and significance to the aphorism of the late Sir William Osler, who once said: "The great republic of medicine knows and has known no national boundaries."

Observations on Foreign Policy

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. THURMOND. Mr. President, on February 10 the Greenwood Index of Greenwood, S.C., editorially demonstrated what appears to me to be a crucial issue with respect to our foreign policy. I ask unanimous consent that this enlightening editorial entitled, "Observations" be printed in the Appendix to the RECORD.

There being no objection, the observations were ordered to be printed in the RECORD, as follows:

OBSERVATIONS

Modern diplomatic quandries arise from surging nationalism among underprivileged peoples. Shall the United States foster this feeling, in the spirit of our own revolution, or is the course of realism to say that these people are not yet ready for self-government?

There is no sure answer. This observation by William Henry Chamberlain in the Wall Street Journal is worth reading on the subject: "A few conclusions may be drawn from the experience of the ups and downs of democracy. This system must grow from within; it cannot be artificially implanted by a few young enthusiasts drawing up an

admirable paper constitution and shouting a few slogans. Democracy has no reality without widespread education and a diffused ownership of private property. The United States will be well advised to frame its foreign policy not by abstract considerations of whether a foreign country is a democracy or a dictatorship, but by positive evidence that the country is going our way politically and recognizes bonds of common interest."

Address by Hon. William F. Knowland at Lincoln Day Banquet

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a speech delivered last Thursday, February 12, 1959, by the Honorable William F. Knowland at the annual Lincoln Day banquet of the Young Men's Republican Club of King County, in Seattle, Wash.

A Member of the U.S. Senate for 13 years, during which time he served as both majority and minority leader, Senator Knowland draws from his vast experience to outline several goals for the Republican Party and for America, as a whole. The speech, delivered on the birthday of our first great Republican President, presents a very straightforward approach to the grave problems facing our Government today, and I commend it to the attention of my colleagues in the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH OF WILLIAM F. KNOWLAND AT THE ANNUAL BANQUET, YOUNG MEN'S REPUBLICAN CLUB OF KING COUNTY, FEBRUARY 12, 1959, SEATTLE, WASH.

Fellow Americans, this is no time for defeatism. It is the time for reflection, for constructive criticism of past action or inaction, for reorganization and for a forward movement along the whole front.

It was Abraham Lincoln in 1858, the year of his defeat for the Senate and 2 years before his election to the Presidency, who said:

"If we could first know where we are and whither we are tending, we could then better judge what to do and how to do it."

For us as Americans and for us as Republicans has come simultaneously the imperative need to stop, look, and listen in order to determine, if possible, where we are and whither we are tending.

The Whig Party failed to do this in the 1850's and passed out of existence.

The Nation in the 1840's and 1850's failed to solve the slavery question and the decisions were finally made in the fiery crucible of a great civil war.

There is much talk these days about the need for precinct organization. This is, of course, vitally important. But to make this No. 1 on the list is to put the cart before the horse.

It seems to me that as Republicans we must first determine for what we stand rather than for whom we stand.

Neither our domestic problems nor our international dangers can be determined safely by officials selected on the basis of the best "Pepsodent smile" nor on the basis that regardless of the principles or policies for which he stands that the incumbent of one's own party has permanent tenure in the office he holds.

Such an approach in these critical times can lead to decay in our party and disaster to our Nation.

It is far less fatal for a party to lose an election than to become all things to all men in order to win.

Would it not be well for Republicans (and Democrats, for that matter) to hold annual conventions in each of our States in order to get a real grassroots understanding as to what the rank and file think and the things for which they want their party to stand?

I do not believe this can or should be left to the office holders alone. The party is far bigger than any gathering of incumbents on the local, county, State, or National level.

At times the officeholder may think his own reelection is more important than giving the people clear-cut decisions on major policy matters. To him it may be, but to the party and the Nation vacillation, and postponing the decision may lead to a more violent outburst later on, as was the case 100 years ago.

Some basic decisions need to be thought out and fought out ahead of the national nominating conventions.

No single person or small group has the answer to all our problems as a Nation or a party. But I do have a confidence that out of the ranks of the people will come the principles and the leadership to again save our Nation at one of the great turning points of history.

Nations, parties, and individuals have both victories and defeats. They can and should learn from both.

I have no regrets for having raised the issues or having made the fight in California last year. It helped, I believe, to alert the people of our State and of the Nation to some of the problems ahead of us.

Despite misrepresentation of my position and the propaganda efforts of the labor bosses, the facts of the matter are that I believe in strong and effective unions.

I said last year and I repeat now:

"Unions should be responsible to their own membership and to the American public. With power must always go responsibility. Collective bargaining must not become collective bludgeoning."

Since last November, James Hoffa has announced his intention to have every policeman wear a Teamster membership button.

I do not believe this would be conducive to impartial law enforcement, for the public good, nor indeed in the best interests of labor unionism as a whole.

How can we best preserve our priceless heritage? This is our challenge as a Nation, as a party, and as individuals.

You here will play a part in the great decisions that will win or lose this historic battle.

What are my beliefs in this regard?

I give them to you, as the reflections of one who for 30 years has been active in the ranks of the Republican Party and for the past 13 years as a Member of the U.S. Senate during the last 6 years of which I served as both majority and minority leader:

1. We must preserve the Federal constitutional system and actively oppose the tendency to break down State lines.

2. We must preserve American competitive enterprise from the monopolistic onslaughts of both big business and big labor.

3. We must stand for responsible and solvent government on the local, State, and National level.

4. We must stand for the protection of the individual citizen against the encroachments of the criminal underworld, labor goonsters or business racketeers, and this is and should remain primarily the responsibility of local and State authorities.

5. We must stand for the protection of our Nation, its constitutional government and the free world, and for this we must primarily depend on the Federal Government and such reliable allies that care to be associated with us in this common effort. We must understand that you cannot purchase either individual or collective friendship.

6. We must preserve the incentives that will continue to encourage investors to take risks to start new businesses or enlarge existing ones so that more job opportunities will open up for our increasing population. Too high a tax structure, invasion of the Government into price fixing, and labor's encroachment upon responsibilities belonging to management can weaken, if not destroy, these incentives.

7. Government should not become confiscatory in its tax levying. Except in case of war, Federal income taxes should not exceed 33⅓ percent of personal income nor more than 40 percent of corporate income. Out of the earnings of corporations and the savings of individuals must come the capital investment to keep American industry ahead of that of the totalitarian Socialist-Communist state.

8. Every American citizen of voting age is entitled to vote, based on standards of qualification applicable without regard to race, color, or sex. The citizens of all the States have an interest in seeing that the citizens of none of the States are denied such rights.

9. Federal funds will ultimately lead to Federal controls. Federal encroachment in the field of education should be resisted.

10. In guarding the rights of one group we must not abuse the rights of other groups. The right to determine one's religious, fraternal, and social associations is fundamental and should not be surrendered upon any pretext of protecting minority rights.

Now these are not all inclusive by any means. But to me all are pretty fundamental and furnish a point around which large numbers of present-day Republicans, Democrats, and Independents (north, south, east, and west) might join together with a common objective and a mutuality of interest.

Once we establish a large area of agreement on principles we are then in a position to sign up large numbers of workers who can campaign with intelligence and enthusiasm for the candidates running on an understandable and agreed program.

Too often now the worker is unclear as to what his party stands for or who the party spokesman is. He may find his candidates for several offices opposed to each other on rather fundamental issues. This only adds to disunity and discouragement to the precinct worker and confusion among the voters.

Our Nation would not have been founded and the Union would not have been preserved if men and women had not been prepared to stand for certain fundamental principles, regardless of cost.

The preamble to our Constitution states:

"We, the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The Constitution provides for its own amendment. By two-thirds vote of both houses and ratification by three-fourths of the States.

Under this and related provisions our Constitution has been amended 22 times.

While it is a cumbersome process neither the executive, legislative, or judicial branches should seek to or be allowed to short circuit this procedure in letter or in spirit.

Relating back now to the 10 principles of constitutionalism let us examine specifics.

1. The growth of the Federal Government has been astronomical in character. The executive, legislative, and judicial branches have all at one time or another expanded Federal power and whittled away at the rights of the States. This trend needs to be reversed now before we pass the point of no return.

2. The Republican Party should forthrightly fight for the American private enterprise system. New Dealers with governmental economic control of prices and wages are as dangerous to the future of free enterprise as are avowed Socialists who believe in Government ownership of the means of production. Whenever the people want New Dealism or socialism they will take the original and not a faded carbon copy.

3. No responsible official can ignore the fact that today our public debt is over $300 billion and that the interest on it amounts to over $8 billion a year.

This interest charge is greater than all income into the Treasury as late as 1941 and all expenditures as late as 1938.

The time has come for a drastic curtailment of foreign aid as a necessary step to putting our domestic finances in order. Foreign aid is used as a leverage for all kinds of local projects.

Sooner or later the overburdened taxpayer is going to ask if there is any more excuse for his paying for unconsumed agricultural products than for unsold refrigerators, unused paper or uncrated bicycles.

4. A government that cannot protect the legal and constitutional rights of its citizens is not worthy of being supported.

Our ancestors left the Old World to get away from compulsory church membership. Compulsory union membership can negate the basic freedom of choice which Americans once held dear.

5. Freedom is indivisible. Lincoln said our Nation cannot be half slave and half free. Nor in our time can the world.

It has never made sense to me for American funds to be used in support of Communist Yugoslavia or Poland. Between them they have received over $2 billion.

This same sum of money very likely could have given us an earth satellite ahead of the Soviet sputnik.

How much more effective this would have been on friend, neutral, and Communist alike than pouring our free enterprise dollars into these Communist sinkholes.

6. At Washington and throughout the Nation there are doctrinaire forces that believe in a regimented economy.

Under the slightest pretext they will move openly to reestablish OPA-type controls over prices. Inevitably this will lead to wage and commodity allocation controls and to the same chaotic conditions existing in 1946 and 1947, which brought the end to OPA.

There has been, in some quarters, a steady encroachment of labor upon the responsibilities of management that is becoming a detriment to small business and tends to cause small operators to sell out to large competitors. This trend whether resulting from inequitable labor demands or a growing multiplicity of tax burdens is most harmful to our economic structure of which small business is an integral part.

7. Today the Federal Government is a major partner in most of the larger companies of the Nation, taking 52 percent in corporate income taxes.

The personal income taxes, Federal and State, are at the point where they put a wet blanket on the incentive which helped to build our Nation from a small colony of 3 million on the Atlantic coast to a great world power of 170 million, the most productive the world has ever known.

The drying up of savings for investment could slow down the continued modernization of American industry which is so essential if our productivity is to keep ahead of the Soviet Union.

8. Those who believe in States rights, as I do, will be on firmer ground if the constitutional right of citizens to vote without discrimination on grounds of race or color is clearly manifest in all 49 States.

Then the power and dignity of the States to run their own affairs will rest on a firm foundation not easily assailable by those who would make the States, in effect, Federal provinces.

9. If there is any function in which the local people should keep control it is in the field of education. Where Federal funds go, ultimately Federal control will follow.

There is no such thing as free Federal money. It comes from the people residing in the 49 States. However, a dollar flowing from the States to Washington suffers substantial attrition before it comes back as a grant in aid.

10. The American Constitution was founded on the principle that the individual had certain rights that neither the Government nor even tyrannical temporary majorities could take from him.

For example, not even a unanimous vote of Congress, the approval of the President, or the action of the Supreme Court can take away his freedom of religion, press, or right to peaceably assemble and petition the Government for a redress of grievances.

The right of citizens of the United States to vote shall not be denied by the United States or by any State on account of race, color, or previous condition of servitude—15th amendment—or by reason of sex—19th amendment.

As we have already pointed out, approval of amendments takes a two-thirds vote of each House of Congress and three-fourths ratification by the States. No bill of attainder or ex post facto law shall be passed—section 9, article I.

There is one section of the Constitution that cannot be amended even by the amending process. Article V states "and that no State, without its consent, shall be deprived of its equal suffrage in the Senate."

Minorities as well as majorities can at times be arbitrary as against the right of an individual to select his religion, his occupation, his fraternal colleagues, or his individual associates.

The great asset of our way of life is that we uphold the dignity and independence of the individual citizen and our Constitution makes certain that the State is his servant and not his master. We believe in a divine being and communism is a godless tyranny.

These are the great contrasts with totalitarian communism or fascism.

On these basic differences there is not and there cannot be any weakening of our faith or our beliefs.

We are admonished by Second Corinthians:

"Be yet not unequally yoked together with unbelievers for what fellowship has righteousnesa with unrighteousness and what communion has light with darkness?"

Almost 100 years have passed since Abraham Lincoln's election to the Presidency. His words come ringing down through the ages: "Fellow citizens, we cannot escape history. * * * The fiery trial through which we pass will light us down in history to the latest generation. In giving freedom to the slave we assure freedom to the free. * * * We shall meanly lose or nobly save this last best hope of earth."

A Southern Editor's Views on Forced Integration

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. THURMOND. Mr. President, for the benefit of the many who did not have the opportunity of hearing Thomas R. Waring, editor of the Charleston News and Courier, present his brilliant defense of the southern position on forced integration of the races on the nationally telecast Chet Huntley Show of Sunday, February 8, I ask unanimous consent that Mr. Waring's statement, entitled "Editor Offers a Southerner's Views," be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EDITOR OFFERS A SOUTHERNER'S VIEWS

(By Thomas R. Waring)

Mr. Huntley's proposal that the NAACP withdraw from the South would meet with hearty approval, I believe, among most southerners—but not for the reasons Mr. Huntley has expressed. As I understand it, Mr. Huntley believes that mingling of the races could be accomplished with more speed and harmony if the NAACP removed itself. Mr. Huntley has presented legal and other reasons why mixing the races is right. I would like to offer a different viewpoint.

OPPOSED TO IT NOW OR LATER

I am a spokesman for no organization or group of people. I am a newspaper editor in a position that offers opportunities to observe and report on people in the region where I live.

I believe it is a fact that the overwhelming majority of southern people are unalterably opposed to mixing races in public schools. They are opposed to it now or later.

They hold this view not on account of hatred or bigotry, as you may have been told. They hold it because they sincerely believe, on the basis of firsthand experience, that separate schools are best for both races.

In presenting this as the view of the majority of southerners, I refer to white southerners, because they are about 75 percent of the population. But the proportion varies greatly. In my home community, for instance, the population is about 50–50. In some neighborhoods, Negroes outnumber whites 10 to 1. In many school districts integration would mean sending white children to Negro schools.

While I do not pose as a spokesman for the colored people, nor pretend to read their minds, I believe that most of them are happy and satisfied. I do not believe the NAACP by any means represents a unanimous feeling among the southern Negroes.

If some southerners are willing to accept token integration rather than shut down their schools it does not mean that they approve, or accept it permanently. Even token integration brings tension and constant threat of disorder, as well as fear of other evils.

If integration is wrong, as we believe it is, we do not concede that a little bit of it is right. The strength of resistance testifies to the depth of this belief. The choice between separate schools and no schools is an agonizing one for people who have spent years developing an education system.

TRAPPINGS OF THE POLICE STATE

Cordons of police ringed the school at Arlington to enforce admission of four colored children. Not even parents were allowed near the schoolhouse. An Associated Press reporter said the scene presented a picture of Alcatraz, southern style. The trappings of the police state were mounted within sight of the U.S. Capitol.

It is not alone the entrance of a few colored children at Arlington or elsewhere that created all this furor. White southerners are more accustomed to Negroes than people in other regions. It is the seizure of rights and powers for local self-government that makes southern hearts turn cold.

The Supreme Court has rewritten the Constitution it swore to uphold. Chief Justice Holmes, Justice Brandeis, and other liberals accepted the law of the land to mean the States had a right to operate separate but equal schools.

Whether the South closes public schools under threat of mixing, or struggles in some regions with the perils of integration, public education will be damaged.

For white pupils, standards of education will decline. This has been the experience in Washington, D.C., and in other places that have undergone mass integration. The statement is well documented and I haven't time to explore it further.

For colored pupils, the relaxed and familiar conditions of their own schools are lost. Discipline breaks down. We have no blackboard jungles in the South, and we do not want them.

PUBLIC EDUCATION IS BOUND TO SUFFER

Though not all southern schools, white or Negro, have achieved the highest standards, they have vastly improved in recent years. Southerners have spent billions of dollars on them. They had a contract with the Federal Government that guaranteed separation of the races. They would not have taxed themselves for mixed schools. And nobody knows how long they would continue to support schools they don't control. In any event, public education is bound to suffer.

Local self-government, through division of State and Federal powers, is the keystone of our Republic. It is being torn apart for the sake of a sociological experiment. If a police state is substituted for the Republic, no race will gain.

Once before, in prohibition, the United States experimented with sociology. Prohibition was a failure. It brought on bootlegging and a crime wave. Eventually the people came to their senses. They repealed prohibition. At least, it had the authority of lawful constitutional amendment. This time the experiment is with the lives of children—on the basis of court decrees.

Southerners are concerned for the welfare of both races. They realize the need to educate colored people as well as white. They need colored citizens for manpower in the burgeoning new industries. They want to build the earning power of Negro workers so they can carry more of their share of the economy.

GOVERNOR COLLINS' COMMENTS

In his inaugural address last month, South Carolina's young Governor, Ernest F. Hollings referred to these problems. He said, and I quote:

"I shall not dwell on the subject of segregation as it affects race relations. We have all heard too much on this subject and there is too much to be done in the days ahead for us to waste our energies and arouse our tempers over a subject upon which we, in South Carolina, are in essential agreement.

"We are fortunate in having a well nigh boundless store of good will and understanding among all races and beliefs in South Carolina. In our schools, peace patrols the school corridors; unlike New York, we do not need armed guards. The Negroes of our State feel that schools are intended for education. They feel that their Governor and general assembly are doing everything possible to provide them the best educational program and the best opportunity to succeed on an individual basis. Let alone, we shall continue to do this.

"As a practical matter, this can only be done in the segregated pattern, and for those who would by integration destroy the education, culture, opportunity and friendship of both races, I simply state that our position of determined resistance remains unchanged."

Southern people are not, as you may have been told, captives of blind leaders who will not or cannot read the signs of progress.

DEFINITION OF A MODERATE

The people demand that their piblic schools be separate. We hear sometimes about Southern moderates. A moderate is an integrationist who isn't in too big a hurry. Fast or slow, most southerners are convinced that mingling the schools would be disastrous.

What is the aim of integration?

It is not improvement for white pupils. Educational standards in mixed schools would have to be reduced to the lowest common denominator.

LEARNING NOT PROMOTED BY TENSION

It will not improve education for Negro pupils. An atmosphere of tension does not promote learning. Discipline would have to suffer when any classroom incident is likely to explode into a racial incident.

It would not promote good relations between the races. Both North and South, integation or attempts at it have created racial trouble.

It will not create respect abroad for the United States. Internal squabbles involving troops, police, and constant arguments over rights and freedoms are signs of unstable conditions.

If the aim of integration is to sustain legal and sociological theories, without regard to practical effects on human beings, it is not defensible.

If the aim is to humiliate the white southerners, it is beneath contempt.

If the aim is to raise the status of the Negro, it won't work. The Negro needs many things more than he needs association with white people on an involuntary basis.

While national diplomacy courts favor in foreign countries, on the domestic front the American Government is not seeking to win friends and influence people in Southern States.

I shall not attempt to explore the reason for those policies. They are in large measure political.

NAACP CREATES DIVISION, ANIMOSITY

The National Association for the Advancement of Colored People has been able to exploit these political forces. It has achieved a balance of power out of all proportion to its actual worth. Millions of white southerners have become an unorganized and oppressed minority.

The NAACP creates division and animosity. Some of its leaders have official records of contacts with subversive organizations. Their names have been published in reports of congressional committees.

With its political allies, the NAACP has set up a virtual censorship on race.

One minor bit of evidence is the removal of dialect from magazines, books, and newspapers. Though Negro dialect is forbidden, a California cartoonist who lampooned the southern speech of Governor Faubus was singled out recently for some kind of freedom award.

Negro crime in cities is appalling, but the facts are being deliberately disguised in the Paper Curtain press.

Superior force may overwhelm the South, as it has done before. But troops and police cannot forever suppress millions of resourceful people.

I do not believe the rest of the country wants some of the States to become concentration camps for the sake of mixing white and colored children against their parents' will.

Lee Wooden Talks to Vernonia High School Students on Rural Electrification

---

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. NEUBERGER. Mr. President, at a time when the rural electrification movement is under attack, it is well that Senators and Representatives should be refreshed regarding its origins and accomplishments.

One of the great pioneers of rural electrification in the Pacific Northwest is my good friend, 77-year-old Lee Wooden, of Jewell, Oreg., who is the longtime president of the Oregon Rural Electric Cooperative Association.

Mr. Wooden is a frontier farmer and lumberman, now retired. In his own words, he remembers what it was like in the Northwest and in Oregon during the era of kerosene lamps and candles. I know, too, not from personal experience but because Mrs. Neuberger's farm family had none of the blessings of electricity until Bonneville Dam was built and the REA financed rural powerlines.

In the February issue of Northwest Ruralite for 1959, there is reprinted a sincere and direct speech which Lee Wooden delivered to the students of Vernonia High School in the lumbering town of Vernonia. The speech is entitled "What Rural Youngsters Should Know." I ask unanimous consent, Mr. President, that Lee Wooden's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT RURAL YOUNGSTER SHOULD KNOW

(By Lee Wooden)

(Seventy-seven year-old Lee Wooden, president of the Oregon Rural Electric Cooperative Association and pioneer Clatsop County timberman and farmer, tells people he has retired. Lately, he has been making a hobby of bringing to the young people of his State an awareness of the meaning of rural electrification. In case you never knew, or have almost forgotten what Mr. Wooden knows so well, Ruralite reprints here some of the story he recently told students at the Vernonia, Oreg., high school.)

Prior to 1935 only 1 farm in 10 had electricity at the turn of a switch. On May 11, 1935, the Rural Electrification Administration was created by executive order of President Roosevelt. That order not only established REA, it also appointed that famous engineer, Morris L. Cook, as the first Administrator.

Congress immediately appropriated $100 million to be loaned to both commercial and public utilities. This money was only for

the extension of existing electric lines into farm areas which at that time did not have electric service. The order made no mention of the formation of electric cooperatives to do the job.

One full year was lost in a futile effort to introduce the existing electric utilities to borrow the money at a low rate of interest, and then Congress realized that it was useless to try further persuasion, and passed the Norris-Rayburn Act, known as the REA Act of 1936.

The Norris-Rayburn Act was signed into law on May 20, 1936, by President Roosevelt. This act gave to the farmers and rural people the right to form their own electric cooperatives and to borrow the money at a low rate of interest to build their own electric systems.

Today, more than 21 years since the REA Act of 1936 was passed, not 1 farm in 10, but 96 percent have electricity at the turn of a switch. Electricity does more to raise the standard of living in the home than any other commodity, and does many more jobs on the farms than is required by the city dweller.

Each cooperative member has a voice and a vote at the annual membership meetings. The members elect a board of directors and establish the policies that govern the management of the cooperative.

On May 11, 1935, when President Roosevelt signed the Executive order creating the Rural Electrification Administration, commonly referred to as REA, he had two main objectives in mind. First, there was a great need to extend electric lines into farm areas, not only to raise the standard of living in the homes and on the farms of America, but also to eliminate much of the drudgery of farm life and make the farm homes a better and much more pleasant place to live, and increase their productivity. Second, the Nation was in the worst depression ever known in the history of this country.

This new business, created by the building of nearly 1,000 electric cooperative systems throughout the Nation, has had a great stabilizing effect nationwide. This wonderful program has created new wealth, new business, where none existed before, and new jobs in untold numbers.

It is estimated that for every dollar loaned to electric cooperatives, more than $6 have been spent for appliances and equipment, thereby greatly increasing employment, and greatly benefiting the entire economy.

All of the nearly $3 billion loaned to electric cooperatives by REA is being repaid over a 35-year period at 2-percent interest, and to date better than 39.9 percent of all payments, both principal and interest, are either current or paid in advance of the due date.

While the REA was not created to make a profit on the money loaned to the cooperatives, according to figures as of February 1957, the Government had netted $47.5 million. That is, the money collected as interest was that much more than the cost of money to the Government.

The members of an REA-financed cooperative own their electric systems and, since such cooperatives are nonprofit organizations, any surplus at the end of the year is credited to the member's account in direct proportion to his yearly payment for service. The 4 million members of the nearly 1,000 REA-financed electric cooperatives represent more than 15 million people. Oregon's 15 REA-financed electric cooperatives have 33,000 members and represent more than 100,000 people.

Many of the new members do not remember the tallow candle and the kerosene lamp and lantern. Most all newspapers and magazines, as well as all other media, carry vicious propaganda advertising against locally owned electric cooperatives. The fight is being carried on both at the State and national level and unless the members fight for their rights they may become weary of the struggle and lose their own electric systems.

Supreme Court Not Sacred to Lincoln

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. THURMOND. Mr. President, there has been in recent times much controversial discussion concerning the morality of criticism aimed at the U.S. Supreme Court. While even the greatest statesmen of every age were not infallible, a review of their attitudes can often be helpful in deciding current controversies. The able columnist, Mr. David Lawrence, has made a definite contribution by discussing the attitude of President Lincoln toward the Court in his column entitled, "Supreme Court Not Sacred to Lincoln," published in the Greenville News of Greenville, S.C., on February 15. I ask unanimous consent that this column be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPREME COURT NOT SACRED TO LINCOLN

(By David Lawrence)

WASHINGTON.—The Nation celebrated last week the birthday of Abraham Lincoln. Eloquent eulogies were spoken—and he deserves them all. But if what Abraham Lincoln said just 100 years ago were attributed today to anyone else in public life, the same utterances would be denounced as coming from a racist, or extremist, or a person who defies the Constitution.

Few people realize how outspoken Abraham Lincoln was against a Supreme Court decision and how he insisted that a mere overturning of precedent in a ruling was not settled law. It was just 100 years ago when Abraham Lincoln was debating with Stephen Douglas in the State of Illinois. Only a few months ago the Library of Congress published a book containing facsimiles of the printers' copy of the stenographic record of Lincoln-Douglas debates as edited and prepared for the press by Abraham Lincoln.

Following is a quotation from Mr. Lincoln's speech delivered on July 13, 1858, at Chicago:

"The sacredness that Judge Douglas throws around this decision (of the Supreme Court of the United States) is a degree of sacredness that has never been before thrown around any other decision. I have never heard of such a thing. Why, decisions apparently contrary to that decision, or that good lawyers thought were contrary to that decision, have been made by that very Court before. It is the first of its kind; it is an astonisher in legal history—it is a new wonder of the world."

In speaking further of the Dred Scott decision, Mr. Lincoln said at Quincy, Ill., on October 13, 1858:

"But we nevertheless do oppose that decision as a political rule which shall be binding on the voter to vote for nobody who thinks it wrong, which shall be binding on the Members of Congress or the President to favor no measure that does not actually concur with the principles of that decision. We do not propose to be bound by it as a political rule in that way. * * * We propose so resisting it as to have it reversed if we can, and a new judicial rule established upon this subject."

In another speech delivered in Chicago on July 17, 1858, Mr. Lincoln quoted with approval a letter from Thomas Jefferson, written in 1820, which declared that if the judges of the Supreme Court are to be considered as "the ultimate arbiters of all constitutional questions," this could be a "very dangerous doctrine indeed and one which would place us under the despotism of an oligarchy."

In a speech delivered at Ottawa, Ill., on August 21, 1858, Mr. Lincoln took up the race question. He denounced slavery, but then added:

"I have no purpose to introduce political and social equality between the white and the black races. There is a physical difference between the two, which in my judgment will probably forever forbid their living together upon the footing of perfect equality, and inasmuch as it becomes a necessity that there must be a difference, I, as well as Judge Douglas, am in favor of the race to which I belong having the superior position. I have never said anything to the contrary, but I hold that notwithstanding all this, there is no reason in the world why the Negro is not entitled to all the natural rights enumerated in the Declaration of Independence, the right to life, liberty and the pursuit of happiness. I hold that he is as much entitled to these as the white man. I agree with Judge Douglas, he is not my equal in many respects—certainly not in color, perhaps not in moral or intellectual endowment. But in the right to eat the bread, without leave of anybody else, which his own hands earns, he is my equal and the equal of Judge Douglas, and the equal of every living man.

"What next? Free them and make them politically and socially our equals? My own feelings will not admit of this; and if mine would, we well know that those of the great mass of white people will not. Whether this feeling accords with justice and sound judgment is not the sole question, if indeed it is any part of it. A universal feeling whether well or ill-founded, cannot be safely disregarded. We cannot, then, make them equal."

Jobless Pay

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial which appeared in the February 3, 1959, edition of the Muskegon Chronicle supporting Federal standards in the field of unemployment compensation. On this exrtemely important issue, one which I hope this Congress will resolve along the line suggested by the Muskegon Chronicle, I am sure all will profit from a reading of this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOBLESS PAY

Congress is getting a number of proposals for setting up a nationwide minimum standard for unemployment compensation, instead of leaving this to the action of each separate State.

There is a tremendous need for national legislation on this subject. Congress has talked about it now for several years, but nothing definite has been done.

Why should States be permitted to compete with one another on the basis of below-minimum unemployment schedules? That is the way it is now. Just as we have a national minimum wage law for industry engaged in interstate commerce, so we should have a national minimum jobless pay level.

The advantage to Michigan is obvious. Our State is one of those that have shown a decent concern for people in industrial employment who are laid off through no fault of their own. Nearly all States have a lower standard of jobless pay than Michigan.

Yet in the process this State has placed itself at a competitive disadvantage with the others that adhere to niggardly standards as a lure to industry, or because labor in those States has a weak voice in its law-making process.

Ever since he became President, Mr. Eisenhower and his Secretary of Labor have urged an increase in the amount, duration and coverage of jobless benefits.

But the situation is as uneven as ever on a State-by-State basis. It should be as apparent to Members of Congress as to everybody else that a national minimum standard is the only solution.

Not many days ago somebody introduced a bill at Lansing to provide unemployment compensation in this State for as long as a person is out of a job. In view of the condition facing Michigan, it is a nonsensical proposal, the main purpose of which was to serve as an entering wedge to extend the present limit.

The cure for Michigan's unemployment is more jobs, not more penalties on present employers and a still greater discrepancy between the jobless pay level of this State and the considerably lower level in most other States.

National legislation, bringing all States to a decent minimum jobless pay standard, is the answer. Michigan Members of Congress, Republicans and Democrats alike, should unite behind such a measure.

Foreign Alumni: One of America's Greatest Assets

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. WILEY. Mr. President, today we recognize that tensions in the world which result in fear, distrust, and misunderstanding are a deterrent to world peace. Currently, we are trying to find ways and means of breaking through the barriers to create better understanding among the peoples of the world.

Recently Mr. Don Anderson, vice president of the Wisconsin Alumni Association, published a thought-provoking article in the Wisconsin Alumnus, entitled "Foreign Alumni: One of America's Great Assets."

In his article, Mr. Anderson points out that men and women from other lands—educated in American colleges and universities—can and are serving in their own nations as important reflections of our way of life.

Educated in our principles and ideals, they are acting to create better understanding, and often to correct the distortions being spread about us by Communist propaganda.

I am pleased to say that the University of Wisconsin—a truly great institution of learning—is now educating about 649 students from 70 nations. Over the years, almost every country in the world has been represented at this fine university.

As alumni of Wisconsin, many of these students will carry back to their homeland a better understanding of this great country.

As a basis for activities, a number of these alumni have organized groups or clubs abroad. Today, for example, Wisconsin has alumni clubs in Bangkok, Manila, Tokyo, and Honolulu. In other nations there are informal get-togethers of alumni.

The expansion of such efforts—based on private initiative, foresight, and constructive thinking—would indeed make an important contribution to creating a better understanding of us among the nations of the world.

To give my colleagues the benefit of Mr. Anderson's thinking on this program, I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN ALUMNI: ONE OF AMERICA'S GREAT ASSETS

(By Don Anderson)

I hope that the day will come when every country in the world has an organized group of Wisconsin alumni, meeting regularly, continuing to learn the lessons that any good school has to teach its children no matter how long they have been out of the classrooms, sending back to this campus the experience and support that every school needs from its alumni.

Dr. Hu Shih, scholar and former Chinese Ambassador to the United States, once said that America's greatest contribution to education was its revolutionary concept of the alumnus, its concept of the former student as an understandable responsible partner and champion.

Wisconsin has been fortunate, especially in recent years, in having strong alumni relations. I would ask that this spirit be extended in a larger degree to the foreign students who come to study here. From classroom and laboratory they get much that a university has to offer. I would like to see them better encouraged to be loyal Wisconsin alumni after they have returned to their homelands. It can be a source of continuing benefit to them, a source of new wealth to the University itself.

It is not known exactly when the first foreign student registered here. There were none in the 1870's. In 1905 there were 33. This year we have 649 students from 70 nations. The leading country is India with about 100 students.

It is estimated that altogether 3,800 foreign students have attended school here. Practically every nation in the world has been represented. If a university gives its students not only knowledge but loyalties as well, is it too much to suggest that there is a little flavor of Wisconsin in every one of the world's communities? Would it not enrich us and the rest of the world to have those loyalties deepened and strengthened?

This program is one that cannot be carried out by faculty and administration alone. It calls for planning and effort by the student body. It will require planning and programing by the alumni association, because it is easy to lose these alumni once they have gone back to their native lands. It needs the understanding and the hospitality of Madison and other Wisconsin communities to help give our foreign guests an understanding and an appreciation of American home and family life.

Much has been done along these lines already, but there is room for improvement.

Too many Americans fail to appreciate the importance of having foreign students here to live and study with us. I think that failure of understanding is almost as common in the university community itself as it is elsewhere in the American scene outside the halls of ivy. Too often we look at these visitors in terms of a favor we are doing them, a privilege they could not enjoy were it not for the largesse of the American taxpayer and his tax dollar. I suggest that if there is anything of merit in our social order, in our economics or our politics, if there is any importance in impressing the rest of the world with the validity of our philosophies, then we are the ones who benefit when the foreign visitor is exposed to our ideas and our way of life which often show to their best advantage in our American university communities. We should be the ones who are grateful for the opportunity offered us.

Roy L. Matson, editor of the Wisconsin State Journal, recently returned from a 3-month tour of duty in India for the State Department. He also visited Thailand, Hong Kong, and Japan. He lectured and talked informally to thousands of people of every conceivable variety of political opinion and ideology. Along the way he met hostility, disbelief, or scorn for the United States and the West. Always there was one shining exception, one person or group of persons, who at least understood us, even if they did not always agree with us. That exception almost invariably turned out to be the graduate of an American university.

If, in their mind, there was not complete agreement, there at least was understanding and that is not a little thing.

The American, face-to-face and in association, is not the frightening thing his detractors abroad sometimes paint him. In no better way can the American be drawn in his true light than by having the man from abroad live with him and learn with him. In no better way can the man from abroad learn that behind and beneath the American's breezy front, his laughter, his insanity at world series time and football season there lies the American ideal.

It is a thing that is discovered with some surprise by many if not most from abroad: the American concern for opportunity and justice for the common man. Once discovered it is a thing remembered, appreciated, and treasured. And it is a thing that is as powerful to American friendship and advantage as all the defense alliances and power pacts we can devise around the world.

As important as these larger values are the smaller ones that accrue. They are the friendships which develop between classmates. An intelligent and cultured foreign student brings breadth and delight to dor-

mitroy, fraternity or rooming house. Those of us who have had them live in our homes know how much richer our family has been made by the contact, and the deep and lasting friendships that have come from them.

Wisconsin now has alumni clubs in Bangkok, Manila, Tokyo, and Honolulu. Tom Brittingham's Vikings get together informally on occasion in Scandinavia. I hope that the day will come when every country in the world has an organized group of Wisconsin alumni, meeting regularly, continuing to learn the lessons that any good school has to teach its children no matter how long they have been out of the classrooms, sending back to this campus the experience and support that every school needs from its alumni.

Wisconsin has two great declarations of principle and policy. The first is the one on winnowing and sifting on the plaque at Bascom Hall. The other is that the boundaries of the State shall be the borders of the campus.

Can anything but good come from extending the borders and the boundaries to include the sons and daughters of Wisconsin wherever they live in this whole world?

How They Steal and Hide Millions

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. CHURCH. Mr. President, the recent Cuban revolution is bringing to light many sordid facts concerning the deposted Batista regime. Looting seems to be the common practice of Latin American dictators.

Jack Anderson exposes Batista's methods in an illuminating article published in the Parade magazine section of yesterday's Washington Post. I ask unanimous consent that the article, entitled "How They Steal and Hide Millions," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW THEY STEAL AND HIDE MILLIONS

(By Jack Anderson)

WASHINGTON, D.C.—Swiss bankers who specialize in secrecy helped ex-dictator Fulgencio Batista rob the Cuban people of millions before his blood-and-booty rule came to an end. Yet he is only the latest in a long line of Latin American dictators to get away with vast loot and retire to a life of luxury.

Argentina's Juan Peron, kicked out by an army revolt in 1955; Peru's Manual Odria, ousted in 1956; Colombia's Rojas Pinilla, toppled from power in 1957; Venezuela's Perez Jimenez, thrown out by his people a year ago—all escaped with the fabulous fruit of years of graft and corruption.

The surviving dictators, Rafael Trujillo of the Dominican Republic and Alfredo Stroessner of Paraguay, are reported to have huge fortunes salted away against the day they may be forced to flee. Nicaragua's Anastasio Somoza was similarly prepared against poverty when an assassin's bullet (one of the hazards of his profession) found his heart in September 1956. His misfortune may well have been some Swiss banker's windfall. The money in his secret accounts may have been so well hidden that no one knew how to claim it all. In that case it would have had to revert to the bankers.

The drama of Batista's New Year's Eve flight to the Dominican Republic, reputedly with suitcases stuffed with high denomination bills, poses a problem not only for Latin America, where dictatorship flourishes, but for the United States, too. With billions of American tax dollars being poured into the Latin American aid program, it is important to know how these vital funds can be raided so ruthlessly and huge sums vanish so completely.

Since Batista's exist, Parade has made an exhaustive investigation of the great dictatorship racket. How do the dictators rob their people? More important, how do they cache the money? Parade contacted authorities in Havana and here in Washington, talked with top officials of the Cuban Embassy here, interviewed Batista henchmen who have taken refuge in this country, checked with the State and Treasury Departments, even succeeded in prying loose exclusive information from the cagey Swiss bankers who hold the accounts of the dictators, both fallen and fearful.

THE REAL TREASURE

From this mass of material, one startling fact emerges. While there are many ways of robbing a country and hiding money, the dictator's real treasure chests lie far away, in Geneva and Berne, to be unlocked only by secret codes. Their accounts are identified only by numbers so closely guarded they never are committed to paper, only to memory.

Parade was permitted to see a Swiss code account held by one Batista aide. There is nothing like it elsewhere in the whole system of banking. The secrecy of Swiss banks is protected by the bulky Swiss constitution itself. Not even the Government can force a bank to disclose the name of a depositor, the amount to his credit or the record of his deposits and withdrawals. Result: the Swiss have become the world's leading bankers and their vaults the repository of most of the world's shady money. Not only dictators but gangsters, gun smugglers, dope traffickers, and the white slavers have stacked their money with the Swiss.

Swiss secrecy has become such a valuable commodity, in fact, that the banks of Geneva and Berne pay commissions of 3 to 5 percent to anyone who can bring in a large secret account. Some banks go further and offer an additional 10 percent of all that can be salvaged should the depositor suffer an accident and the money remain unclaimed. After a reasonable waiting period, the bank concerned usually seizes the money. No wonder Latin American dictators, with their high casualty rate, are welcome clients.

Swiss bank transactions can be bizarre. Although one representative insisted that the total number of secret accounts is far smaller than generally believed, he did acknowledge that it would be impossible for the Swiss Government or anyone else to guess the number of such accounts or how much is contained in them. He told how his bank had once received $4 million in French francs that had been floated across a lake.

The secret depositor apparently could not escape across the French border with the money. So he packed it in a barrel and painted instructions on the outside, asking the finder to take it to a certain bank in return for a reward. Inside the barrel were code instructions telling his bank to whom it belonged and how much reward should be paid. The depositor then waited for a favorable wind, launched the barrel and watched it drift into the darkness. It was picked up next morning by a Swiss fisherman, who scrupulously obeyed the painted instructions.

The code system is so complex that it defies breaking. The depositor is given a secret code number, then is provided with a set of tables that enables him to communicate with the bank by other code numbers. His account number is known only to himself and the bank managers. The set of tables provides serial numbers for messages; even the date and type of currency must be identified by a number from the secret tables.

Without this elaborate code, he would have to negotiate in person. He would then identify himself by his memorized number and supply whatever additional confirmation the bank required. This would depend on instructions given by the depositor on opening the account; perhaps some incident from his childhood, or the name and age of a distant relative.

Holders of numbered accounts receive statements only upon request. Then the statements are mailed in plain envelopes with the address scribbled, looking on the outside like a letter from a friend.

Beyond the slightest doubt, Batista, Peron, and the others have not one but many such accounts. They have siphoned millions into secret Swiss accounts, held by themselves and their graft-grabbing compatriots.

HOW MANY MILLIONS?

Batista may have left Havana with dollar-crammed suitcases, but it would be only his petty cash. The fortune he amassed was too huge for so picayune a means of transport. He had been getting booty out of Cuba for years. How many millions he acquired probably never will be known. It is doubtful that he even knows the amount himself. The new Cuban Government is working day and night trying to unravel Batista's financial skullduggery, but it will be months before even a faint outline of the plot emerges.

Some authorities in Havana estimate that he got away with $200 million. Congressman CHARLES PORTER, Democrat, of Oregan, who championed the rebel cause in Congress by putting pressure on the State Department to stop the flow of U.S. arms to Batista, believes that $500 million is nearer the mark.

"I intend to ask the Treasury and Justice Department to investigate Batista's holdings in this country," PORTER informed Parade. "I also intend to explore what steps can be taken to return this money to the Cuban people from whom it was filched."

During the first Batista years in power (1933–44), he amassed a personal fortune of more than $60 million. This much became a matter of official court record when he divorced his first wife, Elisa Godinez, to marry his mistress, Marta Fernandez. The divorce settlement: $15 million in cash, checks, and property.

It was generally conceded the $60 million was only the part of the Batista financial iceberg showing above water. The bulk of it was well below the surface. His code accounts in Switzerland were beginning to bulge. He siphoned off other funds into U.S. banks, stuffed safety deposit boxes with bearer bonds, bought real estate in Jacksonville and Daytona Beach, Fla.

Outside Havana he built the luxurious Kuquine estate, giving it all the fancy trimmings he had dreamed about as a peasant boy. All the rooms were marble-floored, the cellar mahogany-paneled. He built another mansion at Daytona Beach to house him during his voluntary exile (1944–51).

But it was not until he returned to Cuba in 1951 that the ex-sergeant (who got his stripes for his skill at shorthand, not soldiering) really hit the jackpot by taking charge of Korean war profits. This was the period known in Cuba as the Dance of the Millions. Sugar almost came to be worth its weight in gold dust; the price soared from ½ cent to 8 cents a pound. He also changed the gambling laws, to make Havana a wide-open rival to Las Vegas and Reno. Batista raked in the greenbacks like autumn leaves.

THE GANGSTERS MOVE IN

For the Cuban people, the Dance of the Millions rapidly became a Danse Macabre. Headed by Meyer Lansky, one-time beer baron who had become acquainted with Batista in Florida, American gangsters began to move in. If they thought they had anything to teach Batista, they soon learned differently.

Batista's grip on Cuba was so complete and ruthless they were left openmouthed. His rakeoffs went right down from the biggest companies to the smallest bootblack. Little shopkeepers paid $2 for opening each morning, another $2 for closing each night. Taxi drivers paid $1 for the privilege of parking in a given spot. The national lottery, always a feature of Cuban life, had become almost Batista's personal property. His associates were paid off in batches of tickets that they could either sell or hold. They also ran five illegal lotteries, called Molitos, without interference.

Batista's vivacious wife, taking her lead from Argentina's notorious Evita Peron, received a monthly check of $70,000 to spend on charities. It was money to spend as she wished. Her brother, Roberto Fernandez, as Cuba's Government Sports Director was the country's slot-machine king. He tapped every gambling machine in the island for 50 percent of the take, including those on which children played during the village fiestas. General Francisco Tabernilla, the army chief, pocketed a percentage of every bottle of Scotch whisky imported into Cuba. (Whisky came to be known as Old Tabernilla.) Other Batista men drained off tribute from prostitution, trade unions, public work projects. Under the table, the dictator always got his cut.

U.S. racketeers, graduates of the roaring twenties, gained a grudging admiration for Batista as they planned their lavish hotel casinos. He was ready with Government millions to provide financing. He gave special low-tariff rates for materials such as steel and concrete that had to be imported. Here were lush pickings. Contractors imported twice as much as they needed, then sold off the surplus for huge profits on the open, eager market. But in every case Batista, the donor of this financial banquet, expected his kickback, and his police were around to see that he got it.

Batista was quick to devise a means of keeping the enormous sums he was accumulating out of the Cuban banking system, which, clinging to old-fashioned honesty, required bookkeeping. He set up an institution with the impressive name, Banco de Dessarrollo Economico y Social (Bank of Economic and Social Development). It was less formally known as Bandes.

AN OPEN SECRET

On the surface, Bandes was supposed to be a special bank for handling a $350 million fund earmarked for public works. Actually it functioned as a clearinghouse for graft, complete with numbered accounts patterned after the Swiss system. It was not a particularly well-kept secret that the military and public works projects processed through Bandes were handled on a 50–50 basis—50 percent for the project, 50 percent for Batista and his friends.

The day after the Castro rebels moved into Havana, they acted swiftly to sequester the bank accounts and seal the safety deposit boxes of everybody connected with Batista. Through a special Ministery for the Recovery of Stolen Property, the new Government is attempting to recoup some of the graft.

A Castro spokesman told Parade that investigators already had unearthed an office that controlled 40 companies worth an estimated $40 million. Most of the stock was issued in blank to the bearer. They have traced much of the stock to members of Batista's family, and are satisfied that the 40 companies are merely fronts for the ex-dictator himself.

However much the new Cuban Government may recover of Batista's loot, it will still be only a fraction of the millions extracted from Cuba.

Other dictators and racketeers, present and future, will go on escaping with millions, just so long as there are welcoming bolt holes into which they can pour their money. Bolt holes like those Swiss banks, where a man is only a number, and where the laws of a country can be used to protect his perfidy.

A Little Dog Named Butch "Writes" to Senator Thurmond

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. THURMOND. Mr. President, as we in the Congress read our daily mail, it is a great relief to discover correspondence of a purely human-interest nature, especially when it is in the lighter vein. I recently received a letter from one of my canine constituents which is so well expressed that I believe it is deserving of wide distribution. I ask unanimous consent that a letter which I received from a dog named Butch in Columbia, S.C., be printed in the appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 5, 1959.

Hon. STROM THURMOND,
U.S. Senator,
Washington, D. C.

DEAR SIR: I am a little dog about 7 months old. I am considered a mild-mannered dog. Well liked by my master and mistress, I am well cared for. I take my shots for rabies; I buy my city license each year. I try very hard to abide by the city laws, because I have been taught that way.

But the real reason I am writing you is, I believe the Government should make some provision whereby my master could use me as a dependent, because I am solely dependent on my master to provide me with food, shelter, and medical care; because I do my best to see that he is protected while he sleeps; I act as a doorbell because when someone who is in trouble and wants to use my master's telephone, I always let him know that a stranger is near; and should a storm suddenly strike at night, I usually wake him and let him know. I am always mindful of fires, or prowlers at night; I watch and care for my mistress while my master is working.

I eat an awful lot; I get very seldom sick or need medical care, but I am confident should the need become apparent I can rest assured that I would be given the necessary treatment.

I do try very hard to protect my master's property from stray animals and persons who come for no good reason.

I am very polite to my master's friends; I romp with joy when I hear them brag about how well I look and how polite and considerate I am when they visit my master.

You know I was put here by God; I am a creature; I live and breathe like you; I have feelings that can be hurt; I must have food, water, and medical care; I cannot ask for it because I don't speak; I depend solely on my master because he understands me. He knows when I am sick, and he knows when I should be fed. I provide many hours of happiness and joy for my master by romping and playing. I run many miles a day bringing back sticks which my master throws in the yard and creeks. I cannot live without my master. I do not have to sleep under bridges or houses at night and I do not have to turn over garbage cans for food. I do not have to beg or pretend to like someone to get a bone or food because my master provides me with everything I need. I realize it costs money to keep me, but my master never complains. He is kind and generous; he is ever mindful of my welfare. Please help me so I can help my master. He is Mr. (and Mrs.) G. H. Orr, 4329 Colonial Drive, Columbia, S.C.

Yours very truly,

BUTCH.

Support for a Needed Move To Preserve Padre Island in the Gulf of Mexico

EXTENSION OF REMARKS
OF
HON. RALPH YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. YARBOROUGH. Mr. President, the first bill which I introduced this session provided for the establishment of Padre Island, stretching along the coast of the Gulf of Mexico between Corpus Christi and Brownsville, Tex., as a national park.

This island features some of the finest beaches to be found anywhere in our United States. In addition, they are almost in the same State as they were when the Karankawa Indians lived on the island, when the Spanish explorer Alonso Alvarez de Pineda set foot on the shores in 1519, to be followed by Cabeza de Vaca, David Ingram, and others, and when a young lieutenant named George G. Meade sailed down Laguna Madre on the island's landward side to see if Gen. Zachary Taylor could take his artillery to Mexico by water.

It is an unfortunate truth that in many sections of our country the shoreline was vanished from public use. According to a national survey, only 240 miles of the 3,700 miles of shoreline constituting the Atlantic and Gulf coasts are in Federal and State ownership for public recreation use.

I believe a national park on Padre Island is sorely needed to preserve some of our coastline for the enjoyment of all. If it is made a park, I confidently predict Padre Island will become a winter playground for the Nation.

What better place could there be than this sandy island on which Texas longhorns once grazed and where one can still visit the wrecked hulls of fishing boats and pick up glass colored by the sun marking the sites of towns established here by early settlers? The story of the centuries lends flavor to this island, rich in legend of Indians, pirate treasure, explorers, soldiers, cowmen, and fishermen and sailors.

In addition, the island provides sanctuary for birds and wildlife and the water around it yields fine surf fishing.

Its unique combination of geographical formations, scenery, history, climate, and wildlife cannot be duplicated anywhere else in the Nation.

Mr. President, in further support of my reasons for wanting to preserve this last substantial strip of the American coastline which is still almost entirely in its natural State, I request unanimous consent to have printed in the Appendix of the RECORD a resolution of the Guild of the Houston (Tex.) Museum of Natural History, of February 9, 1959.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF GUILD OF HOUSTON, TEX., MUSEUM OF NATURAL HISTORY, FEBRUARY 9, 1959

The Guild of the Houston Museum of Natural History recognizes that Padre Island is unique in that it is the longest sand barrier island in the world; that its dunes and sand beaches are the finest along the Gulf coast; that bird values are outstanding and its marine life fascinating; and that its historical and recreational values are important.

It recognizes also that the island is largely unspoiled but that easy accessibility, due to three causeways, will soon destroy its natural beauty and its value for public recreation and study: Therefore

Resolved, That this organization go on record as favoring the acquisition of Padre Island for public recreation and for conservation of its beauty and study values.

Resolved further, That this guild take whatever action seems expedient to bring about the perpetuity of the island in its natural state.

Bigness Gives Power, Not Efficiency

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Monday, February 16, 1959

Mr. HOLLAND. Mr. President, some time ago I had called to my attention an excellent article which apeared in the St. Petersburg Times of November 29, 1958, entitled "Bigness Gives Power, Not Efficiency" by Mr. Theodore K. Quinn.

The author is one of the Nation's outstanding authorities on problems of monopoly and bigness in business. He is the author of numerous books and articles on industry and labor and has been a frequent witness before congressional committees on problems of monopoly.

In order that Senators may have an opportunity to read this enlightening article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIGNESS GIVES POWER, NOT EFFICIENCY

(By Theodore K. Quinn)

(The author of this guest column is one of the nation's outstanding authorities on problems of monopoly and bigness in business. Former chairman of the board of General Electric Finance Co., now president of the Monitor Equipment and of T. K. Quinn Co., Inc., business consultants in New York, he has worked with Senators O'Mahoney and Kefauver on problems of monopoly, been a frequent witness before congressional committees, and is the author of numerous books and articles on industry and labor. He maintains a home in Largo as well as one in Roxbury, Conn.—The Editors.)

The distinguished physicist, Dr. Chauncey Starr, head of Atomics International, to whom you refer in your November 20 editorial "Bigness vs. Efficiency Problem," should not be taken seriously when he protests the governmental, economic policy of awarding nuclear power component contracts to small companies. His position is wholly self-serving whether or not he so intends it.

There is, to be sure, an optimum point of production efficiency—that is, lowest cost in relation to investment—in the production of every product. It runs into greater volume in the production of automobiles, for example, and is quite small in tool making, to use an opposite, extreme example. But there is no rule of thumb, and bigness is never efficient per se. On the contrary, the opposite is most likely to be true.

Unfortunately, efficiency in our society is dangerously confused with power. In this sense James Hoffa is efficient; so is Frank Costello. None of the 80 and more billionaire capital corporations need to be as immense as they are for any reason of efficiency. They swelled up through capital power, almost invariably by absorbing and combining other companies. Usually they have many separable departments and divisions not often related to any single product where concentration and the division of labor could produce efficiency.

General Motors, the world's largest manufacturing corporation, like the other giants, is huge because it combines dozens of formerly independent companies. Its production of Cadillacs does not make its production of Chevrolets, Buicks, Pontiacs, Oldsmobiles, etc., more efficient. It does not have also to be in the home appliance business, the bus line operating business, diesel engine business, insurance, finance, etc.—not for any reason of efficiency.

But, and this is the whole point, its tremendous size gives it proportionate power of a coercive kind, in purchasing influence over hundreds of banks it patronizes, over railroads handling its enormous shipping, over magazines, newspapers, and broadcast media—to which it pays over a hundred million dollars a year. All of this spells power, sheer might, not efficiency.

Less than 40 corporations the size of General Motors could handle our entire economy's output of goods and services, including nuclear components. Is this what America really wants? Wouldn't that be too much like Russia, where there is but a single, arbitrary, undemocratic authority?

The available evidence indicates that the biggest companies are not the most efficient producers. Neither United States Steel nor Bethlehem, the two largest, are the lowest cost operators or producers of steel. General Electric, with which I was associated for many years in official capacities, was never the lowest cost producer of any of its many, many lines, except where it was the only producer.

But it had the advantage of certain high profit, monopolistic lines, such as electric lamps and certain big generators, which enabled it to absorb losses on other lines until competitors realized they could not overcome their capital disadvantage, and joined, legally, of course, in livable profit margins and prices.

It makes little ultimate difference to the public from the purely dollars and cents standpoint whether essential independence in smaller companies is subsidized directly or whether, on the other hand, monopoly is supported and encouraged by the Government favoring giant corporations, which eventually resort to administered prices and extort as much or more in high profit rates.

The vital difference is that we can, through smaller companies, maintain a measure of healthy competition and save our American system, or what remains of it, instead of encouraging more and more monopolistic, concentrated control in private hands with the deadly social suffocation to which it leads.

Ten-Percent Tax on the Transportation of Persons Should Be Repealed

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. VAN ZANDT. Mr. Speaker, on January 17, I introduced H.R. 1364, a bill to amend the Internal Revenue Act of 1954 to repeal the tax presently imposed on the transportation of persons.

During the 85th Congress, the 3-percent excise tax on the transportation of property was repealed but unfortunately its counterpart, the 10-percent tax on travelers, was retained.

All of us are familiar, I am sure, with the original purposes of this tax which was imposed in 1941 as a temporary measure to help fill revenue needs and to discourage the general public's use of the airlines, railroads, and buses during World War II. Despite the fact that the reasons for imposing this tax have disappeared, it is unfortunately still with us. We must rid ourselves of it now.

If we ever lose the ability to move quickly and safely from one place to another, either in this country or throughout the world, we as a nation will be as impotent as you and I would be if we lose our ability to walk or talk. There is no doubt about our transportation industry's essentiality and importance to the economy of the country. The general public needs adequate and modern travel facilities. Our transportation system must continue to move forward and expand not only to prepare for the predicted 60 million increase in our population by 1975 but in fact even to exist in this age of electronics and atomic energy. No deterrent should be allowed to stand in the way which might discourage the general public from using common carriers to the limit of their capacity. The 10 percent tax on travel is just such a deterrent and should be repealed as quickly as possible.

By discouraging travel on commercial carriers, the tax places a heavy burden upon one of the Nation's most vital industries. The American transportation system is the envy of the world. During the Korean conflict and World War II, it performed a tremendous job of speedily and efficiently transporting essential personnel and material. If another national emergency should develop, the industry would again be asked to perform miracles of transportation while the automobile would again be

curtailed as a luxury this Nation couldn't afford. Public carriers must be prepared.

To be ready for a national emergency requires the most efficient use of our economic resources. One of the most important ways to accomplish this is to fully utilize and properly maintain our commercial transportation system. The existence of such a system in periods of limited resources depends upon its being permitted to use its facilities economically in periods of abundant resources, a fact too often overlooked. We should therefore encourage the growth of a sound and healthy common carrier system rather than discourage, by tax, the use of such industry's facilities on the part of the traveling public.

Here is a tax that no one has testified is good, fair, or beneficial. It is equally disliked by all regulated carriers and the traveling public. Members of Congress, executives of our airlines, railroads, intercity buslines and shipping companies, trade association officials and the man of the street have all appeared at one time or another before congressional committees urging its repeal. I cannot understand why, if the income derived from the tax amounts to about $200 million a year, Congress refuses to repeal it, particularly when many economists have stated that it is very probable that the Government stands to collect more revenue through increased use of our public carriers.

And do we realize that the effect of this tax on passengers adds to today's already high cost of living. Let me show you how. Since one-third of passenger transportation, it has been conservatively estimated, is for necessary business travel, the taxes on transportation will be included in operating expenses of the companies incurring them and passed on, at least partially, in the pricing of their products. The cost of collecting the tax is borne by the carriers and is included in operating expenses and thus affects the level of fares. And finally inadequate passenger revenues in the case of the railroads must be recovered from freight transportation by increases in rates. So here we have a tax which is not only unnecessary but also inflationary.

Another objectionable feature of the tax is that its burden is greater on the low-income families which spend most if not all of their income on the necessities of life. This group, consisting of about one-third of the families in the United States, it has been estimated, have no other means of travel than our common carriers. For them travel is not a luxury but a necessity and the travel tax which is collected by common carriers competes with the food and clothing dollar.

Not only does this 10 percent tax discriminate against the low income families but because it was imposed as a penalty surcharge, only on travel furnished by for-hire carriers, the tax is inherently discriminatory. As originally enacted, the tax applied to all amounts paid within the United States for transportation by rail, motor vehicle, water or air. This was not unfair in the beginning because there was no discrimination between competing carriers although it did give an advantage to the automobiles which, however, during the war was practically nonexistent. If, as expected, the tax had been repealed at the end of World War II, the inherent discrimination of the tax could not have developed fully. Instead, gas rationing, the device used to discourage private travel, was terminated and the travel tax was and is still being continued.

To make the tax further discriminatory, Congress has amended the law on several occasions so that today only travel within the continental United States and a 225-mile buffer zone is subjected to the tax. International travel is thus encouraged at the expense of domestic travel. Millions of dollars have been spent on our national parks for the benefit of Americans, and they, with our foreign guests, must pay a penalty to visit these places by train, airline, or bus. This is a curious and unhealthy situation.

The effect of the tax in discouraging travel in the United States by commercial means is very visibly demonstrated by the change in the character of intercity travel between 1946, the first full postwar year, and 1958. In 1946 common carriers transported 27 percent of all intercity travelers. Today this figure has dropped to slightly more than 10 percent in spite of the fact that total intercity miles have almost doubled during the 12-year period. How are people getting from city to city? Almost 90 percent of them are traveling with their families in the automobile which is not subjected to the travel tax.

This drop in intercity mileage which our large common carriers have experienced is extremely detrimental to the future of our transportation industry. With the airlines trying valiantly to find the money to order new jet airplanes, with the railroads' passenger car fleet totally inadequate for an emergency according to the Department of the Army, and with revenue of the bus companies—about 80 percent of which are small business—inadequate to cope with rising costs, why does the Congress of the United States, by refusing to repeal the travel tax, not recognize that it is fostering unsound economic conditions in the transportation industry and inadequacy of the transportation plant to meet the needs of commerce and national defense? The travel tax is in derogation of the national transportation policy which is spelled out in the Interstate Commerce Act. How much longer can we go on talking out of both sides of our months at once? Let us let our right hand act in concert with our left. Let us keep our transportation system second to none—one that is ready at all times for anything that might come. Let us repeal immediately the 10 percent tax on the transportation of persons.

Mr. J. Francis Smith

EXTENSION OF REMARKS
OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. MONAGAN. Mr. Speaker, J. Francis Smith, of Waterbury, Conn., died on February 5, 1959. Mr. Smith was one of the most prominent men of his generation in Waterbury and in the State of Connecticut. He was active in the political field, in the business field, and in the field of community activities. He gave generously of himself in activities which benefited the public and brought him no return other than the satisfaction of knowing that he had contributed to the welfare of his fellow man. His death will be a great loss to his community and to the State of Connecticut.

Mr. Smith was chairman of the first Waterbury U.S. savings bond drive during World War II and also headed the first Waterbury Community Chest drive.

He was a member of the boards of directors of many companies, including Connecticut Light & Power, and First Federal Savings & Loan Association. He was chairman of the advisory board of the Waterbury Trust Office and honorary director of the Connecticut National Bank with which Waterbury Trust is affiliated.

Mr. Smith was also a director of the Small Tube Products, Inc., now of Altoona, Pa.; the United Corp. of New York; True-Temper Corp., Cleveland, Ohio; the old Waterburg Farrel Foundry & Machine Co.; now a division of Textron, Inc.; and a former director of the New Haven Railroad.

BUSINESS INTERESTS

In addition to heading the lumber company founded by his father, he was president of the Waterbury Ready Mixed Concrete Co., and Connecticut Wholesale Supply Co. He was president at one time of the Northwestern Lumber Dealers Association and the Connecticut Lumber Dealers Association.

A graduate of Driggs School, Crosby High School, and Dartmouth College, he developed an interest in tennis as a boy, and developed his skill in the sport to win many championships. He was on the Dartmouth tennis team, was winner of the Waterbury city tennis championship nine times, the State doubles championship three times, and also the southern New England championship. In recent years he had been rated as an excellent golf player. He was always considered the most outstanding tennis player developed in Waterbury.

ACTIVE IN POLITICS

Mr. Smith was elected secretary of the Democratic State central committee in 1932 and became chairman in 1934.

Gov. Abraham Ribicoff said of Mr. Smith:

The death of J. Francis Smith is a great loss to all of us. Throughout the years, he has been a close personal friend and adviser. Fran was an outstanding citizen of our State, who always gave of himself to the civic, religious, charitable, and political life of his community. He served the people well.

Mrs. Ribicoff joins me in extending deepest sympathy to Mrs. Smith and the other members of his family. The State of Connecticut will mourn him and miss him throughout the coming years.

LAUDED BY FARLEY

Hon. James A. Farley, former Postmaster General and former chairman of the Democratic National Committee said of Mr. Smith:

News of the sudden death of Fran Smith shocks me, as I had recently talked with one of his brothers, who indicated some progress and imminent release from the hospital. For many years, I have had tremendous admiration and genuine affection for Fran Smith.

There never was any doubt as to his position on any issue. He was never a middle-of-the-roader, which convinced me more than ever, if the Democratic Party in every State had one leader like him, the party would be much stronger.

He had the admiration and respect of everyone with whom he came into contact. I've always enjoyed working with him and it was always a delight, in recent years to talk with him when he came to New York City, or by telephone at his office in Waterbury. My sincere condolences go to his brothers and his family.

U.S. Senator THOMAS J. DODD said of Mr. Smith:

Fran Smith was a great and dear friend of mine for 27 years. His untimely death comes as a great loss to me.

He was a brilliant man and always a clear thinker. He was a man dedicated to his country and the greatest State chairman either party ever had.

He was always a most charitable person and a man of the highest integrity.

His passing is a great loss to Waterbury and Connecticut, and I wish to express my sincere sympathy to his family.

U.S. Senator PRESCOTT BUSH said of Mr. Smith:

I am saddened by the news of the death of J. Francis Smith. The State of Connecticut and the city of Waterbury have lost one of their most distinguished and public-spirited citizens. I extend the sympathy of Mrs. Bush and myself to members of his family at this most difficult time.

Hon. John M. Bailey, chairman of the Democratic State central committee, said of Mr. Smith:

J. Francis Smith's death was a shock to many of us. He had many friends throughout the State. I have lost a close personal friend of long standing, and also a man who was a valued adviser to me as chairman of the Democratic State central committee. The State has indeed lost a valued citizen in the passing of J. Francis Smith.

Former Mayor Edward D. Bergin, chairman of the Waterbury Democratic Town Committee, said of Mr. Smith:

The untimely death of Francis Smith is a real loss to the city of Waterbury. A man of keen intellect, sound judgment, and decisive, direct action, his influence, though little publicized, has been widely felt in all phases of our community life.

His firm adherence to the basic principles of our democratic system of government will be missed in the Democratic Party.

Mayor Raymond E. Snyder said of Mr. Smith:

Mrs. Snyder and I are deeply shocked to hear of the sudden death of J. Francis Smith. His passing has left a void that will be felt by all who have ever known or met him. J. Francis Smith's gentlemanly behavior and wise counsel have won the admiration and respect of all who have known him on the political scene, in civic matters, and in business. There have been few such dedicated men. It is a great loss.

Francis Smith was my dear friend. My interest in public service came solely from him. From my boyhood he advised and stimulated me. He was one person who had the stature to give disinterested advice. I admired his brilliant mind, his independence of thought, his courage, and his idealism.

He was a big man in a time of little men. He had the capacity to cut through any problem to its essentials and to make its solution come easy. He brought to political life an idealism and a concentration on the long views which have too often been obscured in these days of mass thinking. He gave generously of his time and energy in the effort to turn political movements in the direction of principle and away from expediency.

The success of our democratic system requires active participation by its citizens.

If all men gave as prodigally of their talents to the public welfare as did Francis Smith, the future security of our country would be much more certain.

The following is an editorial from the Waterbury Republican on February 6, 1959:

J. FRANCIS SMITH

Our city and the State are made poorer indeed by the untimely death of an outstanding businessman and citizen.

There is a sad irony in J. Francis Smith's death. He had apparently made a strong recovery a couple of years ago from a long, serious sickness, had resumed control of his business affairs, and, in managing Senator THOMAS DODD's campaign for the Democratic nomination, had shown last summer that he still possessed an old political warrior's skill. Then came the heart attack which, after weeks in the hospital, has claimed his life.

A hardheaded sense of what was practical guided him. His was a fierce competitive spirit, shown on the tennis court when he was younger, later on the links, and carried over into business, politics, community service. He had a shrewd, analytical mind. His success as president of J. E. Smith & Co. led to other business connections, to bank and corporation directorship and trade association honors. On the political side, his service as Democratic State charman when the late Wilbur L. Cross was Governor was a very distinguished one, and the part he played over the whole political range from local to national was notable.

As drive chairman for community cases and worker for community betterment he had no superior and few peers. However much you might narrow down a list of pivotal local leaders in business, in politics, and in movements for civic improvement, his name would be bound to be there.

Such men are few, precious, hard to spare.

The following is an editorial from the Waterbury American of February 6, 1959:

J. FRANCIS SMITH

J. Francis Smith was an outstanding man in his generation in Waterbury. He had varied interests, and he served in many capacities; and in practically everything in which he engaged he was successful.

In the business world he was known as a leader of men. The lumber industry nationally recognized him as a person of unusual attainments, and called on him to provide capable direction to many industrywide movements. In politics his record is unrivaled by any person in Waterbury in the past several decades.

Not only in Waterbury but in statewide politics he proved himself a master organizer. And even after ill health had forced him to retire from that field for a number of years, it took him only a few short months to demonstrate, through the nomination of THOMAS J. DODD for the Senate, that he still had the magic touch to win.

In public life, otherwise, Mr. Smith gave his talents willingly to forward projects that were for the common good. Two firsts tell the story. He was chairman of the first U.S. bond sale drive during World War II and first chairman of the community chest after that organization came into being. Of course both campaigns were outstanding successes. But in many instances Mr. Smith was happy to serve in a vigorous and able capacity behind the scenes. It was that way in politics, and it was that way again in aiding various agencies which worked for the community good.

Francis Smith was a man of positive character. In that virtue rested much of his success. He was a man for facts—getting facts and then appraising them in a most intelligent manner. Having done this, he mapped a campaign to attain his goal; and from then on he drove with powerful insistence toward a successful climax. Men in all walks of life valued his counsel. That his judgment was held high in financial circles was shown by the number of companies that invited him to serve as director.

Francis Smith was good for Waterbury. He gave a lot to the city. The city will suffer by his loss. Certainly he felt an example of public service that should be inspirational to all citizens.

The following is an editorial from the Naugatuck News of February 6, 1959:

J. FRANCIS SMITH

"The death of J. Francis Smith is a great loss to all of us."

Gov. Abraham A. Ribicoff said that as part of his tribute to an astute Waterbury business executive and State political leader who succumbed yesterday to a heart attack, at a time he appeared to be recovering from a serious illness.

The Governor's words were representative of the sentiments expressed with deep sincerity by business and political leaders in high echelons, including James A. Farley, former Postmaster General and National Democratic chairman; U.S. Senators Thomas J. Dodd and Prescott Bush; Congressman John S. Monagan; Waterbury Mayor Raymond E. Snyder and former Mayor Edward Bergin; and Mayor Adam Mengacci of Naugatuck.

All who knew him, and they were countless, marveled at his keen analytical mind, his driving power and organizational ability.

As an athlete in his younger years, as a financier and businessman, and in government and politics, he was a leader who had the capacity to cut through any problem to its essentials and make its solution come easy.

He came most prominently to the foreground of public activity as Democratic State chairman when the late Wilbur L. Cross was Governor. After several years of comparative inactivity he reentered the political arena last year to demonstrate his masterful touch as he managed the successful campaign of THOMAS DODD for U.S. Senator.

But his abilities were neither confined nor limited to politics and government; his was the opinion sought on a wide range of activities extending beyond the boundaries of city and State.

In many respects, Fran Smith was a genius and he gave willingly of his talents in community causes, as well as in the other fields in which he was prominently identified.

Murdock's Little Colorado River Project Explained

EXTENSION OF REMARKS
OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. ASPINALL. Mr. Speaker, the Honorable John Murdock, a former Member of the House from Arizona and a former chairman of the Committee on Interior and Insular Affairs, has—after years of official study plus some 8 years of private study—developed a comprehensive plan for putting to beneficial use the waters of the Little Colorado River in Arizona.

In an earlier insertion in the RECORD, entitled "An Alternate Murdock Plan for Furnishing Water to the Western Portion of the Navajo Indian Reservation," a general view of his proposal was presented.

Mr. Speaker, I should like to include in the RECORD at this point a more detailed explanation of Mr. Murdock's proposal so that it may be studied by interested persons:

MURDOCK'S LITTLE COLORADO RIVER PROJECT EXPLAINED

Because a foregoing installment in this series is entitled, "Murdock's Alternate Plan to Furnish Water for the Western Portion of the Navajo Reservation," it may be asked, "Why an alternate plan, if one already outlined is not only good but is the best?" Well, in mapping a complex plan it is well to have a choice. Practically all great water developments now in existence in our West have undergone more or less modifications from their original proposals and designs. Even the best of experienced engineers can only dimly see the end at the beginning. Not being an engineer myself, I should logically expect through the coming years that engineering skill would modify any detailed plan that even good engineers could design today, and such would be especially true of the proposals of a layman, however good a well-wisher he might be. In fact, the very purpose of these statements of mine, dealing with a Little Colorado River project, is to furnish future builders in Arizona these general proposals for their study, acceptance, rejection or necessary modification, in order to obtain the stated objectives of this suggested program.

Besides the engineer and the public works builder, the politician and the statesman will have a say if and when this proposal is considered. This is also because of controversial matters. One of the most controversial items for the Government officials to consider in this plan of mine is the placing of a low diversion dam immediately below the mouth of the Little Colorado River, which site is now within the Grand Canyon National Park. Both engineering and legal questions are involved. Although this would be a low dam, as here proposed—it might even be a rock-filled dam, probably about 150 feet high, and for the purposes of this objective, need not be a power dam, but merely a diversion dam, or weir; even so, the bare suggestion of a dam in the National Park will raise a great cry of opposition. The question then arises, "To carry out this general objective would it be necessary to have this diversion dam on the main stream below the mouth of the Little Colorado?"

Well, no. To get main stream water touching the reservation, it would not be absolutely necesary to build such a diversion dam in the park. A change in the park boundry there could eliminate this site and improve the national park situation. This move I favor. Another alternate plan instead would call for the building of a multiple-purpose dam, which probably will eventually be built anyway, at the Red Walls Dam site in Marble Gorge. However, without such diversion dam, or weir, for the purpose of this objective, a multimillion-dollar tunnel would have to be built through the Navajo Reservation, bypassing the Grand Canyon National Park. Also, such other alternate plan than mine, including this expensive tunnel, would be far less efficient than the original Murdock proposal and of questionable economic feasibility. Naturally, I favor most the alternate plan discussed herein and I have no personal ax to grind.

NATIONAL PARKS MUST BE SANELY PRESERVED

No one has a higher regard for our national parks than have I. No one wants to save them from degradation and commercialization more than do I. By a simple readjustment of two sections of the boundary line of the Grand Canyon National Park, Congress could, under existing and modified law, preserve the principle of national park integrity, as Congress should, and at the same time better the park situation in Arizona while greatly benefiting thousands of Hopi and Navajo Indians who have no powerful lobby at Washington to speak for them.

All during my service on the Public Lands and Interior Committees during 16 years in Congress—and especially during the years that I was chairman of the House Interior Committee—I heard strong and rightful protests from nature lovers against the invasion of our parks and monuments by the engineers who want to build power dams for commercial purposes. I am heartily in sympathy with that attitude for park preservation, although I have known cases in which I have agreed with the engineers and their purposes of construction, if it seemed to me such work would do no harm to a national park, but would do great good to a vast community. Knowing how difficult it is to get Congress to authorize and appropriate a multimillion dollars or any other sum for any Indian tribe, I am reluctant to state this other alternative, without the low diversion dam at the mouth of the river, because of its greater cost and its lesser efficiency.

The favored plan proposes a low diversion dam of about 150 feet in height, more or less, in order to form a V-shaped lake at and below the mouth of the Little Colorado River in order to force the waters of the main Colorado up the Little Colorado several miles to a point east of the present boundary line between the Grand Canyon National Park and the Navajo Indian Reservation. It is only a matter of about 4 miles up to the reservation, and the waters from the main Colorado would have to be forced up the Little Colorado less than 8 miles to a good damsite where a 400-foot multiple-purpose dam could be built within the Indian reservation. By looking at the map it will be clearly seen that by such a diversion a given quantity of mainstream Colorado River water would be forced by its own flow to penetrate the Navajo Reservation several miles eastward merely by building this low diversion dam or weir below the mouth of the Little Colorado as I have here proposed. Knowing the attitude toward power dams in national parks, I want to distinguish such from my plan for furnishing water for biological purposes where so vitally needed.

A COSTLY ALTERNATIVE

Because I do not want to invade a national park with a power dam—nor even by low diversion dam or weir which would do the park no harm—I am also suggesting that this particular site for the low diversion dam be properly eliminated by law from the park. However, if the boundary line of the park is not changed and no construction of whatever kind or for whatever humane purpose is to be permitted in the Grand Canyon National Park at this point, then the other alternative, the long and deep tunnel, must be considered as another method of diversion, although very expensive.

Such a tunnel would run 20-odd miles from the Red Walls Dam site in Marble Canyon—which powerful political forces are determined shall eventually be built—to a point on the Little Colorado a few miles east of the park boundary. Such a tunnel would be very expensive but it would be the Government's price to pay to save deserving Indians—for whom the Government has an obligation and for whom humanity has an obligation—because of a persistent maintenance of an illogical boundary line of the Grand Canyon National Park at its northeast corner.

NORTHEAST BOUNDARY ILLOGICAL

Why do I say that the boundary line at this point is illogical? Because to maintain it unchanged is of little value to the park, and of a great cost, direct and indirect, to the Government and of an inestimable loss to many thousands of Hopi and Navajo Indians, not only who are alive today but many yet unborn. The future—yes, the fate—of the most unique Indians in the Nation is involved here.

Before discussing the change in the boundary line, where it now touches on the Little Colorado River, I must comment on the Indian needs for a long future. The Hopi Indians have made their home in this area for several thousand years. They were there long before Columbus discovered America. And they have accomplished a marvelous existence against harsh nature with only a minimum supply of water. Because they have existed on this barren land for many centuries it is not to be supposed that their children could continue, under modern and changing conditions, to exist there very much longer without a more adequate water supply. A few will move out, but most will refuse to do so, and I do not want to force them. Praying for rain in a ceremony involving handling live and poisonous rattlesnakes will not much longer suffice.

I have for several years felt that the Grand Canyon National Park should not extend northward entirely to the mouth of the Little Colorado. At present there is a little tongue of land in the park less than 4 miles wide extending to the south bank of the Little Colorado and lying east of the main Colorado River. In my judgment, a block of that land, smaller than one fourth of the District of Columbia, should be taken out of the Grand Canyon National Park and returned to the public domain or added to the Navajo Reservation. Thus the "water works" mentioned herein could be built on the Navajo Reservation mainly, and some on the Hopi Reservation, because the Hopi Reservation is within the Navajo Reservation and entirely surrounded by it.

FEW TOURISTS CAN SEE JUNCTION OF THESE RIVERS

My attention was again called and focused on this strategic area by the tragic happen-

ings there in the summer of 1956. It may be recalled that 2 giant airplanes collided high above the Grand Canyon on June 30 of that year and fell, carrying 128 human beings to their death. Although the planes collided, the crash sites of the two were about 1 mile apart. They fell very near the Colorado River, right opposite the mouth of the Little Colorado. The key site of this proposal is near where they fell. Being in Flagstaff at that time, I went to the Grand Canyon by way of Cameron, taking a pair of powerful binoculars with me. I went to the Indian watchtower which is at the farthest point northward in the Grand Canyon Park which can be reached by auto. I wondered whether the crash sites of this airplane tragedy could be seen from any point in the park which ordinary tourists might conveniently reach. I climbed the Indian tower for a better chance of observation, for it is only about 10 miles south from the scene of the tragedy at the mouth of the Little Colorado.

I knew that there were telescopes on the top of the watchtower which were more powerful than my binoculars. When I got up there, of course, I could not see the mouth of the Little Colorado with the aid of any of the glasses, for the canyon is not straight and winds and curves in those 10 miles between. So I found, as I had already surmised, that tourists, even atop the Indian watchtower cannot see anything within miles of the mouth of the Little Colorado on a horizontal line or within several thousand feet on a vertical line. All that I could see pertaining to the air tragedy from up there on the tower was a fleet of army helicopters circling a mighty hole in the ground and waving their ungainly arms as they descended into the canyon to bring out what they could. If I or any tourist had wished to examine the area of the crash or take a picture of it where each plane fell, we would have had to do what some of my friends did—fly over the area to take pictures. Tourists without air or water transport ordinarily do not get closer than 10 miles of the mouth of the Little Colorado River.

Do not assume for a moment that the building of a dam or weir at that point to divert and force water up the Little Colorado would be an unsightly thing to the millions of people who visit the Grand Canyon National Park in Arizona. It is safe to say that not one-tenth of 1 percent of those who have visited the Grand Canyon have ever seen the mouth of the Little Colorado River. To eliminate that site would do no harm. However, it may be said that since the Grand Canyon National Park extends north to the Little Colorado today it may be, in course of time, that the Park Service will build an automobile road up to a point where tourists will be above the mouth of the Little Colorado and thus may view that part of the Canyon country. I very much doubt it.

There is good reason why the park roads today extend north only to the Indian Watch Tower, 10 miles short of the Little Colorado. My offhand guess is that to build a park road 10 miles in length from the Indian Tower to a point above the Little Colorado and its mouth would call for bridge construction as expensive as bridging the Hudson River at New York City, and in addition the cost of first-class highway building as expensive as any 10 miles of the Alcan Highway. With all the hundreds of miles of very deep canyons now viewable in the park area, I do not believe it would be worth the money cost to make the point of land above the mouth of the Little Colorado accessible to the automobile of the tourist—certainly not without going a long, roundabout way across the Navajo Reservation. And for that and other reasons this area at the mouth of the Little Colorado should be available to the Indians to create a V-shaped lake about 100 feet deep at that point. My advice to those who must see the mouth of the Little Colorado is to get a helicopter or an unsinkable boat, or fly high over it in a plane with no other plane near.

NARROW CANYONS IDEAL FOR STORAGE

The very narrow, winding, and deep canyons of the Little Colorado are of such a character that to fill any section of the river labyrinth with water to a depth of from 10 to 400 feet would make no significant change in the impression which the tourist gets in viewing it from the rim for 40 miles eastward. I am speaking now of the 40 miles of the lower portion of the Little Colorado but, of course, all of that section of the river excepting the last or lowest 4 miles is in the Navajo Reservation, and can be improved for their benefit. I would put this lowest 4 miles of the Little Colorado River along with the rest of it in the Navajo Reservation, or return it to public domain.

It requires some study of the relatively precipitous fall, the abrupt descent in its final length; of the Little Colorado to understand why I am proposing that several dams, from 12 to 20 miles apart, be built in that lower section of the river. No better surface storage in a hot climate, where evaporation is terrific, can be found than several man-made lakes at the bottom of the deepest Little Colorado canyons. The reason for this is obvious. When man stores water for future use in hot, dry country, he would like to minimize evaporation losses by having the reservoirs deep and narrow, and thus presenting a minimum of water surface exposed to the thirsty atmosphere. Certainly, the several winding reservoirs at the bottom of the lower end of the Little Colorado River canyons would be ideal for that purpose, large enough for the storage required, and deep enough throughout their narrow lengths to permit the very minimum of evaporation loss. Also their lake surfaces could be protected more easily by a film coating for the same purpose.

It must be apparent that this arrangement of the several storage sections is designed to step some water of the main Colorado River—say 50,000 acre-feet annually, at least—up 300 to 400 feet with each dam on the Little Colorado which will mean, of course, that some water from the main Colorado will have to be pumped up at each of those dams. Since this is a reversal of the usual procedure, considerable explanation is due on this point. It is true that each of these proposed dams down in the Little Colorado is to have a powerplant, but not the usual kind, not to produce electric power but to use windpower to pump water into the reservoir above.

MY COMMITTEE HEARD DR. PERCY THOMAS

After hearing Dr. Percy Thomas as a witness before my committee, and two other witnesses, one from the Bureau of Reclamation and the other from the Federal Power Commission with him testifying concerning the amazing possibilities of wind power, I introduced a bill on the subject in the 82d Congress, May 28, 1951. This was H.R. 4286 of that Congress. A second hearing was held September 19, 1951. Between the time of the preliminary hearing and before introducing the bill, I made a trip through Idaho along the Snake River from the Wyoming border to the Oregon boundary. As I stood on a mountain side in a narrow gorge which is the site for the Palisades Dam, I thought I had never felt such a terrific wind, other than hurricane, blowing naturally through that funnel between the mountains. Then it was that I recalled the lengthy and scientific testimony of Dr. Percy Thomas and the other two power witnesses, and then and there I resolved to introduce the bill.

I thought at the time I had never seen a better situation and locality for an engineering development to extract power from the wind as that site over the Palisades Dam on the Upper Snake River. But I did think that there was a situation equalling the Palisades Gorge—and possibly excelling it—on the lower reaches of the Little Colorado River in Arizona. Now, on further study, I am convinced of the latter.

I have read some of the testimony of aircraft navigators about the treacherous and terrific winds encountered in the Grand Canyon and it is branch canyons of which the Little Colorado River Canyon is one of the most noted. Air pilots would not think of attempting to fly a plane up the Little Colorado, low over it, between its walls from its mouth to a point 40 or 50 miles above, even before the recent tragic happening there. Before it was established that the two giant planes collided there at an altitude of 21,000 feet on June 30, 1956, when it seemed incredible that they could have done so, experienced airmen, knowing the turbulence of the air in those great canyons, expressed the opinion that those two planes were actually "tossed together" by the force of the winds which caused the disaster. Every explorer on foot, of which there are not many, in the lower part of the Little Colorado River Canyon, comments on the consistent and violent winds flowing through the winding, narrow gorge with almost as great a force as the blast through an experimental wind tunnel. In fact, I am convinced that in many places along the winding, narrow canyons of the Little Colorado, wind driven plants which Dr. Percy Thomas advocated could find a maximum source of wind power, even more than at the Palisades site in Idaho.

FAR CRY FROM WINDMILLS TO WIND-DRIVEN GENERATORS

Of course, when one talks about a powerplant deriving its power from the wind, one is apt to think of a small windmill pumping water from a well out on the plains. Now, that is not what Dr. Percy Thomas was talking about, and that is not what distinguished British and Dutch visitors who came from abroad to interview him regarding windpower were concerned about. They came from the very historic home of windmills to learn how to use windpower in a big way.

Has this windpower idea ever been tried out? Yes, in this lengthy hearing before my committee on September 19, 1951, Dr. Thomas and the other witnesses gave the history of such a trial in New England, where a great private utility built a huge wind-driven powerplant on trial and placed it on a nearby elevation, known as Grandpa Knob in Vermont, and connected it with their other regular powerlines where it functioned well until a storm destroyed it.

All of the engineers of the Vermont utility, trying this idea out under private enterprise, were greatly impressed with the tremendous electric power which it contributed to their electric system, with no cost for fuel. The variability of the winds was less of an argument against it. However, the blades of this private powerplant were nearly 100 feet in length, and were ripped off in a storm after efficiently producing power for its owners for more than a year. Since the powerplant towers we are discussing must be built at least 200 feet into the air above their base, the building of such Eifel Towers is an engineering job. And engineers today, including Dr. Percy Thomas, say that a much better powerplant can be produced now than were built with the materials available for the Vermont experiment years ago. Recent improvements in metallurgy with light and strong metals make this possible.

In his testimony before the House Committee on September 19, 1951, Dr. Thomas was talking about a similar but improved air powerplant built on somewhat the same model as the Grandpa Knob power facility. However, that plant generated electricity—in

fact enough electricity on an average for a town of 2,000 inhabitants, but because the wind is so variable it needed numerous gadgets to protect it and to regulate it. Those gadgets were Dr. Thomas' inventions which the Grandpa Knob plant did not have. Since Dr. Thomas was a Federal employe, those patent rights belong to the Government. It is important to note that in answer to my questions, Dr. Thomas explained that, without producing electric power, but for merely pumping water, construction costs would be much less than for a wind-driven electric powerhouse. My thought here is that each of the proposed high dams should have such a pumping plant on it.

CANYON LAKES TO SERVE AS STAIRSTEPS

With the foregoing explanation it should be noted that the total natural flow of the Little Colorado will be collected in these several reservoirs in the lower reaches of the river. Also, let it be noted that from all these storage basins some of that Little Colorado River water may be pumped from lower to higher basins, thus reversing its march to the sea. So, these several reservoirs collect and conserve the waters of the lower 50 miles of the Little Colorado which are considerable, and which have not heretofore been much used by man. Why have they not been much used by man?

No water is diverted from the Little Colorado below the Grand Falls for irrigation purposes. It is known that the greater portion of the total drainage of the Little Colorado enters it below the lowest point of practical diversion. Yet, in more than 90 percent of the time, observers looking at the streambed of the Little Colorado will observe that it seems practically dry. It is like the main Colorado, a very variable stream. It is dry today in the state of nature between flash floods because the drainage of a vast area usually percolates into the streambed so slowly that it is largely returned to the atmosphere by evapotranspiration as it comes in. Take any given quantity of water in the river at Cameron, the chances are, in the state of nature, that practically all of it will return to the atmosphere before it can reach the power plant at Hoover Dam after a 350-mile journey under turbulent winds in a hot climate. What this proposal of mine is, is this: that we catch in these several reservoirs in the lower river all of this drainage which falls on the watershed of the Little Colorado, the silt as well, and make the water usable for the Indians, especially those near the Moencopi and higher areas. Let me now discuss a manmade means of minimizing evaporation losses so that there could be much less loss from surface exposure of water in the several basins than is now lost naturally from exposure in the streambed itself throughout the same length.

SILT PROTECTION BELOW OFFSETS WATER RETAINED

Without the manmade technique of minimizing evaporation losses, the natural evaporation losses are enormous. It is not too much to assume that for every 100,000 acre-feet of Little Colorado River total flow, less than 10,000 acre-feet ever reach the power plants at Boulder Dam. Since this is water which has fallen upon Arizona soil and most of it on the Navajo and Hopi Indian Reservations, it is logical that no other human use has a better claim than those Indians have to whatever amount of this drainage that can be conserved. Of course, there will be a "talking point" by the power users in Arizona, California, and Nevada, that this proposal of mine, mostly for the benefit of Indians, will keep some water from producing power hundreds of miles away in powerplants on the lower reaches of the Colorado River. When we consider the very small proportion of this drainage water reaching those distant lower powerplants under the present natural conditions, it makes any complaint by power users in Los Angeles or Phoenix or Las Vegas seem picayunish. Any loss of hydropower production by this plan would be more than offset by silt retention to protect the lower river investments.

In general, I am assuming that when these numerous reservoirs are created on the Lower Little Colorado that more than two-thirds of the water gathered behind those dams will be water which has come from the watershed itself of that river. Now, because of the variableness of the precipitation on that watershed the river's flow will vary in its contributions. If we wish those several reservoirs to have at all times some usable water it will be necessary, no doubt, to depend upon getting about a third or a fourth of that water in constant daily supply from the main Colorado, by pumping it out of the V-shaped lake at the mouth of the Little Colorado which extends up the Little Colorado a distance of 8 miles or so, where the first high dam is to be built. Thus, we see that the 50,000 acre-feet of main stream water, which I am assuming will be assigned to these Arizona Indians as "exchange water," will serve to regulate the volume in the reservoirs. This supply may be counted on consistently and regularly because it is "let down" at Lee Ferry by the upper basin States according to their compact.

DIFFERENT KIND OF "PUMP PRIMING"

The expression "pump priming" has come in the last 25 years to have a financial meaning with an economic effect. An older generation of citizens will recall that pump priming with water had a literal physical effect. All but the very youngest among us will remember that the original idea of "pump priming" was to pour a little water at hand into a dry pump in order to make it pump up and deliver in a steady volume many times the amount of water which was used for priming. My proposal on the Little Colorado is not exactly that, but there is considerable similarity to actual pump priming in water supply on the farm which we knew in childhood.

The 50,000 acre-feet of main stream water which may be had in constant supply of about 140 acre-feet daily will also serve as a regulator to even out the fluctuating supplies of the river drainage into the five reservoirs. Without this constant volume from the main river it is conceivable, really probable, that after the five dams are built and before any pumping is done on any of them, some of the five reservoirs in flood time would be filled several times to overflowing in flash floods, and some probably empty or almost empty during the dry season of the year. But with 50,000 acre-feet annually, diverted from the main Colorado into the Navajo Reservation it is assumed that that constant supply added to a fluctuated supply from drainage, totaling two or three times that amount, will always keep some water in the "pipeline" system. It is expected that more than 50,000 acre-feet annually can thus be delivered in daily portions for use on the reservations and still furnish water for diversion to the Verde.

Some will say these are violent assumptions. In the first place what is the authority for the 50,000 acre-feet annually out of the main Colorado River? I am assuming that the 50,000 acre-feet to be used here for regulatory purposes as well as partial supply is the same 50,000 acre-feet annually which the upper basin States' compact agrees to let down and furnish to Arizona. Does the upper basin compact apportion such water to those Indians? No, it apportions that amount of water to Arizona as her share of the upper basin apportionment of the 1922 compact because a part of Arizona is in the upper basin. What part of Arizona is in the upper basin? The Navajo Indian Reservation. It might logically be said that the quota released from the upper basin should go legally in perpetuity to the Indians on that reservation. But the law does not say that. There is nothing in the law which says that that should be done but commonsense and justice logically assume that something short of that may be done. Congress is likely to see the logic and the justice of giving the Indians some use of that 50,000 acre-feet annually on an exchange basis and the Legislature of Arizona might reasonably be expected to support that move by resolution. As I view it, untold benefits from it to the entire State of Arizona would make it to her advantage to take this step.

If neither lawmaking body, at Washington or at Phoenix, saw fit to make this move for such a diversion, then this whole plan would be changed, and probably greatly reduced in efficiency. However, even if Congress and the Legislature of Arizona failed so to interpret the upper basin compact regarding the 50,000 acre-feet for Arizona, a series of four or five dams as heretofore explained might yet serve a useful purpose to these Indian reservations and be worth their cost.

Of course, if there can never be legislation at Phoenix and at Washington applying the 50,000 acre-feet from the upper basin to these Arizona Indian lands there would then be no need of a low diversion dam below the mouth of the Little Colorado. In such a case no multimillion-dollar tunnel from the Red Wall Dam site in Marble Gorge to a point on the little Colorado outside the national park would be needed. However, it might be that without this 50,000 acre-feet quota a part of this system heretofore described could be partially effective in supplying, say half as much water as the system otherwise would furnish. But anyone wishing to obstruct the fulfillment of this plan could do so by preventing the diversion of the 50,000 acre-feet into the Navajo Reservation for the use of those Indians, without realizing the vital connection between this highland water plan and the future of central Arizona.

To my mind, such obstruction policy would be a terrible mistake, with devastating effects upon an area half as large as the State of West Virginia and occupied by not less than 50,000 Indians today and which could be the home of hundreds of thousands in years to come. Moreover, to obstruct or destroy some such plan as herein contained for the Navajo and Hopi Indians would have adverse effects on the total growth of Arizona, reaching far beyond the Indian lands.

In the 60 miles of the Little Colorado streambed between Cameron and the main Colorado the evaporation losses now are enormous. Is it conceivable, if that entire distance should be converted into, say, five reservoirs with surfaces exposed to the strongest winds that blow in that canyon country, that the evaporation losses would be any less than they have been in a state of nature by evapotranspiration? Yes, they may be made less. We know that scientists have recently developed a relatively cheap and effective technique for minimizing evaporation losses from reservoir surfaces by a film covering. I believe with all of those reservoirs full of water, or partly full, they could be so treated at relative low cost so as to cut the present evaporation losses in the same stretch of river by at least 70 percent.

All through the West for the last half century we have built great dams and stored large bodies of water in surface storage, knowing full well that there would be evaporation losses from the flowing water in rivers and canals and from the surface of lakes and reservoirs. So long as we must use surface storage we should find a way to minimize such evaporation losses. I believe that an effective technique is now known to accomplish that. This technique is to

cover the surface of the water with a chemical film which largely prevents the drying winds from picking up the molecules of water. This could be one way to conserve water where it is so desperately needed.

Government water studies indicate an average flow of the Little Colorado River of several hundred thousand acre-feet annually, only a little of which is taken out above Grand Falls, and none below. It is conservative to estimate that less than one-tenth of the flow below Grand Falls ever reaches any existing powerplant hundreds of miles below. The large fraction now wasted, if conserved, could be the support of a larger population and a greater civilization. My purpose in courageously writing this is to beg engineers and true statesmen to give serious consideration to some such plan on the Little Colorado.

An Engineer's View of Moscow

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. FLOOD. Mr. Speaker, among the many activities of the International Geophysical Year, an 18-month period of extensive, simultaneous studies, by scientists of 64 countries, of the earth, atmosphere, and sun, was a conference in Moscow in August 1958.

Attending as a delegate of the U.S. National Academy of Sciences at this meeting was Capt. Elliott B. Roberts, who is the distinguished Chief of the Geophysical Division of the U.S. Coast and Geodetic Survey in the Department of Commerce.

The report of his observations on this mission and conclusions, as published in the January–February 1959 issue of the Military Engineer, the journal of the Society of American Military Engineers with headquarters in the Nation's Capital, is most illuminating, timely, and constructive.

In order that Captain Roberts' contribution may have a wider circulation and be permanently recorded in the annals of the Congress, under leave granted to extend, I quote its text at this point in the RECORD.

AN ENGINEER'S VIEW OF MOSCOW

(By Elliott B. Roberts, captain, U.S. Coast and Geodetic Survey)

Attendance as a delegate to the recent Moscow conference on the International Geophysical Year provided an opportunity to meet Soviet scientists, visit research institutions, walk the streets, and see the display of scientific and industrial strength in the Soviet Union.

IMPRESSIONS AND CONTRASTS

On arrival at the vast Moscow airport one's first impression is likely to be unbelief at the number of large jet transport airplanes, TU–104A's, parked about the edges of the field. In turn they approach the landing area to load passengers for Tbilisi, Tashkent, Kiev, and other cities of the Union, and for Paris, Copenhagen, Stockholm, and Helsinki, carrying on routine operations not matched in America. They climb quickly to 35,000 feet, and streak across the skies at 550 miles an hour. The planes have very sturdy seat belts and oxygen masks at every seat. They are excellent aircraft, longtime holders of an international weight-carrying record. One cannot but muse that they comprise a formidable air fleet, capable of carrying large numbers of troops to practically any point on short notice. Russians build and use equipment of this kind because it is necessary to the plan.

By contrast, in stores or at a cashier's desk change is computed on the abacus, an archaic device, still used throughout the Union because the factories are kept busy producing equipment which is considered more necessary than cash registers.

Also, in contrast to the ultra-modern planes, the airport terminal building has all the appeal of a warehouse or a drab 19th century railway station—a fitting introduction to the shabbiness and dreariness of the whole city. Moscow produces a sense of profound and enduring depression which even the flowering parks in summer cannot relieve.

Stark contrasts are everywhere. There is a strange composite of dilapidated, century-old log houses, which the police do not want foreigners to photograph, plain apartment blocks, their walls spalling and pocked, and seven resplendent multistory buildings, the old-time grandeur of which can hardly be described. The architecture is 19th century in style, with star-tipped spires that gleam redly at night in glorification of the Soviet state.

The seven tall buildings include the Moscow State University, an aggregation of 6,000 rooms clustered about a central spire that reaches higher than any structure in Europe except the Eiffel Tower. The marble surfaces and ornate decorations of the vast halls and auditoriums of this showplace are fabulous. Facing a long, landscaped mall reaching down to the Moscow River bluff overlooking the city, this impressive edifice dominates the southwest section of Moscow.

Moscow's newest hotel, the 2-year-old Ukraine, is the latest, and reportedly final, one of the seven multistory buildings. Although it has marble foyers, oriental rugs on the floors, and original oil paintings on the bedroom walls, the parque floors were not planed smooth, the bathroom fixtures are falling from the walls, and the hot water is highly uncertain. A local whim of the management requires that stairway doors be locked, making it necessary to wait for elevators which may be 10 or 15 minutes in arriving.

Every taxi and bus has its clock, which actually runs on time. This minor marvel is matched by the city streets, perhaps the widest in the world, and certainly the cleanest, with old women swinging twig brooms relentlessly. Almost nothing, however, matches the sparkle of the 50-odd stations of the subway—marble palaces, resplendent with statuary, paintings, gold and mosaic decorations, and crystal chandeliers. Through such halls swarm Moscow's workers, going to and from squalid homes where families are crowded into single rooms, and community kitchens and bathrooms are often a block away. There is schooling for all and the state boasts a vanishing illiteracy rate. Yet the workers must buy their sleazy clothing and cheap necessities in state stores where the queues are always long and the smells sometimes overpowering.

As if cowed by the city, the people of Moscow plod through life, stolid and apathetic. Evenings and off-duty days are often spent swarming on the sidewalks, which are hardly more crowded and certainly more pleasant than their poor lodgings. Furtive glances are given passing foreigners, but there are few direct looks or words, except by young boys who have learned that Americans may have chewing gum—a highly negotiable commodity in Moscow.

Clothing generally is shapeless and ugly. Crowds of admiring women gather about the store windows when such exotic items as high heels and stylish clothes are displayed. Women and girls, of all ages above childhood, work at digging, lugging bricks and mortar, operating trucks, buses, and construction cranes, or mowing with rusty shears the grass lawns of the seven tall buildings. A few wear coveralls, but most wear dresses. A prudish modesty prevails.

One wonders about the contrast between the dreary lives of the people and the grandiose buildings, ornate subway stations, and the fanciful pavilions, malls, gardens, pools, and fountains of the city's industrial exposition. Why, when the workers have so little, does the state make such lavish show? The U.S.S.R., straining for industrial supremacy, is in no mood to squander its resources on trifles. The reason cannot have been simple exhibitionism, produced by an inferiority complex and indulged for the amazement of foreign tourists, for there were none until recently. It must be a fulfillment of a need of the people—people who have nothing, yet must slave their lives away. They slave because the lavish displays, always before them, provide a vision of the future—a promise of future luxuries—to be theirs if they work hard enough to beat America.

HOUSING

Overriding the effect of the seven skyscrapers and the log huts in the visible aspect of Moscow is the mass of uncounted thousands of great apartment blocks, as dreary as the long rows of tenements in city slums. From the tower of the Hotel Ukraine the city is a mosaic of such blocks, ranging from dull grey to the ugly yellow-ochre of the newer buildings. This color, so characteristic of Moscow, extends as far as the eye can reach. It is appalling to think of all the rooms in these vast blocks, each jammed with one or more families, living without privacy, quiet, or dignity. There are nearly 8 million workers in greater Moscow, and the population is rapidly growing.

A housing program to meet the population problem is now in progress. Although it will fall far short of the need, it is a tremendous undertaking. Mile after mile of urban land is sprouting ochre-colored buildings of the Moscow style, 10-story warrens of several hundred apartments each. They rise up without framework or scaffolding, by assembly of precast concrete slabs and beams, like building blocks, hoisted by cranes and fitted together by men and women workers. Whatever the engineers' appraisal of this system may be, it is fast and economical, certainly an advantage when attempting to create 600,000 new family units at a rate of more than 50,000 a year.

The miles of cells and cubicles are the future homes of Muscovites who may think themselves lucky. However, style and beauty are sacrificed to utility, and deterioration is widely evident before such a building is even finished. One is told that the design is to provide 3- and 4-room apartments, but, in fact, it will be a highly favored family, perhaps that of a writer or scientist, who will get more than one room. Street floors contain food and clothing stores.

Narrow garden areas separate the blocks, and supervised playgrounds are provided for children, most of whose mothers must work. Wide boulevards, many with center parks, thread the new living areas, and trackless trolley wires promise transportation for the swarms of workers without cars. It is all so regimented that it is utterly dreary.

INDUSTRY

Newspapers and magazines remind the people incessantly of high production figures in the factories, the mileage of railways newly electrified, the size and weight of Russian

rockets and sputniks, and the glory of Russian achievement. The material is so profusely illustrated with diagrams and photographs that even the most stupid workers must understand it and realize the value of his labor.

There are wide industrial areas near Moscow. Workers flock to the factories marked by busy smokestacks. There is no unemployment. Underground trains run on 40-second headway. Tunnels are being extended. A new bridge is under construction across the Moscow River. Heavy construction equipment is seen about the city and on display at the industrial exposition.

Power production is rising rapidly. At Kuibyshev, on the Volga, is the world's largest hydroelectric power project, designed to produce 2 million kilowatts. At the other end of the scale, production of radio sets was 25 million in 1955 and nearly 1 million TV receivers were produced. It is assumed that the propaganda value of these items was not overlooked when such production quotas were set.

Schooling is rigorously disciplined, every child taking heavy courses of mathematics and physics under Kremlin-controlled curriculums designed to produce trained manpower—like a commodity—for industry. American experts report that the Soviet system as a whole is a very effective tool to achieve economic progress.

The regimentation of Soviet resources, efforts, and labors of the people has produced an industrial production which, while still far below that of America, is climbing at an annual increase of 11 percent.

TRANSPORT

Transportation, the life stream of industry, keeps in pace. Aeroflot, one of the largest airlines in the world, has introduced, in addition to the jets, the TU–114, a turboprop plane, capable of carrying 220 passengers, or of flying nonstop from Moscow to Peking or New York. The rail system wrecked by the retreating Germans in 1944 has been rebuilt, and the nation's 120,000 miles of lines are being extended. Diesel-electric and electric power are coming rapidly into use. The Moscow subway, comprising some 50 miles of tunnel nearly 300 feet below ground, is a well-run municipal railway.

Construction is being conducted in extending the canal system which connects the major rivers of European Russia from the Arctic Ocean to the Black Sea. Diesel ships carry vast tonnages on these waterways. For navigation in the Arctic, the atom-powered *Lenin*, a 16,000-ton icebreaker, has been built.

Motor trucks, widely used, comprise most of the street traffic in urban areas. Nearly 500,000 vehicles are built annually, of which a few are passenger cars for government officials and specialists. The cars resemble American automobiles of 10 or 15 years ago. They are light, simple, and economical—far different from the elaborate cars of the American highways.

The Soviet Academy of Sciences maintains more than 90 specialized institutes. The research stations contain equipment which, although perhaps not equal to that of America, is in some cases highly advanced. At Dubno, near Moscow, for instance, there is a proton synchrotron rated at 10 billion electron volts.

At conferences the delegates wear tiny transistor radio receivers, with selector switches for choice of languages. These are beautiful miniature instruments.

Russia is not a prostrate giant. Moscow and its factory-strewn suburbs are emerging almost explosively from their old lethargy. Russia's purpose and industry have given her the strength, in the few years since World War II, to toss her sputniks into space ahead of the world. Those people can and will surpass America—unless, of course, an equal or greater determination is set against them.

As one watches the concentration upon labor and industry at the cost of so much human comfort and happiness, and sees the fanatical striving for superiority, one ponders the eventual outcome. The battle has, in a way, been joined. One wonders if America can afford to continue an economy based so largely on such wastful luxuries as planned obsolescence of consumer products—annual models of automobiles outmoding their predecessors, for instance. Can America afford the economic loss of restrictive production rules in industry? Can America afford to continue expending three-quarters of her productive capacity on the manufacture of nondurable goods in the face of such regimented, determined competition?

Failure to heed the danger signs could mean loss of international markets, foreign allies and friends, and world position as well. America must not become hopelessly steeped in her luxury, as was Rome in her heyday, but with renewed determination must remain strong and alert to the needs of the world.

Mrs. Charles W. Gunn, National President of American Legion Auxiliary

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. NEUBERGER. Mr. President, all of Oregon is proud of Mrs. Charles W. Gunn, national president of the American Legion Auxiliary. Mrs. Gunn has devoted her life to helping and working with people.

It was 33 years ago that Mrs. Gunn joined Hood River Unit 22, and she has been a member ever since. A graduate of Oregon College of Education, at Monmouth, Oreg., Mrs. Gunn has established an enviable record as a schoolteacher at Hood River, and later as principal of the Parkdale Grade School; as an executive of the Charles F. Berg women's wear store in Portland, and as national director of the Volunteer Hospital Workers program. Her election as national president of the American Legion Auxiliary is a well-deserved honor.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the fine biography of Mrs. Gunn, written by Edward W. Atkinson, which was published in the February 1959 issue of the American Legion magazine.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

In Hood River, Oreg., in 1924, a young World War I veteran was attending a picnic when he was attracted by cries for help. He traced the cries to a nearby creek, where another picnicker, a young lady, had slipped and fallen into the water. He rushed to the stream and rescued her, and the two naturally became acquainted. Their friendship—so spectacularly begun—soon blossomed into a courtship.

That young veteran was Charles W. Gunn, who, as a young man, had come to Hood River from Illinois. The young lady was Cecelia J. Thompson, then a student at the Oregon College of Education at Monmouth. When she was graduated from college 1 year later, she married the man she had met at what turned out to be the most important picnic of either of their lives. It was through Charles Gunn's service in the AEF and his membership in Hood River Post 22 that his bride became eligible for membership in the American Legion Auxiliary. She joined Hood River Unit 22 and has been a continuous member of that unit for 33 years.

Thirty-four years after her dramatic introduction to her husband, Mrs. Charles W. Gunn was elected National President of the American Legion Auxiliary at that body's 38th National Convention at Chicago last September. In the interim she had established an enviable record of accomplishment as a schoolteacher, retailing executive, and a leader in the auxiliary.

The brown-eyed, dark-haired woman, who now heads the Nation's largest organization of patriotic women, comes from a background that might well be described as "all American." She was born in New Tazewell, Tenn., the daughter of Nathaniel and Della (Standiford) Thompson. Her mother was born in Iowa, her father in Virginia. Ce (short for Cecelia, pronounced "See") was the first of six children in the Thompson family. While she was still a small child, her family moved from Tennessee to a wheat ranch in central Oregon. They subsequently operated an apple ranch, and in both places, Ce Thompson was given ample opportunity to learn the meaning of responsibility and work.

She attended grade and high school in Madras, Oreg. After her graduation from College she taught school in Hood River and in Parkdale, a town at the foot of Mount Hood. She taught all grades (usually she had the fifth and sixth grades), and she was principal of the grade school in Parkdale.

When she joined the auxiliary, she became something more than just a "card carrying" member. She took an active part in her unit's affairs as her husband did in his Legion post. (After service in the 306th Butchery Company and as a corporal in the army of occupation, Charles Gunn had returned to Hood River and had become a charter member of post 22 on Armistice Day, 1919.) The Gunns have, in a sense made a family affair of their Legion and Auxiliary membership. Charles Gunn was commander of post 22 in 1927–28, and his wife was president of unit 22 that same year.

Mrs. Gunn has maintained her membership in unit 22 even after her husband's job made it necessary for them to move to Portland in 1942. Charles Gunn has always worked in the fruit business, either as a rancher or in some phase of food processing. He is presently plant superintendent of the Terminal Ice & Coal Storage Co. in Portland.

After Mrs. Gunn had served her unit as its president, she was district president, then department president (1934–35). In 1946 she was Oregon's representative to the auxiliary's volunteer hospital workers school in Detroit.

Upon completion of that course, she returned to Oregon and set up a department school for volunteer hospital workers. From 1949 through 1953 she was volunteer hospital director for the entire auxiliary.

When she was asked recently what auxiliary job she has found most rewarding, Ce Gunn said, without hesitation, "I enjoyed most the job of director of volunteer hospital workers. Work in this field has been the most rewarding to me because it is an activity which brings one in touch with people who need help.

"To illustrate what I mean," she went on, "let me tell you about a young World War II veteran whom I met in a VA hospital. This young man was in a neuropsychiatric ward, and had been there for some time when I first came to know him. He was, to put it frankly,

in a bad way then. He had been a professional musician before the war, but while he was in the hospital he would demonstrate no interest whatsoever in music. He would go to the piano, but he would not play.

"It was my good fortune to interest a volunteer hospital worker in this particular boy's case. She began to try to draw him out of himself, to attempt to find some way to make him rediscover himself. She worked with him patiently, and before long she met with some success. He began to take an interest in things. Soon, he began to play the piano. Before much time had elapsed, this veteran was well on the road to complete recovery. Eventually he returned to work as a violinist, and when I last heard of him he was doing fine."

Although the Auxiliary's new national president has personally found her richest experiences in the job of national director of the volunteer hospital workers program, the Auxiliary has seen fit to utilize her talents in many other national jobs as well. She has held a number of national chairmanships. Among them: Americanism, Publications, Girls State (for 2 years), Child Welfare, Rehabilitation. And she was chairman and director of Girls Nation for 2 years.

While serving as national Americanism chairman, she directed an Auxiliary program which aimed at placing Clarence Manion's "Key to Peace" in every high school and library in the United States. That project was so successful that it won a Freedoms Foundation citation for the Auxiliary.

The Auxiliary's vast and varied rehabilitation program prospered under her direction. In 1957–58 she was the Auxiliary's rehabilitation director, and the rehabilitation committe racked up an outstanding record of service to veterans under Ce Gunn's leadership. During that year, 11,847 volunteer hospital workers served an amazing total of 941,935½ hours in 171 Veterans' Administration and 236 non-VA hospitals. American Legion Auxiliary units and Departments furnished $571,539.43 worth of Christmas gifts to 177,516 veterans in VA hospitals. The Auxiliary's outlay for its entire Christmas program was a whopping $942,583.72. In all of its rehabilitation work in 1957–58 the Auxiliary spent, Mrs. Gunn was able to report to the organization's 38th National Convention, a total of $2,784,348.84.

As the woman who directed this enormous benevolent enterprise, Ce Gunn added still more luster to her already long and impressive list of major accomplishments as one of the Auxiliary's top officers. Small wonder that the 834 delegates meeting in the Terrace Ballroom at the Morrison Hotel in Chicago last September 4, unanimously voted to pay her the highest honor they could—to elect her to the national presidency of the American Legion Auxiliary.

The Nation's No. 1 auxiliare joined the Auxiliary because, as she puts it, she is "interested in people." She was attracted by the Auxiliary's programs which "permit a person to work with people—veterans and their families—people who are here where the results of your work can be seen."

In the Auxiliary, she felt, she had found an organization tailor-made for a person who wants to help others. Correctly she perceived that this is an organization whose reason for existence and whose secret of success can be summed up in one word: "service."

Likewise in her business career Ce Gunn's work has been directly with and for people. The obvious personal aspects of the teaching profession are so well known that no comment on them is required here. But in Portland, where Mrs. Gunn worked for 10 years in a ladies specialty store (the Charles F. Berg Co.), she was also directly and closely associated with people in various capacities. Hers was not a cold, impersonal, paper-shuffling job.

She began as "Betty Buyer," a job in which she shopped for others, especially for men at Christmastime. Later she was floor manager of a department, and during World War II she was bond coordinator for the store. As such, she made radio addresses urging the purcase of bonds, and helped to run the store's bond program. The U.S. Treasury Department awarded her a citation for her bond-selling activity. In addition, Ce Gunn did other volunteer work in World War II. For the Red Cross, she made bandages and gave blood. For the USO she served food to servicemen and was hostess at dances

Another facet of her business experience again brought her into close contact with people. While she was working at Berg's, she taught retail selling in the Portland public schools as part of that school system's vocational training program. She was also the store's club representative. In this capacity she served as the store's contact with professional and service organizations, such as the 50–50 Club (an organization similar to the Rotary) and the Business and Professional Women's Club.

But it was her assignment as the store's bridal consultant that was perhaps her most fascinating—and sometimes most nerve-wracking—job. In this position she helped prospective brides to plan their weddings. It proved to be interesting work, and it gave Ce Gunn an opportunity to observe the wedding ceremonies of many different religions. "It was," she says today, "a very delightful experience." There were, however, aspects of the job that would have turned strong men weak.

For instance, one night Mrs. Gunn had three weddings. They were to take place in various parts of Portland, and the brides-to-be were every bit as desirous of looking their best as any girl would be at such an important time in her life. Everything went well until not long before the ceremonies were to begin. Then it became clear that two of the wedding gowns—a size 12 and a size 18—had been sent to the wrong addresses. The brides, as might be expected, were in a state of near panic.

"That," says Ce Gunn, "was my most hectic experience as a bridal consultant. For a while I had cabs going back and forth all over Portland, but finally the mixup was straightened out and the girls got the right gowns."

Later Ce Gunn worked as personnel and operating manager for a chain of five women's specialty stores.

The auxiliary's new national president has also been active in church work. She is a member of the Riverside Community Church. Shortly after she was graduated from high school, she was president of the Christian Endeavor in the northwestern United States. She originally joined that organization for much the same reason that she became an auxiliare: to, as she puts it, "help humanity if I can."

This background of dedicated service and solid accomplishment has made Ce Gunn well aware of the root purposes of the auxiliary and has acquainted her well with its program. It has also particularly fitted her for the important, always demanding, often difficult, sometimes trying job of national president of the auxiliary.

When she was elected to the auxiliary's highest office last September, she was, as any woman would be, tremendously flattered and enormously pleased. "To be elected national president is," she said, "a very exhilarating and happy experience." But it was also plain that Ce Gunn knew that a year's hard work lay waiting for her. No starry-eyed dreamer, she faced up to the fact that she had accepted a year of almost constant traveling, speechmaking, and gruelling hard work.

That she was ready for it was clear in her acceptance speech at the auxiliary's national convention. She proposed no grandiose schemes; no cute gimmicks; no new, temporary projects. Instead she cast a practical eye over the auxiliary scene, sized up the state of the auxiliary and of the Nation, and matter-of-factly told the delegates:

"We do not have to search for new horizons, nor discover new ways to be of service. But what we do have to do is work and labor to keep what we already have. * * * We already have the firmest of foundations and the finest of programs. * * * But in this era of easy living and many pleasures and distractions, we are prone to lose sight of our goals, and to take the priceless heritage known as the American way of life too much for granted. There is no organization better qualified (than the auxiliary) to appreciate and to maintain these freedoms and this way of life."

She then issued a challenge to all auxiliaries, calling on them to examine and evaluate the situation she had described and urging them to join her in her efforts to maintain and to strengthen the auxiliary's basic programs.

A few weeks after she was elected national president, she stated her views once more with equal directness: "The task facing us today," she asserted, "is to fulfill the challenge to work to maintain and make stronger the auxiliary's basic programs. We must ask ourselves, 'Are we doing our best?' My answer to that question, is quite frankly, 'No,' I think that we can do better."

When she was asked, not long after she began her administration as national president, what she thought was the greatest problem facing the United States of America today, she unhesitatingly replied: "The apathy of the people, the widespread attitude of taking our blessings for granted. There is a great need for us to put less stress on material things. That, I believe sincerely."

The auxiliary, she feels, can help to correct this situation by telling America what the auxiliary believes in, stands for, and does. The place to begin, as Ce Gunn sees it, is the place where the work of the organization is really done, where its programs are actually put into effect. "The auxiliary—and the Legion—" she says, "can best help by improving their units, their posts, their hometowns. The auxiliary can be no stronger than the sum total of its units." The strength of both national organizations, she is convinced, lies in the local branches, in the units and posts.

Her administration, she stoutly avers, will be marked by an adherence to the fundamental principles of the United States of America, the auxiliary, and the Legion. "Every ounce of strength I have," she declared, "will be devoted to carrying out these principles."

The Rose, Our National Flower

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to bring the attention of this body to a resolution adopted by the General Federation of Women's Clubs, endorsing the rose as our national flower. The resolution is as follows:

Whereas the United States of America has no national flower; and

Whereas the rose grows in profusion in all States and blooms in all seasons of the year and lends itself to multiple use; and

Whereas the rose by its beauty has won a place in the hearts of the American people: Therefore be it

Resolved, That the General Federation of Women's Clubs urges the Congress of the United States to designate the flower commonly known as the rose as the national flower of the United States.

Communism on the March in the Caribbean

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. FLOOD. Mr. Speaker, over the past year we have observed many political events in the Caribbean area that have led to the overturn of two governments, Venezuela and Cuba. Accompanying these revolutionary upsets, influence of international communism, which likes to fish in troubled waters, has been present.

The story culminating in the present situation is complicated and long, but essential for properly understanding of the problems involved. An enlightening summary of this recent history by Harold Lord Varney was published in February 1959 issue of American Mercury and is extremely pertinent in connection with developments affecting the Panama-United States relations, about which I shall address the House in the near future.

Under leave to extend, I include the indicated article:

COMMUNISM ON THE MARCH IN THE CARIBBEAN

(By Harold Lord Varney)

If Soviet Russia is in search of America's Achilles heel, it will not be difficult to find it. Today, despite the $60 billion anti-Communist ramparts which we have erected with our foreign aid, there is one spot where the United States stands perilously exposed. That danger spot is our own front yard, the Caribbean.

It is conceivable that America could still survive if all Asia and even Western Europe went down the drain. But it is difficult to imagine American survival if communism succeeded in entrenching itself powerfully within the 1,500 mile perimeter of the Caribbean. This is our part of the world—as truly a link in America's home defenses as Cape Canaveral or the Pentagon. Today, while we are preoccupied with our oversea efforts, the Caribbean area is offering an open opportunity, at numerous points, for Soviet Russia to infiltrate and enter our hemisphere.

Four and a half years ago, when Jacobo Arbenz and his Communist-ridden regime were tossed out of Guatemala, most Americans optimistically congratulated themselves that the fight against communism had been won in this area. We should have known communism better. Now we are making the painful discovery that communism was not wiped out, it was merely diffused. Today, 4 years later, there are at least four major Red danger points, and as many secondary ones, in the Caribbean region. Any one of these is capable of erupting overnight into an intolerable threat to American safety.

The frightening truth is that the political situation has been steadily worsening for the United States in the whole Caribbean area. Four years ago, after the cleanup of Guatemala, the Caribbean was ringed with a girdle of strong governments which, although differing sharply among themselves, had one thing in common. All were uncompromisingly anti-Communist. All were pro-American. As nearly as possible, in the fluid field of politics, America's back door was safe.

In Guatemala itself, the pro-American Castillo Armas had replaced the pro-Soviet Arbenz. In Nicaragua sat the elder Somoza, veteran of a hundred successful battles with the Communists. In Venezuela, power seemed firmly in the hands of Marcos Perez-Jimenez, backstopped by one of the sternest anti-Communist security officers in the hemisphere, Pedro Estrada. Cuba was under the experienced rule of Fulgencio Batista who had once tried coalition with the Communists and had learned his lesson. In the Dominican Republic was the granite figure of Rafael Trujillo. In Britain's Jamaica, anti-Communist Bustamente seemed to be a fixture.

The startling speed with which this comfortable situation reversed itself in 4 years should be an eye opener for Americans. Jamaica has turned out Bustamente and has replaced him with the Socialist Norman Manley. The elder Somoza was assassinated and succeeded by his son who, although pro-American, is more conciliatory. Guatemala's Castillo was assassinated by a Communist. Perez-Jimenez in Venezuela was deposed by a surprise revolution: his successor, Larrazabal, had been a pliant and unpredictable tool of the pro-Communist factions. Batista in Cuba has been plagued by a Castro revolution which is both anti-American and pro-Communist, and which today has spread over a part of Oriente Province. Only Trujillo remains with undiminished power, and he has endured the full fury of the Liberal smearpot brigade in the United States during the last 2 years. A situation which was copper-riveted in favor of the United States 4 years ago now appears to be coming apart at all its seams.

In the face of such poisonous developments, it would be supposed that the United States would be reacting with alertness and with a realistic facing of the hard facts. Unfortunately, no such reaction has taken place. Aside from a few lonely voices, such as those of Senator Olin D. Johnson, Congressman Carroll E. Reece and Spruille Braden, most of the public comment on Latin America has actually been favorable to the forces which are working against America. The old American weakness for backing the wrong horse abroad is again manifesting itself, just as it did in China in the early 1940's when most of our writers went ga-ga over Mao Tse-tung. While Russia and its agents pursue a shrewd and unrelenting plan of subversion in the Caribbean countries, most of our so-called Latin American "experts" fail to see the pattern. With the same blindness that was shown in China, they are hailing potential enemies as friends and reviling proven friends as dictators or worse. No wonder Russia wins.

Take the appalling situation which is building up in Venezuela. Most of our national magazines and newspapers are completely misleading us concerning what is actually going on in that unhappy country.

Before this article is printed, Venezuela will have held a Presidential election. Whether the successful candidate is Romulo Betancourt, boss of the Leftist ACCION Party, or the Communist-dominated Larrazabal, the result will be equally disastrous for America. It will be certain that Venezuela, for the next 5 years, will be in hands much more unfriendly to the United States than was the scorned Perez-Jimenez government.

And yet, to take a single example, the New York Herald Tribune on November 3, 1958 hailed the coming election as a "democratic landmark" and remarked foolishly that, whatever the outcome: "Venezuelans will not have to worry too much about the overthow of their present democratic government." The implication was that what has been happening in Venzuela since the revolution of January 1958, should be applauded by Americans.

The bitter truth is that Venezuela will either elect the figurehead, Larrazabal, or else it will put in power a man, Romulo Betancourt, who has been described by Senator JOHNSTON (without denial) as the actual leader of all the Communists in Latin America. Any yet the Herald Tribune has the political naivete to describe such an impending election as a "democratic landmark."

Americans would be wise to keep their eyes steadily on this man Betancourt. He is bad news for the United States. A slippery, phrase-mongering demagogue who knows how to exploit the grievances of the voters, he is now posing in Caracas as an "anti-Communist." This is the same man who, while an exile from Venezuela, founded and led the Communist Party of Costa Rica for 5 years.

Betancourt is one of the Venzuelans who shed crocodile tears over the stoning of DICK NIXON in Caracas last May. And yet, with one of his ACCION Party henchmen then holding the office of Minister of the Interior under the present junta, and another serving as chief of the security police (Pedro Estrada's old office) he could have prevented the outrage by the mere lifting of his hand. The complete unreality of the coverage of the Nixon episode in the American press is shown by the fact that no one pointed out this overall responsibility of Betancourt, the man who gives the Communists their orders.

What is happening in Venezuela, since Perez-Jimenez's overthrow, is the projection onto the political stage of two Communist-manipulated parties—a small official Communist Party and a large ACCION Party. Publicly rivals, they actually are working toward the same power end. The Communist Party operates the Caracas street mob and controls some of the nation's key unions, but it has no hope of winning immediate power in its own name. The party which is being groomed to win is Betancourt's ACCIO Party with its demagogic appeal to the non-Communists. It is a shrewd squeeze play, and a play whose far-reaching consequences have been almost completely ignored by the writers and publications which assumedly keep Americans informed about Latin America.

The blindness of American liberals to Latin American realities was shown on February 5, 1958, when a large group of prominent American writers and publicists staged a farewell dinner to Betancourt in New York on the eve of his return to Venezuela after the revolution. The dinner was held under the auspices of the Inter-American Association for Democracy and Freedom, which claims to be non-Communist.

If and when the Communists come to power in Venezuela, they will have their clutches on the richest prize in the Caribbean. Venezuela is vitally necessary to the United States as the world's second largest oil-producing area. Recently, it has become also an important iron-producing nation. Its geographical location gives it a key strategic importance in any scheme for the defense of the whole Caribbean region. The

first principle of a sound American defense plan should be to keep this fabulously rich area out of the hands of the Communists. There are no evidences that Washington has any such coherent plan. Since the fall of Perez-Jimenez, official America has been content to drift with the events.

The unfolding of the Communist pattern for the Caribbean has been speeded since the Venezuela revolution by what has happened in Cuba. That Venezuela and Cuba are now linked closely in Red plans is shown by the aid which junta-ruled Venezuela has given to the Castro revolution against President Batista.

Prior to the fall of Perez-Jimenez, Venezuela was a closed area to the leftist Cuban rebels trying to pull down the pro-American regime of Batista. Fidel Castro's remote mountain base in Oriente Province was supplied furtively by gunrunners, operating from the Florida coast, and by some irregular aid from Mexico and Costa Rican agents. No prorebel radio broadcast reached the Cuban people.

The success of the January revolution in Venezuela put the dwindling Castro rebellion back into business. Under the Communist-pampering Larrazabal regime, Venezuela has become the supply base for the Castro movement. Shortly after his return to Venezuela, Romulo Betancourt called a Caracas anti-Batista conference to aid Castro. A radio station in Venezuela began daily broadcasts to the Cuban people inciting them to rebellion against Batista. These broadcasts continued until the eve of the Venezuelan presidential election, when, to avoid campaign talk, they were halted.

While Washington shortsightedly pursues a policy of embargoing arms to Batista (how reminiscent this of General Marshall's embargo on arms to Chiang Kai-shek in 1946), Venezuela covertly supplies Castro's forces with Garands, howitzers, and other materiel. Steadily, an axis is being welded between the leftists of Cuba and those of Venezuela under the complacent eye of American "liberal" Latin American counselors. The Caribbean is slipping away from us by continued stages, and we are doing nothing about it.

The paradox of the situation is that the Castro revolt against Batista was largely hothoused by a group of supposedly responsible American publications, including the New York Times, Life, Look, etc., and by the radio and TV commentator, Edward R. Murrow. Without the terrific buildup which these non-Communist publications have given him, Castro, with his initial 80 followers, would still remain a mountain-locked bandit. Although the pace of Castro heroization has slowed down since he and his brother began kidnaping Americans, it still continues fitfully. After one of Raul Castro's raids on Americans, the New York Times actually profiled him admiringly in its Man of the Day column. When it is recalled that Fidel Castro has a long record of both anti-Americanism and close association with Communists, all of which is documented in the files of the Police Department of Mexico City, his nomination by American liberals to be Batista's successor becomes all the more fantastic. And yet it is happening.

When we proceed further in our tour of the Caribbean, we find another smoldering danger point in the Dominican Republic. Under Rafael Trujillo, the Dominican Republic is the strongest bastion of anticommunism in the Americas. Repeatedly, the Moscow agents have attempted to precipitate revolution against him. Always, Trujillo has repelled them, and has forged sufficient strength to aid anti-Communist action in other parts of the area. Without passing upon the merits of his absolutist form of government, it would seem that Americans would welcome such a rugged ally in the life-and-death struggle against communism.

However, with an irresponsibility little short of suicidal, a large coterie of non-Communist Americans are devoting their energies to the fantastic task of driving Trujillo out of the Caribbean. In this mission, an important part of the Nation's press has approvingly publicized them. The Galindez disappearance, an obvious Leftist hoax, has been played up in the press ad nauseum and when even such a lifelong liberal as Morris L. Ernst painstakingly exploded the myths which surrounded the case, his documented report was greeted with contempt and unbelief. The press, headed by the New York Times, continued to reiterate the lies.

The venom with which a group of American magazines and newspapers have pursued Trujillo's politics and even the private life of his family has little parallel in the history of Latin American relations. Were Trujillo an uncertain factor for America, the animus might be understandable. But behind him lies a record of 30 years of unwavering support of the United States in the Caribbean. His overthrow would usher in a reign of chaos in the Dominican Republic which would be an open invitation to the Communists. They would rush in to fill the vacuum. And yet this ghastly prospect does not have the slightest deterring effect upon the vengeful Liberal Americans who are dedicated to the task of Trujillo destruction. No wonder Moscow laughs.

Meanwhile, in British Guiana, just beyond the Venezuela border, we have the obscene spectacle of a Communist government actually in power. Dr. Cheddi Jargan, a fanatical Communist, with a talent for exploiting race grievances, won a majority of the seats in the Legislative Council of British Guiana in 1953 when London incautiously granted the colony self-government. At that time the British were realistic enough to deny Jargan the Prime Ministership. But in the general softening of the West in this hemisphere, the British lacked the stamina to veto Jargan when he won a second election. He was elevated to the Premiership where he sits as the living symbol of Communist victory in the Caribbean.

The events in British Guiana have had a profound influence upon adjacent Trinidad where an anti-American Socialist, Dr. Eric E. Williams, has attained the Premiership. The whole British chain of Caribbean possessions has become an open gash upon the anti-Communist solidarity of the region.

Nothing is more self-evident than the fact that we are on the threshold of tragic events in the Caribbean. They may be events which will point a deadly knife at the political security of America in its own hemisphere. As almost happened in Guatemala, they may conceivably admit Russian-directed communism into our own backyard.

The Reds themselves have now reached the boasting stage. The Moscow Kommunist, the theoretical monthly of the Russian central committee, announced in its November issue that there are now 360,000 card-holding Communist members in Latin America—20,000 of them in Venezuela.

There is still hope that America can halt this dangerous drift before it goes too far. But if America does this, it must speedily change its strategy in the Caribbean. Its publicists and opinion leaders must stop crucifying the rulers in Latin America who are willing to back up the United States in its struggle with communism. They must stop pampering and heroizing America's enemies and Moscow's friends.

The State Department must stop playing footsie, as it is now reported to be doing in Venezuela, with such equivocal characters as Romulo Betancourt.

It may be hard for some Americans to abandon their enjoyable sport of needling the strong men in the Caribbean. But if they don't execute a quick change in their attitude, we may see all the important nations in the area slipping away from us. Change, when it comes, comes quickly in the Americas. Time is definitely running out for the United States, even in this hemisphere, unless Americans quickly learn how to fight and more importantly, how not to fight the Communists.

A New Report on U.S. Defenses

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 16, 1959

Mr. WILEY. Mr. President, there appears in the U.S. News & World Report for February 20, 1959, an article entitled "From the Navy's Top Admiral: A New Report on U.S. Defenses." Adm. Arleigh A. Burke, Chief of Naval Operations, testified before the Senate Subcommittee on Disarmament on January 30, 1959. Among other things, he said, according to subheads preceding the article:

Don't rely on any arms agreement to ward off a first blow.

No controls can guarantee against a surprise attack by an aggressor.

Soviets can't be trusted, ever.

Polaris submarine is best United States weapon.

If atomic tests ended, Polaris and other weapons would suffer.

United States safeguard: ability to retaliate.

I ask unanimous consent that this particularly newsworthy article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE NAVY'S TOP ADMIRAL: A NEW REPORT ON U.S. DEFENSES

(Adm. Arleigh A. Burke, Chief of Naval Operations, appeared before the Senate Subcommittee on Disarmament, January 30, 1959. His answers are from the transcript.)

Can surprise attack be prevented?

There are certain fundamental aspects of this problem. Surprise attack is not limited to attacks only by ICBM's (intercontinental ballistic missiles) or long-range bombers, but can involve attack through rapid movement of sea or land forces as well. This is of particular concern to our allies.

No known control measures can guarantee the prevention of surprise attack by a determined aggressor.

The best that can be expected is that certain control measures may discourage an aggressor from launching a surprise attack by depriving him of the assurance of complete surprise.

We must be wary of proposals which would reduce or restrict our ability to deter general nuclear war through the maintenance of a diversified retaliatory force.

Also we must be wary of proposals which would reduce or restrict our ability to respond quickly with adequate military force to Soviet probes at the free world wherever they occur.

Can submarines launch surprise attacks?

The possibility of a surprise attack by submarines is very great, and it is causing us a great deal of concern. [Deleted.] But we

have forces at sea all the time, searching up and down both coasts. We have our various patrol squadrons that operate. [Deleted.]

Could the United States keep enough atomic weapons on submarines so that, if an attack were launched, the enemy could not possibly catch the submarines?

That is right.

Enough nuclear weapons could be stored at sea on submarines to retaliate with great destructive force?

That, of course, is the philosophy behind Polaris submarines, sir. It is difficult for us to find those submarines with all of our capability, and it will be equally difficult for them (the Soviets). They cannot find all of them simultaneously, but they might find one. If they drop on one, that is an indication for all the rest.

Our strength now, our position of power now with these submarines is that, no matter what he [the enemy] does, he cannot avoid being destroyed. He cannot avoid it. So that is where we have retaliatory strength.

When we get significant numbers of these over the ocean, then he cannot do anything we cannot do.

How are Polaris submarines coming along?

The first one is scheduled to be in full operation in the fall of 1960, and then they will follow through at the rate of, under the present budget, about three a year.

When we get some of those submarines at sea, the Russians are not going to know which submarines are where. They are never going to know whether a submarine is a ballistic-missile submarine, an ordinary submarine, or how many there are or where they are or their condition, or anything about them. They will never know.

And if we have 10 submarines that are built, they will never know where 9 of them are; and every time they pick up a submarine contact, that might be a missile submarine, and the reverse is equally true.

Would submarines have a rather difficult time making much of a missile attack on the Soviet Union?

It would depend upon the number of submarines we wanted to place and where we wanted to place them. [Deleted.] The Arctic Ocean is a very good place because there are holes in the Arctic ice, and you can put a submarine into the holes and it launches through them or it can come up next to the coastline and it is very difficult to detect.

Major population centers of the Soviet Union are far from there, are they not?

Yes, sir. But you could hit Murmansk. * * * With 1,500 miles range you can cover all but a very small part of Russia from launching positions at sea.

Would you have missiles that shoot 1,500 miles?

Yes, sir; yes, sir.

What about this Polaris missile, have we really got one?

No, sir, we do not have one yet, but we started several years ago, sir, on this, and we are right on our schedule.

Does Russia have a considerable number of missile-carrying submarines already?

No, sir; I do not think they have a considerable number. I do think they have done considerable research in them, and I think they are probably doing most of their research based upon their land research data on ballistic missiles. So I think they could have ballistic submarines now. I do not think they have very many.

If the Soviets built a great many underground shelters, would there be any possibility that vast numbers of their people could survive an all-out hydrogen-bomb attack?

No, sir. If we were to launch a retaliatory attack against Russia, large numbers of their people would die, no matter how many shelters they had.

How many do you mean?

Twenty, thirty, forty percent. Of course, it depends on what they do, the direction which their wind blows, how good their facilities are, how long they stay in their underground shelters, but there is a limit on the amount of time they can stay under, and a large portion will die.

Recognizing that the date is approaching when the United States and Russia can each have at sea enough weapons almost to destroy the other, is the time near when neither side will dare to use hydrogen bombs on each other?

I think we have reached that already, sir. I think they are convinced that we will not start a general nuclear war. I believe they are convinced of that. I think they are also convinced that, if they start a general nuclear war, they have had it, they are destroyed, and both of us will have serious damage.

In effect, is there not already a tacit, unwritten agreement that there is not going to be a war with hydrogen bombs, by mutual recognition of the terrible consequences?

Yes, sir; except that an agreement has been made with a congenital liar.

Does that indicate the type of fighting most likely would be the conventional type?

It would be a limited war; yes, sir. We may use small nuclear weapons in limited wars on certain occasions, too.

If the United States gets into a position in which it is not able to fight a limited war, is that not when the enemy is going to attempt that kind of war?

Yes, sir; and he is about to probe, just as Mikoyan came over here probing, finding weak spots, looking for weak spots in our businessmen, finding any place at all where he thinks the United States is weak so he can drive a wedge in that would be military, political subversion, economic, every way possible. And when they find that weak spot, they are going to try to have the capability of taking advantage of it.

They haven't the capability now, perhaps, in all the ways—I mean in all aspects—but they will. I think they are going to try to get that capability. And when they do—they find a weak spot—they cash in.

Operation Nibble?

Operation Nibble; yes, sir.

Do you see any prospect of achieving something in the field of disarmament?

It is possible, sir. I do not see much prospect of it; no, sir. * * * If Russia wants to decrease tensions, the first thing she should know, and I think she does, is that she has got to create confidence in the rest of the world.

I think she is trying to. She is trying to put up a false front to create a situation in which we have confidence in her which is not deserved.

We have to watch that. That is the most dangerous thing there is.

The chairman of the Joint Chiefs, General Twining, said in U.S. News & World Report last April:

"Our defenses would be affected if atomic tests were to be stopped, as we would be unable to proceed with desired improvement." He meant in nuclear weapons. Would that statement be true today with respect to Navy defense requirements?

Yes, sir.

Why do you say that?

Because there are great prospects of increasing the yield and decreasing the size of weapons—smaller weapons, with greater yield. In Polaris, for example, we have a satisfactory warhead, but if the tests were to continue we could probably get a warhead weighing the same amount which will have two or three times the present yield.

Also, we would like to go into real small weapons. Take depth charges that could be fired from a [deleted] gun, for example. Some day you will be able to achieve that if testing continues.

But if you do not have a test, you do know whether you have it or not.

Would you even want to consider an agreement with Russia limiting development of rocket engines?

No, sir; because we entered into a naval agreement, you know, and we got rooked.

Dr. Walter H. Hitchler

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of February 6, 1959, upon the passing of Dr. Walter H. Hitchler, former dean of the Dickinson School of Law, and native of Plymouth, Pa.:

DR. WALTER H. HITCHLER

As an educator, public official, and citizen, Dr. Walter Harrison Hitchler, native of Plymouth and retired dean of Dickinson School of Law, easily qualified for a place among the distinguished Pennsylvanians of his generation. This was no mean achievement when the record of the past half century is examined. From the Nottingham mine, where he launched his career, to the eminence he attained in the profession and in public affairs is impressive progress by any yardstick.

Member of an old and respected family, Dr. Hitchler carved a remarkable career by combining law and education. He joined the law faculty of Dickinson in 1906 and was named dean in 1930, a post he held until his retirement in 1955, after 48 years of service. One of his pupils was former Gov. John S. Fine, and a boyhood friend was former Gov. Arthur H. James, with whom he worked in the mines. Scores of Luzerne County lawyers came under his supervision at the Carlisle institution with which his name was linked so long and intimately as an instructor and administrator.

Pennsylvania called on him repeatedly for a helping hand. He was a member of various commissions to revise the laws of the Commonwealth and he wrote extensively on criminal law. He served in the office of the secretary of the commonwealth and Governor James drafted him to chairman the State liquor control board. During the Second World War he headed the Alien Enemy Hearing Board in the middle district. He also added to his reputation nationally through his service on the National Panel of Arbitrators. But the law school was his principal interest and he served it with fidelity and distinction.

Many honors were heaped on him, including five doctorates from higher institutions of learning. Hitchler House on the Dickinson campus is one of the memorials a grateful college provided in acknowledgment of its indebtedness to him and as an expression of its appreciation. The profession paid tribute to him on a number of occasions for his dedication to the law and the public interest, as well as for his modesty and unselfishness.

With his passing, a useful life has come to an end.

The Catholic Church in China

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DADDARIO. Mr. Speaker, I should like to call to the attention of the House the fact that Sunday was observed as a day of reparation and prayer for the people of China by Catholics throughout the world. This observance was asked by Pope John XXIII and special devotions were held to mark the day.

I request unanimous consent to enter in the Appendix to the RECORD a brief statement on the facts concerning the church in China. This statement was released by the National Catholic Welfare Conference to accompany remarks made by the four American cardinals urging that Catholics in Red China remain loyal to their faith.

I am troubled by the fact that we Americans often concentrate on the military and economic threat posed by the Soviet regime and fail to recognize the greater spiritual, moral and intellectual threat of communism, whether it is practiced in Moscow or Peiping. Indeed, we tend to think of China in second place, while it remains a major threat to world peace.

The tragic effect of the tyrannical effort to force all people of China into one mold, the so-called rectifications of error that provides for the breaking up of families, forced labor, jail or worse, is not compatible with any idea of justice. China's behavior toward her obligations, her refusal to release American prisoners despite her promises, her eagerness to acquire an atomic capability while her military force increases, all must attract the constant concern of our people.

The record of Red China's treatment of her native Christians is a frightening one. I hope all of the Members will give it close attention.

WASHINGTON, February 13.—Ever since the Communists gained control of Red China in 1949, Chinese Catholics have been under relentless pressure to erect a schismatic church.

Schism would occur if the Catholic Church in China renounced the Pope's jurisdiction.

Pope John XXIII warned last December that schism is now threatening the Catholic community of China.

"We cannot but beseech Almighty God that in His mercy He may avert such a calamity," the Pope said.

Within the last year about 20 Communist-sponsored priests have been consecrated bishops in defiance of the holy see.

Catholics in China have never been many, numbering some 4 million in a total population of over 500 million. But missionary influence has been far reaching and deep.

In 1949 there were 2,557 Chinese priests and 3,080 foreign ones. There were 5,112 Chinese and 2,351 foreign sisters. The hierarchy comprised 27 Chinese and about 100 foreign bishops.

The Catholic educational system consisted of 3 universities, over 150 high schools, 1,546 elementary schools, and 2,742 catechetical schools. Other institutions included 216 hospitals, 781 dispensaries, 5 leprosaria, and 254 orphanages.

None of the schools or institutions remain. The only exception is a Catholic school taught by European nuns in Peking for dependents of foreign diplomats.

The foreign missionaries have been expelled or killed, and four are in jail. Among them is Bishop James E. Walsh, of Cumberland, Md. The Communist Government confirmed his arrest last December. U.S. State Department efforts to secure his release have been so far unfruitful.

The Chinese clergy has not fared any better. More than 1,000 have been imprisoned or killed.

In 1951 the Communists launched a three-autonomy movement to end completely all foreign contact. Churches could not accept financial support nor missionaries from abroad. All relations with foreign countries, especially with the Holy See, were prohibited. Sermons on the Gospel had to support communism.

In 1954 the Government announced the formation of the patriotic association of Chinese Catholics to supplant the three-autonomy movement.

The late Pope Pius XII roundly condemned the association in an encyclical secretly circulated among Chinese Catholics last summer. The association aims "at making Catholics gradually embrace tenets of atheistic materialism by which God Himself is denied and the principles of religion rejected," the Pontiff declared.

Through the association the Communists wear down resistance. A steady diet of indoctrination is one of the Reds' most deadly weapons. In a letter smuggled from Red China to Hong Kong, a priest wrote:

"These indoctrination courses are deadly, there is no escape. You couldn't imagine how rapid, rabid talkers can force you to think, repeat, concede, admit, and at last get you on their side to prattle the same misleading, ambiguous statements as they spit out. * * * They insist, repeat, insist again and again always on the same statement—wearing us out, breaking us down—until unable to hold out any longer one is finally prepared to say, 'Well, have it your way.'"

News reports from the Communist press indicate that at least 32 Chinese priests have been elected bishops through the patriotc association. About 20 of the bishops have reportedly been consecrated. A decree of the Holy See provides automatic excommunication for clergymen who take an active part in unauthorized consecration ceremonies.

Church authorities, however, are reluctant to pass judgment on those who take part in illicit consecration ceremonies until more is known.

Rev. Frederick A. McGuire, C.M., organizer and former head of the Catholic Central Bureau in Shanghai, which coordinated missionary activities in China before the Reds took over, said he is optimistic that the majority of Chinese Catholics have remained loyal to the Holy See. He pointed out that tight censorship in Red China restricts what is learned to items from the Communist press and from indirect reports.

Father McGuire is now director of the mission secretariat at the National Catholic Welfare Conference in Washington.

A Communist newspaper recently indicated that Catholic opposition has not been shattered. The newspaper, Chieh-fang Jih-pao of Shanghai, denounced reactionary forces among Catholics who opposed the efforts to support Communist leadership as well as to get rid of the Vatican's reactionary controls.

Forced labor for sisters and priests leaves little time for religious duties. A Communist publication, the Review of Tientsin, published an enthusiastic account allegedly written by a sister superior:

"All the sisters as well as the bishops and priests are taking part in work in the fields. This lasts from 6 in the morning until 9 at night. At midday we take our meals in turns so that work is not interrupted. Those who dig the ground change teams every 20 minutes and those who are breaking stones every 10 minutes. When wells are being dug supper is passed over and work continues on an empty stomach until 9:30 in the evening."

Protestantism, no less than Catholicism, has been the target of the Communists' intense campaign to eradicate God. The China Committee of the National Council of Churches of Christ recently reported that all church bodies have been merged into one. Ministers must register with a government group and are closely restricted. The more than 200 churches once in Shanghai have been reduced to 12.

"Attendance has much fallen off, partly because so many work on Sunday—one of the latest resolutions is that services on Sunday must not be allowed to interfere with work," a letter reaching the NCCC noted.

The pattern that has emerged in Red China is a deliberated methodical campaign to destroy the spiritual allegiance of the Chinese people. In its place the Red Government wants to substitute a national church subservient to the aims of the totalitarian regime.

Col. William P. Jones, Jr., a Superior Officer

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. EVERETT. Mr. Speaker, all to seldom are we given the opportunity to join in a special public expression of appreciation and esteem for the men and women who carry out the great public programs authorized by the Congress. One such rare instance is the recognition accorded Col. William P. Jones, Jr., Army District Engineer at Memphis, Tenn., since July 1957, upon his transfer to the Army War College.

Colonel Jones truly has rendered outstanding public service in carrying out the tremendous responsibilities of the Corps of Engineers in the lower Mississippi Valley. The corps' program for flood control, drainage, and navigation directly affects the lives and well-being of the millions of people served by this great waterway. Colonel Jones' exceptional professional ability, as well as his understanding of and sympathy with our needs, has contributed immeasurably to the solution of many difficult problems. His service at Memphis has been in the highest tradition of the Corps of Engineers.

I am sure that I speak not only for myself, but for all of our people, in paying tribute to Colonel Jones for his superior service at Memphis. Our regret at losing a district engineer of such qualities is tempered by sense of gratification that our judgment of this fine officer is confirmed by official recognition in his new assignment for training to undertake still higher responsibilities.

Under unanimous consent I include in the RECORD the following editorial

from the Commercial Appeal at Memphis for January 31, 1959, with respect to the services of Colonel Jones:

A SUPERIOR OFFICER

No Army district engineer who has served in Memphis has better fitted himself into the community's life or to that of the Midsouth he serves than Col. William E. Jones. His impending transfer to the War College must be, therefore, a cause for genuine regret. The only compensating factor lies in the Army's recognition that he is general officer material and for that reason must be given War College training.

If civilian authorities throughout the Midsouth had the power to make out an efficiency report for his personnel file they would use the designation superior for every rating classification. It would not be exaggeration of the quality of service Colonel Jones has given Memphis and the Midsouth.

Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. FLOOD. Mr. Speaker, there is no aspect of human events so mighty in its consequences as militant revolution. Throughout history reformers and pseudoreformers have repeatedly raised the revolutionary banner, inciting insurrection against national governments in the name of liberty. The results have been many and varied, sometimes mighty in their beneficence, sometimes mighty only in their destructiveness, and sometimes productive not of liberty but only of a mightier tyranny than any that existed before.

The people of all nations have strong feelings about revolutionary leaders. To those who profess a love for liberty, yet actually seek only personal gain, the people accord nothing but scorn. Yet to those who actually fight for liberty, the people willingly pay eternal devotion. It is the distinction of the Polish people to honor as one of their revolutionary heroes a man regarded by the freedom-loving citizens of all nations as the outstanding democratic revolutionist of his age and one of the outstanding of all ages: Thaddeus Kosciuszko, universally acclaimed as the hero of two worlds.

Kosciuszko's breadth of vision and ability gave his career a fictional quality. Of noble birth he rose above the narrow outlook of the 18th century Polish nobility to espouse democratic reform. With no prospect of personal gain he crossed an ocean to aid a foreign people in overthrowing British tyranny. Hailed in the New World for his part in the American Revolution he forsook all honors to carry the spirit of revolutionary democracy back to Poland. Defying his own class, the Polish nobility, he campaigned politically in behalf of constitutional government in Poland and when Polish nobles and Russian and Prussian troops sought to thwart the popular will, he took up arms against them. Although achieving fame in the American Revolution as an engineering genius he now appeared in the role of military tactician, leading a minute Polish Army against the Russian horde in some of the most brilliant defensive military campaigns in history.

Triumphant as a democratic revolutionist in foreign parts, Kosciuszko was defeated in his efforts in Poland's behalf. But only physically and in the short-term sense. Actually, the classic heroism of his actions captured the imagination of the Polish people and of the world at large, and established him as a national symbol—a symbol which stands today, not only representative of Poland's past, but of Poland's future. The democratic dreams generated by Kosciuszko's actions and beliefs have taken permanent hold of the Polish spirit and no temporary tyranny, no foreign ideology is strong enough to snuff them out.

As we in America have seen, democracy is a hardy institution. It can withstand the rigors of devastation and deprivation, and ultimately come back from apparent defeat to overwhelm its enemies. This was the philosophy, the living philosophy, preached by Thaddeus Kosciuszko, and Polish patriots throughout the world have learned it well.

The man we honor on this occasion undoubtedly deserves our tribute for his political and military accomplishments, for in these respects he has few equals. But it is to Kosciuszko the philosopher, the father of democratic Polish thought, to whom we owe our greatest debt, for the fate of Poland's future is still, to this day, in the hands of his spiritual heirs.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DAGUE. Mr. Speaker, as one of the consistent admirers and constant supporters of our distinguished Secretary of State I can only contemplate with the deepest concern the prospects of his being immobilized at the moment in history when we need his strong hand at the diplomatic helm more than ever before.

The irony of the situation centers in the fact that many of his most violent critics are now wringing their hands as they desperately scan the horizon for some one to take his place. All of which points up the fact that most of his traducers took their positions for political reasons and show by their concern that they have never had a constructive alternative to Secretary Dulles' firm resistence to international communism.

In my book the only real test of a nation's foreign policy is the avoidance of war, and under John Foster Dulles' guiding hand we have weathered six crises—count them: Straits of Formosa, Suez, Syria-Turkey controversy, Southeast Asia, Lebanon, Quemoy—without firing a shot. And his policy of being able to take the Nation to the brink of war without plunging in has exhibited an adroitness which none of his more recent predecessors ever seemed to possess.

The alarm with which the Secretary's illness has been recorded abroad attests to the respect in which he is held by our allies and the satisfaction with which the Communists must be presumed to welcome his withdrawal from the active conducting of our affairs of state points up as nothing else can the vital necessity of securing in his successor, if and when a selection must be made, a man who will carry on his policies to the minutest detail.

In addition to being a great statesman and a great patriot, John Foster Dulles is a great churchman and we can only prayerfully petition the Almighty God upon Whom he has ever leaned that He will have His servant in His care and that in His good time this great and dedicated American will be restored to full health and strength and the resumption of his ceaseless efforts in the cause of peace.

The Unfolding Role of Russian Gold

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks, I desire to direct to the attention of my colleagues a speech made on February 7 by Mr. L. L. Huelsdonk, of Downieville, Calif., before the National Western Mining Congress in Denver. Mr. Huelsdonk is a member of the California State Mining Board and a recognized authority on gold. His observations make good sense and I hope his suggestions on setting the price of gold at a realistic value will be adopted. I have introduced a bill for that purpose.

His speech follows:

THE UNFOLDING ROLE OF RUSSIAN GOLD

I was glad to be asked to appear again before the National Western Mining Conference and talk about gold—even at the risk of being dubbed a crackpot on the subject. However, it is my intention to prove that the real crackpot is not the man with his feet on the ground, but rather, the long-haired dreamer who challenges the deeprooted credence of gold, then saddles up a puff of smoke to chase both ends of a rainbow. Today, because of these starry-eyed vendors of inflation, we are well able to say—with the help of Shakespeare—that gold "is a custom more honored in the breach than the observance."

During a Lions zone meeting shortly after the November 4 election, the president of the host club called upon me to substitute for their program which had failed to show. Knowing my political affiliation and convictions regarding gold, he set the stage in a spirit of good fellowship by satirically suggesting that perhaps the Democrat Party—since it had done about everything else—would now raise the price of gold. This

point of humor, of course, was well waxed with the usual witticism that such a meeting generates. However, in the remarks that followed, a rather serious vein developed when it was pointed out—with good reason—that neither the Democrat nor Republican Party, but rather the Communist Party, would be the first to raise the price of gold.

Today I intend to elaborate upon this danger by showing when, why, how, and where this will be done and the tremendous impact it will have upon the economy of the United States.

In the beginning, it will be necessary to briefly analyze a growth of developments which—over the years—have been undermining the very foundations and cornerstones of our Nation. First of all, we must recognize that inflation is not only our most dangerous foe—but it is also our most vulnerable spot. Many distinguished writers have recently pointed this out with emphasis. Inflation devours our uncommitted savings—which in the final analysis is the only firm basis for sound monetary reserves. It fosters uncontrolled repudiation of Government debt at the expense and misery of the people. It causes the debauchery of currency through the collapse of money value. It throws a serious burden upon fixed income of all types. It generates price-wage spirals which shifts its destructive force into high gear. Its unseen power can completely collapse civilized order. In short—the catastrophic malignancy of inflation, whether it continues to creep or strike rapidly, is more far-reaching and devastating than anything known to man. It is imperative that this cancer be killed—and in order to do this, its roots must be sought out and destroyed. Trying to hide these roots by spreading out the top of the bush is hypocritical, false and foolhardy.

If the real cause for the uncontrolled growth of inflation is to be unraveled, we must first distinguish between proper and improper money, because the roots of inflation are fertilized when an oversupply of improper money is dumped helter-skelter into an economy. Under such conditions, money—like anything else which is oversupplied—becomes cheap and easily available. As a result the banks become glutted and a surplus piles up beyond the needs for healthy economic growth. The cheap offering of this surplus is a natural incentive which induces everybody to spend and borrow until new and greater demands are created for goods and services beyond our normal productive capacities. This generates higher bidding in a race for things that become hard to get and in turn motivates the producers to increase their capacities in a skirmish to maintain their markets against competition. The resultant buildup of factories and the enlargement of auxiliary production facilities engenders still more demand and higher bidding for the materials and services that are necessary to further expand. With money as no object, because of its easy creation and oversupply through more borrowing—inflation takes over and a false prosperity rides high. However, industrial capability soon catches up to such a wayward economy and in time passes its false boom. Everyone has two cars and two refrigerators and they don't want any more. Conveyor belts continue to roll, but the goods pile up in inventories and warehouses because more has been produced than can be used. At this point deflation sets in. Factories are forced to curtail and lay off workers. Demand for raw materials ceases; the deferred payments on the fast-but-false money supply are called for, but cannot be met and mortgages are foreclosed. In short, this is the inevitable consequence of oversupplying an economy with improper money. And, unquestionably, the longer that corrective measures are deferred, the more severe is the backfire.

History has recorded this story many times and it is currently being somewhat demonstrated in France and Argentina where inflationary pressures have forced programs of austerity and currency devaluation as a retaliatory means against external trade competition. Such drastic moves could easily lead to international trade ware with realistic reevaluation of all inflated currencies through a general depression. The Western World is vulnerable to this type of pitfall because the supply of tangible or proper money has not been allowed to keep pace with the demands for the new amounts of money which its present rate of economic growth and population increase is requiring. As a result fractional reserves have been abused, excessive deficit spending has become the rule and government indebtedness has been outraged to provide these undeniable needs for money. In a race of this sort, improper money is easily and irradically oversupplied and currencies are weakened by dilution and instability. This points to the importance of recognizing the difference between proper (or real money) and improper (or fiat money) if the explosive mirages of inflation are ever to be absorbed into the permanence of an honest prosperity.

Simply speaking, if a dollar is to be borrowed—someone must own a dollar to lend. However, if the owner of the dollar is able to lend it 10 times and still keep it, he has created $9 of improper money or ghost money that is to be counted, but does not exist tangibly. Many world-renowned economists consider only gold as proper money because it must always be weighted before it can be counted—and because it is now and always has been, the guarantee of redemption throughout the world. It is the only universal measure of value and the standard for all currencies. Even our mighty dollar is used with gold and as gold in foreign monetary reserves only because we guarantee its redemption 100 percent in gold (through the Bretton Woods Agreement) upon demand by the foreigner. And, mind you, this guarantee holds good no matter how many ghost dollars we send abroad or how low their purchasing power may sink—so long as we have enough gold to pay off. This guarantee is the only reason that our dollar holds its high prestige in international exchange. The loss of our gold would result in the immediate loss of our dollar prestige and the Communists know this as well as anybody else. This fact alone lays the foundation for schemes which they do not intend to overlook.

Gold is different from the inflationary supplies of new money which can be created through the facilities of a commercial or central banking system, because it cannot be simply provided by a stroke of a pen. Gold cannot, in any sense, be considered as inflationary money for the simple reason that the cost of its production must be paid for before it can be used as payment. This is true no matter to what extent the demand for funds in an economy exceeds the supply of its savings. This makes gold proper money. This makes gold real and positive money and this is the reason why it holds disciplinary action over the inflationary expansion of fiat money when deficit spending ratios are not allowed to be abused or when reserve requirements are not indiscriminately changed.

On the other hand improper money can be briefly defined as a supply of fractional reserve paper in the form of private and public debt which has been dumped upon an economy to be honored in kind as specie. Although this obligatory paper is thrust into the world markets on a parity with proper money, the determination of its true value must necessarily wait until its liabilities have been liquidated in the uncertainty of future terms. In other words, the degree of inflation at the time of settlement determines the worth of this money—and the amount of this money that has flooded the markets determines the degree of inflation.

The vulnerability of our money to any outside scheme for its debauchery is being augmented by the continual cheapening of our dollar through the undisciplined monetization of too much debt. This is true because distinction cannot be made between the proper and improper dollars that are held in foreign government account. They all command and collect 100 percent of their face value in gold from our Treasury Department on demand. They act with gold and as gold in foreign reserve accounts and therefore our debts do not only create and inflate our own money, but they do double duty by creating and inflating foreign money. The only difference being that in the final analysis, we are underwriting foreign inflation with our gold.

Under these conditions, continual pressure for more free trade, foreign aid and dollar investment abroad further impairs our position. Through the impact of our generosity in these fields it is already apparent that we can no longer be expected to compete with low foreign costs through high unit output alone. Mechanization is not an exclusive privilege; so from our point of view, certainly freer trade cannot be carried on with justice to our standard of living unless the same pay for like-services in the other nations can be reconciled to our level through the convertibility of sound currencies. The order of natural availability for the fair distribution and utilization of the world's resources is a commendable goal, but not for the United States so long as she is forced by international agreement to underwrite foreign currency through the sacrifice of her gold without provisions to compensate for the depreciation of her own dollar.

It can be readily seen that if our monetary authorities and Congress continue to fail in protecting the purchasing value of our dollar, it will—someday soon—be worth only one-tenth of the value which it contained when the Bretton Woods Agreement was ratified back in 1945. This simply means that in the near future foreign-held dollars will be in a position to demand—and proportionately take—10 times more gold from our Treasury than the original agreement called for.

This situation lays the door wide open to any eager design that the Communists might have to collapse our dollar in favor of ruble prestige. It points to the importance of immediately tying the dollar realistically to gold in order to forestall its further weakening by the calculated drainage of its last drop of blood.

Such a move would take congressional courage—but it would be action and not reaction against any economic manipulations that the Communists are planning. So far we have only reacted to their moves. In the Middle East they acted and we reacted by sending in the Marines. In Quemoy they acted and we reacted by sending in the 7th Fleet. In Berlin they acted and we are still reacting. They put a satellite in orbit and we reacted by outsputniking them and now they have placed us in another secondary position by outmooning us.

They will no doubt be the first to raise the price of gold and force us again into reaction. This time it will be much more serious because, if we cannot immediately counteract to meet the consequences, it will lead to the complete degeneration of our dollar. An initiative on our part would take bold action because the opponents to the revaluation of gold are mostly powerful gentlemen of influence who self-seek by the collection of multifold interest on the expansion of the money supply through the debts of the people. The interest on the public debt alone is now over $7 billion annually. Thus, American citizens must now dig up over 4

times the amount of money, just for the payment of this interest, that it cost to run the entire Government of the United States (including the armed services) when the power to create money was taken from Congress and given to these powerful interests, who are now—in essence—saying that if some of their power to create debt is regulated by an increase in the price of gold that inflation will be the consequence and Russia will be helped.

With all due respect for the feelings of these people, it is impossible to understand how an increase in the price of gold—which would be geared primarily for the control of inflation—could cause inflation. In fact the great shortage of gold for the safe coverage of our presently over-issued currency is the main reason for the inflated prices of today's goods and services. Certainly, inflation is here now and certainly the price of gold has not been raised. Inflation is consistently growing because the function of gold—which has been set up on an international basis as the controlling factor for the discipline of currency expansion—has been ignored usuriously through the abuse of fractional reserves for the sake of reaping multiple profits. This abuse hurts the United States more than any other nation because she is the only nation in the world obligated by international agreement to convert outside holdings of currency to gold. It simply means that in the long run our chances to gain gold without producing it are nil. We cannot possibly use our dollars to build up the gold reserves of the other nations without tearing down our own gold reserve—unless enough new production of gold or gold value can be furnished to keep pace with the issuance of our dollar. The growth of money must keep up with the growth of population and its economic needs if prosperity is to be maintained. However, this growth of money cannot be substituted by the dilution of money, if periods of depression are not to be expected. It must all grow from the increase of proper money (with reserve ratios static) if inflation is to be avoided.

There are many ways to adjust the issuance of money to a reevaluation of gold without inflationary effect. As one example—under existing law, the profits from an increase in the price of gold could be sterilized and held by the Treasury as a stabilizing fund to be fed back into the economy by the retirement of public debt in adequate amounts to supply enough money to stimulate and support the needs for normal economic growth. In such a case the purchasing value of the dollar would remain constant, if fractional reserves were not allowed to change. The creation of the main supply of money would be properly in the hands of Government with qualified backing for convertibility at home as well as abroad. The lending of money would be properly in the hands of the banks but limited to positive reserve ratios. This would not be inflationary.

Of course, an increase in the price of gold wold definitely aid Russia, because she is a large producer of the metal. But, to say that an increase at this time wold give her an advantage over the free world is ill-advised. Certainly, if a raise in the price were to her advantage now, she would not wait for someone else to make the move. She wold do it herself. She is not a member of the international monetary fund. She is not bound by agreements of any kind to hold the price. She is currently supporting such an all-out gold production program that her physical facilities to produce are being taxed to the limit. So—at the present time—an increase in the price could not materially increase her volume of gold—whereas in the free world a revaluation upwards would result in the reopening of closed mines and the mining of marginal ores to such an extent that the volume of its gold through new production wold climb by many fold. Such a situation would be a definite disadvantage to Russia in fighting the economic war that was declared on America by Khrushchev in a recent speech where the challenge was made brutally clear in these words: "We declare a war we will win on the United States—in the peaceful field of trade." And then he added confidently. "We will bury you."

In order to enter into such a war with any assurance of reasonable success, the Russians know that they must first possess a fully convertible ruble that will be guaranteed on a sound exchange basis for world trade. Therefore, it is clearly evident that the main reason behind their all-out effort for the production of gold, is to build up their monetary gold reserves to a point where this can be safely accomplished as the when of the when, why, and how and where that the Communists will be the first to raise the price of gold. With the realization of such a reserve objective, their next move wold be to disorganize confidence in the American dollar and capture its prestige with convertible trade rubles. And this is the why of our story—because if an increased price for gold in the term of our dollar was first offered by Russia in soundly convertible rubles, an immediate run would be created on our gold through the redemption of foreign-held dollars. This race would be made by the foreign owners of American dollars in order to gain gold to sell to Russia where more benefit in convertible currency could be received by them than by their retention of our dollars. The immediate effect of such action wold be to place Russian rubles in a trade position among members of the International Monetary Fund and discredit the American dollar by sending it home for the unpleasant job of divesting not only itself of its own gold backing, but also that of three other dollars. A dollar shortage wold once again develop abroad, but this time the gap would be bridged by Russian rubles. The how and where follow axiomatically. It will be simply by proclamation from Moscow. There need be no consent, no legislation, no red-tape.

We are now vulnerable to such an ambush, because we ratified the terms of the Bretton Woods Agreement without having first incorporated into it a protective provision for the depreciation of our dollar and then by immediately embracing the professional means of depreciating it through the hocus-pocus of mysterious money.

When Russia raises the price of gold, our Congress will be forced into immediate reaction by groping for fast legislative procedure to meet or beat the price she dictates—or stand resolved to gamble away the tangible backing of our dollar and be judged in history as the prize pigeons of the century. The only other alternative would be to scrap our agreement with foreign friends which guarantees gold redemption for the dollars they hold and thereby sacrifice our international prestige. Last year alone, without cause for a run on our gold, other than the inflationary sickness of our dollar, we lost over one-tenth of our reserve source at Fort Knox—and let us not forget that this amount is the direct backing for over $8 billion of Federal Reserve notes. This drain has pulled our reserves down to $20 billion and of this amount we legally need to hold about $12 billion to cover Federal Reserve deposits and notes. This leaves only $8 billion in gold for the redemption of nearly 16 billion foreign-held dollars. Foreign governments and central banks alone own about one-half of these holdings which can immediately draw on our gold. This means that we could be wiped clean before we could react through our legislative processes.

We can take but one sound step to halt this coming economic onslaught and that step is to set the price of gold to a realistic value in terms of the dollar. But we must take the initiative and move first or else our leverage will be weakened against the weight of gold which we had been told was old fashioned.

In conclusion, I would like to warn Congress again of its responsibility. Under the influence of skillful propaganda, its majority of both parties have, for some time now, been suffering under the illusion that it has been elected for the purpose of giving away the assets of this Nation—and that by sending us to the poorhouse, it can make the whole world rich. Congress should understand that so long as we have our heads under a direct national debt of over $280 billion— which we are apparently not capable of reducing—that we have no assets to spare. A nation should first learn the fundamental of providing its own fiscal needs before embarking upon an experiment of furnishing money for a world.

Air Reservists at the University of Florida Are Being Educated to the *N*th Degree

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks, I take great pride in inserting in the RECORD an article by Lt. Col. Franklin Hibel, which appeared in the February 1959 issue of the Air Reservist. I am proud of the accomplishments of this Air Force Reserve unit in Gainesville, Fla., in my congressional district, and I know my colleagues and the American people will feel, as I do, that they have reflected considerable credit upon themselves and their country.

The article follows:

AIR RESERVISTS AT THE UNIVERSITY OF FLORIDA ARE BEING EDUCATED TO THE *N*TH DEGREE

(By Lt. Col. Franklin Hibel)

Not only can the Gainesville, Fla.'s 9886th Air Reserve Squadron be called ready, but they're ready made.

With over 75 percent of the squadron strength composed of students and professors at the University of Florida, it is only logical they meet on the school campus.

Half of the 100-plus reservists are students, while 18 are professors. Another 10 are university employees.

Lt. Col. C. J. "Pete" O'Connor, squadron commander, said it best: "The availability of specialists in the many fields of endeavor in which the university group is normally associated has made available to the 9886th a tremendous pool of top-flight professional instructors and speakers."

Since the population of Greater Gainsville is 44,500 and the University of Florida has 12,304 students this year, it can readily be noted that much of the city's civic life is centered around the university.

A progressive and cultural center, Gainesville points with pride to its university, the largest land-grant institution of higher learning in the Southeast. The city is justly proud, too, of the 9,886's educator reservists, who have gained national, and in some instances, international renown.

TALENT GALORE

The available talent can best be observed through the following capsule comments

concerning four of the professors, selected at random:

Lt. Col. Frank E. Maloney, acting dean of the College of Law. Holds a bachelor of laws degree with high honors (University of Florida) and a bachelor of arts degree (University of Toronto, where he also did graduate work in philosophy). He became a professor in 1950.

Colonel Maloney has written many articles on law subjects. He has had such professional recognition as chairman, Equity Round Table Council, Association of American Law Schools, and adviser to the Florida bar.

Col. Robert B. Mautz, dean of academic affairs. Holds a bachelor of laws degree from Yale. Has a bachelor of arts degree (magna cum laude with honors, Miami University, Ohio). He has served on the advisory board of Journal of Legal Education, and has been chairman, Southern Law Review Conference. Incidentally, both Colonels Mautz and Maloney have completed their residence requirement for J.S.D.

Lt. Col. Manning J. Dauer, professor of political science. He has been with the university 25 years, with time out—1942-46—for military leave with the Army Air Force.

Colonel Dauer authored two books, "The Adams Federalists," and one covering political "Scope and Method." He has acted as consultant to congressional committees and is much in demand as a lecturer. The professor is also managing editor of the Journal of Politics, a leading political science journal, circulating in the United States and in 50 foreign countries.

Lt. Col. Willard M. Fifield, provost for agriculture at the university. He holds a bachelor of science degree in agriculture (University of Florida) and a master of science degree. He is a past chairman of the Committee of Nine (nine State experiment station directors), adviser to the Secretary of Agriculture on regional agriculture research.

Colonel Fifield has been a committee member of the institutional projects abroad of the American Council on Education. Also indicative of his ability is the fact he was named Man of the Year in Florida Agriculture for 1955 by the Progressive Farmer.

A unit under the Jacksonville Air Reserve Center (2686th AResC), the Gainesville squadron was organized early in 1949. First commander was Lt. Col. James S. Lanham (USAF retired), now head professor of accounting.

The 9886th's legal detachment was the first in the 14th AF geographical area at the time and one of the pioneer flights in the Air Force Reserve. Officially organized on September 12, 1949, the legal unit has developed a mock court-martial which has earned considerable praise from higher echelon.

Called Operation Court-Martial, the trial put on by the legal reservists—professors and law students—is a model of military court procedure. So professionally proficient have the participants become in the mock court-martial, that they have presented their "show" on several occasions outside of Gainesville.

Regarding the squadron's degrees, take a reading of the following percentages: close to 30 percent hold bachelors; over 16 percent have masters; nearly 10 percent carry doctors of philosophy, while approximately 6 percent earned doctors of law.

What have all these degrees got to do with the squadron in general? Glad you asked that. The Gainesville reservists are benefiting by instruction from No. 1 instructors—instruction which would normally cost plenty of cash.

"In 26 years of military service," emphasized Colonel O'Connor, "including a varied number of assignments from squadron to theater command level, the responsibility of command of the 9886th has been one of the enjoyable tasks of my military career."

"It is my opinion that our squadron," he concluded, "with its vast resources in manpower drawn from the University of Florida, is one of the outstanding Air Reserve squadrons within the structure of the Air Force Reserve and has the potential to meet many of the specialized requirements that may be needed in times of emergency."

No one has to have a degree to absorb the significance of that statement.

Need for Economic Rehabilitation of Distressed Areas

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mrs. KEE. Mr. Speaker, recently, a friend of mine had the unhappy experience of being on hand for the distribution of surplus agricultural commodities in one of the counties of the Fifth Congressional District.

It was truly a heartbreaking scene. Able-bodied men, eager and willing to work, had to line up and await their turn to receive a limited supply of food for their families. Defeat and resignation were written on the faces of these men.

"For goodness sake, do everything you possibly can to help provide jobs for these men," my friend told me after this experience. "They want to work. It is a crying same that jobs simply are not available."

Mr. Speaker, my primary job this year is to do everything I possibly can to help create new jobs in West Virginia. It is difficult at times to make people from other areas, which are not plagued by chronic unemployment, understand the gravity of the situation. Our two Senators—BYRD and RANDOLPH—are doing an excellent job of setting forth in the Senate the need for an economic rehabilitation program. I am convinced there is a much wider interest in the problem in the House now than there was last year.

A Federal program of loans and grants to enable areas such as West Virginia to attract new industries is an indispensable part of any overall coordinated program. But we must not overlook the fact that local initiative is another necessary ingredient.

Mr. Speaker, West Virginia has much to offer to industry. Our manpower supply is pentiful. The supply of coal for fuel is almost inexhaustible. Water is plentiful. Excellent transportation facilities bring the markets of the country within easy shipping distance of West Virginia.

These and other facts, which make our State an attractive location, must be made available to industry. The electric utilities and other industries, which realize that their progress is tied to that of the State as a whole, have done an outstanding job of industrial promotion. A number of counties have started industrial development committees.

Mr. Speaker, all of this activity, I believe, demonstrates a commendable resolve on the part of the people in my State to work ourselves out of the economic difficulty in which the State temporarily finds itself. I am sure these local groups would agree that a sensible, workable program of Federal assistance is essential. But I am sure they would further agree that to rely entirely upon the Federal Government would be a fatal mistake.

The bill which I am pushing in the House for the economic rehabilitation of distressed areas calls for a coordinated effort. No Federal handout is involved. Rather, it is a program that will help the States—and their subdivisions—to help themselves.

There can be no doubt that everyone would benefit from a program that would create new jobs for the thousands of men in West Virginia who cannot find gainful employment. Mr. Speaker, the investment in dollars would be repaid many times over. Just think of the tax revenue that would be generated by an additional 200,000 jobs in the State and how great the demand would be for new services. Each new dollar in wages thus created would circulate many times through the economy.

I am convinced that during the months ahead we will see much progress in West Virginia toward working our way out of our present economic difficulties. Eventually, we will build in West Virginia an economy based upon widely diversified industries, providing jobs for men who are now displaced by machines and technological advancements.

Don't Let Antarctic Go by Default

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an excellent article by Jim Lucas, Scripps-Howard staff writer, which appeared in the Washington Daily News on February 13, 1959.

The article follows:

DON'T LET ANTARCTIC GO BY DEFAULT

(By Jim G. Lucas)

A former U.S. Pacific commander, Adm. Felix Stump, today urged the Nation not to let the Antarctic go by default.

Admiral Stump said it could become an important military asset to the nation or nations controlling it.

As U.S. Pacific commander, Admiral Stump was responsible for supplying American forces in the Antarctic during the recent International Geophysical Year. He now is with the Freedom Foundation in Gettysburg.

With the conclusion of the IGY, eight nations, including the United States and Russia, said they plan to maintain Antarctic bases indefinitely.

Meanwhile, representatives of 12 nations, which participated in the IGY, are meeting here in Washington in an attempt to insure

that it be used only for peaceful purposes and that it does not become a political football. There have been reports that the Russians have blocked the kind of treaty President Eisenhower proposed last May.

Admiral Stump noted that the United States takes the position it neither asserts nor recognizes territorial claims in the Antarctic. But he advocated the establishment of additional U.S. bases there, adding frankly his reason was to "keep it out of the hands of some of our so-called former allies."

He said we should put bases in all ice-free areas of the continent. "Possession is nine points of the law," he remarked.

Admiral Stump said the Antarctic could become a major space launching platform, a military staging area or be used for control stations on a great circle commercial air route between Europe and Australia.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial concerning John Foster Dulles from the Sunday Call-Chronicle, Allentown, Pa., February 15, 1959:

Secretary of State John Foster Dulles went to Walter Reed Hospital in Washington last week for what normally would be considered a routine operation. It was performed successfully, but doctors found an old intestinal cancer had become active. Suddenly his health became just about the most important matter in the world.

Even those who have been clamoring for his scalp, both in this country and abroad, for one reason or another, found it almost intolerable to consider the vacuum that would be created were this 70-year-old combination of an iron constitution and steel nerves to abruptly disappear from the scene.

He is almost universally considered the architect of the plans and policies by which the Western powers managed to keep the cold war from turning hot. His opinions have prevailed with few exceptions within the councils of the alliance, even when strongly opposed. There is an old saying that the best steel blade bends a little. This aptly describes Dulles. He might have bent a little on occasion, but never much and he has steadfastly refused to deviate far from his determined course.

A man of such stubborness of will, a man who refuses to compromise when it would seem to be the easier thing to do, a man who holds the trump cards so forcefully that he can usually command others to do his bidding, is bound to create enemies. John Foster Dulles has done this in a big way. He is thoroughly disliked in the capitals of many friendly nations. He has been mercilessly lambasted by critics at home, within his own party and without. He is the No. 1 enemy of Moscow, for when others showed an inclination to listen to Russia's sweet talk, he managed to squelch any movement toward appeasement.

Yet, despite all this, he has somehow retained a deep and abiding respect on the part of those who love and those who hate him. And as the man who enjoys the complete confidence of President Eisenhower, he is considered by many the most powerful individual in the world today. By the way of illustration, the story is told that when the Quemoy crisis developed last summer, Dulles flew to Newport where the President was vacationing and in the matter of a few hours had outlined the problem and secured Eisenhower's agreement to announce the defense of the offshore islands with American forces if that became necessary.

John Foster Dulles is unique in a number of other respects. No Secretary of State in American history has been so well prepared for the work he has been called upon to do. His was anything but a political appointment when Mr. Eisenhower first took office.

He was 65 when he got the job, but he had been getting himself ready since he was 19, when he attended the second Peace Conference at The Hague in 1907 as a secretary to his uncle, Robert Lansing, then Secretary of State to President Wilson. His maternal grandfather, John W. Foster, was Secretary of State under President Harrison.

Ten years later President Wilson sent Dulles to Central America to negotiate successfully for the protection of the Panama Canal after we had broken relations with Germany.

After the armistice of World War I, he was a member of the U.S. delegation to the Versailles Peace Conference, where he served as the chief of American counsel on reparations. Later he served in other important capacities relating to the peace treaty with Germany.

Between wars he conducted an outstanding practice in international affairs. In 1938 he wrote a book in which he pointed out the inevitability of war between this country and Japan.

As a Republican adviser, he accompanied Secretary of State James Byrnes to the meeting of the Council of Foreign Ministers in 1945. In 1947 he went with Secretary of State George Marshall to Moscow, and in 1949 he accompanied Secretary of State Dean Acheson to Paris.

When, in the same year, President Truman needed someone especially able to deal with the Japanese, he picked John Foster Dulles as his personal envoy with authority to speak directly for the President in negotiating a peace treaty. This treaty he subsequently wrote. Earlier he had served under Franklin D. Roosevelt as an adviser to the American delegation in the formation of the United Nations at San Francisco.

If anyone ever was in a position to give American foreign policy continuity across several administrations, if anyone has had the opportunity to gain a broad perspective of its problems, it has been Secretary Dulles.

Dulles' many public statements, all made with typical candor, added to his reputation as a controversial character. Probably the most controversial is what is now known as his brink-of-war declaration. Made in the course of an interview with Life magazine, it said:

"You have to take chances for peace, just as you must take chances for war. Some say that we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you try to run away from it, if you are scared to go to the brink, you are lost. We had to look it square in the face—on the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

This paragraph pretty well sums up the man and his philosophy. History may prove his policies were what caused Russia to back up time after time when the chips were down.

Last week, as he underwent the surgeon's knife, the air was filled with rumors. Dulles would never return. His convalescence would take many months. He would resign and Under Secretary Christian Herter or some other understudy would take his place. At his age and under all the accompanying circumstances, these rumors were accorded a certain degree of credibility. Yesterday the doctors confirmed that he has cancer and the worst fears were realized. The Secretary of State will not be on the job for a long time, if ever.

Is John Foster Dulles an indispensable man? Of course he isn't. Why then the deep concern so suddenly manifested in so many quarters, even by those who only a short while ago cried for his scalp?

The answer is that without him there is bound to be a period of grave uncertainty. The vacuum created by his withdrawal would immediately be filled with a mass of conflicting opinion. For awhile no one would know where the United States stood, or its allies either for that matter, a situation made to order for Moscow. With John Foster Dulles in charge there has never been any doubt.

Perhaps the world is just beginning to realize how much it owes this quiet, determined, unflinching man who prepared himself over more than threescore years for the most difficult job his country could ask him to perform—to walk to the brink and look it in the face.

Upping Airport Subsidies; or, Piling Pork on Pork

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. BENNETT of Michigan. Mr. Speaker, under leave to extend my remarks I include the following editorial from the February 14, 1959, issue of the Milwaukee Journal on the question of airport subsidies. The support of the Milwaukee Journal of the President's airport program is significant since this particular newspaper is antiadministration about 99 percent of the time:

UPPING AIRPORT SUBSIDIES; OR, PILING PORK ON PORK

The very first Senate bill introduced and reported out for action would more than double the amount which the administration had proposed for airport construction subsidy in the next 4 or 5 years.

Senator MONRONEY, Democrat of Oklahoma, the author, was sure of support from both sides of the aisle. State agencies and local governments have been clamoring for more Federal money—which has to be matched with State and local money—for airport expansion.

The chief justification offered has been that airliners are beginning to fly and that, to accommodate them safely, very large sums will have to be spent on extending and strengthening runways. (The airports aid bill does not cover safety and traffic control devices provided wholly at Federal expense.)

But the subsidy boosters are just as interested in tossing more thousands to hundreds of little airports back home which will not see a jet transport or provide a nationally necessary service in the foreseeable future. Millions, too, will subsidize terminal lounges, lobbies, outlook balconies, and the like at metropolitan airports. This for special benefit of air travelers and the commercial air-

lines, but adding nothing to the capacity to handle jet planes or any others.

The $50 million a year the Eisenhower administration proposed should be ample to cover the Federal Government's proper responsibility in local airport improvements. It should be more than enough if spent only where and as needed for improvements essential to the national security and welfare.

The money will be allotted politically, however, as it has been in the past. A move to restrict Federal aid to field improvements (not terminal buildings, etc.) was turned down in committee. So this is, in other words, another pork-barrel proposition. The President is willing to go on doling out some pork. The Monroney bill backers just want a lot more.

All-American Athlete From All America City

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. HECHLER. Mr. Speaker, in these times when juvenile delinquency is so frequently mentioned on the front pages of our newspapers, I am happy to commend to your attention a young man of an entirely different sort, a young man whose courage, faith, and determination make him a living symbol of all that is decent in America's youth.

The young man is named Leo Byrd. At this time, he is climaxing a sterling scholastic and collegiate basketball career at Marshall College in my hometown of Huntington, W. Va.

As major colleges go, Marshall is not a very large one, and as collegiate basketball players go, Leo Byrd is rather on the small side. But in character, talent, and personality, Leo's stature is tall indeed.

When Leo Byrd was 12 years old, the dreams of basketball glory he had cherished since babyhood seemed turned to dust. He was a patient in a hospital, stricken with poliomyelitis and partially paralyzed.

Many a boy would have accepted defeat at this point, but Leo did not. As soon as he was able to get up, he started running and training to strengthen his weakened legs, although he says "This hurt me a lot, but I wouldn't let them know."

He recovered sufficiently to play junior high school and later high school basketball. His first 3 years of high school competition were comparatively undistinguished, and even as he played through his senior year, he did not enjoy the publicity accolades often accorded promising young players.

His star soared cometlike into the heavens, however, in the 1955 West Virginia High School tournament. Leading a lightly regarded Huntington High School team into the event, he broke the existing tournament record for scoring by making 48 points in a game that eliminated the school that had won 4 consecutive State championships. The following night he snapped his own record with a 49-point performance, and proved to be the start of the tournament.

Later that spring, he was named "Mr. Basketball USA" after appearing in an intersectional high school all-star game.

Leo enrolled at Marshall College, only a few blocks from his home, after spurning the offers of glittering scholarships from other schools.

Here he has brought continuing credit to his family, his school, and his community. Under the tutelage of Jule Rivlin, Marshall's able basketball coach, he has blossomed into a universally respected college star. His basket-shooting ability is regarded as almost uncanny, and although he is only 6 feet, 1 inch tall, he relies on aggressiveness and remarkable coordination to outplay men far taller than he.

Last year, Leo Byrd teamed up with Hal Greer, the first Negro player in Marshall hisory, to give his squad an awesome scoring attack. With Greer gone, and winning fame as a professional player with Syracuse, Leo has done a remarkable job of carrying the offensive load for his team this year.

All season long, he has remained near the top among the Nation's scorers. As I speak today, he is second in the Nation only to Cincinnati's widely acclaimed Oscar Robertson. Leo never lets down. In fact, his scoring ability has improved as the season has progressed.

As glamorous as Leo Byrd's career has been, his personal life, however, is at least equal to it in stature.

He is modest and unassuming, yet talks about his basketball feats frankly and with great sincerity if asked.

He is the son of a Methodist minister, Rev. Joseph P. Byrd, who was himself a versatile college athlete. The Christian training of Byrd's early days have remained with him. He is universally saluted by his opponents for his clean play and good sportsmanship.

A former leader in the youth fellowship in his father's church, Leo has kept religion as his guide, and before each Marshall game, Leo leads his teammates in prayer.

The city of Huntington this year was one of the few American communities honored with an All America Award. The community is justly proud of its civic progress. And Huntingtonians also may take great pride in the fact that Leo Byrd, a native son who elected to stay in his hometown for a sparkling collegiate athletic career, seems a sure bet to collect some all-American honors himself at the close of the basketball season.

Israel and the Middle East

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. SCHENCK. Mr. Speaker, on November 14, 1958, the Council of Jewish Federations and Welfare Funds, of which the Dayton Jewish Community Council is a member, adopted a resolution entitled "Israel and the Middle East." The Council, which is a coordinating association of 213 local-central Jewish community organizations, represents more than 800 Jewish communities in the United States and Canada. Following is this resolution which should be of interest to all Members of Congress:

ISRAEL AND THE MIDDLE EAST

This assembly records its strong support of the U.S. Government's economic aid to the Middle East, so fundamental to the welfare and progress of the peoples of those countries and to strengthening democratic institutions in that strategic and vital area.

The representatives of this Council have viewed at first hand the profound achievements made possible by this economic assistance to Israel.

We commend the President and the Congress for these enlightened programs, and we urge the continuation and the extension of such aid, in the interests of the humanitarian needs of these underdeveloped countries, the stability of the region, and the peace of the world.

Public Law 480

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LANGEN. Mr. Speaker, today I should like to add my voice to the voices of certain of my colleagues by introducing an amendment to the Agricultural Trade Development Assistance Act of 1954, commonly known as Public Law 480, which would permit this act to operate for 5 years without need of congressional action.

At a time when our farms are involved in the largest production in our history, we find nations all over the world in need of these products, while we at the same time are lamenting their existence. This law was enacted for the sole purpose of expediting this situation; it was enacted to permit our Nation to provide for those countries in need of our commodities. This is possible in a manner not calculated to upset or hinder their economies, but rather in a fashion which will enable them to purchase what they need, when they need it, in a sound economic and businesslike fashion. We, by the same token, as a nation are profiting in a bilateral capacity. We are able to sell our excess products for currency or credit on the international market, while reducing the surpluses presently costing the Government millions of dollars in storage.

Public Law 480 has provided this Nation with the opportunity of winning countless friends among the nations of the world where a food deficit is in existence. It has permitted disposal of approximately $5 billion of surpluses on the world market from our markets. This program has served us well; it has stood the test of almost 5 years, and has proven itself to be one of the better laws passed

by the Congress when one evaluates its results on the domestic agricultural market and its benefits to our farm families.

I have introduced this amendment because I feel a program which has proved its worth in this manner should no longer be restricted by year-to-year operation. Effective as this provision has been in its present form, it stands to reason that long-range commitments by the Department of Agriculture could better be made and utilized if the Department could make assurances of delivery, as permitted by this amendment.

Because of the effect of Public Law 480 on our international policies and because of the advantageous effect it has on our farm economy, I urge the favorable consideration of this amendment.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

Congress suspended its deliberations on Thursday, February 12, to observe the 150th anniversary of the birth of Abraham Lincoln. Carl Sandburg, the famed poet and author of a monumental biography of the Civil War President, spoke at a joint session of the Senate and House.

Lincoln was the founder of the Republican Party. His birthday each year is the occasion for party dinners throughout the country, at which funds to finance future campaigns are raised. Democrats use the birthdays of Thomas Jefferson and Andrew Jackson for their fundraising events.

But Lincoln does not belong to the Republican Party, just as Jefferson and Jackson are not the exclusive property of the Democrats. These great Americans belong to the entire country and they are revered and remembered by all of us, regardless of party.

There can be no denying the fact that Lincoln was a great man. His was a tragic life and the sense of doom, of impending tragedy, which haunted him his entire adult life, became a reality when John Wilkes Booth put a bullet through his body in Ford's Theater in Washington. Lincoln had a devotion to the Union which guided his public life. He had to lead this Nation through a bloody and cruel Civil War in which 500,000 men on both sides fell, to prove the insolubility of the Union.

Lincoln was a vilified President. The cruel, bitter things which were said about him when he was President are almost beyond belief today. He was pictured in cartoons as an ape, a monster, and a maniac.

Lincoln was a noble soul. There was a touch of the poet about him. In an age of florid prose, he spoke and wrote in simple terms. He was preceded on the platform at Gettysburg by Charles Sumner who spoke for 2 hours. Lincoln spoke for 5 minutes. What Sumner said was forgotten; Lincoln's Gettysburg Address has attained immortality, a masterpiece of prose, a speech which every schoolchild has to learn by heart.

All of Lincoln's speeches were memorable. He coined phrases which are quoted as the epitome of wisdom. Yet he was a modest man. He had grave doubts of his ability to govern the country in its most trying hour.

Lincoln was a masterful politician. Surrounded by a hostile and disloyal Cabinet, imposed upon him by his party, he persevered, outmaneuvered and, in the end, had his way. He fought with Congress and firmly established the precedent of a strong President—the head of a coequal branch of the Government as the Constitution decreed.

Upon his death people forgot the cruel, unkind things said about Lincoln. Instead they remembered his nobility, his long suffering to hold the Union together. Men wept openly in the streets of Washington upon learning the sad news. They realized the Nation faced a period of adjustment, of binding up the Nation's wounds, as critical and dangerous as the war period. They were afraid of that future without the steady hand of Lincoln at the helm.

How the course of history might have been changed had this man been spared. He wanted to bring the South back into the Union. He sought no vengeance. Had he lived, the South would have escaped the indignities and humiliations which were forced upon her by radicals bent upon revenge. Had Lincoln lived, the South would not have turned to counterviolence. The Nation could well have been spared a legacy of hate and suspicion which is still with us today.

It is fitting and proper that the birthday of our great heroes be observed each year. Lincoln, Jefferson, Jackson—these and others who built this country—have much to teach us today. It is unfortunate that we have not learned better the lessons of the past.

Where Is the Money Coming From?

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WEAVER. Mr. Speaker, an article in the February 1 edition of the Omaha World-Herald properly gives recognition to the gentleman from Iowa [Mr. GROSS] for his fight against heavy Government spending, and I desire to include the article as part of my remarks:

For many years, the most vocal critic of heavy Government spending in the House of Representatives was former Representative Robert Rich (Republican, of Pennsylvania).

Mr. Rich's frequent query: "Where is the money coming from?" became famous.

He retired from Congress a few years ago, however—and now an Iowan appears to have taken over his role.

This is Representative H. R. GROSS (Republican).

Mr. GROSS is a man with little tolerance for a lot of the Government's spending and it makes no difference to him whether it is by agencies or by his brethren in the House.

His latest assault came when an effort was made to put a man on the Federal payroll at $11,600 annually, to make plans for the visit to this country of the North Atlantic Treaty Parliamentarian's Conference.

The past 4 years these meetings have been held in Paris, attended by United States delegates from Senate and House. The next one will be here, and the employee—whom Mr. GROSS described as a "flunkey"— would make arrangements.

Not caring on whose toes he stepped, Mr. GROSS called the conference a junketing organization. Members of Congress shudder when their inspection trips and the like are described as junkets.

Mr. GROSS told one member of the Parliamentary Conference that he and his fellow junketeers had been traveling by military transport, and using the armed services to haul their baggage around Europe.

The Iowan succeeded in halting a vote on employment of the "flunkey" until Monday.

Hero of Democracy: Thaddeus Kosciuszko

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. GALLAGHER. Mr. Speaker, to Polish people all over the world there is no date more worthy of note than February 12, the birthday of the great Polish statesman, military engineer extraordinary, democrat, and patriot of two continents, Thaddeus Kosciuszko.

Revolution in behalf of any cause is a perilous undertaking. Not only does it inflict suffering on the government it assaults, but on the revolutionary party as well, not to mention the thousands of persons not directly involved in the struggle. For this reason history looks with a critical eye upon all revolutionary leaders and observes closely their merits and shortcomings.

Professedly democratic revolutions are no exception to the rule. Far too often self-styled democrats have instigated revolution, overthrown tyranny and then, in a burst of postwar confusion or villainy, established a government as tyrannical as that which it replaced. The world owes nothing to such misguided zeal but contempt, reserving its respect only for the truly democratic result, an all-too-rare occurrence in revolutionary history.

In this country, following our War for Independence, we had the good fortune to come under the guidance of George Washington, a revolutionist of genuinely democratic spirit, and our progress as a Nation is to a large extent the result of that happy occurrence. But Washington was not the only great statesman to emerge from this struggle, nor his democratic outlook peculiar to him alone. Numerous leaders in the American Revolutionary Army were to become exponents of the democratic dream and one of the most remarkable of these was the man we honored on February 12, Thaddeus Kosciuszko.

No one in history more deserves the title of democrat than Kosciuszko, whose sympathy for the oppressed carried him across the seas to fight for principle on a foreign shore. His participation in the Revolution was vital. A master in the art of fortification construction, he is credited with laying the groundwork for some of the Americans' most outstanding military achievements. And once the war was over and America was free, the

people of his adopted land poured honors on Kosciuszko and bid him remain, as a distinguished and respected citizen.

But the ideal of democracy is a moving force, and it would not let Kosciuszko rest. In a few years he was back in his native Poland, campaigning as an apostle of constitutional government. Long subjected to the presence of foreign troops on their soil, the Polish people grasped at the teachings of democracy, and in 1791 rose up to form a constitutional monarchy, in the hope of at last attaining political unity and repelling foreign domination. When the neighboring states of Russia and Prussia combined with certain Polish nobles to quell this democratic demonstration Kosciuszko met them on the battlefield and though initially defeated he returned in 1794 at the head of an insurrectionary army to revive the democratic cause.

For a moment, and for a moment only, Kosciuszko sat at the head of the counsels of a free Poland. Temporarily triumphant, the Polish democrats foresaw a glorious future, such as that already spreading before the Americans, and in honor of Kosciuszko's leadership in battle they chose him as President. In this capacity Kosciuszko's attitude was the same as that of the American leader, George Washington. Despite his noble background and militaristic career, he gave to free Poland its first taste of genuine democracy, initiating democratic reforms that were immediately incorporated into the Polish tradition.

Although eventually overcome by the military might of their powerful neighbors, the followers of Kosciuszko realized that they had taken up a cause that could not be suppressed by armies alone or by any other force, and from that time to the present the democratic flame has burned brightly in the Polish heart. The result is directly attributable to Kosciuszko, whose love of democracy kindled that flame. Democratic people the world over have good reason to do him honor. His abilities, his deeds, his courage, and his foresight are unsurpassable. Indeed, among the many heroes of democracy, Thaddeus Kosciuszko ranks second to none.

The Governor Said It

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DAGUE. Mr. Speaker, in a news article datelined Harrisburg, Pa., February 11, Democrat Gov. David Lawrence came out firmly for less frills—and that should mean less expense—in our school construction program.

Frankly, I would have been happier to have such a forward-looking stand taken by a Republican official but perhaps the pronouncement coming from a topnotcher in the party that has always enjoyed a reputation for handouts and spending will have a farther reaching effect.

The Governor displayed his annoyance over the fact that most of our school buildings stand idle a third of the year, a defect in our system which would not and could not be countenanced in industry. And the Governor has reopened the way for renewed consideration of round-the-year utilization of our schools through staggered enrollments.

The Governor then very properly vented most of his denunciation on deluxe, palacelike structures which have nothing whatever to do with the proper education of the youth of America. And as an aside he says that he will insist on a measure of standardization so as to eliminate the duplication of architectural fees.

The Governor's firm stand is undoubtedly predicated on the realization that we have reached a crisis in educational expense and that the heavily-burdened taxpayer can no longer be expected to supinely accept these country club, Taj Mahal-types of school buildings.

The news article to which I have referred appeared in the Philadelphia Inquirer on February 12, and is included in full as follows:

LAWRENCE URGES SCHOOL ECONOMIES

HARRISBURG.—Gov. David L. Lawrence today called for economies in school building construction and operation because there's just not enough money to meet the costs of elaborate structures for use on a part-time basis.

Attending his first meeting of the State Public School Building Authority, Lawrence, who was elected president of the agency, urged a revaluation of school construction practices and the use of educational structures.

The Governor told the board he had been "annoyed for many years" by the long periods when school buildings remain empty and unused.

He added that when school buildings are use only 6 or 7 hours a day, 5 days a week and 9 months a year they represent a poor return on the investment.

His remarks were followed by a general discussion reviewing possible economies in the construction of school plants.

These include:

Standardized plans and specifications so the could be used for different buildings in a move to save architect's and engineers' fees.

A ban on the erection of deluxe buildings when State aid is involved, and requiring local districts, who insist on the palace-like structures, to assume a greater basic share of the costs.

Larger classrooms, particularly for the use of closed-circuit television, so a reduction could be made in perpetual teachers' salary expenses for smaller classes.

Employment of architects and engineers by the State in a move to save fee expenses, or use the same architects' plans a second time at a 2 percent fee, instead of paying 6 percent twice.

Another issue raised by the Governor centered on the control of the tremendous cafeterias and gymnasiums in school buildings.

Secretary of Property and Supplies Andrew M. Bradley said costs of planning new structures should be reduced as a result of a departmental ruling adopting standards for component parts of public buildings, such as window frames.

Meanwhile, Senate Minority Leader Charles R. Weiner said that the authority was planning to ask the legislature to raise the $925 million ceiling on school building construction, by possibly $300 million or more, because the limit has already been reached, thus barring new construction. Applications for millions in new school construction are on file with the authority.

At the same time Weiner, also attending his first meeting as a member of the authority, challenged payment of $850 to the Provident Tradesmens Bank and Trust Co., Philadelphia, for transporting $18 million in negotiable bonds from New York to Philadelphia.

Weiner claimed the job could have been done by the State police for a great deal less. Lawrence agreed the charge appeared to be excessive.

The bank, however, actually paid the $850 to Brink's Inc., an armored car service which transported the bonds. It is agent for the authority.

Natural Gas Legislation

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mrs. GRIFFITHS. Mr. Speaker, it appears that a national gas bill is due to be considered again. The following resolution adopted by the mayor and the Common Council of the City of Detroit expresses my views and the position I have consistently taken on natural gas bills.

RESOLUTION

Whereas our attention has been directed to the fact that certain bills have been introduced in the U.S. Congress to amend the Natural Gas Act by releasing producers of natural gas from effective regulation by the Federal Power Commission; and

Whereas we have voiced our strongest opposition to such measures in the past because of the extremely adverse effect they would have on the prices paid by consumers of natural gas in our community as well as throughout the country; and

Whereas in the absence of effective regulation of all segments of the natural gas industry—producers, pipeline and distributing companies alike—the consumer is at the mercy of those who will charge what the traffic will bear; and

Whereas it is our duty and obligation to do all that we can to protect the consumers of natural gas in the city of Detroit from being charged unreasonably high prices; and

Whereas we are unalterably opposed to any measures which would remove any of the safeguards presently afforded such consumers by the provisions of the Natural Gas Act; and

Whereas it is imperative that public hearings be conducted on any bill proposing an amendment to the Natural Gas Act in order that those representing the consumer's interests be given an opportunity to be heard: Now, therefore, be it

Resolved, That the corporation counsel be and he is hereby authorized and directed to take the appropirate action necessary to voice the city of Detroit's opposition to any proposed amendment to the Natural Gas Act which would adversely affect the consumers in the city of Detroit; be it further

Resolved, That our Michigan Senators and Congressmen be advised of Detroit's position in this regard and urged to join with Detroit

in opposition to any such amendments and voice their strong protest to any attempt to avoid public hearings on the merits of such amendments; be it further

Resolved, That the Honorable G. Mennen Williams, Governor of Michigan, the Honorable Paul Adams, attorney general of Michigan, and the chairman and members of the Michigan Public Service Commission be advised of Detroit's position herein and urged to do all in their power to obtain public hearings and to prevent the passage of new amendments to the Natural Gas Act deemed detrimental to the consumers in Michigan, and be it further

Resolved, That copies of this resolution be sent to all the above-mentioned officials and officers. Adopted unanimously.

The Gleaner and Journal—50 Years of Service

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. NATCHER. Mr. Speaker, if cities and communities are to progress they must be the recipients of up-to-date news coverage. The citizens of the Second Congressional District of Kentucky are fortunate in being served by newspapers whose editors and owners are men and women of exceptional ability and character, capable of disseminating the news in an interesting and unbiased manner. One of the outstanding newspapers in my district is the Gleaner and Journal, of Henderson, Ky. The Gleaner and Journal this month celebrated its 50th anniversary.

On February 9, 1909, Mr. Leigh Harris brought his family to Henderson, Ky., from the State of Illinois. Several weeks previously he had purchased a newspaper then called the Journal. Subsequently another newspaper in Henderson, known as the Gleaner, was consolidated with the Journal, and thus the Gleaner and Journal came into being. After arriving in Henderson, Mr. Harris' first editorial, now world famous, consisted of the following sentence:

I have come to Henderson to run a newspaper.

And until his retirement, in 1950, he ably edited and published the Gleaner and Journal. Mr. Harris possessed firm beliefs and convictions, but this fact did not deter him from imparting in his paper true facts and events as they actually transpired. He was a dedicated citizen, who gave of his talents, time, and efforts to the betterment of his community.

The two great interests in Mr. Harris' life were his newspaper and his family. Love for his work was only exceeded by devotion to his wife and children. And, fortunately, he has passed on to his children the freshness of the deep springs of life, a quality of imagination and vigor of emotions. His daughter, Francele Harris Armstrong, as editor of the Gleaner and Journal, is now guiding its policies with a firm and efficient hand.

Kentucky and the Second Congressional District owe a debt of gratitude to such gentlemen as the late Mr. Leigh Harris, who, in their journalistic capacities and through the medium of their newspapers, have made our communities and our entire Nation a better place in which to live.

Some Footnotes of History

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. CHAMBERLAIN. Mr. Speaker, a form of negative sour grapes which is abroad in the world today—in which the man who does not succeed in any way in life calls the other fellow's success luck—received a real exposure in the Flint Journal of February 12. Using Abraham Lincoln, as the springboard for his remarks, the editor pointed out that while luck gave the first republican president opportunity, it did not give him his greatness. This is something a man chisels out in long chipping at the stone of wisdom. The great knowledge which Mr. Lincoln displayed in the White House he learned by living, reading, talking, and listening.

Young people today who believe that exposure to lectures in high schools and colleges will give them wisdom would do well to read this editorial and some of the less known facts of Lincoln's life and realize that these are only a first step to real learning.

I submit the attached editorial for inclusion in the RECORD.

SOME FOOTNOTES OF HISTORY

Three footnotes of history come to mind today as we observe the 150th anniversary of the birth of Abraham Lincoln.

One is that Lincoln, although martyred by an assassin's bullet, was a special darling of fate. Another—most pertinent at this time because of our concern for education—is the way Honest Abe obtained his learning. Lastly, this date recalls the almost-forgotten fact that another man also gave an oration at Gettysburg.

Most Americans remember that Lincoln was elected President in 1860 and was reelected 4 years later. But few history books tell us how important a part chance, or luck, played in his nomination in 1860.

Lincoln was known nationally in 1860 but he was not the foremost candidate. He had been runner-up for the vice-presidential nomination in 1856 but, luckily, he did not win. The word lucky applies because the GOP team was defeated in 1856 and a defeated vice-presidential nominee was no better a presidential prospect in 1860 than today.

The historic Lincoln-Douglas debates of 1858 boosted Lincoln's standing with the party and made him the foremost Republican in Illinois. But he didn't carry a favorite-son label when his former campaign manager persuaded the party to hold its 1860 convention in Chicago because it was a neutral city in a State which did not have a candidate.

Lincoln later won the endorsement of the Illinois GOP convention. When the national convention got under way, his campaign managers were able to pack the galleries with Lincoln supporters, just as Franklin D. Roosevelt's backers did later.

Senator William H. Seward of New York was the front-runner in 1860. In another parallel with a recent convention, Seward's opponents sold GOP delegates on the idea that Seward can't win. The same thing happened to Senator Robert A. Taft in 1952.

The "can't win" label and the support of the galleries helped Lincoln win the nomination. The luck that was his in 1856, 1858, and 1860 helped him become President.

Luck did not make Lincoln a great President and a great humanitarian. But it opened the way for him to win election to the position in which he achieved greatness.

Lincoln was just about as short on formal education as he was long on luck in those years, but the lack of formal schooling did not prevent him from acquiring a great amount of useful knowledge.

Although Lincoln had to read by firelight, he developed to the utmost his learning potential. He drank up knowledge wherever and whenever he could. He learned by living, by reading, by talking, by listening. He had the desire to acquire knowledge and use it to the fullest.

Plenty of Lincoln's contemporaries were better educated, but it was Lincoln who became great. Lincoln had the talent to develop to the utmost the learning he gained from books and from just living.

No one is suggesting that Lincoln's method of education should be utilized in 1959. Extensive formal education is much more important now than in his time. But everyone can add to his knowledge and understanding by drinking eagerly from the sources of information which are available in everyday living.

The modern pooh-poohing of the other speech delivered at Gettysburg on November 19, 1863, is just one of the ways in which legend has eclipsed historical fact.

Almost every child who has memorized Lincoln's justly famous Gettysburg Address has done so with the idea that the day's main oration, by Edward Everett, was so poor and long that Lincoln's speech gained attention because of its brevity.

Lincoln's comments became a part of America's heritage because of greatness, not because Everett did so poorly.

Everett was one of the finest scholars and public speakers of his day. He spent 2 months preparing his address, which was a detailed analysis of the Battle of Gettysburg and its significance to the Union cause. Historians say it is a remarkably accurate and valuable account of the 3-day battle.

Lincoln's 2-minute speech is revered today, while Everett's 2-hour oration is ridiculed, because in those few words Lincoln painted a graphic picture of personal humility and devotion to the ideals of freedom.

Those characteristics are among the reasons Lincoln's greatness increases with each passing generation.

The Late Montgomery Phister

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. KING of California. Mr. Speaker, under permission to extend my remarks, I wish, first, to insert into the RECORD a resolution unanimously adopted on Jan-

uary 25, 1959, by the Assembly of the Legislature of the State of California, honoring the memory of the late Montgomery Phister, and in addition thereto, within a few words, to pay my own tribute to a great Californian and a great American, who passed away on last Christmas Day, December 25, 1958, at the age of 61, at the peak of his career.

Montgomery Phister was a lawyer, a banker, and an industrialist and a great civic worker, whose remarkable mental and physical energies were dedicated and expended primarily in the development and protection of American fisheries and the fishing interests of these United States. He served as vice president and secretary, as well as legal counsel, to the Van Camp Sea Food Co., Inc., formerly of San Pedro, Calif., and now of Long Beach, Calif.

Among many other posts, Mr. Phister served as a past president of the California Fish Canners Association, chairman of the American Bar Association's Committee on Fisheries and Territorial Waters, member of the State Committee on Natural Resources, member of the advisory committees to the International North Pacific Fisheries Commission, Inter-American Tropical Tuna Commission, and the Pacific Marine Fisheries Commission. He was a leader in obtaining the special assistant for fisheries in the Under Secretary of State's Office, and the Assistant Secretary for Fish and Wildlife in the Department of the Interior. He was active in the establishment of the Pacific Marine Fisheries Commission, the California Cooperative Oceanic Investigation, and the Inter-American Tropical Tuna Commission.

He served as a member of the Fishery Products Committee of the National Canners Association from its inception, and was its chairman in 1958. He was elected to the board of directors of the National Canners Association in 1957.

It has been my privilege to know and work with Montgomery Phister here for the many years that I have been in public life. While not of the same political faith, I found him to be a great American and I can say that, in all my dealings, he was forthright, constructive, helpful, and cooperative in any matter which inured to the benefit of the public. On no occasion did he fear the truth nor did he withhold it. Nothing contributed more to his renowned trait of dependability nor to the highest esteem in which he was held by all who knew him. My district, the State of California, the Van Camp Sea Food Co., Inc., our Nation, and the fishing industry have lost a stalwart and substantial leader.

The resolution of the Assembly of the California Legislature is as follows:

HOUSE RESOLUTION 45, RELATIVE TO THE PASSING OF MONTGOMERY PHISTER

Whereas the members of this house have, with profound sorrow and deepest regret, learned of the passing, on December 25, 1958, at the age of 61, of one of the most respected and loved leaders of the American fishing industry, Mr. Montgomery Phister; and

Whereas "Monty," as he was affectionately known by his host of friends and admirers, was born in Denver, Colo., on September 6, 1897, and it was California's good fortune that he came to this State in 1909; and

Whereas after receiving the degree of doctor of jurisprudence from the University of Southern California School of Law, he began the practice of law and rapidly developed a wide reputation, among fellow lawyers and the general public, as a competent, scholarly and fearless representative of his clients' interests; and

Whereas in 1937 he became associated with the Van Camp Sea Food Co. and thereafter advanced to the high office of vice president and secretary of that corporation; and

Whereas his accomplishments on behalf of the fishing industry were many, and some of his more noteworthy projects included the establishment of offices within the U.S. Department of State and the Department of Interior to deal with fisheries, the establishment of the Pacific Marine Fisheries Commission and the founding of the Fishermen's and Merchants' Bank, now a branch of the California Bank; and

Whereas Mr. Phister was unstinting in giving his time and energy to the service of his profession, his Government and his beloved fishing industry, having served as president of the California Fish Canners' Association, chairman of the American Bar Association's Committee on Fisheries and Territorial Waters, member of the California State Committee on Natural Resources and other boards and commissions too numerous to mention; and

Whereas this man was active in civic affairs at the local level, having served on the San Pedro Y.M.C.A. Board, the board of directors of the Los Angeles Chamber of Commerce and the mayor's committee on transportation; and

Whereas "Monty" has been the living example of those famous words of Theodore Roosevelt, "I would rather wear out than rust out"; and

Whereas it is fitting and proper that this house, as the representative of those people who have benefited from the services of this man, should honor him: Now, therefore, be it

Resolved by the Assembly of the State of California, That the members of this house desire to express their deep regret at the loss of so outstanding a citizen and adopt this resolution of testimony to his great contributions to his Government, his industry and his fellow men; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit suitably prepared copies of this resolution to his widow, Helga Phister, his two children, Montgomery Phister, Jr., and Mrs. Susan Holt, and to his brother, Henry Phister.

Alabama Press Association Resolution Deploring Action by the Washington Post

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. ROBERTS. Mr. Speaker, on January 27, 1959, in my remarks contained in the Appendix of the CONGRESSIONAL RECORD, I called attention to the resolution adopted by the Alabama Press Association condemning the Washington Post and Times Herald for refusing to carry the Putnam letter as a paid advertisement.

So that the record will be complete, I have obtained a copy of this excellently written resolution and I ask unanimous consent that it, too, be included in the RECORD.

The APA resolution follows:

Whereas it is a fundamental tenet of this association that the American people have an inherent right to know every side of the great debates that take place in our society; and

Whereas the Washington Post and Times Herald, published in the Capital City of this great country, has heretofore been a leader in the fight for journalism freedom; but

Whereas the said Washington Post did recently deviate from its longstanding policy of upholding freedom of expression by rejecting a paid advertisement known as the Putnam letter; and

Whereas that letter set forth a strong argument by a reputable author and business executive contrary to the present policy of said newspaper in favor of mixing the races in the common schools of this country: Therefore this association, in convention assembled, does deplore and condemn the betrayal of the freedom of the press, or the right of the people to know all sides of a public issue, by the Washington Post management; and be it further

Resolved, That a copy of these resolutions be given to the press for the information and enlightenment of all the citizens of the United States.

Man of the Ages

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. CHAMBERLAIN. Mr. Speaker, I continue to be full of wonderment at the greatness of Abraham Lincoln in inspiring for nearly 100 years some of the most effective editorials in our daily press. The genius of the first Republican President transmits itself to the pens of the men who write about him. I submit herewith, for inclusion in the RECORD, a particularly effective editorial in the Lansing State Journal of February 12, in which "the man of the ages" is the springboard for some very excellent editorial writing.

MAN OF THE AGES

Lincoln's greatness was recognized in his lifetime, even by many who hated him. The Union had been saved and the war won before the assassin struck. But at his death few men would have believed that generation after generation would find absorbing interest in his life and words and deeds.

On the 150th anniversary of his birth the stream of books about Lincoln in unceasing. Every line of his writings, almost all of his speeches have been published. Many of his jokes, every anecdote about him, the details of his domestic life, and much fable and fiction may be found in the many shelves of Lincoln biographies.

Each year brings notable new works. His wife and associates continue to interest the public. Some of this interest can be accounted for simply by the fact that he was the principal figure in the Nation's most tragic ordeal. Any man who had carried the United States successfully through that fearful crisis would have achieved immortality.

But there is more to the Lincoln legend. There is Abraham Lincoln.

An earthy personality was combined with a subtle intellect and a spirituality that had overtones of mysticism. To this was added, despite an absence of formal education, rhetorical skill that produced some of the most memorable prose in the English tongue. Here was a paradox, and the paradox is ever fascinating.

It was natural that some should write with a warmth of admiration that amounts to adulation. By this uncritical school Lincoln has been elevated to political sainthood, enshrined as a folk god.

But responsible scholarship has preserved the perspective, discussing freely what they regard as his faults. This objective approach to a towering figure has saved Lincoln from turning into marble or bronze.

The research has strengthened popular understanding of Lincoln's problems and motives. It has not diminished, but enhanced, his stature. It has confirmed the judgment that rates him one of the great men of all time.

Every man, on his own birthday, must look back on his past and wonder, a little or much, at what has happened to him. President Abraham Lincoln, on his 56th birthday, February 12, 1865—2 months before he was assassinated—must have marveled at the circumstances that had entrusted to him the leadership of the young republic during a civil war that threatened to destroy it, and with it the American dream.

He could recall his youth in the backwoods—as railsplitter, raftsman, store clerk, surveyor, volunteer soldier, student of law. He could live again through the events that made him a State legislator, member of the bar and rising trial lawyer, Representative in Congress, unsuccessful candidate for the U.S. Senate, and eventually the nominee of the new Republican Party for President.

Lincoln seemed to have had a mystic sense of being the instrument of a power too great and inscrutable for any man to understand. There was no pride in that feeling, only humility, but it was there. It is expressed in some measure in the second inaugural address, and it may be that Lincoln already had that great document well in mind on this day in the year 1865.

It is worth reading again, not only for the splendor of the passage beginning "With malice toward none" but for Lincoln's words on the causes of the conflict that he then knew to be ending. He also saw, that while the war was nearly over—and victory sure—the battle for freedom and justice is never fully won.

The Paragould, Ark., Kiwanis Club

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. GATHINGS. Mr. Speaker, on Friday, January 9, Representative GEORGE P. MILLER placed in the CONGRESSIONAL RECORD a most splendid report on the fine work of the Newark, Calif., Kiwanis Club. It was pointed out by Mr. MILLER that in the city of Newark the Kiwanis have devoted some 2,400 man-hours to civic and charitable endeavors.

This is characteristic of the Kiwanis Clubs of America. As indicative, may I call attention to the 2,983 man-hours of community building by the Paragould, Ark., Kiwanis Club. Paragould, located in Greene County, Ark., has three active civic organizations, of which the Kiwanis is one. During 1958, working together, the members of the Paragould Kiwanis Club devoted themselves to the following activities:

BOYS' AND GIRLS' WORK

First. Sponsored local Explorer Scout Troop furnishing advisor, institutional representative, committeemen, and financial aid.

Second. Sponsored little league baseball team and Pee Wee basketball team, furnishing uniforms, manager, and coaches.

Third. Sponsored Key Club at Paragould High School.

Fourth. Donated over 50 percent of all foodstuffs, toys, and clothing used by Goodfellows, Inc., for Christmas baskets.

Fifth. Served as "newsboys" selling papers for Christmas baskets.

Sixth. Fifty new toys donated to Goodfellows, Inc., for use in baskets for the needy.

Seventh. Leased 40 acres of wooded land with stocked pond for use of the scouts.

Eighth. Sponsored representative at Boys and Girls State.

Ninth. Gave registered Duroc pigs to deserving 4–H students.

Tenth. Kiwanian served as chairman for city's annual Christmas parade.

Eleventh. The club was the recipient of Kiwanis Appreciation Day give by high school.

Twelfth. Assisted in manning concession stands at football games.

Thirteenth. Assisted in fund drive for Boy and Girl Scouts.

PUBLIC AND BUSINESS AFFAIRS

First. A Kiwanian was selected as Citizen of the Year.

Second. Worked with local chamber of commerce in all civic affairs.

Third. Assisted with securing full-time employed for physically handicapped and students during summer months.

Fourth. Members manned gates for county fair.

Fifth. Met with county RCI clubs furnishing speaker on farm safety, soil conservation, and international farm exchange student.

Sixth. Participation in 4–H contests and banquets.

Seventh. Awarded an additional prize for 4–H pigs shown at county fair.

Eighth. Participated in Dairy Day.

VOCATIONAL GUIDANCE

First. Assisted school officials in setting up industrial tours.

Second. Presented club scholarship to outstanding student.

Third. Honored all local teachers with banquet, teachers appreciation.

Fourth. Recognized 10th-, 11th-, and 12th-grade honor students with scholastic achievement banquet.

Fifth. Furnished club counselors for students in selecting occupations.

SUPPORT OF CHURCHES

First. Furnished public eating places with prayer cards.

Second. Furnished hotels and motels with "Attend Church Regularly" signs.

Third. Members serve individual churches as officers, teachers, and lay speakers.

Fourth. Erected road signs urging church attendance.

The primary objective of the Kiwanians of Paragould is to serve underprivileged children. During 1958 the Kiwanis Club of Paragould bought shoes, clothing, groceries, school lunches, books, dental work, and glasses as a part of this program. The club paid graduation expenses for needy senior students as well as medical expenses of children and their transportation to the Crippled Childrens Hospital. Through the untiring efforts of the Kiwanis Club and with the assistance of a city noted for its generosity, 197 needy and indigent children received vital assistance.

And, what is the purpose behind all this work? I believe that President Walter J. "Bud" Branch, affable head of the Paragould Kiwanis Club, makes good answer:

> We ask not for commendation or reward but rather to offer thanks that we are in a position to give assistance, realizing but for the grace of God we could very well be the recipients of these things we now give to others.

These are the men who make America great. Voluntarily, and because of their faith in a God who inspires them, they work in Paragould—in Newark—and in other communities of this land to make a better life for their fellows.

Vigorous Supporter of Reclamation Takes Chair

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ROGERS of Texas. Mr. Speaker, the Nation as a whole and we in the Congress are fortunate to have WAYNE N. ASPINALL as chairman of the House Interior and Insular Affairs Committee. Chairman ASPINALL has a broad knowledge and understanding of all the matters within the jurisdiction of this committee. In particular, he is an expert in water matters and problems relating to development of our water resources. Upon many occasions he has expressed the necessity for continuing the orderly development of our water resources as a means of expanding and strengthening our national economy. He has been one of the most vigorous supporters of the Federal reclamation program and it is a pleasure for me, as chairman of the Irrigation and Reclamation Subcommittee, to be associated with him in this field. Most reclamation areas and interests recognize their good fortune at having Mr. ASPINALL as committee chairman. As an example, I am cluding an editorial from the January 27, 1959, edition of the Yuma (Ariz.) Sun.

The editorial follows:

VIGOROUS SUPPORTER OF RECLAMATION TAKES CHAIR

Yuma farm and reclamation people will be interested in knowing more about the man who is the new chairman of the House Interior and Insular Affairs Committee. This is the committee which, among other items, deals with reclamation.

The new chairman is Representative WAYNE N. ASPINALL, Colorado Democrat. He succeeds CLAIR ENGLE of California, now a Senator. ASPINALL is an expert in water and mining law. He also is a member of the Joint Committee on Atomic Energy.

ASPINALL is a strong Democratic partisan. He frequently has been critical of the Republican administration's policies on natural resources. He has denounced the administration's ban on starting new water projects. Likewise he criticized Secretary Benson for his skepticism about bringing more land into cultivation while there are farm surpluses in this country. "Whenever this Nation refuses to take advantage of developing the frontier left in this country, then it is already showing signs of decay," he said.

ASPINALL is a strong believer in basin-wide development of water resources by the Federal Government. He startled a meeting of the National Reclamation Association in 1956 by calling the administration's "partnership" power program "partitionship." He said the private development of the Hells Canyon power sites dealt "a body blow" to the "maximum and comprehensive development of the Columbia basin."

ASPINALL is a veteran of many a legislative and legal fight over water. He is best known for his sponsorship of the law authorizing the $760 million Colorado River storage project, largest reclamation project ever authorized by Congress.

He favors continuing the 160-acre limitation on reclamation projects "as a general policy." However, he would relax it when a larger tract of land is necessary to support a family-size farm.

He does not favor a change in the present pay-out period of 40 years for water and power users to reimburse the Government for the construction of reclamation projects.

ASPINALL sponsored a law creating a new $10 million program to build five demonstration plants to desalt sea and brackish water—a program which some day can mean much to both California and Arizona.

This western Colorado Congressman presented to the House Appropriations Committee in 1958 a proposal for a long-range reclamation program to run at the rate of about $300 annually. ASPINALL said it was "designed to meet a real need * * * for a consistent rate of construction of reclamation projects if we are to obtain maximum benefits from our expenditures."

At the time, he recommended the start of eight new reclamation projects. Congress approved money for seven of them, and two others as well.

With Representative WAYNE ASPINALL as chairman of the House Interior and Insular Affairs Committee, reclamation interests can be assured of vigorous and forthright leadership.

One Style of Politics

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix, I include, as of possible interest to the many friends the Honorable James A. Farley has made and retained outside his home State, an editorial which appeared in the Syracuse, N.Y., Post-Standard of January 17, 1959:

THE JIM FARLEY EXAMPLE: PRIMARY ELECTION REFORM VITAL

If Jim Farley had been nominated for U.S. Senator last year, he undoubtedly would have been elected.

Further, there is a distinct possibility that his popularity would have carried the State ticket for the Democrats. Governor Harriman might have been reelected.

But Mr. Farley was not nominated, even though he was the favorite candidate of the people. A good man was picked to run in his place, but he was not widely known and went down to defeat.

The bosses picked the candidates—and lost. If the party's voters had been given a voice in choosing them, they would have won the senatorial office at least.

Mr. Farley is known in every city and hamlet in New York State. The people like his warmth and sincerity, his integrity and fine principles; he was the logical man for the office but was passed by.

This case is an example of the need for an open primary system in New York State, to replace the closed system of conventions which shuts the people out and gives the bosses sole control of selecting nominees for office.

Under the open primary system, Mr. Farley would have obtained the necessary petitions in at least half of the counties of the State and would have been placed on the primary lists as a candidate. His selection as the one candidate to represent the Democratic Party would have been a foregone conclusion.

Had his strength been added to the ticket, it would have fared far better than it did.

Mr. Farley unquestionably would have been elected.

The Farley example shows not only how the State's people are shut out when it comes to picking nominees, but how a major political party can lose, as well.

Under the open primary system, which we should have in the State, independent candidates would be able to place their names before the voters more easily.

The voters would have a direct voice in selecting them. The present failure of primary elections would be overcome.

The power of the smoke-filled hotel room would be cut down to size. Political dictation would be stopped.

No one can say a good word about the existing primary elections and make it stand up. The system is a failure.

If open primaries were established, every weakness in the primary situation would be overcome.

The power of the political clique in control to put rubberstamp members on political committees would be ended.

The lack of interest in primary elections would be overcome.

The invisible but nonetheless strong link between politics and the underworld would be severed, at least partially.

Legislators and officeholders would be more independent and good Government would be strengthened.

The State needs the reform. Existing bills in the legislature to assure it deserve the strong support of every legislator.

It's time to get rid of the mock primaries we have now and replace them with constructive, useful ones.

Mr. Speaker, I also include an editorial which appeared in the New York (N.Y.) Mirror of January 24, 1959.

WHOSE BOSSISM?

The grass roots crusade started on the sidewalks of New York to re-create the State's Democrats more in the image of the New Deal-A.D.A. tradition is a fascinating development.

Former Senator Herbert H. Lehman, Mrs. Franklin D. Roosevelt, and former Air Force Secretary Thomas K. Finletter are the originators of this venture, which is known as the New York State Committee for Democratic Voters but is referred to in some quarters, perhaps uncharitably, as the youth movement.

At any rate, it is aimed directly at Carmine De Sapio, Tammany leader and national committeeman, and not quite so directly at Michael H. Prendergast, Democratic State chairman.

The liberals, as represented by the above-named trio, are still smarting over the fact that New York District Attorney Frank S. Hogan got the nomination for U.S. Senator, backed by De Sapio, over the man of their choice, Finletter.

Hogan, in the face of the Rockefeller whirlwind, ran beautifully—far ahead of his ticket, indeed—but was defeated by the Republican senatorial candidate, Representative KENNETH B. KEATING. Any political realist must wonder whether Finletter could have made a better showing.

It is significant that former Governor Harriman, importuned by Lehman and Finletter to join the anti-De Sapio rebellion, is reported to have given a firm no and to have called the venture "ridiculous."

Harriman, of course, may remember how his own presidential hopes were scuttled by the liberals in favor of Adlai Stevenson in 1956, and he may sense that these same people would like to give Stevenson another go at it in 1960.

We may point out, on our part, that the liberals joined gleefully in the brushoff of that grand Democrat, James A. Farley, who also sought the Senate nomination and might just have been the man to win the seat.

In this tumultuous picture, conservative and left wing Democrats are alined against each other over what the latter calls the issue of bossism.

One can ask, Whose bossism?

Eric Sevareid Views Integration in Alexandria, Va.

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ROOSEVELT. Mr. Speaker, from time to time I have inserted in the RECORD the very lucid and penetrating remarks of a most distinquished news analyst and well-recognized CBS commentator, Mr. Eric Sevareid. I am sure that many of my colleagues will agree with me that it is a tempting thought to place Mr. Sevareid's daily commentary in the RECORD on a regular basis.

On February 10, Eric Sevareid's radio broadcast brought to his listeners a close personal experience in the matter of school integration and a story far removed from the usually impersonal analysis of events of the day.

Under unanimous consent, Mr. Speaker, I insert in the Appendix of the RECORD the text of that broadcast, as follows:

THE ERIC SEVAREID BROADCAST OF FEBRUARY 10, 1959

Good evening. This reporter has had his home, the last 13 years, in the Virginia city

of Alexandria; it is an old city, proud of its traditions and very southern; Washington laid out some of its streets as a young surveyor; its newspaper is the oldest daily paper in America. It can be hard for a community so imbued with and formed by the old and the past, to confront the new and the present.

But Alexandria did so this morning, because when the final test comes, the sharp wind of the here and the now generally prevails over the drifting mists of the past; three Alexandria public schools admitted Negro children to their classes. The adults kept their dignity; so did the white children, as far as is known; and so did the handful of Negro children, who walked, without trembling, through the early morning gantlet of officials, policemen and the staring knots of the curious.

One of the three schools is the new city high school, a quarter mile up the lane from my house. It was a lane; just a few years ago this was open country, outside the city limits; there was a scrub pine where the school now stands; a place for secret caves; a place the quail would fly into for refuge when you surprised them on the lane. If you knew the hidden path, as my boys did, it was a place to idle your pony and cool him off on the homeward stretch.

Schools take a time to build, country lanes a time to widen and pave; the change came gradually; and we have all been accustomed, for some time now, to the groups of children walking up the road in the morning frost, swinging their books, kicking an idle stone. I can remember no tension, no act of violence along that little road. This morning, there was the crowd, slightly tense; there were the policemen in their cars. There was trouble in the air and it was hard to bring back to mind the pine wood and the pony path. But the trouble did not erupt; and for selfish reasons also, one can be thankful for that; an ugly scene at that corner, I'm afraid, would have wiped out and forever replaced the more tender memories all of us there would prefer to keep.

So Negro children can walk along there, too, from now on, kicking an idle stone if the spirit so moves. I can remember when they had to ride a bus some 30 miles if they wished a high school education.

Perhaps it will be news to some in that old city if I say that this is not the first instance of racial integration in an Alexandria school. There is an elementary school there, a private, cooperative school, integrated now for several years; possibly the first integrated school of any kind in Virginia since Reconstruction days.

I know about this school because my wife and I were among the 12 families who founded it, the year after the war ended and the overcrowded public schools were in a bad way.

We decided at the start that if Negro kids wanted to come and their parents would pay and would work on the place like the rest of us—why, they could come. They have been coming for the last 9 years; about 20 of them, 1 year, as I recollect. When they started coming, there was no fuss; only 4 or 5 families dropped out; the school is bigger and better and more prosperous now than ever. We integrated that little school, not as a challenge to anybody, not as a precedent; just because it seemed a good thing to do, on behalf of our own children, who must learn to live, after all, in a country that doesn't belong to any particular group.

We had no trouble; those three public schools had no trouble today. Letting all little children go to the school nearest their homes doesn't have to bring the world to an end.

This is Eric Sevareid in Washington.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. CHARLES A. HALLECK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks I would like to include in my comments a letter I have received from one of my constituents in Indiana, since it contains a compelling argument bearing on an issue which will confront us shortly—the matter of statehood for Hawaii.

On three occasions in the past I have voted for Hawaiian statehood and it occurs to me that had this legislation been approved before now the situation about which my correspondent writes might well have never come to pass.

Having just returned from the district in Indiana it is my privilege to represent, I can attest to the accuracy with which the writer describes conditions there.

The letter follows:

VALPARAISO, IND., *February 12, 1959.*
Representative CHARLES A. HALLECK,
The Capitol Building,
Washington, D.C.

DEAR SIR: It was gratifying to learn of your recent elevation in the party which to some of us was an overdue recognition of leadership long since evidenced.

I will come quickly to the point of this letter which is to urge you to use the influence of your high office to obtain statehood at the earliest possible moment for beautiful Hawaii.

Although you are enjoying the comparative protection of District of Columbia's geographical location, you must be aware by now that your fellow Hoosiers have been suffering untold hardships from severe cold, snow, and flood conditions ever since Alaska was admitted to the Union.

Although our inclination at first was to rejoice with our new countrymen, it cannot be denied that wave upon wave of cold and icy blasts have descended upon the Second Congressional District of Indiana and elsewhere.

And while we were prone to welcome the Alaskans with open arms and warm heart, a "chill" has overtaken us, and a (change of) heart condition may develop.

Please do not regard the calamities that now beset us as being just punishment for the way Hoosiers acted at the polls last November. Be assured the Alaskan reveler strikes without regard to party line.

One way streets are at an all time high. Icebergs outline the business districts of Indiana towns. Automobile graveyards are mushrooming. Pedestrian traffic may soon overtake mobile units. With humor running low, those not yet bitten by Jack Frost are being bit by fellow Hoosiers.

No doubt it will seem elementary for me to mention at this point that the one ray of hope for the relief of your people is the hope that emergency action will be taken by the Congress to quickly admit our greatest possession. And when the people of Hawaii are overcome by joy at this long awaited action, great waves of warm balmy air will emanate from their good will, the icy northern blasts will be dispelled, and the people of Indiana will once more be able to resume normal, useful lives.

CHARLEY, the people of the Second Congressional District, whom you have taken such good care of for the past 20 years, are now looking to you to save them from the worst plight to afflict them since you first went to Washington. This may prove to be your finest achievement. Don't wait.

Cordially,

ED JOHNSON.

Senator Morgan's Dream

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ROBERTS. Mr. Speaker, development of Alabama's vast potential of waterways is destined to become a reality. One of the greatest of these waterways, the Coosa-Alabama, is seeing some of this development at the present time. This was envisioned by an outstanding Alabamian, the late John Tyler Morgan, who served in the Congress as a distinguished Senator.

An editorial on this subject recently appeared in the Anniston (Ala.) Star, and I ask under unanimous consent for it to be included in the CONGRESSIONAL RECORD.

The editorial follows:

MORGAN'S DREAM IS COMING TRUE

Hardly had he doffed his uniform as a general in the Army of the Confederacy, before the great John Tyler Morgan, later to become U.S. Senator, hung up his shingle as an attorney at law on the square in Jacksonville and began to talk about the development of the Coosa-Alabama River.

That was before he had been to France and other European countries as a member of the Foreign Relations Committee of the Senate. But following his observations of the waterway uses in the Old World he became more interested than ever in the development of our own streams.

On one occasion during a political rally at Oxford Lake he made a rousing address and predicted the time would come when the waters of the Coosa would be brought to our doorstep here in Anniston by means of the canalization of the Choccolocco Creek, just as Houston, Tex., did later by tapping the waters of Galveston Bay.

But a cursory investigation a few years ago proved tentatively that the Choccolocco Creek project was geologically impracticable. Yet with the developments now taking place on the Coosa Dam sites, we will be near enough to take advantage of river traffic and industrial water.

This was called to our mind by reason of the Tennessee Dock having been authorized by the State at Decatur. It is of interest to note, too, that Memphis and Nashville river docks add greatly to their economy.

And in a progress edition of The Spokesman Review, published at Spokane, Wash., there are pictures in the magazine section that show ports on the Columbia-Snake Rivers now numbering 33, and they carry cargo that is valued in many millions every year.

We eventually will profit likewise and not only bring to pass the dream of our great Senator Morgan with respect to river traffic, but also realize his long battle for an interoceanic canal at Lake Nicaragua, as Panama is now becoming obsolete in several respects.

As is well known, the great project that Morgan conceived and fought for so many

years would have been consummated but for the ambitions of Teddy Roosevelt and New York lawyers who represented the French interests that attempted to build a canal at Panama but failed.

This paper happens to know that countries adjacent to or abutting Nicaragua are giving serious consideration to a revival of the project that Morgan formed. And it is not inconceivable that a sea-level canal could be constructed as a consequence of more modern imaginary genius.

Thirty Years Ago Today I Landed on the North Plains of Texas

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ROGERS of Texas. Mr. Speaker, my dear and good friend, Mr. J. H. Nichols, of Spearman, Hansford County, Tex., is a gentleman of great heart. He is one of the pioneers of the Southwest and came to the great Panhandle of Texas 30 years ago this month. He has penned his worthwhile comments on the Panhandle scene in that period which are, at the same time, notable for their generality and their succinctness. These notes were published in the Spearman (Tex.) Reporter on January 22, 1959, and I insert them herein under unanimous consent:

THIRTY YEARS AGO TODAY I LANDED ON THE NORTH PLAINS OF TEXAS

(By J. H. Nichols)

There has been oceans of water run under the bridges, since I crossed the Mississippi River headed west. Thirty marks on the calendar, which means I have passed up 30 mile posts, and the time has flown by like a weaver's shuttle. As we look back over our past life, we wonder where it has gone and what we have done with it. What have we accomplished? Nothing of any worth as we look at it. The mountains stand still but Old Man River rolls on. We take up our pictures from childhood and look at them, and see the many changes there have been, then we are reminded we are living in a different world. You see the family together; now they are most of them gone over the river of Jordan. Some are scattered and we seldom ever see them. If we did not live in another world, from that we lived in as children, what would life be anyway? I could not have made it if I had not had a father and mother to take care of me when I was a little barefooted boy. Now I am on my own, and they have gone to their reward. This has changed the scenery around the old landmark as a boy, moving out in all directions of the United States has given me a different scenery on the beauties of this old world. The world has been better to me than I have been to the world. I have enjoyed every step of the way, some of it has been rough and rocky and uphill. These experiences make us enjoy the long streched out road on the endless prairies in the western country. For the benefit of those who may read this span of thirty years I am going to only touch on some of the high places, time and space will not permit me to try to go into detail on some of the heartbreaking experiences I have had in the span of time when I arrived and now. This western country has completely revolutionized its self here in three decades. There is no more nor less acres of land, but there has been such a change it is hard to recognize them.

History will bear me out on this statement, I have seen the same section of land bought and lost several times. Today you cannot get anyone to price his land. Real estate men were on every corner in these western towns begging you to buy this land. Now they are begging you to price your land.

Those who have it know it is sold, if they even price it at any price. Less than one-half of a century ago you could file on this land. The oil industry has revolutionized this country. Wagon trails across the open prairies then and paved highways now. The spring roundups with horses in the spring to brand the cattle has changed to cattle following jeeps and pickups to get their feed. They will follow their herds into the corral and there is where they are branded in the shute. With the good wheat pasture and the care of good cowmen they can put a good beef on the market as they take them off of the cows. They can put four beeves on the market in 1 year as large as they used to put a 4-year-old steer on the market. Things have been speeded up. Irrigation has whipped the drought years down when it comes to having crop failures. When I read in the Bible the desert shall blossom as the rose I have seen this prophecy come true in this short span I have been here. Towns and cities have sprung up overnight here in the West. We find gas wells furnishing our towns, where they once picked up cow chips for fuel. Kindling was a premium when I came here on a cold morning to start a fire. Today I cannot give away a truckload of kindling. Wood is as obsolete for fires here, where we have gas, as a double-shovel plow. There is no more market for oxyokes unless someone wants to hang one over his place of business as an old relic. Model T's are only used in parades on rodeo days to show the progress here in the West and for the best.

When a southern or an eastern man comes to this country on the North Plains of the Panhandle of Texas, and he looks in front of him and the earth and sky meets. He has gone his limit until he puts on some field glasses which will lengthen his vision. When he looks down the railroad and he sees the rails running together, his eyes have gone their limit. With all the progress in 30 years here in the west, it is unbelievable. Yes, we miss the hills, mountains, creeks and valleys back east and south. These bubbling springs always make us want to go back and get a cold drink out of them and refresh our boyhood days. I have had a drink of water from the Atlantic coast to the Pacific and from Canada to Old Mexico. God being my judge there is no better water in the world than this deep well water on the north plains. To see irrigation running like a creek when we are accustomed to dust storms over the same ditch, which has revolutionized farming industry here in the west. Would I be stretching my imagination to say this North Plains is the garden spot of the world? Water the plains down and turf it down we will not see it changing hands in a dust storm any more. This land is too valuable to blow away. The soil conservation has been doing all they can to stop erosion and they have done a capital job of it. Many a farmer who lost his land during the dust-bowl days. When he left his land looking like it was following him in a dust storm. This gave the Panhandle the name of the dust-bowl. Scientific farming will change it to the garden of Eden. There is not a healthier country in the world. The wind takes care of the heat in the summer time, and in the winter the blizzards are soon passed over. People are not eat up here with chiggers and ticks. It is a good saying you cannot get all the coons up one tree for they will not all go up there. Very few of our southern people if they should arrive here during a dust storm would have this country. Some of the northern capitalist evidently saw great gain here and a great future for this country. They bought it in blocks. They believed this was the coming country of the United States. Others, all they saw was prairie dogs and jackrabbits and hearing the coyotes howl all night and they were willing to leave it to them. They saw the skeleton of the buffaloes lying in the sand and their bones bleached by the burning sun. They thought all of these wild animals starved to death and they better get out. This was only a testimony of the waste of the white man who robbed the Indians of their happy hunting ground. There are still signs of buffalo wallows and Indian battle grounds here. There is no country in the world which has made the progress since the turn of the century as this western country of the Panhandle of Texas, has made. The "headers" and the old threshing machines have been parked in the fence corners. The combines have taken their place. There is no more need for horses here, for the tractors have put them in the museum, when it comes to hauling loads and riding them to town. The automobile and good roads have kept the horses in the pasture, what are left here. This country has been one of the greatest opportunities for progresive people of any country in the world. This is still a coming country for men with vision and capital to put their vision in motion. There is not a doubt the opportunities here haven't scratched the surface on what is here. We all know the oil is here for it is being produced in abundance. God only knows how many more hidden treasures there are here which man knows nothing about. We read the stories about men getting lost in the west. Now you never get out of sight of a tall grain elevator which looks like they will punch a hole in the sky; with a light on them to bring any man home out of the dark they stand as a beacon light.

There is something majestic about an open country which gives elbowroom and man can reason and think and bring some of these thoughts to the hearts and minds of people. Laura V. Hamner is a living testimony of a woman who loves the history of the West, and she has always said, "light and hitch with me. The Panhandle is the grandest spot on earth." I believe she is right. We can always get our eyes full when we look toward the mountains. Our imagination will run on after our eyes have played out here on the endless prairies. Amen. This is the white spot of the world. Eastern industry and capital have their eyes on this section and they will move in and develop the natural resources God had depostied here for the advancement of the world. When some one said there would be 60,000 people here in the next 10 years, this is not prophecy for the people will come to develop the natural resources as they are discovered. This will naturally revolutionize the farming industry. All this country needs is water and it is here and they have learned how to lift it out of the ground and spread it on the dry ground, which has proven a great step up in production. When the real estate man would say they are not making any more land, we all knew they were right, but we have learned to make more on what is already made. The time may come when more people will live on 50 acres of land, and live better than they are living on a section now. Waste land is like dormant ability going to waste, no one is getting any benefit out of it. Waste water is destructive to both man and the community. Conserve the soil and the water for the coming generation. Leave it better than you found it. This country shows what it can do for the people. The people show the world what

they can do with this country where they have the opportunity. The golden opportunity has always been here. The Indians never did and they never would have developed the natural resources which are here today. They said the oil was here but if they took it out of the ground the world would go to creaking; it must stay there to grease the axle tree of the world. They might have been right for something has started this old world to cracking. This country could be layed underneath with uranium and other metals we know nothing about. The churches and good buildings, schools, and roads have made the greatest stride of any country I know anything about. Men with money and vision have never come from the dugout, which they owe their allegiance to, those who stayed here when only he-men and fearless women would stay and develop a country. They paved the way to prosperity. This town has some of the best residences in it of any town west of the Mississippi River and east of the Rockies. We have a cosmopolitan class of people who have the Anglo Saxon background in them who come from every nook and corner of the world. There are no finer people on earth than the people who moved out in the West to have elbowroom. They have developed a new country and this country had developed a class of people who have seen the dreams of their forefathers; saw when it was hard to settle up a new country. It is not bragging to be a Texan, it is good to be an adopted son or daughter of one of the grandest States in the United States. We will still hold to the old traditional thought, Texas is the largest State in the United States. We only think of Alaska as a foreign country which has been annexed to the United States. It is not bragging and boasting to say we are proud and glad to be a Texan. We can all say this and only stating facts, and not bragging and boasting. It is the people in other parts of the United States who are sailing under false colors; they think every man living in Texas has a ranch and oil wells. They think everybody is rich just because we have the natural resources here that makes this the richest State in the Union. Think of this. It is good to be here.

Forty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. CUNNINGHAM. Mr. Speaker, it gives me great pleasure to join many of my colleagues in marking this 41st anniversary of Lithuanian independence.

Despite the tramp of the Soviet military boot which has echoed over Lithuania since 1939, the people of Lithuania, and of the other nations now ruled by Russia through force, live with hope and memory. Their hope is for the day when they and their children will have a second Lithuanian Independence Day to mark the day when the Soviet rule will be thrown off. Their memory is of the years of freedom from this day 41 years ago until the black day in 1939 when the Russians moved in to rule with steel.

I join my colleagues in sending greetings to the people of Lithuania wherever they are on this memorable anniversary. May their ideals and memories stay alive, may their courage and hope never fail them. If there is right in this world, the people of Lithuania will someday be able to know freedom and independence again.

Even If They Die, We Make Our Rules

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LIBONATI. Mr. Speaker, the American Cancer Society refuses to test Krebiozen alleging that the double blind test plan is not a scientifically valid plan for conducting an objective and meaningful evaluation.

What tommyrot. The American Cancer Society collects millions of dollars of public moneys to find a cure for the treatment of cancer; and if not a cure, a scientific area of a type of research to develop studied methods of the control of cancer. And presently, an avenue of study is open—a biologically active substance derived from the injection of a mold in animals—the effect of Krebiozen on the cancer victim is known to 500 medical men who used it on their patients, terminal cases; and several research scientists, Dr. Andrew Ivy, Dr. Stevan Durovic, the discoverer of Krebiozen, and others. Yet the American Cancer Institute knowing of the volcanic eruption in Illinois caused by the suppression of Krebiozen research over 7 years ago and the public hearings conducted by the Illinois Legislature joint committee and commission, broadcast all over the Nation by leading commentators; books written; debates on radio and television broadcasts.

And the American Cancer Society for some reason was not interested. And is not interested now. But on the other hand refuses to approve the test of Krebiozen advanced by Dr. Andrew Ivy because it might prove that the American Medical Association's report on Krebiozen was false, that certain officials of the American Medical Association had perpetrated a fraud on the public—and changed the results of successful scientific findings by forgery.

At the termination of the present negotiations between the National Cancer Institute that stepped in the breach, and Dr. Andrew Ivy representing the Krebiozen Research Foundation—if no agreement is reached and nothing is done; then by proper Federal enactment I shall ask for an investigation of this entire matter. It is a sad commentary on the American History of Research in Science that a handful of pseudo medics, politically appointed members of the official family of the American Medical Association; can "ham string" a whole nation with false and forged evidence; and by vicious pressures prevent the honest scientific research, for the evaluation of a drug, whose merit as a biologically active substance is conceded by hundreds of medical men. Also over 50 terminal case patients are living testimonials to the scientific results obtained in the use of this drug administered by brave God fearing doctors, members of the same society, working for humanity in the secret underground of the medical world.

STATEMENT OF KREBIOZEN RESEARCH FOUNDATION REGARDING AMERICAN CANCER SOCIETY RELEASE OF REJECTION

The Krebiozen Research Foundation is astonished at the refusal of the American Cancer Society to test Krebiozen and the reasons given for their action.

The American Cancer Society based its refusal to test Krebiozen on the assertion that the double blind controlled experiment we proposed does not provide "a scientifically valid plan for conducting an objective and meaningful evaluation."

At the invitation of the American Cancer Society to submit a proposal for a fair evaluation of Krebiozen the Foundation and Dr. Ivy proposed that a committee of outstanding scientists be chosen half by the American Cancer Society and half by the Krebiozen Research Foundation and that the members thus chosen select a fifth member of the committee.

This committee was to select 200 terminal cancer patients and administer Krebiozen to 100 of them, while giving the other 100 plain mineral oil. Neither the doctors nor the patients were to know who were receiving Krebiozen. A comparison of the two groups of patients at the end of the period would determine whether or not Krebiozen had shown any effect. Such a double blind controlled test has historically been accepted by science as the best method to evaluate a treatment with a minimum of prejudice and subjective impressions by either the physician giving the drug or the patient receiving it.

Therefore, the American Cancer Society is not accurate in stating that "the proposal does not provide a scientifically valid plan for conducting an objective and meaningful evaluation." A double blind experiment is in reality a machine for the exclusion of prejudice, professional misjudgment and human error and records only the facts. Science has yet to devise a better or more accurate method of evaluating a new form of therapy.

Neither is the contention valid that "the proposal does not provide for the trial to be conducted by an independent group of clinical investigators recognized as being objective and competent by the scientific community at large."

When we proposed that half of the members of the evaluating committee be chosen by the American Cancer Society can it be supposed that the American Cancer Society would not select competent and objective investigators? Or does the American Cancer Society suggest the committee would lose its independence because of Dr. Ivy's presence? It is equally inaccurate that the proposed test provides no clear-cut standards for measuring either the results desired or defining or measuring the results obtained. Since we propose to measure the effects of the drug by comparing the patients who rereived it with the patients who did not, this method would not only show whether Krebiozen is active but would measure precisely in terms of relief of pain and diminution or disappearance of tumor, how great or small that activity might be.

The statement that the test does not permit an opportunity to determine whether physicians generally can obtain the same results since it provides for the administration of the drug by the proponents only, is meaningless in this connection. The question at issue here is whether the drug is active or not. If it is active it will give the same results in every physician's hands when used

as prescribed. For the last 7 years physicians in all parts of the United States working independently of each other have uniformly obtained the same percentage of beneficial results.

We proposed that Dr. Ivy administer the drug because he has the widest experience with it and the most exact knowledge of the dosage required in different cases. Furthermore, we felt that it was proper to suggest Dr. Ivy since every scientists is entitled to the opportunity to demonstrate his scientific claims.

The American Cancer Society has stated that it is currently testing hundreds of indifferent drugs merely on the possibility that they may be found to have some activity against cancer. It is difficult to understand why they should refuse to test this one alone which at least has the evidence of some hundreds of physicians as to its activity in the cancer patient. Furthermore, this evidence shows that out of 300 terminal cancer patients approximately 50 are now cancer-free by all known tests.

The reasons given by the American Cancer Society fail to justify its refusal to test Krebiozen and reveal an unwillingness to end the controversy over this drug.

The American Cancer Society has withheld its decision on our proposal for many months and gives it only now when we are already discussing with the National Cancer Institute arrangements to perform substantially the same test under Government auspices.

STEVAN DUROVIC, M.D.
(For the Krebiozen Research Foundation.)
CHICAGO, ILL., *October 24, 1958.*

Reporter Harold Hutchings, of the Chicago Tribune, gives the American Cancer Society's version of its position in the controversy—like the babbling brook—its opposition goes on forever; similar to the opposition of the American Medical Society. I wonder if their purposes are parallel:

REJECTS IVY'S PLAN FOR TEST OF KREBIOZEN—CANCER SOCIETY GIVES THREE REASONS

(By Harold Hutchings)

NEW YORK, October 24.—The American Cancer Society's board of directors voted Friday against a proposal that it conduct a test of the drug Krebiozen. The proposal had been made, February 10, 1958, by Dr. Andrew C. Ivy, head of the department of clinical science at the University of Illinois, and the Krebiozen Research Foundation.

Krebiozen is a controversial substance claimed to have properties for the treatment of cancer patients. It was extracted from a horse blood serum by its owner, Dr. Stevan Durovic, a Yugoslav physician now residing in Chicago.

The American Cancer Society's board took action in its annual meeting here.

NO VALID EVALUATION PLAN

The decision was in effect an approval of a report by the society's medical and scientific committee on the Krebiozen Research Foundation.

The board held that the proposal for testing krebiozen does not provide a scientifically valid plan for conducting an objective and meaningful evaluation, according to an official press statement.

It was noted that full consideration had been given by the board not only to the krebiozen proposal, but also to the recommendation made in connection with it by the American Cancer Society's advisory committee on research on the therapy of cancer, the research advisory council and the committee on new or unproved methods of treatment of cancer.

THREE POINTS IN DECISION

Three points in support of its decision were cited by the board as showing how unsatisfactory the krebiozen proposal was:

1. The plan does not provide for the trial to be conducted by an independent group of clinical investigators recognized as being objective and competent by the scientific community at large.

2. It does not permit an opportunity to determine whether physicians generally can obtain the same results since it provides for the administration of the drug by the proponent only.

3. It provides no clear standard for measuring either the result desired or the finding or measuring the results obtained.

New Bethlehem

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. SAYLOR. Mr. Speaker, every Member of Congress whose district or any part of it is plagued by unemployment will be vitally interested in an editorial broadcast February 1 by Jerome R. Reeves, general manager of KDKA-TV in Pittsburgh. It is the account of a courageous and determined community which—during an economic low point marked by joblessness, poverty, and frustration—found the necessary imagination and leadership to undertake an aggressive industrialization campaign that is inspiring all cities and towns within hearing distance of this success story.

New Bethlehem, population 1,604, is 75 miles northeast of Pittsburgh, with a good number of the residents of this community belonging to the 22d Congressional District. Mr. Reeves' editorial, though brief, describes the efforts of New Bethlehem's businessmen so expertly that I shall not attempt to supplement it. Needless to say, we are proud of what has been accomplished and of the attention that has come to this community.

Some of the approaches used in New Bethlehem to attract new business are original and unique, yet townsmen did not attempt to keep their ideas a secret. They are happy to have their strategy recounted for the benefit of other areas that have been stricken by shutdowns and idleness, and I invite my colleagues to relay this story to surplus labor areas in their own districts. Under unanimous consent, I include Mr. Reeves' editorial in the CONGRESSIONAL RECORD at this time:

NEW BETHLEHEM POINTS THE WAY

(An editorial by Jerome R. Reeves, general manager, KDKA-TV, broadcast February 1, 1959)

Good afternoon and think you for spending the afternoon with channel 2.

All of us know and realize the terrible tragedy much of western Pennsylvania and Ohio suffered in the recent flood, and although it will never seem so to the people whose homes were lost or damaged—it may well be a blessing in disguise. It has established the need and urgency of upstate flood protection and there is little likelihood of further delays.

But the flood that we want to talk about for a few moments is the flood of unemployment that has literally chased thousands of families from their hometowns. The flood of unemployment is a sinister, creeping paralysis that has been with us for a long time and cannot be explained away by the 1958 recession, or for that matter, by any recession.

Governor Lawrence in his inauguration address labelled this as our major problem in the Commonwealth. Specifically, he said that Pennsylvania has a series of economic problems, many years in the making, that can bring us a grave crisis in the future if we don't learn to act together and act now.

Nearly 12 percent of our labor force of more than a million people were without jobs. In the last 25 years, the number of manufacturing plants in the four adjacent counties to Pittsburgh increased only half as much as similar areas throughout the Nation. Allegheny County actually lost manufacturing plants—500 plants, to be exact.

We are not keeping pace with the industrial growth of the Nation, nor are we diversifying and creating employment to soften the blows of the slumps in coal and railroading.

Many of you live in towns faced with severe economic troubles. A few of you live and work in towns that face a bright, prosperous future. When you look at communities which have solved their problems you find only one thing. The people and the town helped themselves.

How can you do it in your town? Well, let's take a look at a pretty good example.

This is New Bethlehem, Pa., some 75 miles northeast of Pittsburgh—population 1604.

Over the years the town had only a small lumber company, a little peanut butter firm that wandered in after the war, and several modest tile and firebrick firms—and on the deficit side, a rapidly depleted strip mining industry. They had an unemployment problem, and were designated a surplus labor area. Their youngsters grew up and graduated from school and those who didn't migrate just didn't find jobs.

This is a pattern not unlike hundreds of other towns within the range of the channel 2 signal.

But in New Bethlehem businessmen became tired of singing the blues and wringing their hands, and in 1953 they set out to do something about their predicament.

Their first step was to form a "New Industry Committee" and they had every businessman include in the envelope of every bill paid to suppliers a note with a pointed question: "Is your firm thinking of expanding? If so, let us know about it." The committee button-holed every salesman who came to town and asked the same question.

In 1954, roughly 1 year later, Milo Palaggo and his partner Joseph Constable, who operated the J and M Furniture Co., popped the question to Joe Schaffer—a salesman for Crawford Furniture Co. Mr. Schaffer responded in the affirmative: "Yes; we are thinking of expanding."

Charley Leech, the town's industrial committee secretary, promptly arranged a meeting with Clyne Crawford, president and owner of the Crawford firm in Jamestown, N.Y.

Meetings were held. Crawford was impressed, impressed with the labor pool, the nearness of hardwood such as maple, cherry, and oak. Mr. Crawford was also a man of action and said if the town would build him a 70,000 square foot building they'd set up operations in New Bethlehem.

The town then formed the New Bethlehem Area Development Corporation, with W. C. Martin as president, Dean Bowersox as vice president, W. K. Millison as treasurer, and Charley Leech as secretary and moving force.

Their first move was to go to the John Hancock Mutual Life Insurance Co., of Boston, where they obtained a $360,000 loan. Then they went to the townspeople to sell bonds, with each merchant urged to buy at least a thousand dollars worth, but no more than 10. One hundred and forty people bought $292,000 worth of bonds. A 30-acre site on the edge of town was secured.

To finish the building the group went to the Pennsylvania Industrial Development Authority and obtained $60,000.

On July 1, 1955, New Bethlehem celebrated the opening of the $700,000 plant, the first hardwood manufacturing plant north of the Mason-Dixon line since the First World War.

It is now running in two shifts with jobs for close to 200 men.

Most towns would have been satisfied to slow down at this point, but whetted by their initial success, the committee threw itself into the development of 25 additional leads. One of them, turned up by the West Penn Power Co., was the Hawthorne Manufacturing Co. of Youngstown, Ohio, which was looking for a relocation site.

Well, you perhaps guess by now, Hawthorne did relocate. The development committee obtained an eight-acre site, the New Bethlehem Bank put up $75,000 first mortgage money, the State industrial development authority $45,000, and the townspeople bought $30,000 worth of bonds.

Did New Bethlehem stop here? They did not. They kept plugging away and New Bethlehem hit the jackpot as these things go by landing the Rola Co. of Cleveland—an electronics firm employing mostly women for intricate bench work. Four hundred and seventy people responded to the first employment ad.

Rola came to New Bethlehem for two important reasons: the labor pool of female workers, and a low interest loan for their building.

The First Senace Bank & Trust Co. came up with a 4½-percent first mortgage loan for $125,000. The local people secured this loan with the original Crawford Furniture plant, which freed the same amount of town money earning 2 percent when the Rola loan would average out a 3¼ return. The high finance isn't as complicated as it may sound. It's a simple process of the townspeople converting or shifting their resources to finance manufacturing plants in their area. Beside the employment and economic considerations of the actions, the money lended earns hard cash dividends in terms of interest.

And here we are. New Bethlehem, population 1,600, created 500 new jobs with an annual payroll of over $2 million a year. And they did it in the last 5 years.

New homes have been built. Not so many people commute elsewhere for employment, and the high school graduate has a better opportunity of earning a living in his home town.

What's the formula? Well, you need cooperative property owners who are willing to sell land at a fair price. You need low real estate and occupational taxes to attract outside firms. You need a group of energetic people in your community to aggressively seek out potential industry. You have got to make decisions fast and not get trapped in your own red tape.

And as Charley Leech so aptly puts it, "and any community willing to put their money where their mouth is can do it."

To this, KDKA television says a solemn amen for every town in the channel 2 area.

If you think your town can use any of the material used in my remarks, along with additional research data pin-pointing the New Bethlehem story, kindly write me here at KDKA Television, No. 1 Gateway Center, and we will be happy to supply it.

Thank you very much.

A few samples of immediate response from the towns:

FEBRUARY 1, 1959.

DEAR SIR: I heard your broadcast on community development this afternoon and I didn't even want to wait for tomorrow to write. It was quite an inspiration.

I was just elected president of the Dunbar Community Development Association just formed 2 days ago. We are or rather were a small town with an advanced case of ennui as far as progress was concerned. Now we have taken the first treatment toward recovery. But what a long, long convalescence ahead. How can you impress, inspire, drive a patient that appears happy being ill. * * *

Please send us all you can that might help.

Sincerely,

WILLIAM F. ROCKWELL, Jr.

DUNBAR, PA.

EAST LIVERPOOL, OHIO, *February 2, 1959.*

Mr. JEROME R. REEVES,
KDKA–TV, Pittsburgh, Pa.

DEAR SIR: Please send information from your talk on Sunday's program about the small town (New Bethlehem) which located new industries.

I will be grateful for your help and will turn the information over to those who will make use of it. Thank you.

Mrs. ALICE BANKS.

BENTLEYVILLE, PA., *February 1, 1959.*

Mr. JEROME R. REEVES,
KDKA–TV, Pittsburgh, Pa.

DEAR SIR: I have heard part of your program on Channel 2 today and I would like to have the information on community development and how to get the town folks interested enough in their community.

Thank you.

Mrs. FRANK DOCHENETZ.

Y.E.L.P. SERVICE, INC.,
East Liverpool, Ohio, February 2, 1959.

KDKA–TV,
Pittsburgh, Pa.

GENTLEMEN: Yesterday, February 1, at 5 p.m. on channel 2, I happened to catch the end of a program I believe entitled the "New Bethlehem" program. It was on the order of an editorial with respect to community development.

I believe it was noted that further information with respect to programs for community development could be obtained by writing to your station.

I am deeply interested in community development in this East Liverpool area and if you have any information that could be forwarded to me I would greatly appreciate it. If any cost is connected it will be taken care of promptly.

Thanks for your kind cooperation.

Very truly yours,

ALVIN T. BABB,
Vice President.

A Program To Retire the National Debt

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WRIGHT. Mr. Speaker, I am including under leave to extend my remarks two editorials which appeared in the Fort Worth Star Telegram last Wednesday, February 11. One appeared in the Morning Star Telegram, and the other was published in the Evening Star Telegram.

These editorials relate to the proposal I advanced last week for a systematic program to retire the national debt in not more than 100 years.

This proposal has evoked favorable editorial comment generally throughout the country, but the thing which distresses me is that most such comments seem to proceed upon the assumption that Congress will do nothing about this. I am certain that the country would be glad to have this Congress dispell any such cynicism as to our intentions by taking affirmative action:

[From the Fort Worth Morning Star-Telegram, Feb. 11, 1959]

HUNDRED YEAR PLAN

Representative WRIGHT, sounding like a voice in the wilderness, has proposed a plan for retiring the huge national debt on a gradual and orderly basis. It calls for yearly repayment of not less than 1 percent of the present indebtedness. That would mean about $2.8 billion annually, in addition to interest, but in 100 years "the debt would be completely paid and the slate wiped clean."

This plea must have brought a stunned silence in the halls of Congress, where cries of "spend, spend" echo constantly. For at the time, Representative WRIGHT's colleagues were preoccupied with discussions of further Federal spending, which inevitably would increase, not reduce, the monstrous national debt. There was talk of more money for housing, more for aid to airports, more for schools and education and more for defense.

Nearly all these projects have merit, though in most cases the proposed allocations are ridiculously extravagant, but none is more worthy than the national defense. And this was one on which the Fort Worth Congressman pinned his appeal. Now the country is struggling to buy each year from 30 to 40 B–58 bombers with the $9.8 billion in interest the debt soon will cost annually, more than 700 of these super-weapon systems could be bought, he pointed out.

Of course, the interest still would have to be met even if regular payments on the principal were to be set up. But as the principal went down, the interest also would fall. Before many years, the savings in interest would offset the debt payments, and the benefits would be realized long before the final installment was paid a century from now. The psychological effect of a determined effort to remove this staggering load from the Nation's shoulders would be an immediate boon to the country's economic health.

The chatter over the various spending proposals no doubt was resumed in the Capitol, as soon as Congressmen had recuperated from their initial shock, but it can be hoped that Representative WRIGHT has planted a seed that may one day germinate and bear fruit. For if it should, the Nation's future could—despite any temporary inconvenience imposed by the payments—be pictured in a considerably less dismal light.

[From the Fort Worth Evening Star-Telegram, Feb. 11, 1959]

THE NATIONAL DEBT SHOULD BE PAID

What with Walter Reuther demanding increased Government spending and the proposed next Federal budget already thrown out of balance by Congress, the prospects for approval of Congressman WRIGHT'S resolution for orderly retirement of the national debt do not seem very promising.

But even in introducing the proposal the Texas Representative has performed a public service, for he has reminded the American people of the tremendous weight of debt under which the National Government is attempting to operate and of the necessity of reducing it if ultimate bankruptcy is to be avoided.

Congressman WRIGHT'S proposal, despite the poor light in which his colleagues are likely to regard it, is eminently practical. It calls for retirement of the $285 billion debt over a period of 100 years at a rate of $2.8 billion a year.

Before other Members of the Congress dismiss the suggestion as politically undesirable and a poor substitute for vote-wheedling spending programs they should reflect upon what the political situation may be if the debt continues to rise and repudiation becomes the only way out.

The fact that an entire century would be required under the Wright resolution to correct what war and governmental irresponsibility have brought about in a quarter of a century is a measure of the improvidence under which the national establishment has been operated.

A hundred years of paying back what is owed is a might long time, but we owe a mighty big debt, far beyond anything which any government ever owed before. The interest rate alone is costing the taxpayer more than $8 billion a year.

The debt would be serious enough if it had no other effect upon the economy than that of the requirement to pay the heavy interest charge. But its presence, and the constant fact of budgetary deficits in the effort to keep political wheels turning, has profoundly disturbed American economics. The debt is a supercharger of inflation and inflation has so weakened the value of the U.S. dollar that it is worth less than half what it was worth 20 years ago.

Clearly no greater fallacy was ever uttered than that advanced when the great debt was in the early processes of creation, that it was of no moment because "we owe the money to ourselves." Debt is debt, whether it is public or private. The obligation has to be discharged some time, in some manner—by honest repayment, by erosion of the people's savings through inflation, or by outright repudiation.

We are far from the last, but we are engaging in the second under political euphemisms, and we are dodging the first. To undertake the honest and orderly repayment of the debt would produce great economic benefits long before the debt itself were fully repaid. Confidence in Federal fiscal integrity would return in a short time and a powerful influence would be brought to bear against the inflationary processes.

What is needed now is a start toward debt retirement under a program of budgeted annual repayments, instead of a program of annual budget deficits that are added to the sum already owed. This Nation, unless it returns to financial responsibility, can destroy itself as it destroys the people's money. There is no reason, except political cowardice, for postponing such a program as Congressman WRIGHT proposes.

Enterprise Versus Socialism

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the February 10 issue of the Savanna Times-Journal, Savanna, Ill., entitled "Enterprise Versus Socialism":

ENTERPRISE VERSUS SOCIALISM

Near the end of January, the power-producing facilities were completed at a new, giant-sized hydroelectric dam. And this, in the light of past circumstances, was something of an historic occasion.

The dam's name is Brownlee, and it is situated on the nationally famous Hells Canyon reach of the Snake River, along the Idaho-Oregon border. It was built by the Idaho Power Co., one of the Nation's many publicly regulated, taxpaying private utilities. But, as everyone who has followed the news knows, every conceivable effort and device was used by the public power groups to prevent construction. They wanted Hells Canyon development to be undertaken as a tax-subsidized Federal monopoly.

These groups did delay the dam's building for years. But at last all the legal and administrative obstacles were cleared, and Idaho Power was permitted to go ahead. Brownlee, with its 360,000-kilowatt capacity, is the result.

And Brownlee is only the beginning. It is the first project in a three-dam program in which the company has already invested more than $110 million—every nickel of it private money. The entire development is licensed by the Federal Power Commission, and the cost will be about $164 million.

In addition to harnessing the full potential of the Hells Canyon reach, the development will provide benefits in the form of flood control, downstream navigation, fish conservation, recreation—and tax revenues totaling some $10 million a year to local, State, and Federal governments.

And that's the United States idea of enterprise versus socialism.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. GROSS. Mr. Speaker, the second-place Iowa winner of the 12th annual Voice of Democracy contest was Larry Phelps, the son of Dr. and Mrs. Gardner Phelps, of Waterloo, Iowa, and it is with pleasure that I include his contest paper as part of my remarks:

I SPEAK FOR DEMOCRACY

The march of civilization may be compared to the march of science. As one looks over the various civilizations, he almost senses a supreme power, experimenting with man as a scientist experiments with the laws of nature. All of these civilizations seem to be attempts, on the part of this supreme power, toward a perfect society. These experiments date back to ancient times with such great attempts as the Babylonian and the Egyptian civilizations.

Sometimes in a scientific experiment, the most important aspect is overlooked. The same thing occurred when democracy first appeared in a civilization of man. It was first exploded in ancient Athens and reappeared in several more recent civilizations. However, not until 1776, when our Forefathers launched the type of society we know of as democracy was its full potential realized. In the minds of those men was the idea of a country in which all men are equal in their own right. In this society each man would be free to guide himself and have the right to shape his own destiny. Today, 182 years later, this society still exists. Those men may be compared to a group of scientists standing around a test tube in a biological research laboratory. In this test tube is a tiny green specimen, the first artificial living thing. Before 1776, democracy, as we know it, was like that bit of life before it was created; it existed solely in the minds of men, waiting for the proper time to come into the world. As would the scientists who created artificial life be acclaimed, so were the men who created our democracy acclaimed by thinking men the world over.

The test-tube life would lead its creators to new and useful discoveries concerning the nature of things. Democracy has similarly led man to many great and wonderful discoveries concerning himself. It has exposed the most admirable traits in man and has served as the breeding place for many great social advances. Through a competitive society we have developed one of the highest standards of living known to man.

Another similarity is seen in the fact that as a blob of laboratory life would serve as a guide for future experiments, so has our democracy served as a proving ground for those who have followed. Our Constitution, which is the oldest in the world still in use, has seen many nations built around its basic concepts.

The imaginary laboratory specimen will lead its creators to new discoveries without the waste of time and money. In like matter, our democracy has prevented us from going astray in the most expensive directions; such as nazism, fascism, and communism. These would be paid for not only with time and money but with human lives and liberties. While democracy has guided us around these pitfalls, our liberties and freedom have remained.

The hypothetical creatures will change and react to changes in stimulus and environment caused by its creator. Likewise, our democracy, built on a wonderfully flexible basis, has changed and will continue to change in response to the needs and desires of its creators. This distinguishes it from other inferior forms of society.

Perhaps the greatest similarity which the manmade life has to democracy is that as this artificial creature is dependent on its creator, the scientist, and its every move is guided by him, so is our democracy guided by the only proper force. This force is its creator, the people. Other forms of society have failed because one man or small group has led millions of people according to his whims and ideas. We have attained a society in which each individual man is free to have his part in his government.

The successful scientist has always been free to guide himself and his creations. Our democracy has been successful because, in guiding ourselves and our Government, we, the people have always been free.

Man in the Middle

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. MOORE. Mr. Speaker, I have gone into the RECORD in the past week with newspaper articles outlining in detail conditions which exist in West Virginia with regard to the economc plight of our people.

My colleague [Mr. SLACK] of the Sixth District has done a great and gracious service in touring his area in southern West Virginia with a newspaper reporter who has given a graphic and compelling description of the unemployment and the destitution which exists there.

I take the liberty today of letting the House know that this condition is not confined to southern West Virginia. It is widespread in our 55 counties. Under unanimous consent to extend my remarks, I include for reprinting an article from the edition of February 5 of the Fairmont West Virginian, one of our distinguished newspapers, which relates the plight of the man in the middle. As the newspaper account states, this man can be found all over the State; he is not alone. And while my distinguished colleague investigated conditions in southern West Virginia, the source of this story is 250 miles north of his district. I mention this to indicate that West Virginia's economic condition is extremely grave and widespread.

During the past week, there have been meetings with Secretary of Commerce, Lewis Strauss, and Gov. Leo Heogh, concerning imports of residual fuel oil. Our coal industry representatives and representatives of our great coal-carrying railroads are extremely interested in seeing that mandatory quotas are placed upon imports of this fuel. I mention this in passing, but my main concern is to have Mr. Herst's article printed for all to see:

MARION COUNTY HAS CLASSIC EXAMPLE: MAN IN THE MIDDLE SUFFERS

(By Ray Herst)

He is West Virginia's man in the middle—the employable who cannot get a job and who is not eligible for aid from the department of public assistance.

He lives next door to you or maybe in Wetzel County or in Tayler County. He can be found all over the State.

One such man in the middle and his family live here in Marion County: They are not alone—theirs is a typical case.

For breakfast last Sunday they had chicken gravy and bread; for lunch they had chicken gravy and bread, and for dinner they each had some of the meat—but how far does a chicken go for a family of 10?

The previous day there was nothing in the house to eat and no money to buy food. The family traded an old motor for a rooster. When that was gone, they had nothing again.

This man in the middle—let's call him Mr. Booth—has been out of work for the past 2 years. He was alid off from his job with the State road commission.

NO JOB

Like so many others, he has been unable to get another job. And because he is considered employable he cannot receive aid from the DPA. This is why he is the man in the middle—the man stranded in the middle of a no-man's land that is barren and bleak and surrounded by walls of frustration.

Mr. Booth is 58 years old and has arthritis of the spine—and he is beaten.

This family of 10 has an income of exactly $2.50 a week—this comes from Mrs. Booth, who, every other week, cleans house for another woman. She gets paid $5.

Theirs is a story that seems impossible to believe, but it is a true story and one which hundreds of families in the State can also tell.

Their eyes would probably be empty of sparkle and life as Mrs. Booth's are and their voices would sound as desperate as hers when she said, "We can't keep our home together much longer and if something isn't done pretty soon, I don't know what will happen.

How Mr. and Mrs. Booth have kept their family together for the past 2 years, God only knows.

IN DARKNESS

For a year now, the family has lived in virtual darkness. Their electricity was shut off when they were unable to pay the bill. But they kept on as best they could.

Six of the eight children in the family are in school. Each night they gather in the living room, pull their chairs around in a semicircle and study by the weak light from two oil lanterns.

Yes that's right, oil lanterns. The lights dance and smoke and throw grotesque shadows over the wills but the children study and they study hard.

One of the girls—she is 19—is scheduled to graduate from high school in June. She may not. It's not that her grades are bad—they're good—it's because she and the other children do not have the necessary paper and pencils needed to carry on their school work.

The girl, a pretty lass, is thin from the meager diet of the past 2 years and pale with frustration. She is determined to finish high school and get a job as a secretary if possible.

"That will be the proudest day in our lives," her mother said.

GIRL OF COURAGE

It will indeed be a proud day—for here is a girl with courage seldom found in young women of her age. Her clothes were worn and sometimes too small and most of the time out of style and repaired hundreds of times; she couldn't participate in school activities because there was no money—but she stuck with it and soon she will be rewarded.

All of the family is in dire need of clothing—their coats are thin and worn and it seems as though the lightest breath could be felt through them. They don't have proper shoes and they are hungry.

And they and their parents face spring without a home. They haven't paid rent since they moved there. The landlord told them they could stay rent free if they would keep the property up, but now he has told them he wants to sell the house and they will have to move.

The only problem is they have no place to go. Moving the furniture would present no problem—if you could call the few pitiful sticks that they have in the house furniture. It's that they have no place to go.

Mrs. Booth said, "I love it here in this community. The people are wonderful and kind. I would like to stay here the rest of my life."

SOME ROOMS COLD

The six-room house is heated with gas—that is, in all but two of the rooms. In one of the rooms the Booths' 17-year-old son sleeps and in the other, two of the girls and one of the boys sleep. The kitchen is heated by the cooking stove. They have a gas bill of more than $20 that needs to be paid.

They get some aid. The family received commodities which last them less than a week and during 1958 they received a total of $100 from the emergency relief fund of the DPA.

For a year Mrs. Booth has washed the family's clothes as her grandmother did—with a washtub and a scrubboard; she ironed with an old-fashioned flatiron, heated on the stove.

But they are a family—a true family. They have stuck together and worked together. They know hunger and cold and need and they remember the days when they laughed and had enough clothing to go around or dishes to eat on or when the baby had milk to drink.

IN THE MIDDLE

But they are in the middle—stuck fast in the middle and no matter which way they turn they find the slick, high walls of frustration. But through a small peephole in the wall comes a glimpse of sunlight and hope—hope that the children will be able to finish school and have enough to eat and perhaps, eventually find the gate to the wall and live a little better life than they are now.

Dr. Clyde J. Wright, county commissioner, who knows the family and has tried to help them and who took this reporter to visit the family made this statement:

"The health and welfare of every citizen should be first and foremost in the consideration of public officials. We are all proud we live in a free country, but we have some conditions in our county that none of us could be proud of.

"Every person should be free to earn a living for himself and family. The discharging of people from their jobs because of their political affiliation is un-American. Personally, I am opposed to such despotic methods of political tyranny. Pressuring people into starvation so that by force they must submit themselves to certain groups, is foreign to the principles and philosophy of our American way of life.

HELP NEEDED

"Those who are not physically able to earn their bread must be cared for. The little children who are victims of circumstances because of the lack of assistance will break the heart of anyone who hears their feeble cries for food. Our Saviour was so concerned about children when He said 'Whosoever shall offend one of these little ones, it is better for him that a millstone was hanged about his neck and he were cast into the depths of the sea.' "

Instead, this family and the hundreds of families like them—Virginia's Man in the Middle—has been cast into the depths of the sea and left to drown of frustration and hunger.

February 16 Marks 41st Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. DON. L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. SHORT. Mr. Speaker, I would like to call to the attention of the House the fact that today, February 16, is Lithuania Independence Day. But the plain fact is that this day, first celebrated 41 years ago, serves to remind us that Lithuania is no longer free to celebrate this proud day in its history.

The vast majority of freedom-loving American people, I am confident, join with me in a sincere hope that some day the efforts of the free world may result in bringing Lithuania and other freedom-loving countries out from behind the Iron Curtain.

The people of Lithuania have my profound sympathy, and I am sure efforts will continue to be made to bring about the freedom of Lithuania which the people of that country so ardently desire.

Nixon Can Unite GOP

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. SPRINGER. Mr. Speaker, I append herewith a very enlightening article by Gould Lincoln in Sunday's Washington Star regarding the Vice President and his ability to weld together all phases of the Republican Party. It is a good article—well put—and most convincing, about a man who is widely accepted to be the coming leader of his party:

NIXON CAN UNITE GOP
(By Gould Lincoln)

Dark horses for the Republican presidential nomination in 1960 are scarcer than hens' teeth. And by the same token, there are two outstanding Republicans who, according to insiders in the party councils, may make the race for the GOP nomination next year as keen as that between Mr. Eisenhower and Senator Taft in 1952. They are, of course, Vice President NIXON and Governor Rockefeller, of New York. The very fact that there is a dearth of dark-horse and favorite-son candidates will make the contest between the Californian and the New Yorker—if it comes—more interesting. It makes the race a real struggle.

Vice President NIXON, through his wide experience as Congressman, Senator, and 6 years in his present office, has a better grasp of Government affairs and the problems that confront the Nation than any other candidate, Republican or Democrat. And he has ability of a high order. Careful inquiry shows he is widely liked and highly regarded among the party leaders in many States.

Governor Rockefeller is an attractive new figure in elective politics. His victory last November in New York catapulted him into the presidential picture. He carried a New York Republican senatorial candidate along with him to victory.

COULD UNIFY FACTIONS

The 1958 elections, on the other hand, did Mr. NIXON no good. California voters defeated former Senator Knowland for Governor, and former Governor Knight for Senator (both Republicans)—and badly. Mr. NIXON himself was not a candidate, of course. The picture might have been vastly different had Senator Knowland been content to run again for Congress, leaving Governor Knight to seek relection. Senator Knowland's insistence on the governorship nomination spilled the beans. When he also seized on the right-to-work issue and made it his own, the jig really was up.

As between Mr. NIXON and Governor Rockefeller today, the Vice President stands a far better chance to unite the two wings of the Republican Party. The conservative wing can go for him 100 percent. The strong and loyal support he has given President Eisenhower should certainly encourage the "modern" Eisenhower Republicans to go for him.

Governor Rockefeller, on the other hand, has been regarded as too far left of center by many of the conservative Republicans. He has yet to prove himself a good executive and Governor. His demand for higher taxes in order to balance New York's budget has not been popular with a lot of voters. The fact he has accompanied his high tax program with a spending program has not endeared him to many conservative Republicans. Further, no one yet knows how a Rockefeller, as a presidential candidate, would sit with the Republicans of the Midwest, an area the GOP must carry if it is to win next year's national election.

If this is to be a race between Mr. NIXON and Governor Rockefeller, the presidential primaries offer a real field for tests of popular strength. Both men would be considered far more than favorite-son candidates—candidates who go to a national convention with their own State delegations lined up for them, and little else, hoping the lightning will strike. Each will have, however, his State's delegation all wrapped up. Senator Knowland, who had been a possible contender in California—and Knight—have been eliminated by their sorry showing last November.

OTHER GOP POSSIBILITIES

What Republican dark horses and favorite-son candidates are on the horizons? There is former Gov. Thomas E. Dewey of New York, who likes Mr. Rockefeller and will not himself be a candidate. Senator CASE of New Jersey, one of the modern group, is another possibility. Secretary of the Treasury Robert B. Anderson, who has been described as an Eisenhower Republican from Texas (who now is from Greenwich, Conn.), has support in some circles. So has Ambassador Henry Cabot Lodge, Jr., our representative at the United Nations.

Republican governors of States have been reduced to a pitiful number, especially in the primary States. In Minnesota, where former Gov. Harold E. Stassen at one time could hold the State's delegation at the national convention, he no longer figures materially. Further, he has moved to Pennsylvania, where he would not have a chance against either Mr. NIXON or Governor Rockefeller in the presidential primary.

The argument has been urged against Mr. NIXON—as it was against the late Senator Bob Taft of Ohio—that he could not win if nominated. From the 1952 presidential results, it can well be argued that Senator Taft would have won, if he had defeated Mr. Eisenhower for the nomination. Mr. NIXON is a resourceful campaigner—wonderfully effective on television. Opponents say he would not get the independent vote and no Democratic votes. They could be far wrong. Further, a lot will depend on the Democrat who is nominated for President. None of the so-called candidates are politically flawless. A country at peace and reasonably prosperous could go for Mr. NIXON.

Mr. NIXON should win the first primary in New Hampshire in a walk if he enters it. He is popular there, where thousands of Republicans took the trouble to write his name in for Vice President in the 1956 primary. Minnesota, Wisconsin, Ohio, Oregon, Nebraska, Pennsylvania and New Jersey all could provide Mr. NIXON and Mr. Rockefeller with real battlegrounds.

"Maine" Memorial Day

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DADDARIO. Mr. Speaker, in Connecticut, Governor Ribicoff proclaimed Sunday, February 15, as *Maine* Memorial Day to commemorate the sinking of the battleship *Maine* at Havana. Under leave to extend my remarks in the RECORD, I include Governor Ribicoff's proclamation:

We are soon to observe the 61st anniversary of the tragic event that was the immediate cause of the Spanish-American War, the sinking of the battleship *Maine* in the harbor at Havana, Cuba, on February 15, 1898.

There are comparatively few among us who have personal recollections of the time when the war cry "Remember the *Maine*" was heard throughout the Nation, but it is as meaningful today as it was then.

Today America is determined to stand firm when her security is threatened or attacked. America's sympathies for oppressed people, and her resolution to aid them in every way possible, are as strong as they were 61 years ago.

It is fitting, therefore, that we keep alive the memory of this episode in our history, and in accordance with our statutes I hereby proclaim Sunday, February 15 to be *Maine* Memorial Day.

It will be appropriate on this day for our public and private buildings to display our National and State flags. Fitting exercises may be held in our schools and other public places especially honoring the 266 officers and men who went down with the *Maine* and the some 3,400 Connecticut volunteers who served in the Spanish-American War.

Boy Scout Week

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. AVERY. Mr. Speaker, last week 12 Explorer Scouts made an official report to the Nation representing the 3½ million Boy Scouts of American. Naturally I was proud to have a Scout from my own district, Steven D. Peterson from Topeka, Kans. It was my privilege to attend a special breakfast honoring these Scouts on last Tuesday and I would like to observe that it is reassuring to see 12 such fine and capable young men representing the youth of America. The Nation owes a special tribute to the 125,000 volunteer leaders of the Scout organization. It is by virtue of the unselfish and tireless effort of these public-spirited citizens that we are able to attract our youth into the Boy Scout organization.

On Sunday, February 15 many churches throughout the Nation appropriately paid tribute and recognized the Boy Scouts of America. Many churches are counted among the 81,000 organizations sponsoring Boy Scout troops throughout the land. In many instances the church makes their facilities available to Scout troops for a place of meeting even though the troop may be sponsored by a nonsecular organization.

In recognizing the Boy Scouts of America it was a common practice for a Boy Scout to be selected to deliver what is described as the Patrick Henry address during one of the church services. Typical of the Scouts selected to make this address was Bob Singleton, of Bethesda,

Md., who spoke during the church service at the Bethesda Methodist Church. Bob was presented by the Reverend Marion S. Michael.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 2, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of February 14, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth Congressional District, Texas)

Capitol activity this week centered around a joint session of Congress on Thursday called to pay tribute to the memory of Abraham Lincoln on the 150th anniversary of his birth.

In this week's newsletter, instead of talking about Lincoln, perhaps we might all benefit more by letting Mr. Lincoln talk to us about citizenship and government:

GOVERNMENT

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities.

"In all that the people can individually do as well for themselves, government ought not to interfere" (July 1, 1854).

DUTY

"We hold the true republican position. In leaving the people's business in their hands we cannot be wrong" (Congress, July 27, 1848).

SOLVENCY

"As an individual who undertakes to live by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with a government" (Whig circular, March 4, 1843).

ECONOMIC FREEDOM

"I believe each individual is naturally entitled to do as he pleases with himself and the fruit of his labor, so far as it in no wise interferes with any other man's rights" (Chicago, Ill., July 10, 1858).

"We see it, and to us it appears like principle, and the best sort of principle at that—the principle of allowing the people to do as they please with their own business," Congress, July 27, 1848.

"The primary cause of our great prosperity • • • is the principle of 'Liberty to all'—the principle that clears the path for all—gives hope to all—and, by consequence, enterprise and industry to all," Fragment on the Constitution and Union, January 1861.

LIBERTY AND SECURITY

"If destruction be our lot, we must ourselves be its author and finisher. As a Nation of free men, we must live through all time or die by suicide," speech to Young Men's Lyceum, January 27, 1838.

CAPITAL/LABOR

"The strongest bond of human sympathy, outside of the family relation, should be one uniting all working people, of all nations, and tongues, and kindreds. Nor should this lead to a war upon property, or the owners of property. Property is the fruit of labor—property is desirable—is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another; but let him labor diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built," to New York Workingmen's Democratic Republican Association, March 21, 1864.

"I don't believe in a law to prevent a man from getting rich; it would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else. When one starts poor, as most do in the race of life, free society is such that he knows he can better his condition; he knows that there is no fixed condition of labor, for his whole life," March 6, 1860.

DEPENDENCE ON GOD

"The purposes of the Almighty are perfect, and must prevail, though we erring mortals may fail to accurately perceive them in advance. We hoped for a happy termination of this terrible war long before this but God knows best, and has ruled otherwise. We shall yet acknowledge His Wisdom and our own error therein," to Mrs. Gurney, September 4, 1864.

DUTY

"Let us have faith that right makes might, and in that faith, let us to the end dare to do our duty as we understand it," at Cooper Institute, New York City, February 27, 1860.

Administration's Farm Proposals a Confession of Failure

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, on February 9, 1959, the Wisconsin Farmers Union News printed an editorial which I feel neatly sums up the appalling farm price situation which would result if the administration's 1959 farm proposals were put into effect. Under leave to extend my remarks, I would like to include a copy of that editorial in the RECORD:

PRESIDENT'S FARM PROPOSALS

Faced with the prospect of being buried under mountainous farm surpluses of its own making, the Eisenhower administration has proposed solutions of such a reckless nature that they are a sure sign of panic and a confession of failure.

The President has offered Congress two courses of action: (1) Abandon the parity concept and set price supports between 75 and 90 percent of the average market price for the immediate preceding years (probably three), or (2) retain the parity standard but give the Secretary of Agriculture authority to set price supports anywhere between zero and 90 percent of parity.

If either proposal were adopted, Secretary Benson would have the power to make "price supports" completely meaningless because the free market level would usually prevail.

Let us suppose that Congress would approve the President's first recommendation, giving Benson the authority to drop the price floor to 75 percent of the average market price for the last 3 years. Manufacturing milk could then be supported as low as $2.45 a hundred pounds as compared to $3.06 for the present marketing year; butterfat at 47.6 cents a pound compared with this year's 59 cents; corn 96 cents a bushel compared with this year's prospective $1.14; and wheat could go as low as $1.43 a bushel compared with $1.82 set for this year.

Both the President and Benson have made much of the argument that Government price support programs have been unrealistic. If the above farm prices are a sample of the new realism in Washington, then we'll take the dream world that farmers purportedly have been living in.

The Federal Penal System

EXTENSION OF REMARKS
OF
HON. KENNETH J. GRAY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 21, 1959

Mr. GRAY. Mr. Speaker, due to overcrowding in our Federal penal system, the U.S. Bureau of Prisons has submitted an urgent request to Congress for funds with which to construct a maximum security Federal penitentiary. The budget request submitted to Congress is not to exceed $9,875,000.

In an effort to discredit the need for this maximum security penitentiary, the Wall Street Journal has printed an editorial listing the cost at $110 million. This, of course, is grossly in error. In order to set the record straight, I have asked the Wall Street Journal for a correction of their editorial and have written the letter below concerning this matter, and with permission previously granted, request that it be printed herein.

Should a prison riot occur in one of our overcrowded Federal prisons, far more damage could be done in one prison riot than the cost of the new proposed maximum security institution. Therefore, I hope Congress will favorably consider this urgent request for funds and ignore such efforts to discredit the urgent need for this new institution.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 16, 1959.

Mr. JOSEPH E. EVANS,
Wall Street Journal,
New York, N.Y.

DEAR MR. EVANS: I would like to take this opportunity to point out an error which appeared in your editorial comments in Review and Outlook of the February 12 edition of your publication. You stated, and I quote, "The prison will house 600 men and the estimated cost of the Illinois prison is set at $110 million."

Mr. Evans, the figure of $110 million is $100 million in error. If you will check the printed budget request submitted by the President, on page 761 in the right column under the heading "Buildings and Facilities," you will find an item requesting moneys not to exceed $9,875,000 for this proposed prison. I am quite sure that you will agree this figure is quite different from the figure you quote in your editorial of February 12. Naturally, with this error the further figure of $183,333 per man used in your editorial is likewise in gross error.

I sincerely feel that, in justice to your readers who look to your publication and editorials for correct information, you will want to right this error at the earliest possible time. And, I might add, that the actual budget request for $9,875,000 might also change you editorial thinking on this matter.

If I can be of any further help to you in getting the factual information on this or any other matter, please do not hesitate to call on me.

With kindest regards, I am,

Sincerely yours,

KENNETH J. GRAY,
U.S. Congressman.

National Defense

EXTENSION OF REMARKS
OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. LANKFORD. Mr. Speaker, I wish to commend the attention of my colleagues to an address by Adm. James S. Russell, U.S. Navy, Vice Chief of Naval Operations, delivered recently in Seattle, Wash. This distinguished naval officer was the cowinner of the Collier Trophy in 1956 for his work in developing the supersonic F8U Crusader jet fighter. I believe Admiral Russell's remarks to be particularly timely as the Congress is called upon to assess the nature of the military threat our Nation now faces:

NATIONAL DEFENSE

(Address by Adm. James S. Russell, U.S. Navy, Vice Chief of Naval Operations, Before the World Affairs Council of Seattle, Seattle, Wash., February 4, 1959)

It is a privilege to be asked to address the Council of World Affairs of Seattle and their many distinguished guests here today. It is particularly pleasant for me since the occasion is in the nature of a homecoming. As some of you may know, I grew up here in the Pacific Northwest and throughout my Navy career have maintained a home on the shore of American Lake just south of Tacoma.

So devoted is my family to the local deep water, the tall fir trees and the glacier-clad peaks that we have recently purchased a tract of land on the western shores of Puget Sound, and when the time comes to retire, it is our intention to return and there to build the house of our retirement.

I am especially happy to have this opportunity to discuss with you, my neighbors, a subject which is of great importance to all of us—national defense. While in my discussion I may understandably deal more with the affairs of the Navy, I do not for a minute minimize the vital roles of our brother services, the Army and the Air Force. All of the services have an important place in the defense of our country.

This country of ours is now in the greatest competition in its history, and the very survival of our way of life is going to depend in large measure upon the extent to which we, all of us, industrialists, businessmen, educators, clergymen, statesmen, labor leaders, and military men, recognize this competition and its very long-term implications.

National security is a goal which can be attained only by national effort, participated in by every citizen of this Nation. Its achievement in these perilous times is a full-sized job and not one to underrate. This Nation can remain free only by a combination of political, economic, spiritual, psychological, and military strengths, including the will to apply appropriate military force when forced to by aggression. The price of security is high. It will probably go higher. The biggest single item of our security bill is our Military Establishment. The rising costs of everything make it mandatory that we make the most exacting appraisal of just what this overall establishment should contain. We must maintain adequate strength in all necessary areas, for, if we do not, the enemy will find and exploit our weaknesses. But by the same token, we must not overexpend in any one area, for, if we do, our resources in dollars, materials, and manpower simply won't be enough to provide for other equally vital forms of military strength.

Bear in mind, if you please, that the final decision as to our overall military posture is not made by the military, but by the civilian side of our Government—the Secretary of Defense, the President, and the Congress. The ultimate authority properly resides in the hands of our voting citizens, and so must the ultimate responsibility.

The Soviet sputniks brought our national security problems sharply into the focus of public attention. The comparative success of the Soviet lunar probe launched on January 2, 1959, again brought us face to face with the fact of Soviet technical progress. In whatever way we view this progress, its military implications are more long-term than immediate. What we do in response must look toward our long-term security. We are going to have to live with Communist imperialism for a long time. Our problem is an enduring one.

Bear in mind, also, that decisions we make today concerning our military posture require several years to implement. It takes years to build ships, airplanes, and missiles. Hence, what we plan now will take shape and be in service 3, 5, or 10 years from now.

Our national task—and that of the free world—is to establish a just and lasting peace in the world in which the rights and independence of all countries are safeguarded in conformity with the charter of the United Nations. To fulfill this national task we may be forced to go to war—and war may be of different kinds. General war may be defined as a war involving a massive nuclear exchange between the United States and the Sino-Soviet bloc. I know of no one who is not convinced that such an exchange would be something less than beneficial to both sides. It is therefore unlikely to happen, barring an insane and desperate choice on the part of the Communist leaders. Nevertheless, we much insure this unlikelihood by maintaining a deterrent to the deliberate initiation of all-out war by the Soviets. The overall deterrent, of course, is the collective strength of the free world, but a substantial part of the deterrence is a retaliatory atomic strike capability which the Soviets know will be capable of inflicting unacceptable damage to them, even if they deliver a surprise attack upon us.

Bearing in mind that this essential retaliatory capability is very expensive and in competition with other elements of our national strength, the country and our military planners must answer three questions:

1. How much de we need?
2. What form shall it take?
3. Does national security demand any other form of military power—and if so, what and how much?

To deal with the first question as to how much deterrent, we need enough so that the Communists know that if they attack us, they will be destroyed. Thus, deterrence is a state of mind: but, and this is important, sufficiency in this particular is absolute, not relative; it bears no ratio, no relationship, to a like capability on the part of the Soviets. It specifically does not mean matching them bomber for bomber, or missile for missile.

As to what form it should take, you might decide to build up a huge force, highly vulnerable to surprise attack, but big enough so that its residual capability, which you calculate will survive a surprise attack, will still do the job. This is a very expensive and rather dangerous choice, because either you might miscalculate, or the enemy might. He might figure that a really good surprise attack would get enough of your force so that he could survive the residual attack, and he might be strongly tempted to try it.

On the other hand, a small but highly invulnerable force is not only attainable within reasonable financial limits, but by its very invulnerability it removes the temptation from the enemy to have a go at trying to wipe it out. This invulnerability to surprise attack can be achieved only by resorting to dispersal, concealment, movement, and hardening.

We must face the fact that as the number of long-range rockets in the enemy's arsenal increases, the capability of either manned bombers or missiles operating from unhardened fixed bases to provide the necessary residual retaliatory capacity becomes progressively less. Similarly, the capability of manned bombers to penetrate constantly improving air defenses declines. We shall, perforce, rely more and more on missiles for this task.

A truly effective retaliatory force should meet the following criteria:

1. The enemy should have a wholesome fear of it; and to this end, it should be able to reach, with requisite accuracy and effectiveness, any target in the Russian Communist bloc.

2. It should not be so located that attempts to destroy it before it is launched would collaterally wreak damage on nonmilitary targets.

3. It should be highly invulnerable to all forms of enemy military attack including ballistic missiles.

4. Its launching points should be such that it cannot be located accurately in advance by an enemy, and such that its most probable trajectories cannot be precalculated by an enemy.

5. After it is launched, it should be as invulnerable as possible to all forms of countermeasures.

6. It should be an invulnerable as possible to enemy efforts of sabotage, subversion and espionage.

7. It should have a minimum reaction time; that is, the time between the decision to fire, and actual launching, should be as small as possible.

8. It should so complicate the enemy's defense problems that absolute defense against it is either technically or financially infeasible.

It so happens, not by coincidence, but by intention, that the foregoing criteria are met by the system in which the ballistic missile, Polaris, is mounted in submarines.

The Polaris submarine system will be unique in that it is a weapons system which combines the advantages of attack by ballistic missile with the already established potential of concealment and mobility offered by the nuclear powered submarine. By moving about, remaining submerged for long periods, and constantly changing positions, the Polaris submarine is virtually invulnerable to surprise attack. Surrounding the potential aggressor are oceans and seas providing millions of miles of underwater concealment within missile range of vital targets. A relatively small fleet of these atomic powered submarines, each carrying

more than 10 ballistic missiles in its hold, and capable of firing them at distant targets while completely submerged, represents for this country the capability to retaliate, so quickly, and so inevitably, that the potential attacker has the certain knowledge that once his attack is launched, he will himself be destroyed.

Besides Polaris other comparatively invulnerable systems are now being developed, but to be effective they also must be mobile and concealable, or else they must be fired from bases so hardened as to be virtually indestructible.

However, I do not think we should go overboard, even on Polaris. Like all retaliatory weapons, it is one which paradoxically, if truly successful will never be used, and we should make every effort to tailor its number to an adequate minimum. Further, if you accept the premise that we must not overexpend in any one area of our military strength, then logically, funds devoted to Polaris should come from those allocated to the retaliatory forces—not from those so badly needed for other naval forces—as those in antisubmarine warfare, in amphibious employment, and in fleet air defense.

Despite all the military virtue one finds in the Polaris submarine system, I would not advocate having it as the only retaliatory system. A single system can be met with a single countermeasure, and although that countermeasure against Polaris is not now evident, in consideration of it we should have some variety in our retaliatory locker.

As to the third question: Do we need anything except the deterrent to general war.

The answer is an emphatic "yes." We need the forces to deter, or, if hostilities are forced upon us, to prosecute successfully limited or peripheral wars. The growing atomic parity makes all-out war increasingly unlikely. This means, not that the Communists will give up their imperialistic goal of world domination, but that they will seek other means to attain their ends. Wars of limited objectives will become increasingly more likely, efforts will be made to enslave free countries by subverted revolutionary uprisings from within and through limited offensives by puppet governments from without. Following this pattern was Greece in 1947, Korea in 1950, Vietnam in 1954, and this year we had our forces ashore in Lebanon to prevent such a move and we augmented the Seventh Fleet and forces ashore in the Taiwan area to counter the offensive against Quemoy. Unless we are equipped to deal promptly and effectively with such wars, we must choose between losing the free world a little at a time, or invoking the atomic holocaust.

It follows that all our armed services must maintain a strong limited war capability. But for a conflict to remain limited, there must be restraint in the selection of targets and in the size of weapons, and precision and discrimination in their delivery. These are qualities which the long-range rocket and the large nuclear weapon do not possess.

A limited war will not be fought in North America or necessarily in Russia. If limited war should be forced on a third country by an aggressor, to help that third country we must be prepared to exert power—limited and discriminating power—on the other side of some ocean. We must get that power there quickly and get it ashore quickly. We may have to keep it there, and keep it supplied, for protracted periods. To do this, we must have three capabilities. First, a capability to control the sea routes to the area of aggression, and any other sea routes along which we are threatened or harrassed. Second, a capability to strike within the area of aggression, precisely and with discrimination, using weapons appropriate to the scale of the war. Third, a capability to put forces ashore promptly in the objective area against whatever resistance there may be. In sum, naval forces, including their amphibious marines, can freely operate from international waters, to provide the spearhead and the shield to defeat limited aggression, and to do so without triggering unlimited catastrophe.

The forces for these purposes must be reasonably large to match the size of the enemy's forces and the extent of the oceans and their shorelines. Our forces must be in being and in a high state of readiness. We are not able to resort to megaton weapons to cover any quantitative weaknesses in this type of war.

The world situation which the popular writers like to describe as the balance of terror, the situation which Sir Winston Churchill dolefully calls the melancholy paradox, brings with it an increasing requirement for seapower.

Certainly seapower will play a vital role in any limited war. Upon reflection, to fight such a war without command of the sea on the part of the United States and its allies in the free world is unthinkable. And should the deterrent fail and general war ensue, the seas will give us the time and space factors we need for early warning and for defense in depth; as well as vast maneuver areas for dispersal and concealment of our striking forces. To me, one of the most telling arguments supporting the importance of command of the seas is the trouble and expense to which the Soviets have gone in their endeavor to be ready to take it away from us. Since World War II they have built a formidable surface and subsurface navy. Today they have more than a score of heavy and light cruisers, 140-odd destroyers and 450 submarines. Russia ranks today as the world's second largest seapower.

An essential ingredient of the Navy's limited war capability is the attack carrier and its complement of manned aircraft capable of applying precise striking power—precise as to degree and as to target. It is the most versatile single weapon system on the face of the earth. Its mobility permits it to reach most of the peripheral areas where limited aggression may threaten. There are many places in the world in which carriers, as mobile airbases in international waters, provide the only means of applying this precise airpower, and of doing it soon enough to keep the situation from getting out of control. The carrier force is a powerful instrument of national policy in a period of international tension, and a most effective stabilizer of cold war disturbances. Attack carriers are vital to the Navy's ability to control the seas, and hence to this Nation's ability to win a war of any kind—small, medium or large.

In summary: Over the long term, we must maintain an overall military force adequate to our security needs, and do it without wrecking our economy. The steadily increasing cost of weapons makes it mandatory that we make the most searching appraisal of what our military force should contain, to the end that it has enough of everything we do need, but not more than we need.

We must, of course, be ready to meet the ultimate threat—but not to the exclusion of being able to cope with lesser, more likely, threats. To this end all services must maintain a capability for limited wars, which although limited in area and in objectives, may not be small wars. Seapower—the ability to use the seas for our purposes and to prevent their use by the enemy—is vital to our security and an essential part of our overall military structure.

Wonders of the Universe: Safe Rocket for Young Scientists

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 15, 1959

Mr. FULTON. Mr. Speaker, we need to develop promptly safe rocket and space equipment for the young people who are so deeply interested in outer space and flight problems.

Likewise our U.S. agencies and scientists should cooperate with our amateur and home-kit experimenters for the protection and the development of the legitimate interest of these part time and zealous pioneers on the rapidly widening space front at home.

To call attention to this need, I enclose an article that I believe to be a start or pointer in this direction of safety and adequate participation by the amateurs of all ages in the wonderful and exciting new space age:

[From the Pittsburgh Post-Gazette, Feb. 2, 1959]

WONDERS OF THE UNIVERSE: SAFE ROCKET FOR YOUNG SCIENTISTS

(By Dr. I. M. Levitt)

Here's a tip for youngsters experimenting with homemade rockets.

In tinkering with explosive fuel mixtures you can avoid danger and also have an almost guaranteed successful series of flights by using a model rocket perfected by C. Harry Stine, a rocket expert who has spent most of his professional career at the White Sands Proving Grounds and with the Martin Co. in Denver.

To get first-hand experience with the Stine rocket, my son Peter and I spent an afternoon in a Philadelphia park launching the rocket many times to heights of hundreds of feet. Both of us had a wonderful time learning how well the rocket operates and planning further experiments.

OPERATES LIKE BIG BROTHER

The device is a small scale model of the Aerobee-Hi using a solid propellant of about a pound-second thrust. The model weighs but a few ounces but operates like its big brother on takeoff.

The thrust can carry it upward to 500 feet. Once it reaches this altitude the nose cone is blown off and out comes a thin plastic parachute carrying the outfit safely back to earth. Thus it can be used over and over again.

The rocket is completely safe. In talking to Stine at the annual meeting of the American Rocket Society in New York last November I learned there had been 10,000 models fired without a mishap.

An expert in full-scale rocketry, Stine developed the rocket knowing that countless youngsters in the United States, unable to get proper chemicals, were experimenting with dangerous materials—match heads, say. There has been a growing toll of injuries and even deaths from these experiments.

Stine's rockets give teenagers a motor unit with excellent thrust combined with the utmost in safety. But there is also another advantage.

The units can be combined to allow youngsters to learn at first hand the design requirements of multithrust rockets.

For instance, my son and I have designed a model of the Viking Rocket weighing con-

siderably more than the Aerobee-Hi model. We plan to cluster four of the rocket motors together to power the model. Special wiring will be required and here we face the same problem professional rocket makers are confronted with in clustering Jupiter motors to achieve a thrust of 1½ million pounds.

Once the tiny motors ignite perfectly, Peter and I will watch our miniature Viking zip upward to a yet undetermined altitude. Yet the rocket will not be lost, because of the parachute device in the nose cone.

TEACHES ABSORBING SCIENCE

Parents should be grateful to engineers like Harry Stine who invest time and capital to work out the details for safe rockets.

While this rocket is a toy, in practice it teaches the teenager many facets of this most absorbing science.

He can, for example, use telescopes to find the height of the rocket and in so doing improve his knowledge of arithmetic and trigonometry. If he is a ham radio operator he can design a small transmitter to telemeter information to the launching site. He can exercise his ingenuity in designing various rocket shapes.

These are just several of the bonuses accruing from the use of Stine's toy.

Interested parents should get in touch with Mr. Stine at 1165 South Cherokee Street, Denver 23, Colo.

Forty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. McDOWELL. Mr. Speaker, in commemoration of the 41st anniversary of the Lithuanian independence proclamation, I, under unanimous consent, insert in the CONGRESSIONAL RECORD my recent remarks to the Lithuanian American Council, Inc.

The coming 41st anniversary of the restoration of the independence of Lithuania on Monday, February 16, gives me this welcome opportunity to express my most sincere hopes for a renewal of that freedom that Lithuania experienced for the 22 years following 1918. Americans have not ceased to be horrified and angered by the Union of Soviet Socialist Republic's forcible termination of Lithuanian independence in 1940, and will never recognize that attempt to subjugate a people who have historically demonstrated their love of freedom and their ability to flourish under a free system.

Yet, I know that the Soviet Union's blatant violation of the Law of Nations has not accomplished its purpose, in spite of the annexation of Lithuanian territory, for the Lithuanian peoples have demonstrated that they will not be enslaved in spirit. Their determined search for the support of the Western democracies, their continued listening to the Voice of America, and the very existence of your organization prove that in Lithuania are peoples of courage, fortitude, and devotion to belief in the dignity of man and the inherent value of free institutions.

Although the people of Lithuania in their own country are forbidden to celebrate the anniversary of the restoration, I join my fellow Americans in remembrance of that day to wish for renewed Lithuanian freedom, to admire Lithuanian fortitude, and to praise the devoted work of the Lithuanian American Council, Inc.

Appreciation Dinner in Honor of Hon. William R. Williams, Former Member of House of Representatives

EXTENSION OF REMARKS
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I should like to include the text of an address given by me February 10, 1959, at Oneida, N.Y., on the occasion of an appreciation dinner in honor of the long and devoted public service of the Honorable William R. Williams, formerly a Representative of this esteemed body, sponsored by his friends and associates of Madison County, N.Y.:

One hundred and fifty years will have passed on February 12, 1959 since Abraham Lincoln was born in a log cabin of backwoods Kentucky. There was little at the time to suggest that the event was of any great significance, even in Hardin County where it happened. There wasn't one, excepting possibly the courageous, saintly mother, who dreamed that life had been breathed into a soul that, in the short span of 56 years, would experience the heartaches of poverty, abuse, and disappointment, and yet the glory of high responsibilities, inspired leadership and supreme martyrdom. Yes, no great American ever was ushered into this world with so little promise—yet the story of his life is really the story of our country—an expression of all that is basic and true in our way of life. It is fitting, therefore, that all America pause on this special anniversary to glimpse once again the nobility of the man and the eternal wisdom of his philosophy. While the noble Lincoln made richer the heritage of all Americans, to those of us who continue the Republican Party which he founded, he passed on a torch of dedicated leadership. It does us a great honor but imposes upon us a heavy responsibility. Our task would be performed, our obligation fully met if we were to apply to the problems of this day, the simple honesty, the tolerant understanding and quiet courage of our great founder. He dared to do what he believed to be right—sometimes he felt only God approved what he was doing, and in his darkest hours maybe he wasn't so sure he had that approval, but he held fast against all the forces which would divide and destroy our country. It would confer a great blessing upon us all if we could relive the struggle of his 56 years so that we might more fully understand his sense of values, so that we might more readily appreciate the dangers of which he warned and so that we might rededicate ourselves to the task which is ahead. The party of Lincoln can and must remain faithful to its trust, worthy of its founder.

There is a symbolic adherence to that trust in the life and service of the great Republican we especially honor tonight, our own Bill Williams. Approximately 75 years ago this rugged stalwart breathed first the invigorating air of Madison County. There was little in his early days to suggest the distinguished service which he was to render. He says he was so busy chasing Indians and panthers that he didn't have time for extensive schooling, but the truth is—Bill has attended school all his life—observing, thinking, and applying his commonsense to each situation as it arose. I'm reminded of what Robert Burns, the Scotch poet, so well said—"Give me a spark of nature's fire—it's all the learning I require." Surely Bill Williams had that spark which he kindled into a flame by hard work, rugged honesty and hearty friendliness. Speaking as I am to those who have followed his career, marked by over 25 years of public service as a State legislator, as sheriff and a Congressman, I need not remind you that he never lost an election, nor did he ever lose his head. Popularity and good fortune never gave him any false notions of grandeur—he remained jovial and approachable. He sensed that with added responsibilities came opportunities for greater service which he was proud and glad to render. Years of working for the people have brought countless friendships. During the past campaign, I had the privilege of seeing and hearing the expressions of those friendships. I will retain in my memory always that striding form, the friendly, lively countenance, the campaign hat which looked as though its wearer was going backward as he strode along the street, in and out of buildings, retracing campaign trails of former years, proud and happy that he was so enthusiastically remembered. I said then and I repeat it now—Bill Williams was reaping and enjoying the greatest reward of public service, the devoted appreciation of those whom you've tried to serve.

During the past few weeks I have been privileged to be with many of Bill's old friends in the Congress and, to a man, these former colleagues have spoken earnestly of his friendliness and dependability as he worked with them for sound Republican principles. He was a man of his word and applied common sense to the solution of many different problems. His unfailing good humor carried him through many a trying situation. It may interest you to hear the very words used by his colleague in describing their impressions of his character and services as set forth in letters I've just received.

(At this time communications from the Honorable CHARLES A. HALLECK, the Honorable HAROLD OSTERTAG, the Honorable JOHN TABER, the Honorable CHARLES HOEVEN, and the Honorable R. WALTER RIEHLMAN, were read and presented to Mr. Williams.)

There is still another chapter. When personal considerations dictated withdrawal from his Washington duties, all of us hoped he would remain an active force in our party and that he would continue his close associations on the local scene. The sad death of Oneida County's Republican chairman necessitated choice of a new leader and Bill became the unanimous choice for this very important job. With vigor and a sincere purpose he is on the way to new achievements.

So it is that Bill Williams has brought honor and distinction to his party. As Republicans and as Americans we are proud that the tradition of Lincoln has been so faithfully followed by him whom we honor. However, he would not want this event to be simply an occasion of praise. We will do him far greater honor if we accept his contribution as a strong and enduring link in the great chain of dedicated service which began with our great Lincoln and which we must continue so that this country may remain strong, united, and free.

Wabash River Flood

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. WAMPLER. Mr. Speaker, I have just returned from my home in the Sixth District of Indiana, Terre Haute, where I surveyed the tragic amount of sheer waste and devastation caused by the rampaging floodwaters of the Wabash River.

The need for remedial flood-control construction in this area, Mr. Speaker, is desperately urgent. The annual human, agricultural, and property damage resulting from Wabash River floodings is incredible.

In the small town of Clinton, Ind., with a population slightly in excess of 5,000, where I witnessed that city's heroic flood-control efforts, the Wabash was being fought with 8,000 sandbags purchased by the local citizenry for 14 cents apiece. Those sandbags were not purchased this year, Mr. Speaker; they were bought several years ago, during a previous flood, and when the danger was past were emptied and stored so that they could be used again, when the Wabash River would inevitably threaten the area's people and their homes.

West Terre Haute has been flooded out 3 years running. Flood crestings are so frequent and so severe that Terre Haute no longer records flood levels at the 14-foot mark; the 20-foot level is now the only recorded level.

These few further word pictures, Mr. Speaker, can but only begin to describe the extent of the flood's devastation or to dramatize the urgent need for flood control planning and construction along the Wabash River. In Terre Haute, 80,000 sandbags have been used in an attempt to control the floodwaters, and the people of Terre Haute are still filling and using sandbags. In Attica, Ind., some 20 homes have been submerged. State Road 41, which is a national highway, is being swept by a 20-foot current. People in Williamsport, Ind., who travel but a mile and a half to 2 miles to work in Attica, are now being transported by helicopter, and should they be forced to drive, they would have to travel approximately 45 miles. People returning home from their working day find themselves looking for a place to sleep. The farmers of the area are currently uninterested in the question of price supports; they are more interested in looking for a piece of land to farm.

A copy of a telegram to the President, which I received this morning, I think graphically portrays the plight of the people along the Wabash. From Cara-Jean Baldwin, chairman, Parke County, Ind., chapter, and director of the Wabash Valley Association, the wire reads:

THE PRESIDENT OF THE UNITED STATES,
The White House, Washington, D.C.:

We are experiencing the third flood in this territory in 5 weeks. After devastating damage of 1957 and 1958, our farmers cannot endure or gamble on planting 1959 crops without some assurance conditions will be corrected as soon as possible. All of this tragedy could have been averted with proper flood control in Wabash Valley. Implementation of funds for approved Mississinewa, Salomonie, and Huntington flood-control reservoirs with funds to expedite surveys and reports on Sugar Creek, Wildcat Creek, and Big Pine Creek would cost taxpayers millions less than flood damage costs year after year.

Mr. Speaker, I hope the Members of the House will fully appreciate the seriousness of the damaging flood conditions in the Wabash River area, and will lend their support to the efforts which I, and I feel sure, the other Members of the Indiana delegation, intend to make toward securing the appropriations necessary to start and hopefully complete flood-control construction along the Wabash River.

The Revere Journal—On Its 78th Birthday

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 3, 1959

Mr. LANE. Mr. Speaker, freedom of speech would mean little without freedom of the press. Even today, newspapers are the best medium for gathering factual reports about people and events; communicating this information to thousands of people; and pointing up important issues of the day with clear and concise editorials. The more we learn about censorship in other countries, the more we appreciate our independent and responsible press.

Outstanding among the hometown weeklies that have survived the competition and have prospered because of a loyal and appreciative reader following, is the Revere Journal, of Revere, Mass. It is a distinguished member of the American Press Half-Century Club.

In recognition of this sturdy weekly, I ask unanimous consent to insert in the RECORD the Journal's editorial of February 5, 1959, entitled "78 Years Old Today":

SEVENTY-EIGHT YEARS OLD TODAY

The Revere Journal is 78 years old today. For more than three-quarters of a century, since February 5, 1881, this newspaper has served the residents and the community by presenting all the local news of interest, as well as offering advertising space to those with something to sell the public. And it has been proved through the years that both of these functions were of equal importance, for one could not exist without the other and still have the newspaper remain free and not subsidized by the Government or other interests.

The Revere Journal is proud of the part it has played in the growth of the city. It is proud of its effort to record current events, not only to enlighten the public at that moment but for history. And it is with a sense of accomplishment that the publisher and his staff can thumb through the back issues and trace the growth of this community from a section of another city to its present independent status as a city today. And there is evidence of the Revere Journal's growth as it adjusted to meet the demands of the growing community.

But the pages of the present and of history are not closed. There is no doubt that Revere still has many unused potentials, more than most cities and towns in the area. It is expected that these potentials, coupled with the enterprise of the residents, will boost Revere still further both in size and prosperity. And the Revere Journal, on its 78th birthday, stands ready to do all it can to continue this progress by constantly examining its role in the community and making every effort to render the best possible service to both its readers and its advertisers.

Tribute to the Late Major General William J. Donovan

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DADDARIO. Mr. Speaker, last Wednesday, a great American, a dedicated citizen-soldier who had served his country well, was laid to rest with his comrades in arms at Arlington National Cemetery. I served under Maj. Gen. William J. Donovan during World War II, and I have the highest regard for what he accomplished for his country both in private and in public life.

He well deserved the tribute paid to him by so many hundreds of his friends at his last rites. He can go to his final reward well pleased with the accomplishment of a life's work.

Under leave to extend my remarks, I insert in the RECORD a tribute paid by another soldier who served under General Donovan, Maj. Max Corvo, now editor of the Middletown Bulletin in my State:

Few in their lifetime are given the opportunity to serve their country in the manner that William J. Donovan served this Nation in a lifespan that inspired two generations and carved out a solid niche in the history of America.

Born in humble circumstances he worked his way through school and eventually earned a reputation as an outstanding lawyer; thrown into the maelstrom of battle during World War I he led the Fighting 69th to immortal glory and won for himself this Nation's three highest decorations for valor; called by five Presidents of this Nation to serve in various important capacities, he acquitted himself with distinction in each one of the tasks that he undertook; called by President Roosevelt at the inception of World War II to martial this Nation's intelligence forces he won fame as the head of the Office of Strategic Services, a huge collection of devil-may-care officers and men dedicated to advancing the cause of the Nation; appointed U.S. Ambassador to Thailand by President Eisenhower at a time when the Nation was being enfeebled by internal and external Communist pressures, he paved the way for the return of southeast Asia into the orbit of freedom.

This was William J. Donovan. A man born in humble circumstances who had achieved the pinnacle of success but who

had learned to walk with humility in his daily contacts with the world.

Always in the forefront when danger was ever present he asked of none that which he himself was not willing to do.

His passing from the mortal scene leaves a great void in a never-ending circle of friends but indelibly inscribed a page in the history of individual achievement and service dedicated to an enduring cause—the cause of freedom.

Lincoln Alone Saw Our Struggle as World's

EXTENSION OF REMARKS
OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. BOLAND. Mr. Speaker, much has been written on the occasion of the 150th anniversary of the birth of the great American President, Abraham Lincoln. One of the most interesting articles that I have read was written expressly for the Associated Press by the noted American historian and Pulitzer Prize winner, Allan Nevins. He quotes an Emancipation Proclamation editorial from one of the most eminent and well respected newspapers of that era, the Springfield (Mass.) Republican, which is still published as a Sunday newspaper in my home city.

Under leave to extend my remarks, I would like to have Professor Nevins' article, taken from the Springfield Union, printed with my remarks:

LINCOLN ALONE SAW OUR STRUGGLE AS WORLD'S—HISTORIAN NEVINS PAYS TRIBUTE TO HIS GREATEST QUALITIES: SAGACITY, MAGNANIMITY, UNERRING FAITH, AND VISION

(By Allan Nevins)

It is 150 years since Abraham Lincoln opened his eyes in a one-windowed, dirt-floored cabin near Hodgeville, Ky.; it is almost 94 years since Stanton broke the hush at his deathbed with words, "Now he belongs to the ages."

No statesman ever grew more sturdily than Lincoln grew between 1854 and 1865: grew from a prairie politician to be the beneficent dictator of a great Nation in its most terrible crisis.

No leader of modern times has grown more steadily in fame and worldwide influence since his death.

He is like the mountain peak that at near view seemed little more than equal with its fellows, but that as we recede and gain perspective rises higher and higher above their level.

The romance of his life furnishes part of his appeal. "This man," wrote his Springfield law partner Herndon, "this long, bony, wiry, sad man, floated into our country in 1831 in a frail canoe, down the north fork of the Sangamon River, friendless, penniless, powerless, and alone—ragged, struggling for the common necessities of life. This man, this peculiar man, left us in 1861, the President of the United States, backed by friends, power, fame, and all human force."

The self-taught railsplitter reached Washington relatively unknown and untested. He died so trusted that the once-skeptical New York diarist, G. T. Strong wrote: "No prince, no leader of a people, was ever so lamented * * * his name is faithful and true. He will stand in history beside Washington, perhaps higher."

What is the deeper secret of the hold this son of the prairies had taken on the imagination of the world? More books, foreign and domestic, are written on him than on any other civil ruler of the past.

His statue stands in many cities; his writings are in all collections of the classics of the English tongue; his sayings are alike the treasure of the humbler and the inspiration of the great.

The Hindu student, the South African Negro, the British statesman, the Latin American publicist, find his name what Lord Charnwood called it, "the greatest among those associated with the cause of popular government." He belongs equally to the masters of statecraft and to plain men and women. Just why is this so?

HE ACTUALLY OPPOSED ABRUPT EMANCIPATION

We would look in vain for the explanation merely in his principal public acts.

He was the great emancipator, but he was a reluctant emancipator, who for all his intense desire to free the slaves would have preferred gradual compensated emancipation to an abrupt liberation.

He was an unmatched war leader, but never a highly efficient administrator; two other wartime Presidents, Wilson and Franklin D. Roosevelt, showed more skill in organizing the energies of the Nation.

He was a farsighted national chieftain, but never an astute planner with the many-sided talents of a Theodore Roosevelt.

We reach a partial understanding of his grip on succeeding generations when we turn from his acts to examine two underlying traits, his sagacity and his magnanimity.

The sagacity with which he was always correctly credited did not lie in a simple grasp of what was expedient. It lay in his ability to pierce to the heart of a complex problem, where right and wrong seem inextricably mingled, with unerring logic.

The supreme illustration of this wisdom is offered by his proposal for meeting the terrible national disease of slavery and sectional friction.

From 1854 onward he preached that the Nation could not endure half slave and half free; that a crisis must be reached and passed before it could be safe.

He was our first statesman to define that crisis without evasion.

What did passing the crisis mean? Not a decision to abolish slavery immediately. No, simply a decision to put bounds around slavery, to contain it, accepting the principle that within a reasonable time it must be gradually erased; and meanwhile to sit down and calmly consider ways and reasons for erasing it.

This was the one courageous, morally sound, and practical remedy ever proposed for the difficulties of racial readjustment, economic revolution, and regional strife bound up in slavery.

Its sagacity, had Americans adopted it, would have saved the country a million lives, a mountain of treasure, and a grievous retardation of growth.

His magnanimity, innate and unfailing, matched his sagacity.

In the course of a long, bitter war he never once uttered an abusive word about the southern people.

Throughout that war he maintained his hope that it should end in no mere political reunion, but a reunion of hearts and purposes.

A young Frenchman, the Marquis de Chambrun, who was sometimes at the White House in 1865, tells us that whenever Lincoln heard men talk about putting the conquered South under iron controls, he exhibited an unconcealable "fatigue and weariness."

In the last weeks of the war, when the foe was plainly vanquished, he proposed to his Cabinet a plan for giving the South, if it stopped fighting at once, a general amnesty, a release of all confiscated property, and a grant of $400 million toward regaining its feet.

When he heard from Grant at the time of Lee's surrender that Union troops might capture Jefferson Davis, a radical northerner exclaimed, "He must be hanged." But Lincoln replied with a free quotation from the Bible: "Judge not, that we be not judged."

HE KNEW STRENGTH OF THE PLAIN PEOPLE

Lincoln's greatest qualities, however, lap deeper than sagacity and magnanimity. One was his passionate faith in the virtue and strength of the plain people.

God must have loved them, he said, or He would never have made so many of them; you could never fool all of the people all of the time; government of, by, and for the people was not only the best government, but the hope of the world.

As an expounder of democracy he had the same fervent faith as a poet he loved, Robert Burns.

Out of his passionate regard for common folk came his unerring instinct for popular sentiment; he knew just how far and fast he could go in leading the country without losing touch with the majority. Out of it came his consistent refusal to talk down to the people or appeal to their passions. As Lowell said, he never played the cleon, the demagoge.

Instead, he presented the people with careful arguments, addressed to their reason and their best sentiments. "I beg of you a calm and enlarged considertaion of them," he said of one set of reasons.

This instinct for the popular heart made his most memorable public act, the Emancipation Proclamation, seem to good judges just right. The Springfield Republican said: "The President's action is timely—neither too soon nor too late. It is thorough—neither defeating itself by halfway measures nor by passionate excess. It is just and magnanimous, doing no wrong to any loyal man, and offering no exasperation to the disloyal. It will be sustained by the great mass of the loyal people, North and South; and thus, by the courage and prudence of the President, the greatest social and political revolution of the age will be triumphantly carried through in the midst of a civil war."

SAW IT AS STRUGGLE FOR DEMOCRACY

And out of his deep feeling for popular government was born Lincoln's crowning quality: his vision of the larger meaning of the grim struggle he had to conduct. It mine whether the Union should survive or perish.

It was an ordeal to determine whether democracy had sufficient strength to survive, whether America would repay the devotion of the hosts who died for it by seeking a new birth of freedom, and whether the Republic would serve the future of mankind.

From the Bible, from Shakespeare, from long reflection, Lincoln had gained an understanding of the meaning of history.

He knew that whatever is done in one part of the globe affects the lot of peoples in other parts.

He knew that the adventure of mankind has but begun, and that the course chosen by a continental power like the United States must have its influence on the long ages to come.

This conviction, expressed with his memorable eloquence, gave the struggle a spiritual significance, and made victory for union and freedom seem the opening of gates on a better world.

Five years after the Gettysburg Address, the British Parliament passed its new reform bill, partly because American democracy had vindicated itself.

Seven years after the address, France erected the Third Republic, partly because the

American Republic had survived its ordeal.

These facts gave new significance to the letter to J. C. Conkling in which Lincoln had expressed the Nation's gratitude to the men who died for their ideals on all the fields—Shiloh, Antietam, Chancellorsville, Vicksburg.

"Thanks to all," he had written, "for the great Republic—for the principle it lives by and keeps alive—for man's vast future—thanks to all."

The truest tribute the American people can pay Lincoln on every celebration of his birthday is to try to share his earnest conviction that the Republic has a great world destiny; that in every crisis men must do their duty not for the country alone but for all countries, and not for the hour only, but for the long generations ahead.

The 41st Anniversary of Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. DONOHUE. Mr. Speaker, it was my honor and privilege, yesterday, to participate in exercises, commemorating the 41st anniversary of Lithuanian Independence Day, which were held in Our Lady of Vilna Church Hall, Worcester, Mass.

The meeting and ceremonies were sponsored by the Committee for Commemoration of Lithuania's Independence, Joseph W. Glavickas, president; Olga A. Kersis, secretary. The assemblage, which overran the capacity of the hall, consisted of the members of the two great local Lithuanian parishes of St. Casimir's, and Our Lady of Vilna, together with representatives from 55 other Lithuanian groups within our community.

In connection with this eventful occasion I have been requested to include in the RECORD resolutions unanimously adopted by the assembly, and speeches delivered by myself and Anthony J. Miller, a prominent Worcester attorney of Lithuanian descent; the resolutions and speeches follow:

THE 41ST ANNIVERSARY OF LITHUANIAN INDEPENDENCE DAY, WORCESTER, MASS.

(Speech Delivered by the Honorable HAROLD D. DONOHUE, of Massachusetts)

I am, very glad, as your Representative in the Federal Congress, to again take part in these ceremonies commemorating another anniversary of the Declaration of Lithuanian Independence.

While this occasion necessarily and sorrowfully reminds us that Lithuania is still suffering under the cruel heel of Russian Communist imperialism, we are not gathered here in any atmosphere of casual surrender or regretful abandonment of the hope that Lithuania and her good people will eventually be freed.

We are, rather, assembled to voice our righteous protest of outrageous Communist conduct, and exert our best efforts to give heart to the courageous and long-suffering Lithuanian people for the continuation of their struggle against enslavement. Our confidence for the future of Lithuania is based in great part upon our knowledge of her past history.

You know, and I know, that at one time, and for a number of centuries, the Lithuanian kingdom was a powerful force for good in the whole of eastern Europe. The Lithuanians not only had succeeded in repelling the barbarian invaders from the East, but they were also the gallant champions, and formed the advance guard of Christianity in that part of Europe. A high place of respect and admiration for Lithuania among the nations of the world seemed to be assured.

The Lithuanian state came into being as an independent unit in the year 1253, more than 700 years ago. I do not have to recount to you her glorious history through the following centures up to the tragic time, late in the 18th century, when she was ruthlessly absorbed into the old Russian Empire.

However, when World War I ended, Lithuania regained her independence and succeeded in reestablishing an individual national state, and proclaimed themselves as such on February 16, 1918, after 123 years of Russian domination.

During the long period of subjugation, the devout and dedicated people of Lithuania had persevered in their resistance to tyranny and faithfully preserved the heritage of faith and freedom.

It does not surprise us then that modern history shows that following that fateful February day in 1918 there was an immediate resurgence of national culture and a prompt expansion of her free institutions.

The Lithuanian people established a democratic form of government. Under it they prospered, economically, socially, and religiously.

Suddenly, on June 15, 1940, the Soviet Union violated all of its treaty commitments with Lithuania, and the Red army moved in. Without provocation or justification, and in utter contempt of international law and morality, the Communist Kremlin overran Lithuania, and the other independent Baltic countries, and installed regimes deliberately designed to destroy the newborn freedoms of all the peoples within those brave states.

Since that time, Soviet Russia has purposely used the whole force of its overpowering totalitarian might to exterminate the Lithuanian sense of nationhood. The Soviet system has been imposed and Lithuania has actually been incorporated in the Union of Soviet Socialist Republics.

Thousands of Lithuanians have been executed and hundreds of thousands have been shipped to slavery in Siberia.

Every conceivable barbarian effort has been made to suffocate the patriotic independent sentiment of the Lithuanian people.

Today our hearts and our minds are moved with compassion by the suffering and the persecution we know the good people of Lithuania are undergoing this very hour. At the same time, our minds and our hearts are inspired by them and for them because we also know they have bravely and gloriously survived and conquered other and earlier periods of cruel foreign tyranny.

The people of Lithuania are neither broken nor discouraged by the stark and terrible realities of oppression under which they now, unfortunately, live. The burning fever of basic liberty and freedom is heightened within them, not diminished, by their current adversity.

We know that their courage and their indomitable will to resist subjugation grows stronger with every outrage committed against them by those who seek to become the atheistic masters of their spirits as well as their bodies.

We in America take courage from the valor of the Lithuanian people. They are sustaining us by their example of devotion to our common cause.

They inspire us here, and her countless friends throughout the still free world, to remain true in our struggle to relieve Lithuania, and the other oppressed nations, from the Communist yoke.

We will continue the struggle with every resource at our command to overcome the godless scourge which is trying to enslave the whole world and which presently has unfortunate and gallant Lithuania within its horrible grasp.

Today we specially remind ourselves that no people anywhere have been more heroic nor fought more bravely against countless odds for liberty and freedom than the Lithuanian people. We are reminded that the destiny of Lithuania and her freedom-loving neighbors is linked with the future of America. We cannot ourselves expect to remain free if we do not exert every possible effort to promote the freedom of Lithuania.

Let us then here pledge ourselves to work unceasingly for the liberation of Lithuania and the other captive nations, and may divine providence grant that that glorious and Christian objective be accomplished in the near future.

FORTY-FIRST ANNIVERSARY OF LITHUANIAN INDEPENDENCE DAY, WORCESTER, MASS.

(Speech delivered by Attorney Anthony J. Miller)

As an American of Lithuanian descent, it is an honor for me to join with Congressman DONOHUE in this program commemorating the 41st anniversary of the Declaration of Lithuanian Independence.

I want to emphasize the word "independence" because, to my mind, and I am sure to yours, independence is not a matter to be dwelt upon or spoken about on only 1 day a year.

The history and tradition of Lithuanian independence is a living thing and a blessed thing within us and among us, except when we give sorrowful thought to our Lithuanian homeland and her unfortunate people.

On this occasion, we are reminded that the Russian Communists cannot stop or forbid this program, or any other similar exercises that are being held throughout the United States and in other free countries in honor and in respect to Lithuania.

Appreciating our own blessings as citizens of the United States, we should, therefore, not permit a day to pass without thinking and planning and praying for the time when our native land will be liberated from Communist tyranny.

As Americans, we know that the generous heart of this country has always welcomed and assisted exiles and refugees.

Because this Nation fought for its own independence, it encourages independence for others.

Because we, as Lithuanian descendants, have advanced in the United States, and because we have a part in the development of this country, we are thereby helping to sustain the strength of the Lithuanian homeland. I think that is a substantial hope and comfort to our friends and relatives there. They know that we have a voice, as good Americans, in the formation of American foreign policy so that it will never be permitted, by any possible subversives, to forget its moral obligation to work for the freedom of Lithuania and the other suppressed nations.

Some of our people appear to be worried about the development of American foreign policy. They feel that we may gradually forget Lithuania and the other Baltic victims of Red Russian conquests. They fear that we may be tempted to make a settlement with the Communists and that we may be fooled by an invitation to peacefully coexist.

Let me clearly state to you my opinion that so long as we have representatives like

Mr. Donohue, and other fine Americans in our Government, neither the Congress nor the executive department will ever be fooled into such a betrayal. No diplomatic arrangement, no matter how convenient for the moment, would be tolerated by the American people whose traditional rule of life and conduct is fair play.

If we, ourselves, ever entertained such a thought, we then would be betraying the traditions that have inspired every generation of Americans and we would be faithless to the historic devotion to freedom that has made America what it is today.

We, and all our fellow Americans, realize we have had sufficient experience with Communist promises, pledges, and treaties, to know that we can trust them only at our own peril.

We remember very well the peace treaty that was signed by Lithuania and Russia at Moscow on July 12, 1920. By this treaty, the Soviet Government recognized, and I quote, "the sovereignty and independence of the State of Lithuania with all juridical consequences resulting from such recognition and voluntarily and forever renounces all sovereign rights possessed by Russia over the Lithuanian people and territory," end of quote. On September 22, 1921, Lithuania was admitted into the League of Nations, becoming a full, free, and equal member of the international community. These are historical facts which the Russian Communists cannot change because they cannot burn or distort all of the history books in existence. Although they have since unjustly seized Lithuania and have done everything within their cruel power to communize it, they cannot justify their action in front of the conscience of the world.

Every other still free nation, including our own, knows that we will suffer the same tragic fate of Lithuania if we allow ourselves to be compromised or become so foolish as to place any reliance upon mere Soviet promises. We, as good Americans, also know that if we do not stand up and testify for our friends, we may some day find ourselves alone and without friends.

That is why all our fellow Americans join with us in working for the liberation of Lithuania and all of the other unfortunate nations that have come under Communist Russian subjugation.

That is why we must unceasingly strive with our own united words and actions, and commemorations of this kind, to keep the historic spirit of liberty and freedom burning high within the minds and hearts of the people of our Lithuania homeland.

That is why we can hope, even on this sorrowful occasion, that with our help, the help of our fellow Americans, and with God's help, to live to see the bright day when the persecuted people of Lithuania, and the other suffering nations, will again be free and independent in a peaceful world.

Having assembled at Our Lady of Vilna Parish Hall, Worcester, Mass., on February 15, 1959, to commemorate the 41st anniversary of Lithuanian Independence Day (February 16, 1918), the members of the committee, as well as the members of the two Lithuanian parishes in Worcester, St. Casimir's and Our Lady of Vilna, and of the Lithuanian-American community of Worcester, comprising in all 55 Lithuanian groups, unanimously adopted and passed the following resolutions:

"Whereas the Government of the United States has ever been a stanch defender of the inalienable right that all nations, both large and small, have to enjoy freedom and to determine for themselves the form of government under which they wish to live; and

"Whereas Soviet Russia has denied this right to Lithuania and, in violation of the treaties of peace and nonaggression, with Lithuania in particular, and of various international agreements in general, has unjustly seized the territory of Lithuania and has subjected her people to the horrors of oppression, terrorization, dispossession, persecution, mass deportations and mass annihilations which, according to international law, constitutes the heinous crime of genocide; and

"Whereas the Republic of Lithuania, a small freedom-loving nation, ardently desires to exercise her solemn right of self-government and has proven that she is capable of self-rule by a remarkable progress made in all fields of endeavor during the years in which she enjoyed independence (1253–1795 and particularly 1918–39); and

"Whereas, the Government of the United States since 1940 has steadfastly refused to recognize de jure the unjust absorption of Lithuania within the Soviet orbit: Now, therefore, be it

"*Resolved*, That the Government of the United States continue to maintain and adhere to its present policy of recognizing the de jure independence of Lithuania despite her present unlawful and unprincipled occupation by Soviet Russia; be it further

"*Resolved*, That Soviet Russia, having no sovereign rights over Lithuania or her territory, be forced to leave Lithuania immediately, thus restoring freedom to the nation, and to return at once to Lithuania all Lithuanian nationals, now exiled in Siberia and other foreign lands; be it further

"*Resolved*, That the Republic of Lithuania be duly admitted and fully approved as a full-fledged member of the United Nations and that her appointed representatives be allowed to maintain with full privileges the status of duly-elected delegates of that Organization; be it further

"*Resolved*, That copies of these resolutions be forwarded to the President of the United States, His Excellency the Honorable Dwight D. Eisenhower; to the Secretary of State, the Honorable John Foster Fulles, Jr.; to the U.S. Representative to the United Nations, Ambassador Henry Cabot Lodge, Jr.; to the Senators of Massachusetts, the Honorable John F. Kennedy and the Honorable Leverett Saltonstall; to the Representative of the Fourth Congressional District of Massachusetts, the Honorable Harold D. Donohue, and to the press."

Mr. JOSEPH W. GLAVICKAS,
Chairman.

WORCESTER, MASS.

MISS OLGA O. KERSIS,
Secretary.

WORCESTER, MASS.

Gordon E. Dunn of the Miami Hurricane Forecast Center—Citation

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. FASCELL. Mr. Speaker, it is always pleasant to note recognition given to an outstanding public servant. Mr. Gordon E. Dunn, Weather Bureau meteorologist in charge of the Miami Hurricane Forecast Center, today received a Department of Commerce Gold Medal Citation for his outstanding contributions to the public service in the field of hurricane warnings.

We in the community have for some time considered his ability and experience in this field of great value to the areas served by the Miami center and are particularly pleased to see that the agency of which he is a part has presented to him this award.

The Germination of Religious Acknowledgments in Political Documents

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. AVERY. Mr. Speaker, under leave to extend my remarks, and in connection with the introduction of a resolution proposing a Christian amendment to the United States Constitution, I hereby insert the fourth in a series of 13 radio programs delivered by Dr. R. J. G. McKnight delivered on the Christian Amendment Hour, entitled "The Termination of Religious Acknowledgments in Political Documents." Dr. McKnight, Pittsburgh, Pa., is a great student of history, philosophy and the Bible. A complete set of the 13 radio addresses can be secured by writing to the Christian Amendment Movement, Box 92, Pittsburgh, Pa. The address follows:

At the close of our last broadcast we quoted a statement made by Justice Story in his "Commentaries on the Constitution of the United States." This is the quotation: "Every American colony, from its foundation down to the Revolution, did openly, by the whole course of its institutions, support and sustain, in some form, the Christian religion."

The evidence for this statement is abundant and available. It abounds in all the charters granted by kings of England from James I to George II. In every one of these charters: the charter of Virginia (April 10, 1606) granted by James I; the charters of Pennsylvania, Massachusetts Bay, Maryland, Connecticut, Carolina, Rhode Island, Georgia, and the colonial compacts of government.

The sentiment of all these charters may be summarized and exhibited in the oath taken by John Haynes who was elected Governor of Connecticut in 1639. This is the oath taken by Governor Haynes: "I, John Haynes, being now chosen to be Governor within this jurisdiction * * * do swear by the great and dreadful name of the everliving God, to promote the public good and peace of the same according to the best of my skill * * * and will further the execution of justice according to the rule of God's word. So help me God, in the name of the Lord Jesus Christ."

Compare this oath, framed in the days of the colonies, with the feeble constitutional oath: "I do solemnly swear—solemnly (not in a religious sense)—that I will faithfully execute the office of the President of the United States," etc. No recognition of God by Whom men are commanded to swear; not even, "So help me God."

This oath of John Haynes has been quoted to show that the dominant sentiment of all the charters, colonial compacts, and civil documents of the pre-Revolution days was Christian—that in all of them God, Christ, and the Bible were recognized.

All of this continued "from the foundation of every colony down to the Revolution," as Justice Story says ("Down to the Revolution"). Justice Story's keen legal mind, in writing of the history of our Constitution, discerned the turning point.

Times passes on, May 17, 1776, was kept as "a day of humiliation, fasting and prayer, by appointment of the Continental Congress, that they, with the colonies, might confess and bewail sin, and by a sincere repentance and amendment of life, appease God's righteous displeasure, and through the merits and mediation of Jesus Christ, obtain His pardon and forgiveness."

On July 2, 1776, a resolution was passed dissolving all political connections with Great Britain. Then on July 4, 1776, was adopted that immortal instrument, in which, while asserting the Nation's independence of oppressive human authority, the Continental Congress acknowledged their own and the Nation's dependence on God, closing with these words: "And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

On October 31, 1777, a committee was appointed by Congress to prepare a recommendation to the States to set apart a Day of Thanksgiving for their signal success. On December 18, 1777, the Thanksgiving Day was observed. The closing words of that Thanksgiving Proclamation are as follows: "That the people may join in the penitent confession of their manifold sins, whereby they had forfeited every favor, and their humble and earnest supplication that it may please God, through the merits of Jesus Christ, mercifully to forgive and blot them out of remembrance * * * that it may please God to take schools and seminaries of education * * * under His nurturing hand and to prosper the means of religion for the promotion and enlargement of that Kingdom which consisteth in righteousness, peace and joy in the Holy Ghost."

Time passes on. In September, 1783, the Definitive Treaty of Peace between Great Britain and the United States was drawn up and signed by representatives of both nations in Paris on September 3, 1783.

The Revolutionary War, with all its horhors and bloodshed was over. The United States of America was recognized by Great Britain as a free and independent sovereign nation. By December 1783, the British troops evacuated New York City, the Continental Army was dissolved, George Washington gave a farewell message, and there was peace.

You will remember that Justice Story said: " 'Down to the Revolution' every American Colony did openly, by the whole course of its institutions, support and sustain the Christian religion." The 6 years that followed were years of confusion and chaos in Government.

J. Fiske says in his book "Critical Period of American History" (p. 55): "It is not too much to say that the period of 5 years following the peace of 1783 was the most critical in all the history of the American people." Trade and industry declined to the lowest point. As we read the history of these 5 years, there were arguments, debates on matters concerning human rights, lines of territory, taxes, and a thousand other material problems. But in all this history you find no single line acknowledging the need for dependence upon Almighty God, no prayer for divine guidance.

The religious fervor of the early Colonists had evaporated. The confessed need, expressed in the Colonial Compacts, for pardon of sins and for reconciliation with God, through the merits of Jesus Christ, was entirely absent.

As H. C. Lodge says "Life and Letters of George Cabot": "Thomas Jefferson, arrived in New York from France, filled with the wild democratic theories which his susceptible nature had readily imbibed in France (and) soon infused them into the minds of most of his followers."

It was at this point in history that "We the people" assumed the task of writing the Constitution of the United States. It was at this point that we the people of the United States undertook the colossal task of writing the Constitution of the United States which was to govern our people for generations to come without any recognition of the sovereign God who created all nations.

Murray-Metcalf Bill Strengthens Local and State Control Over Education

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. METCALF. Mr. Speaker, on Wednesday, February 4, 1959, the gentleman from Washington [Mr. PELLY] introduced into the House of Representatives a bill to provide money for educational purposes termed free from any Federal controls. The gentleman from Washington stated:

> Therefore, I am introducing a no-strings-attached alternative bill to pay back some of their own money to the respective States and Hawaii for educational purposes free from any Federal controls. My bill would authorize an appropriation equal to 2 percent of all Federal income taxes collected in each State and Hawaii for education in the common or public schools. That is all. No standards or specifications of any sort are stipulated.

In introducing his bill, the gentleman from Washington [Mr. PELLY] clearly recognizes that there is need for the Federal Government to take action in assisting local and State authorities in the financial support of schools. He said:

> If some of our local school districts' financial affairs are critical, and I am convinced such is the case, let us give the local and State authorities help but refrain from dictating how they must solve their problems.

By some twist of the imagination the gentleman from Washington [Mr. PELLY] asserted in his speech that the Murray-Metcalf bill—H.R. 22—sets forth limitations and definitions of the State educational program that would make it unnecessary for State and local education agencies "to abdicate jurisdiction over educational process." Such a contention is incorrect. There is nothing in the Murray-Metcalf bill that would require even in the slightest any abdication of State and local jurisdiction over the educational process. On the contrary, the Murray-Metcalf bill was drawn up in such a way as to specifically strengthen the local and State control over education in this Nation.

In an attempt to document his contention that the Murray-Metcalf bill sets forth limitations on the States' education programs, the gentleman from Washington [Mr. PELLY] cited section 4, subsection (b), of the bill, which he says "spells out specifically that this money shall be used for school construction and teachers' salaries." It is impossible to see how anyone could consider that the Congress, through providing money to the States to be used for either school construction or teachers' salaries, could be accused of setting forth limitations on the States' education programs. Such a contention is somewhat analogous to the story of the father of a 12-year-old newspaper boy who was earning some of his own spending money. The father gave the boy $20 to buy shoes and clothing that the boy needed badly. It would be absurd to argue that in giving the boy money to be used for these two purposes, the father was limiting his son's discretion over how he would spend his earnings from his paper route.

The gentleman from Washington [Mr. PELLY] stated that section 5 of the Murray-Metcalf bill, "by inference sets forth priorities for school buildings, removing from the State the latitude of determining its own needs." Actually, all section 5 of the bill does is say that the State education agency shall certify that the portion of its Murray-Metcalf funds that are allocated within the State for school construction shall be so distributed that "priority is given to school districts which have the greatest additional need for school facilities and which, in terms of the economic resources available to them are least able to finance the cost of need school facilities." This provision of the bill leaves the priorities that are to be developed wholly up to the State. The U.S. Commissioner of Education does not have the authority to say whether or not the priorities that the States set up are adequate or inadequate; he has neither the power to approve or to disapprove the States' priority methods. Hence, the gentleman's contention that these priorities would remove from the States the latitude of determining their own needs is completely false. Again, this is somewhat analgous to the case of the father of the 12-year-old newspaper boy giving his son the $20 bill with which to buy needed clothing and saying:

> Son, first sit down and draw up a list of the clothes you need and with this money buy the items you need most.

Such a specification by the father certainly could not be considered as removing from the son the latitude of determining his own clothing needs.

All the Murray-Metcalf bill does in section 5 is to say to the States that if they use for school construction some of the money provided under this bill, they must agree to send the money to those school districts that need it the most. Certainly such a specification could not be considered as causing the States "to abdicate local and State jurisdiction over educational process."

In his speech, the gentleman from Washington [Mr. PELLY] stated:

> If some of our local school districts' financial affairs are critical, and I am convinced such is the case, let us give the local and State authorities help.

Let us look for a moment at the type of help that the gentleman would give State and local school districts under his

proposed return of 2 percent of all the Federal income taxes collected in each State to be used for "education in the common or public schools." The Pelly bill introduced would provide $71 per child of school age in New York but in his own State of Washington it would provide only $25 per child of school age, while in the State of Mississippi it would provide only $4. These figures are obtained by dividing the States' 2 percent of 1957 Federal income tax payments, given by the gentleman from Washington [Mr. PELLY] in his speech, by the estimated school age population, 5–17 years, for 1957. It is most difficult to see how the Pelly bill would provide help to those school districts that have the most critical need for such support from the Federal Government. Actually, the gentleman's proposal would provide for equalization in reverse, for it would give proportionately the greatest amount of money to the States that had proportionately the least number of school age children. On the other hand, the Murray-Metcalf bill would collect the money from the States in which the wealth is located and distribute it to the States in which the children actually reside and are to be educated. Hence, there is a substantial equalizing effect in the collection and distribution of funds under the Murray-Metcalf bill.

Moreover, there would be hardly any more administrative costs involved in the Murray-Metcalf bill than there would be in Mr. PELLY's proposal. After all, it is the same revenue agency that would be collecting the taxes and the same Treasury Department that would be sending a check to each State. The only additional cost involved in the Murray-Metcalf bill would be a fraction of one person's time needed to determine the amount to be paid to each State under the formula provided in the bill and to receive reports from the States. These administrative costs should amount to not over $10,000. Such an amount is infinitesimal in comparison with the $4.7 billion that the Murray-Metcalf bill would annually make available to the States for the vital needs of school construction and teachers' salaries.

The College Student Loan Program

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. LANE. Mr. Speaker, under the impact of Russian technological progress and the hard-driving educational system on which it is based, the United States is slowly waking up to the challenge.

Education—in the long run—will prove to be the decisive factor in the struggle between freedom and communism for world leadership.

Our attitude toward education must—and will—change.

No longer can we regard it as secondary to luxuries. If necessary, we must make sacrifices to guarantee the development of the world's best educational system.

As evidence of this definite trend, I ask for unanimous consent to insert in the RECORD the following editorial from the February 4 issue of the Lawrence Daily Eagle, entitled, "Federal Education Loan Plan Popular":

FEDERAL EDUCATION LOAN PLAN POPULAR

The college student loan plan written into the National Defense Education Act last year has turned up a major surprise in popularity.

It was substituted for a $75 million scholarship program after an intellectual wrestling match in the closing weeks of the last Congress. The lawmakers in their infinite wisdom killed the scholarship plan and put a $295 million, 4-year loan program in its place.

Few educators thought it would work. For, as Dr. Arthur Flemming, former president of Ohio Wesleyan and now secretary of Health Education and Welfare declares, up until recently, college loan funds had gone begging.

The most optimistic prediction was that not more than 800 of the 1,950 U.S. institutions of higher learning would take part in the new Government student loan program.

In the first 4 months, 1,230 colleges and universities have applied for participation, asking for $62 million in Government money for this year.

This figure is double the amount Office of Education now has in sight. Congress appropriated $6 million to get the program started this year. A supplemental $25 million is being asked to run the program until June 30. Unless the colleges are being overoptimistic in estimating student demand, it won't be enough.

Loans applied for now are expected to be small, to run students short of cash through this college year. For the next college year beginning in September, it is believed that loan applications will be larger, to cover a full 9 months. But Office of Education has so far requested only another $31 million for the year beginning July 1.

Congress originally authorized—but has not appropriated for the student loan program—$47½ million the first year, $75 million the second, $82½ million the third and $90 million the fourth. This $295-million total would take care of 590,000 1-year loans of $500 average.

No student will be permitted to borrow over $1,000 a year, or $5,000 over 5 or more years. Interest is 2 percent while the student is in college, and 1 year thereafter. Then the interest rates goes to 4 percent. The loan must be repaid in 10 years.

There is a 10 percent forgiveness every year for 5 years to students who go into grade or high school teaching. To this extent the loan program is a scholarship.

Also, the law offers fellowships to graduate students preparing for college teaching. They will provide grants of $2,000 for the first year, $2,200 the second, $2,400 the third, plus $400 a year for each dependent.

One thousand such fellowships were to be granted the first year. But in the first 4 months of the program, 6,000 applications have been received. This response is likewise far heavier than was anticipated. Commissioner of Education Lawrence G. Derthick will make the first 160 grants early in February.

Last October DHEW Secretary Flemming declared that scholarships would still be needed, in addition to the loan and fellowship programs. The original plan was to give up to $1,000 a year for 4 years to exceptional students who could not pay for a higher education.

Unexpected popularity of the loan program, however, has shelved the scholarship idea. It is not mentioned in President Eisenhower's new budget. The administration's austerity program may have had something to do with killing it.

If the loan program turns out to be as good as it now looks, Secretary Flemming is of the opinion that corporations and private foundations which have granted most of the scholarships in the past may change their programs.

U.S. Money Troubles Grow

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. GROSS. Mr. Speaker, for many months, through the medium of my weekly newsletters and otherwise, I have warned the people of the Third Congressional District in Iowa that their Government is facing serious trouble in refinancing the huge Federal debt.

Early last August, I called attention to the fact that beginning in 1958 and running for 5 years, the U.S. Treasury would be confronted with the herculean job of refinancing some $216 billion of the then existing Federal debt, plus any deficit spending during that period. It was obvious even then that investors were not enthusiastic about Government securities and subsequent developments have made that completely clear, despite almost unbelievable increases in interest rates.

Bringing the debt management situation up to date, I recommend the reading of an article by Sylvia Porter, a writer for the Hall Syndicate, Inc., which appeared in the Washington Star of February 15, 1959. The article follows:

MASS REFUSAL OF U.S. I O U's

Something rather frightening is going on in Wall Street, involving the credit and financial reputation of the Government.

Administration policymakers are starting to talk in almost evangelistic tones of the urgent need for balancing the budget now. They insist it's imperative to squelch now the belief that inflation is inevitable in this country. They're stressing inflation dangers so much now—a time when prices are fairly stable, unemployment is disturbingly high, lots of industrial plants are idle. Here's the story:

Yesterday and today over $9 billion of Treasury securities, held by institutions and wealthy individuals the Nation over, mature. Since the Treasury hasn't the cash on hand to pay off the securities, early last week it asked owners of the I O U's to extend them. And to induce the extensions, it offered close to the highest interest rates in a quarter century—3¾ percent for a 1-year extension, 4 percent interest for a 3-year extension.

TWENTY-TWO PERCENT SAY "NO"

Holders of more than 22 percent—or $2 billion—of the I O U's, said "No." They are demanding their cash this weekend.

This was one of the biggest mass refusals of Treasury securities on record. To meet the cash demands, the Treasury has been forced to borrow a large chunk of money against the taxes it will collect next September.

Why did these investors turn down the new Treasury securities?

Because many think that as today's economic advance progresses, they'll need the money for other, more profitable activities. They don't want to extend loans to the Treasury even for a year.

Because many have become increasingly disenchanted with buying Treasury securities during the past several months of a huge budget deficit and constant Treasury borrowings.

Because many are convinced that the combination of Government-business-labor policies will keep us in a long-term inflation cycle. They don't want to own fixed-income securities in a period of inflation.

Because many believe that as inflation accompanies the business upswing, interest rates will go even higher. They're waiting for some sort of climax in the market before they buy more Government securities.

Although prices on marketable Treasury obligations have sunk to the lowest levels in years and the market is highly nervous, a climax hasn't occurred and hopefully, it won't occur.

But financiers are beginning to shudder at the magnitude of the debt management problems facing the Treasury.

NEAR DEBT LIMIT

In its new borrowing the Treasury is bumping against the legal debt ceiling.

In its sale of securities the Treasury also is approaching the 4¼ percent interest rate ceiling on new bonds set up by Congress in the World War I era.

Now the evangelistic attitudes become understandable. Spokesmen for the White House, the Treasury, the Federal Reserve System are crying out that the budget must be balanced—so the Treasury can avoid borrowing more new money and the inflation feeding deficit can be erased.

Even as the Treasury was counting the refusals on its IOUs, its chief, Secretary Anderson, was standing before a joint House-Senate Economic Committee, solemnly warning that, "if we ever reach the point where people believe that to speculate is safe, but to save is to gamble, then we are indeed in trouble."

There is no simple way out of this one. Actually, I can't recall when experts in this field have been so lacking in solutions—except, "balance the budget, squelch inflation fears, convince investors that Treasury securities at these interest rates are sound buys." So easy to write, so hard to achieve.

No Enfant Trouble

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. FASCELL. Mr. Speaker, an important facet of improving international relations is that which can be done by the people themselves. Improvement of international relationships and exchanges on a government-to-government basis through the usual means, such as treaties, diplomatic channels, memberships in international organizations, the mutual security program, cultural and student exchange programs, and others, are all excellent but limited in their impact upon the great mass of the people. It remains for the people themselves—individually and as a group—to act affirmatively to bring about better understanding among each other and to achieve world peace.

An extremely effective effort is being carried out under the people-to-people program. An excellent example of what can be done and of what is being done is the one of the "sister cities" of Coral Gables, Fla., and Cartagena, Colombia. Fifty-nine residents of the south Florida community have returned today from a 4-day visit to Cartagena as guests of Cartagena's mayor and people-to-people committee. Last November, some 15 visitors from Cartagena were the guests of Coral Gables on a similar 4-day visit. During their visit, many of the Cartagenans stayed in the homes of their hosts in order to see how Americans live and work. The success of this visit led to the return invitation.

Both groups of visitors were feted at social and civic functions attended by local dignitaries and enthusiastic residents of the host communities. The very important part of these exchanged hospitalities is the face-to-face contacts between civic, business, and educational leaders of both cities, about which the Coral Gables Times, a Knight publication, made the following appropriate remarks:

NO ENFANT TERRIBLE

Back in the twenties American tourists slapped French francs on the outside of their luggage, zipped through the Louvre and other venerable museums on the European continent in 10 minutes and carried away tons of souvenirs.

Thus was born the reputation of the American tourist as enfant terrible, a reputation that we bear to this day, regardless of the area where we set foot as sightseers and visitors.

That this stigma is one of the concerns of our Government is borne out by the fact that the U.S. Information Agency sent one of its executives to Coral Gables to instruct our local citizens about Colombia where a group of them will spend this weekend as exchange visitors in President Eisenhower's people-to-people program.

To our surprise he presented the audience with a pamphlet reassuring, and at the same time advising, them that they are not the vulgar tourists that is the stereotype of the American visitor which exists in the minds of natives of foreign countries.

But the fact that this advice had to be given at all is indicative of the responsibility that lies with every American in a foreign port.

That is why we believe so heartily in the people-to-people program. It will send to Latin American countries Americans who are the leaders and most respected members of their communities.

Coral Gables is proud of the delegation which will represent the United States in Cartagena, Colombia, this weekend. Their presence will show the Colombians that America is a land whose leaders on the municipal level are cultured, educated, and interested in the affairs of foreign neighbors.

Only the individual traveler can help to erase the idea, which is outmoded and unfair to our country, that our tourists are still roaring down on foreign cities out of the crazy heyday of the twenties.

I am proud that citizens in my district are playing such an important part in our international relations and have such a keen realization of what we as Americans must do to fight for freedom and understanding.

Right Place To Start

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. LEVERING. Mr. Speaker, under leave granted me, I am inserting in the CONGRESSIONAL RECORD an editorial from the Mansfield (Ohio) News-Journal for Wednesday, February 11, 1959.

I not only welcome the letters that may come to me as a result of this thoughtful editorial, I congratulate the News-Journal for devoting editorials to the great issues that face our people.

As this alert editor so correctly implies, these matters relating to billions, and to Federal spending generally, are not matters that are divorced from the day-by-day activities of the people themselves. The people are the ones who must pay the bills, through their own work. They have a vital stake in the budget, not only their own, their city, county, and State, but of their Federal Government.

I have always been in favor of economy in local spending, in State spending, and in Federal spending, and I always will be. The more facts the people can learn about how their money is being spent, and the more they think on these vital matters, the better off we will all be.

The editorial follows:

RIGHT PLACE TO START

While it is difficult to go along with the Democratic leaders in Congress who want to whoop up virtually all of President Eisenhower's recommendations for funneling more taxes through Washington for housing, schools, airports, farm subsidies and the like, one thing must be said for the idea.

If the Government is going to continue to tax and tax and spend and spend, it's better for the money to stay at home among the folks who pay the taxes.

The Democratic leadership is eyeing foreign aid as a place to cut down the overall budget and maybe even balance it.

That is certainly the right place to start.

The President has asked for $3,900,000,000 for foreign aid this year.

What the American people have not been told is how much of their tax money is already appropriated for foreign aid but not yet spent.

A good guess, based on last year's figures, would be that the foreign aid spenders already have $5 billion or $6 billion at their disposal which Congress cannot touch. It was appropriated in past sessions of Congress and remains unspent.

Why not spend this first—if we must keep on with this monstrous folly which has already cost an estimated $60 billion U.S. tax dollars—before the people are saddled with more foreign aid taxes?

Why not slash this year's appropriation drastically or take it out of the budget entirely?

The foreign aiders would still have billions to operate on, the budget might actually be brought into balance and something applied on the debt we have been piling up for our children to pay.

The Democrats definitely have the right idea in attacking this wasteful section of the budget. They can earn the gratitude of the

Nation by slashing this phase of Federal spending.

They need go no farther in other directions, but this would be a sound start. Let's encourage them. Write your Senators FRANK J. LAUSCHE and STEPHEN M. YOUNG, Senate Office Building, and your Congressman, ROBERT W. LEVERING, 324 House Office Building, Washington, D.C.

A 4-cent postage stamp could help save you literally hundreds of dollars in future taxes if you use it now.

I Can Hardly Wait

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. METCALF. Mr. Speaker, here is a gem for the information of my colleagues:

LEGAL INFLUENCE

There are ways that you can influence your Congressmen—legally.

We've had a lot of mail on this subject from clients who are wondering whether it's safe for them to dabble in politics in view of such exposés as the Goldfine case.

The answer is: Yes, you can get into politics. You can get to know your Congressmen, and you can use many methods to influence their opinions and votes—without any danger of involvement or embarrassment.

How do you go about it? Arrange first to meet your Representatives and Senators either at home or in Washington, whichever is convenient. You'll find that nearly all of them are very approachable, very human.

Don't limit your contact to a formal conference, explaining your views. It's better to talk about other things first, matters on which there is no controversy.

Find some fields of common interest—people back home, sports, hobbies, etc. Invite your Congressman to lunch or dinner, or to a social affair. Make him feel you think he's smart and important. Ask him questions about subjects on which he's expert. Be a good, agreeable listener.

Don't overspend on entertainment, but don't be afraid to order a sufficiency of the best. Very important: Don't give gifts of any kind.

Develop future personal contacts—an affair back home, a speech or visit by your Congressman at a trade meeting or convention, a fishing trip, golf game, visits to your home, etc. Gradually build a close personal friendship.

After you're on a first-name basis, casually ask his advice about a personal or business problem * * * let him develop a reputation as a problem solver. Praise him for his astuteness.

Very soon you'll find him wanting to live up to this developed reputation. At that stage, you'll be surprised at how open-minded he will become on issues on which you previously thought him bitterly opposed.

He'll give you a fair hearing * * * and will avoid arbitrary votes against your point of view. He'll be embarrassed if he cannot logically defend his oppositional vote.

To some, this procedure may sound like trickery. Actually, it is the type of public relations being practiced every day by those who are guiding the Nation down the road to socialism.

Unless fire is fought with fire, American businessmen may just as well sit back and await the inevitable.

What Lincoln Said

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial appearing in the Washington Post of February 13, 1959, entitled "What Lincoln Said." It is a well-known fact, historically, that the problems of one generation vary from those of a preceding generation. The editorial of the Washington Post clearly recognizes this fact in connection with a statement recently made by President Eisenhower, where he went back nearly 100 years in making a quotation from a speech made by the late Abraham Lincoln while he was a Member of Congress. One could just as well make the argument that we should not today enter into any military pacts or agreements with any other nation because of what George Washington said in his Farewell Address relating to no "entangling alliances." To me, the answer to such a statement would clearly be that the problems of America in the world of today are entirely different than they were during the infant days of our Government, or 100 years ago.

Everyone with common sense wants a balanced budget but there are few persons in Washington, and objective minds throughout the country, who are not aware of the fact that the President's budget is not a balanced one. If the President really wanted to balance his budget, he would have recommended that new taxes be imposed. I have stated publicly that leadership on his part in the world of today would have called for more taxes in order to assure us greater national defense. The people of our country would willingly make the sacrifices of paying more taxes if they knew that the additional revenue was to be used for the security of our country through stronger military preparations. The responsibility of recommending such increased taxes for greater military strength rests with the President. For the Congress to increase taxes to make larger appropriations for military purposes might result in, first, taxes being imposed, and the additional revenue collected; and, second, greater appropriations being made for defense, and the President freezing the same. If recommendation came from the President for more taxes for stronger national defense, the Members of Congress, and the people, would know if new taxes are imposed, that the additional revenue would be used for the national interest in the defense of our country.

In any event, the editorial appearing in the Washington Post of February 13 shows that President Eisenhower's reference to President Lincoln has no application to the conditions of today:

WHAT LINCOLN SAID

President Eisenhower did little honor to Abraham Lincoln in attempting to suggest that he would have supported the present Administration's retrenchment on Federal spending. It is, of course, a pretty thin tactic to begin with—to go back 111 years when Lincoln was a Member of Congress for even a general judgment on how present-day Federal finances should be managed. But if such guidance is to be sought from Lincoln, he ought to be read whole.

Lincoln did say, in the quotation attributed to him by Mr. Eisenhower, "The tendency to undue expansion is unquestionably the chief difficulty." But just before addressing those words to the House of Representatives on June 20, 1848, Lincoln said, "Determine that the thing can and shall be done, and then we shall find the way." His speech was in reply to President Polk's veto of an internal improvements bill. Throughout this speech Lincoln espoused the responsibility of the Federal Government to undertake the kind of "local" improvements which Mr. Eisenhower so often speaks of as being the primary responsibility of the localities involved.

We are not certain where Lincoln would stand in the present budget debate; but we suspect that if Mr. Eisenhower had been a party to the debates of the 1840's on the proper role of the Federal Government, he would have been arrayed against Lincoln.

Debt Refunding and Inflation

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including an article written by Harold B. Dorsey in today's edition of the Washington Post and Times Herald.

The writer explains, in a very understandable fashion, exactly how the Government has come to experience unusual difficulties this month in the financing of its long-term securities.

It shows also how the new short-term issues of Government securities, purchased largely by the banks, are feeding the fires of inflation by having the exact effect of creating money for which there is no actual offsetting security.

It would be good, I believe, for all Members of the Congress to read and understand this article. It serves to point out that, in the interest of dollar stability, it would be an exceedingly good thing to begin some plan of systematic reduction of the national debt, as I proposed last week in the introduction of a resolution calling for such a plan.

[From the Washington Post and Times Herald, Feb. 16, 1959]

DEBT REFUNDING AND INFLATION

(By Harold B. Dorsey)

It is most unfortunate so few people will understand the mechanics involved in an example last week of one of the dynamic consequences of current inflationary pressures. If the public—and if those well-meaning national leaders who have been generating the inflation pressures—understood this particular matter, there would be a better prospect that commonsense based on a more complete knowledge of the facts would dictate policies which are vital to the public welfare.

The instance concerns the refinancing of the Government's mid-February debt maturities totaling $14.9 billion. At the risk of incurring the criticism of purists in the field of money and credit techniques, I would like to explain this refunding operation with the hope that it will promote a broader comprehension among average people of the way that circumstances are making it necessary to create money by the simple stroke of the pen.

Approximately $9.2 billion of the total mid-February Federal debt maturities was held by the public, the remainder being held by the Federal Reserve banks and by Government investment accounts which almost invariably swap their maturing securities for the new securities in exchange. On the latter portion of the refinancing operation the matter of money supply was not involved, because savings of the economy that had formerly been loaned to the Government were merely transferred from one kind of security to another.

However, the holders of nearly $2.1 billion (approximately 23 percent of the publicly held maturities) refused the offer to relend the Government their savings for 1 year at 3¾ percent or for 3 years at 4 percent. They elected to have their savings paid back to them in the form of cash.

As a result of this unexpected cash requirement to pay off its creditors, the Treasury Department had to offer an even shorter-term issue (217-day maturity) for $1.5 billion. To a greater and greater extent, the Government is finding it necessary to use such short-term issues to finance the Government deficit and to refinance its maturities. Usually, this kind of issue is purchased largely by banks. The savings that might otherwise have been absorbed by investment in Government securities—in the current instance some $2.1 billion—thus becomes available to increase the demand for common stocks or for goods and services.

But let us see how the Government gets the money to pay off this $2 billion. What takes place on the books of the banks, which probably will be buying a large portion of the $1.5 billion of 217-day-maturity new certificates that were offered to raise the major part of the necessary cash? It is this particular operation that is so broadly misunderstood.

A given bank will agree to take $1 million of these certificates. It will receive a piece of paper signifying that the Government owes the bank a million dollars and will add this piece of paper to its assets under the heading of "Holdings of Government Securities." It then credits the deposit account of the Government with a million dollars. This latter credit represents money that the Government can spend. Presumably, in the current instance, the Government will draw a check against its deposit account and will deliver that check to some holder of the maturing Government debt issue. The receipient will then deposit the check in his checking account with some bank. Thus it becomes money that he can spend for whatever purpose he chooses.

Recognize then that the net result of the whole transaction is an increase in the indebtedness of the Government to the bank, and by the simple stroke of a pen—without even using a printing press to manufacture currency—there is created a million dollars of spendable funds. The latter increases the wherewithal to enlarge the demand for common stocks, or for all types of goods and services.

One does not have to be a professional economist to understand that the artificially created increase in demand, without an offsetting increase in supply, creates an inflationary pressure for higher prices.

It appears to be an unfortunate fact that the inflation situation has reached the dangerous breeding stage. The saver's fear of inflation, concretely demonstrated by the foregoing incident, has made him unwilling to invest a normal proportion of his funds in longer term debt instruments. There is a very understandable hesitancy to lend money when there continues to be such a distinct threat that it will be repaid in dollars of lower purchasing power.

Herein, we can see the simple facts underpinning Federal Reserve Board Chairman Martin's recent observation to the Joint Economic Committee that: "There can be no effective control of inflation if the banking system is made the major source of funds to finance Government deficits." We have just seen an incident wherein the banking system had to be an important source of funds to refinance a portion of the Government's old debt. By the way, the interest charges alone on the Government's accumulated deficit of past years are budgeted at $185 per average family of four for the next fiscal year—which presumes that the Federal debt will not be increased further.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. MULTER. Mr. Speaker, the unfortunate Lithuanians are among the most stout-hearted and bravest fighters for liberty and freedom. Yet, freedom and independence have been denied to them for centuries.

Except for the short but happy interlude of interwar years, they have had the misfortune to suffer under the oppressive and at times almost unbearable alien yoke in their homeland for almost two centuries. During the First World War, it seemed that their woes had come to an end by the overthrow of the czarist Russian regime, when they regained their freedom by proclaiming their national independence on February 16, in 1918. For about two decades fate was kind to them, and they lived happily in their free country. But, as the clouds of war began to gather over eastern Europe in 1939, their situation became extremely precarious, and early in the war their independence was shattered by the forces of the Red army.

Since then the unhappy Lithuanians have not known freedom, and have been held down by their Communist overlords. In their own country they lead the lives of prisoners in a vast prison camp, working as long as humanly possible, and under most wretched conditions, for their masters in the Kremlin. There is no trace of freedom, neither of speech, nor of movement, nor of correspondence; not even the freedom to lead a quiet life in any corner of the country.

But they have the satisfaction of knowing that they have friends and sympathizers in the free world, and particularly in America.

Today on the 41st anniversary celebration of the independence day I gladly join hosts of Americans of Lithuanian descent and echo their true liberty-loving sentiments.

That Old Gag That You Cannot Tell the Difference Between Republicans and Democrats Not True Now

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the February 4 issue of the Sterling Daily Gazette, Sterling Ill., entitled "That Old Gag That You Cannot Tell the Difference Between Republicans and Democrats Not True Now."

THAT OLD GAG THAT YOU CANNOT TELL THE DIFFERENCE BETWEEN REPUBLICANS AND DEMOCRATS NOT TRUE NOW

That old gag about it being impossible to tell the difference between Republicans and Democrats is no good any more.

In the first month of this new session of Congress, programs of the Eisenhower administration and the Democratic majorities on Capitol Hill have been spelled out so clearly that the differences are unmistakable.

The principal difference is in ideas about the amount of money the Federal Government should spend, and whether the budget shall be kept in balance or operated at a deficit.

In three areas alone—Federal aid to education, airport construction, and housing—Democrats now propose spending $1½ billion more than the Republican administration proposes for the next fiscal year. Over the full 6 or 7 years of the conflicting programs, the Democrats would spend $13 billion more.

These proposals do not cover national defense, aids to agriculture and public works, on which the Democrats are considered likely to increase heavily Eisenhower budget figures.

In campaign speeches at Pittsburgh and Charleston last October 27, President Eisenhower identified the Democrats as "the spendthrift league" and accused them of urging a raid on the taxpayers' dollars.

The charge was resentfully denied by Democratic orators. But from the way things are shaping up in the new session of Congress, the President's charge seems justified.

Take housing. The administration called for a $1,660 million program, spread over 6 years. Senator JOHN SPARKMAN, Democrat of Alabama, introduced a bill which would cost nearly $3 billion, spread over 7 years.

For the fiscal year 1960, this bill as approved by the Senate would cost $15 million more than the President requested. A bill passed by the House would cost $300 million more. The differences would be for direct loans to veterans which the administration proposes.

House and Senate bills have to be compromised, with no telling what the outcome. President Eisenhower will give no hint on whether he will sign or veto a bill that goes so far beyond his recommendations. But this will bring to a head the question of whether the Government will unbalance its budget and embark on deficit financing.

Take aid to airports. The administration program calls for $200 million spread over 4 years. The bill introduced by Senator A. S. MONRONEY, Democrat, of Oklahoma, calls for $575 million spread over 5 years.

Take Federal aids to education. The administration called for nothing beyond last

year's National Defense Education Act. But Senator JAMES E. MURRAY, Democrat, of Montana, has introduced a bill for school construction and other benefits which would cost $1.1 billion the first year and increase by that amount or more to $4.7 billion the 4th year. The total cost would be $11.3 billion.

In the field of Government lending programs, the administraion proposed $55 million for depressed areas suffering from chronic high unemployment. Senator PAUL DOUGLAS, Democrat, of Illinois, topped this with a $375 million program. President Eisenhower vetoed a similar bill last year.

All the foregoing illustrate differences in approach to spending bills. In addition, there are wide differences in Republican administration and Democratic congressional bills on labor legislation, civil rights, social security, atomic energy power development, space exploration, missile development, and foreign policy.

The new Congress is already bogged down with legislative proposals not recommended by the administration. In the first month of the session, 820 new bills were introduced in the Senate and 3,833 in the House for a total of 4,653. This is a record for any first month.

Many of these bills call for increased Government expenditures. The challenge which they throw up to Democratic leaders is how they will curb inflation if they allow Government appropriations to keep on going up.

Smear of Fear

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an editorial concerning the FBI which appeared in the February 9, 1959, Los Angeles Examiner, entitled "Smear of Fear."

I believe this editorial, which discusses the reasons behind the various propaganda barrages against the FBI, is very timely and will be of interest to all Members of Congress and the public.

The editorial follows:

SMEAR OF FEAR

American leftwingers and political pinkos appear to be pressing another propaganda barrage against the Federal Bureau of Investigation.

An indication of this is the unusual emphasis given to a long-winded magazine article which purports to show the FBI as an ineffectual crime prevention agency and a menace to civil liberties.

The line is a familiar one to anyone who has given any study to the subject, and the motivation for this antagonism to the FBI isn't hard to understand.

It is precisely because the FBI, under Director J. Edgar Hoover, has been so successful in exposing saboteurs, traitors, and subversives, that it has incurred the enmity of their sympathizers and dupes.

The FBI's record as a law enforcement agency and as protector both of the Nation's security and of the legitimate rights of individual American citizens is one to be proud of.

No comparable agency in the world has been more zealous in its regard for legal propriety, nor more careful not to overstep the bounds of its proper functions and jurisdiction.

As Hoover himself has emphasized time and again, the FBI is not a prosecuting agency but an investigative agency, constrained by, and observant of, the limits of the law.

Law abiding and patriotic Americans have no reason to fear the FBI and every reason to be grateful to it. The smear accusations that the FBI is a sort of a gestapo are generated by those who, because of their activities or associations, have reason to fear that the FBI will expose or apprehend them, and Hoover and the bureau are to be congratulated on the enemies they have made.

The 41st Anniversary of Lithuanian Independence Emphasizes the Sad Plight of a Liberty-Loving Nation and Calls to Mind the Contribution of Lithuanian-Americans to American Culture

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. VAN ZANDT. Mr. Speaker, the roots of American strength and greatness have been the diversity of its population. It has been the transfusion of foreign cultures into the circulation of American life that makes our country what it is today. The reasons for immigration to our shores have been varied, but the most tragic of these has been the loss of freedom in the homeland. This was the case in Lithuania.

In the latter part of the 18th century, when Russia absorbed Lithuania, many oppressed Lithuanians, finding freedom and justice more precious than the ties of their native soil, fled to our free shores.

Once in this country, these brave Lithuanians never ceased in their struggle to achieve liberty for their persecuted homeland. Numerous Lithuanian organizations throughout the United States worked vigorously for Lithuanian freedom. This work was not to be in vain, for on February 16, 1918, independence was finally realized. Happily, many Lithuanians returned home, but many more decided to remain in their adopted country.

Lithuania's loss was to be America's gain. Despite the strangeness of our laws, customs, and language, these eager Lithuanians quickly adjusted to the American way of life. Although naturally concerned about the fate of their homeland, these people identified themselves completely with America. They became solid American citizens and have never ceased to be grateful for the opportunities that this country has provided.

On the other hand, Americans have been equally grateful for the contributions of these Lithuanians to the growth of their culture. Evidence of these contributions is shown by the success of Lithuanian-Americans in various fields of endeavor.

The list of their achievements is long. Such names as Mikas Petraukas, Shirley White, and Ivan Lebedeff are familiar to music and theater lovers. Sport fans have cheered Jack Sharkey, Jack Goodman, and Vito Tamulis. In addition many more have served faithfully in public offices throughout the United States.

These few examples are indicative of the Lithuanian-American contributions to American life.

Nevertheless, although Americans first, these American citizens have a natural concern for the land of their ancestors which once again is not free. Ever since 1940, this helpless country has been incorporated into the Soviet Union. Although today is the 41st anniversary of Lithuanian independence, Lithuanian-American hearts are sad, for today will not be one for rejoicing in the land of their forebears.

Consequently, I would like to take this opportunity, on the anniversary of Lithuanian Independence Day, to express with all Lithuanian-Americans their hope of freedom for their oppressed homeland. Moreover, all the free world should resolve on this February 16 to work unceasingly for conditions that will bring peace to the world, allowing all nations to live in an environment of self-government, peace, and justice.

Gallant Lithuanians Sustain Persecution Through Faith and Courage

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. IRWIN. Mr. Speaker, just a few short weeks ago it was my privilege to participate in the observance of the 41st anniversary of Urkainian freedom.

What I said then can be mirrored today in our commemoration of the 41st anniversary of Lithuanian independence.

Before the outbreak of World War II, Lithuania, along with her sister Baltic nations, Estonia and Latvia, was still an independent and democratic state.

But in June 1940 the cherished freedom of Lithuania evaporated with the cruel and unjust seizure of the country by Soviet Russia.

Within 2 days Soviet military troops invaded and tramped through the territory of Lithuania, as well as of Estonia and Latvia.

Lithuania has not been free since that time, but the spirit of freedom, hidden though it is behind the Iron Curtain, remains alive in the hearts and minds of Lithuanians.

Always a proud, virile nation which, through its long history, survived other oppressions, we of free America have little doubt that Lithuania will survive her present persecution and tyranny.

Ruling Lithuania, just as in other Soviet satellite nations, is a detested puppet regime that has stolen from the Lithua-

nian people all of their political and social rights and has forced them to vote for a single list of candidates designated by the Communist Party.

The people of Lithuania live in constant fear and terror. Their personal security is nonexistent. They are harassed every minute of every day by the agents of the secret police.

Without reason, without fair trials, they are imprisoned, investigated, executed, or deported for slave labor to remote areas of the Soviet Union.

Seven major waves of mass deportations, carried out under inhuman conditions, have diminished the total population of Lithuania by more than 350,000. Lithuania, a predominantly Roman Catholic population, has also seen her priests murdered, jailed, deported, or exiled. Of nearly 2,000 priests, we are told less than 750 remain free and alive.

Monasteries have been closed. Church property has been confiscated. Religious instruction has been forbidden.

What, then, keeps the faint, flickering hopes of the oppressed Lithuanian people alive?

What gives these gallant people the strength to sustain a persecution and a tyranny the like of which the world has not seen for centuries?

Two things, Mr. Speaker, just two things—an unrelenting faith in God and an indomitable courage born of tremendous hope.

And one day, I am confident, this great faith, this fantastic courage will be rewarded, and Lithuania will be delivered from enslavement, as will all the other oppressed peoples under the yoke of Soviet tyranny.

Commemoration of the 41st Anniversary of Lithuania's Independence

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. PILLION. Mr. Speaker, it is a distinct privilege for me to add my small voice to the growing demands for freedom on the part of millions of Lithuanians and other nationalistic groups who are being kept in a captive status under the Soviet Communist rule.

Although, Premier Nikita Khrushchev continues to boast of the military strength and the economic advances of the Soviet, he fails to recognize that this apparent strength is based upon a compulsive labor economy that is held together by fear, by military tanks and guns, and by the cloak, spy, and dagger machinations of the select Communist Party membership and leadership.

I am sure that the spirit and the desire for freedom on the part of the Lithuanian people cannot be quenched and will continue to grow. The nationalistic spirit and the desire for freedom on the part of millions of people under the domination of the Soviet Socialist Republics will continue to be a fatal weakness in the miscalculations of Mr. Khrushchev and his Politburo Bureau.

I join with the Lithuanian American Council in today's celebration of the 41st anniversary of the restoration of independence of Lithuania. I join with the millions of Americans of Lithuanian extraction in their aspirations for the liberation of the Lithuanian Nation.

Cooperation by the Bureau of Ships

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MULTER. Mr. Speaker, our attention is often called to wrong-doing by Government departments. Too seldom do we give credit to a Government agency that does a good job.

I am pleased to commend to the attention of our colleagues the following letter, dated February 6, 1959, which came to me unsolicited from my friend, Solomon Dimond, a practicing attorney in Washington, D.C.:

DEAR CONGRESSMAN MULTER: Members of Congress and the congressional committees have long been the traditional sounding boards for registering complaints concerning the various instrumentalities of the executive branch of the Government. As representatives of the people, Congress has generally recognized its responsibility to sift grievances with a view to determining the need for remedial legislation.

It is very rare, and probably newsworthy, when the attention of Congress is directed to an unusual and outstanding accomplishment of a Government bureau in improving its relationships with an important national defense industry. It is highly important that Congress should be so informed for it indicates a sensible, practical solution to similar problems of other industries in their dealings with Government departments, bureaus, and agencies.

Due to the widespread dissatisfaction of the small ship and boat industry with the manner in which the Bureau of Ships was awarding and administering contracts for the construction of small ships and boats, with an attendant relatively large number of insolvencies of small ship and boat manufacturers as a result of undertaking Government contracts, the American Boat Builders and Repairers Association set up a Government contracts committee. This industry's grievances were aired in the CONGRESSIONAL RECORD under date of January 9, 1958, at page A-89. On March 6, 1958, a meeting was held at the Bureau of Ships between members of the committee, including me as counsel to the committee, and the Chief of the Bureau of Ships, his counsel and his top-level contract administrators.

Following the meeting, the Bureau of Ships decided to make a survey of the entire industry to determine its grievances as well as its suggested improvements in procedures. Letters were sent to over 500 shipyards, which shipyards included all companies that had expressed interest in undertaking Government contracts, inviting them to attend regional conferences. These conferences were held in Seattle, Philadelphia, Boston, New Orleans, Great Lakes, and Long Beach, California. Everyone present at the conferences was given as much time as he desired to present his views. The suggestions made were analyzed by the Bureau of Ships and collated into 101 different categories that were then considered by a study group set up by the Bureau of Ships.

As stated in its report, the study group accepted almost two-thirds of the suggestions in whole or in part. In each instance in which the Bureau rejected a suggestion, a detailed explanation of its reasons for rejection was set forth. The report is divided into two sections, the first of which is dated November 25, 1958, and the second of which is dated January 30, 1959. Enclosed you will find copies of these reports. It is my understanding that the Bureau of Ships has already put many of the agreed changes in procedure into effect, and is expeditiously proceeding to put the others into operation.

The efficient, thorough and prompt manner in which the Bureau of Ships cooperated with the small ship and boat industry is highly commendable. While the individual members of the industry might not agree with all the conclusions reached by the Bureau of Ships, they certainly would have to concede that they had the opportunity to present their views, that the Bureau of Ships carefully considered those views and that the resultant changes in procedures will materially improve the award and administration of contracts. The general discontent of the industry would have warranted a very time consuming exhaustive survey by a congressional committee. This was avoided by prompt administrative action. It was a fine job of public relations for which the Bureau of Ships should be officially commended.

Sincerely,

SOLOMON DIMO

Spending Crusade

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 12, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Marys (Pa.) Daily Press of January 30, 1959:

SPENDING CRUSADE

Americans have their ears dinned with crusades for this, crusades for that, and in most cases respond with what they think they can afford.

But few seem to take any part in any crusade to halt congressional spending in Washington. Mr. Eisenhower submitted a $77 billion budget to the lawmakers with the implication that if spending were kept within that limit, tax reform legislation would follow with the possibility Federal taxes could be reduced.

Yesterday he sent a bill to Congress on the farm program asking that the $5 billion per year subsidy be brought within reasonable limits and something be done about surplus crops, that under present legislation, the U.S. Government is compelled to buy and store. Storage rental for the stuff costs millions of dollars per annum.

The farm bloc in Congress says Mr. Eisenhower's program has no chance of passing and American taxpayers will continue to pay high subsidy rates.

Some Members of Congress are not satisfied with the $47 billion budgeted amount for national defense and want to go beyond that figure. Those who oppose the limita-

tion set by the White House, say United States must spend more to make up for what they call the "missile lag" between this country and the Soviet Union.

So the possibility of spending beyond the $77 billion is quite apparent and all this spending means the dollar you get in salary or wages has less purchasing power. The dollar today buys less than 50 cents of its real value as compared with the dollar's worth prior to World War II, and the end does not seem in sight.

Many Members of Congress were elected last November on promises of spending more money on Government-sponsored projects, and they seem determined to live up to their campaign pledges unless more conservative heads hold the whip hand in both Houses of Congress.

The voice of Senator BYRD of Virginia, who has long been an advocate of less spending, is becoming weaker and weaker with each passing Congress, filled with some who seem to think spending American money is the first objective of their office. The free wheelers in Congress may ruin the value of American currency unless brought to the realization the money they spend comes out of the pockets of the folks back home, who today are pretty well fed up with the American system of taxation and its confiscatory clamming onto what the wage earner earns before he ever sees it, knowing only it has been taken from him, willingly or unwillingly by the deduction explanation attached to his pay voucher.

Patriotic Advertising—"Life Line" Broadcast, December 3, 1958

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ALLEN. Mr. Speaker, one of the outstanding radio programs of the present day is the "Life Line" broadcast, produced by Life Line Foundation, Inc., a religious and patriotic educational movement. This program, conducted 6 days a week by Mr. J. Wayne Poucher, radio minister for "Life Line," is broadcast from a large number of radio stations throughout the Nation.

Mr. Poucher's broadcast is unique in that the first half of each program is devoted to a forthright discussion of public affairs and the last half to a religious sermon.

The current affairs portion of a recent "Life Line" program dealt with a matter of vital concern to American business and its customers—the importance of adding patriotism to advertising. Under leave to extend my remarks in the RECORD, I wish to include the text, slightly revised for publication, of this broadcast by Mr. J. Wayne Poucher:

PATRIOTIC ADVERTISING—"LIFE LINE" BROADCAST, DECEMBER 3, 1958, DELIVERED BY MR. J. WAYNE POUCHER

American business today finds itself at the crossroads of its very existence. It must make a choice of following the mistaken lane to its destruction or the right lane to survival. Business has sought every possible customer in its effort to make every possible dollar. Business has carefully avoided any intentional offense toward any person or group for fear of losing a present or potential customer. Business has refused to participate in programs with a patriotic theme for fear of losing a few sales dollars and arousing threats of boycott from the mistaken. As further concessions, business spends fabulous sums in sponsoring some programs which sadly have a positive anti-American propaganda line. This is done on the true but terrifying premise that good Americans won't complain, and it will keep the vocally boisterous pinks in silent appeasement.

To date, business has not extended its vision beyond the next quarterly report to stockholders. In the zeal of business to avoid having red figures to explain away, business has not considered how it will explain its total demise under a Red regime. It has not realized that someday, just around the economic corner, stockholders are going to ask "What destroyed the capitalistic system that made our business possible? What caused the political and economic debacle that took our system, our company, and every other company built on the solid virtues of hard work, individual effort, courage to invest and to produce a better product under the goad of free competition?" They will also then be asking, "What happened to history's highest standard of living that all these things produced?"

Business will have no choice of explanation to make if the mistaken trend continues in America. It will be too late. And the only truthful reason for the destruction of the American free enterprise system will be obvious. Through its blind fear of losing a few customers, business will have lost them all. Through the fear of offending a piddling number of radicals who make loud splashes throwing rocks in the shallows of America's economic river, business will have permitted the great, but silent mainstream of America to flow unrestrained over the precipice of collectivism * * * never to be retrieved. Through fear of reprisal from some in Government, business has failed to take a stand in favor of the Constitution and what it guarantees * * * through fear, yes, through fear, business * * * well, that's all there was to it, fear.

But right now at this moment it is not too late. There is something wrong when management decrees the kind of advertising that praises the American way yet is overruled at lower levels. There is something wrong when men of lower rank in a business tell those above they can't afford to defend America. There is something wrong when the owner of the business is told by those on his payroll he can't spend his money to advocate the system that made his business, even their own jobs, possible. If this is happening in your business, don't look now, it might be embarrassing.

Whether business likes it or not, it has now reached the place where the road divides. It is not an unmarked trail like the proud pioneers pondered and then summoned courage to make a choice on which to stake their canteen contents and the only life they had. Rather, it is a well-marked crossroads that has been traveled many times by many people. The road signs are in large letters and are easy to read. The pages of history interpret them in clear and unmistakable language so all may understand. Many civilizations have been lulled by the sedatives of prosperity, apathy, and fear until the point of no return was reached down the wrong fork of the road. And its further stretches are strewed by their wreckage.

"Life Line" believes that the vast and overwhelming majority of the American people, the customers of business, if you please, would drive an extra mile to greet and extol a firm which uses its advertising to help keep America free. Business must make a choice, and soon, of saving itself and America with its mass of customers or business may elect to keep the vocal minority on its books and lose the books, business, and all.

People Want Gold

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks a speech delivered by Mr. Harry Sears on gold before the National Western Mining Conference in Denver on February 7. Mr. Sears is president of the Calaveras Gold Mining Co., at Angels Camp, Calif., and is chairman of the Western States Gold Committee. I am sure that the Members of the House will be interested in his observations on this important subject, which follow herewith:

PEOPLE WANT GOLD

Three words describe a condition as old as civilization: People want gold.

They express human emotions, the desire for power, wealth, adornment, or merely personal satisfaction, plus some sense of safety.

For 25 years our people in this country have been denied the possession of gold, except in the form of manufactured products. The Government asserts complete control.

But we have reached the time when this Government, having failed to provide us with sound money and a sane and honest fiscal policy, find themselves deeply enmeshed in a rapidly growing inflation, with the greatest indebtedness in the history of the world, with an irredeemable paper currency, based only on debt, with no sound monetary reserves which can be used under their present system, and from all quarters come their confessions that they need some solution to their problems, but have not found it.

We still talk about dollars, but do not use them. The Federal Reserve notes which we use instead of money merely carry the insignia which has been familiar to us for years, but because of constantly shrinking purchasing power this paper currency is valued only in pennies, and when translated into an equivalent of what a dollar should be in value, for almost any transaction in our daily lives, we are met with high prices, but these are merely the result of multiplying our currency units, because of their constant loss of purchasing power, into the number required to bring their usefulness to the necessary amount demanded for goods and services in our daily transactions.

There is one outstanding exception to this perfect pattern. The price of gold, which was set by Government decree in 1934, and which the Treasury has refused to alter, has been steadily reduced since the originally proclaimed $35 per ounce, so that, translated into the purchasing power of the paper currency which is paid for it by the Treasury, the price of gold becomes $16.80 per ounce with a 48-cent dollar, $11.55 per ounce with a 33-cent dollar, $8.75 per ounce with a 25-cent dollar, $3.50 per ounce with a 10-cent dollar, 35 cents per ounce with a 1-cent dollar.

And, by applying the same factual figures to the sales of gold by the Treasury, we find that during the past year between $2 and $3 billion in gold has been sold to foreign central banks and their governments and private customers, in addition to all the gold which was supplied by the Treasury for commercial use in this country and abroad, at the same reduced prices.

The proponents of this suicidal and fantastic stupidity have the audacity to call such results the "value of gold," and groups of economists and "monetary experts" are

constantly seeking to have conversion of this Federal Reserve currency into gold at the $35 price, and a favorite slogan with them is that any increase in the price of gold would be inflationary.

The root cause of the inflation stems from the practices of the Federal Reserve System, their multiplication of printed currency based on debts, the removal of gold from all monetary use in the United States and the unlawful Treasury practices and propaganda regarding gold.

The inflation has been built by the Government because they wanted to build it, but it is getting beyond control and the people are searching for safety and a way out of the confusion. They are beginning to turn to gold.

We are at the date of an important anniversary. Twenty-five years ago the Gold Reserve Act of 1934 was passed by Congress. This is claimed as the authority for the gold regulations and practices of the Treasury; and that Congress acted under its constitutional power to coin money and regulate the value thereof, but Congress has used no such power with regard to this act, and the Treasury has been clothed with no authority.

That was some time ago, the details may be quite dim in your memories, but again please note the title, "The Gold Reserve Act of 1934." This very title is misleading and its interpretation has been appalling. Few people have read it and realize its actual powers and limitations and during this quarter of a century we have been taught fundamental errors and have been herded into mistaken understandings and have been taught false beliefs regarding gold. Our Government officials have promoted fictions and claimed powers which are outside the law and which they do not possess.

Our rights and the peoples' rights are fully supported by law and are directly contrary to the claims and practices of the Treasury.

So that there may be some order in this confusion we review provisions and purposes of the act.

The Government took title for the United States, to the gold coins and monetary gold bars which had been in the vaults of banks for many years or which had been turned in at the Treasury or Federal Reserve Banks by our citizens in accordance with Presidential demands.

We need not here determine the legality and morality of Congress in blindly following Presidential orders and stripping the American public of their gold, in 1933.

This was in the period when the President ordered Congress to pass laws and not to hestitate because of doubts as to their constitutionality, so acting under the assumption that possession denoted authority, title to this bold was declared by the act, to pass to the Government.

But it is extremely important that we know what was provided as to gold owned by the Government, we therefore quote from the act:

"No gold shall hereafter be coined, and no gold coin shall hereafter be paid out or delivered by the United States.

"All gold coin of the United States shall be withdrawn from circulation and together with all other gold owned by the United States, shall be formed into bars of such weight and degree of fineness as the Secretary of the Treasury may direct. No currency of the United States shall be redeemable in gold."

This is the important provision of the act and through improper interpretation of these words, or through intentional disregard of their meaning, the Treasury and other Government departments have indulged in a program of skullduggery toward gold which violated the basic property rights of all citizens and has almost entirely destroyed the gold mines and gold producing districts in 13 Western States.

They have confiscated the gold which was taken from its owners, in defiance of law, and they have been parties to the imposition of frauds on our citizens generally, through misrepresentation to them that gold was the basis of a reserve to provide safety for users of the present irredeemable currency.

With gold clearly and completely removed from all monetary use in the United States it lost its former identity as money, and became a simple commodity and Congress then had no greater power over it than over any other commodity.

The fact that some of it is stored in Treasury or Federal Reserve vaults, or Fort Knox, gives it no monetary standing or character for the Gold Reserve Act specifically terminated any monetary use of gold in this country. The term "bullion" has no monetary significance. It merely means "metal in the mass" and the term has been in common use for centuries.

All gold owned by the United States thus became merely a commodity stored in Government warehouses in 1934, and the Secretary of the Treasury merely became the custodian of the warehouses. It is thus exactly the same as the commodity gold produced from the mines and is subject to all safeguards for property which our Constitution and laws provide.

The act gave no authority to the Secretary of the Treasury to set a price for gold and to maintain such a set price during the years of inflation when the purchasing power of irredeemable Federal Reserve currency dropped steadily so that now it is only accepted on the basis of from 25 cents to 33 cents on the face value of the so-called dollar. This means that in buying gold from a producer the Treasury pays for it with irredeemable paper currency of which the purchasing power has been so reduced that it pays only from $8.75 to $11.50 per ounce, and not the much touted $35 which is publicly held forth as the rate the Treasury pays.

The Secretary has a set of regulations but owing to the fact that he is only dealing in commodity gold, just as any private citizen would deal in it, he has no authority to control or enforce them because Congress had no power to grant althority to control commodity gold. But in spite of this he compels gold producers to secure a license from him before they can melt their gold and place it in marketable form and he also demands that they contract to sell the gold to him, at his price, to avoid having this license cancelled.

Of course gold cannot be produced at these prices, except in a few special cases and as a byproduct from other metals.

There were about 4,000 operating gold mines in production when they were peremptorily closed as an asserted war necessity, in 1942. After years of idleness the great majority of these could not attempt reopening because economic difficulties of inflation and currency depreciation had made a higher gold price mandatory. A few mines attempted reopening but after heavy losses were forced to again close down. This is the condition of more than 95 percent of all gold mines in the country.

FRAUDS ON THE PEOPLE

Another provision of the Gold Reserve Act of 1934 gave the Secretary of the Treasury authority to buy and sell gold, "at home and abroad." Sections 3699 and 3700 provide for his purchases and sales at varying prices, with no special price specified. As this was virtually a public trust it was his duty to see that these purchases and sales would be properly conducted and the laws respected, but this has never been done.

The gold policy of the Treasury was concisely stated by former Under Secretary Randolph Burgess in testimony before a Senate Committee in 1954; when he said: "We buy and sell gold freely with other countries * * * at the price of 35 an ounce and we sell gold * * * to foreign banks and private owners as well."

There was a lot of loose language and fancy phrases in the act and in the proclamation of the President which announced it in 1934, but none of this could vary the essential fact which the act established.

When gold was completely removed from monetary use in the United States there could be:

No gold dollar.

No gold content of the dollar.

No gold monetary reserves.

In addition, there is a statute which declares that no obligation of the United States could be measured in gold, therefore no matter what the President said, surplus language describing unauthorized and nonexisting facts have no effect and establish no rights, but in view of what has since happened one announcement by the President should be remembered. He said:

"In pure theory, of course, a government could issue meer tokens to serve as money—tokens which would be accepted at their face value if it were certain that the amount of these tokens were permanently limited and confined to the total amount necessary for the daily cash needs of the community."

This could well have been an advance description of managed currency and the present Federal Reserve notes. Since they have no ascertainable value they fit the description of a "mere token to serve as money." They are accepted far below face value for it is certain that the amount of these tokens is not limited, either permanently or temporarily, and they are not confined to the daily cash needs of the community but are contributed in fantastic amounts as gifts all over the world. Thus vast amounts accrue in the hands of "foreign banks and private owners as well," which are given the fancy title of foreign trade balances and the Treasury honors these by selling them gold at $35 an ounce.

Nevertheless throughout the years, Government officials, bankers, business advisers, economists, teachers and Members of Congress continue to think and talk about these non-existent gold formulae and our currency as though they were real. They have been so effectively brain washed that they continue to delude themselves and others by repetition of untrue and wholly fallacious theories.

For years we have been conducting our lives under this irredeemable and constantly depreciating currency. In testifying before the Senate Finance Committee in 1957, retiring Secretary of the Treasury Humphrey, who had just admitted that the purchasing power of the dollar had dropped to 48 cents, was asked:

"But you do think that as long as this inflation keeps up, the savers and pensioners and people who have paid on insurance for 20 to 30 years, are the forgotten people, are they not?"

To this Secretary Humphrey replied:

"They are definitely forgotten people who have been injured. * * * They are severely injured."

In these words was the confession of the Secretary of the Treasury regarding your bank balances and savings.

In spite of the contempt for the legal and property rights of our citizens and gold owners, as shown by the gold regulations and Treasury practices, gold is extremely important to the Treasury as a screen to conceal their real position.

If the depositors in our banks are injured by saving our shrinking currency, there could be no question that gold producers have a greater injury illegally forced upon them. Their gold is taken under coercion

by a Treasury acting without authority and they are forced to accept Federal Reserve currency in exchange for their gold. They are brazenly robbed.

In spite of the Treasury's repeated insistence that U.S. citizens cannot possess gold, they misrepresent gold to the people in order to mislead the public. In hearings before the Senate Finance Committee in 1957, former Treasury Under Secretary Randolph Burgess admitted:

"We have got a kind of gold standard and to the extent the people have confidence that we are going to keep the money nailed down to the value of gold, it is easier to sell the bonds."

THE TREASURY CAN NO LONGER EVADE THE LAW

We have had no gold money or monetary gold in this country for a quarter of a century. Gold held by our Government is merely metallic gold as a commodity.

It is in the same class as the gold which is owned in the thousands of gold mines and properties throughout our Western States.

The rights to produce this gold and sell it are on an equal footing with the rights of our citizens to purchase it and to hold it, or to sell it as they may choose.

Congress has no power to enact laws or to authorize regulations which abridge these rights of possession and when the Secretary of the Treasury attempts to enforce such regulations he is acting illegally and without authority.

A current case in the Federal court bears directly on this. It concerns possession of gold bullion by a man in the State of Washington, charging him with a criminal act for which he was arrested, tried and sentenced. During recent years there have been many instances where others have been treated in this fashion and in most cases they have not contested, having been overawed by the long standing propaganda and claims that the government had this power, or they could not afford the cost of an appeal.

This case was appealed, and after consideration by the Court of Appeals, has been remanded to the original court for corrective action or dismissal. The criminal charge for gold possession was based on original emergency orders of the President early in 1933 and upon subsequent Treasury regulations and the Gold Reserve Act of 1934, but it was found by the U.S. Court of Appeals that there are no criminal penalties provided in the Gold Reserve Act for possession of gold and no criminal statutes authorized by Congress.

Of course the conditions under which the original presidential emergency orders were issued, no longer exist. In 1933 they were used to force the people to turn their gold coins and bullion over to the Treasury and later, title to this gold was given to the United States in the Gold Reserve Act of 1934. It all became commodity gold and gold coinage was wiped out.

In fact, even the Treasury has recently lifted bans on the possession of gold coins and they are now permissible to be held by the public and are classed as collectors' items. But the old criminal bogey, as to gold bullion, is still held over the heads of the people by the Treasury. It is interesting to note the language of the court of appeals in reversing this case:

"It seems vital as a matter of national policy that emergency regulations and almost dictatorial powers granted or conceded in the turmoil of war, cold war, economic revolution and the struggle to preserve a balanced democratic way of life, should be discarded upon return to normal conditions, lest we grow used to them as the fittings of ordinary existence. Executive regulations drafted and confirmed for an emergency should expire with the emergency."

Since the Gold Reserve Act of 1934 established the status of gold owned by the United States as merely commodity gold, and abolished any former status it may have had as money, or monetary gold, it had the effect of establishing all gold in the United States as commodity gold and as private property.

Neither Congress nor the Secretary has any power or authority to prevent U.S. citizens from buying, selling, or holding gold; or

To prevent the mining or processing of gold in the United States, or to make regulations which would interfere with the proper conduct of such business by the owners of this gold, or any mineral deposit containing same; or

To set a price limit on gold, or to compel its owners or producers to sell it in any manner, or at any price which does not conform to valid laws regarding private property; or

To require gold miners and producers to have any form of license in order to melt their gold, which is a necessary part of mining to change it from the form of a concentrate in which it is mingled with other metals, and to prepare it for sale; or

To confiscate privately owned gold or to assess any owner with a penalty or a threat of penalty, because of its possession; or

To appropriate or take possession of privately owned gold, in any manner which violates the property rights of the owners, or contrary to any valid law made to protect them; or

To misrepresent the status of gold owned by the United States and to state or imply that it is in any manner connected with the present irredeemable currency in common use.

In considering newly mined gold from properties in the United States and summarizing the laws which must be obeyed, by the Secretary of the Treasury, we find he is governed by the following well settled legal principles:

Price control of commodities and private property is unconstitutional;

Private property and property rights of all U.S. citizens are protected under our Constitution and must be so recognized and respected;

Private property of citizens is protected from seizure or confiscation;

Private property cannot be taken for public use without just compensation and this cannot be determined without a hearing.

It should come as a welcome breath of hope for the future of the gold-mining industry to consider that although in the past we have been singled out and made the victims of lawless treatment by our Government, we have well-settled rights which can be invoked and can reverse this condition for the future.

Gold producers have been an isolated industry with limited public contacts in the past but the drastic effects of the manufactured inflation has brought gold into fresh prominence and as the cycle of inflation continues the doubts and the growing resentment of the people can compel the Government to establish and use real reserves of gold, for there could be swift collapse of the multiplication of paper currency now being used.

PEOPLE WANT GOLD

In recent years there has been increased buying of gold in free countries abroad. Our substantial citizens have been adding to their holdings, but these had to be handled as bulk purchases since the sales were large and the storage abroad was expensive, so this was never a practical market for our modest citizens.

But there has been preparation underway for some months to bring the advantages of a free gold market to us close at home, and on such a scale that it could be a popular market. With expenses cut to a minimum it can serve all classes. This is about ready to function in Canada and trading would be on the open commodity markets both there and here in the United States. The gold will remain in bank vaults in Canada and warehouse receipts will be traded on the market.

Even in its preliminary steps the volume of demand for gold is causing surprise in Canada and they see that here is a world market in the making. But we can forsee that it will not be necessary even to go to Canada or to trade there, for we now know that morally and legally there is a clear right for us to have a free gold market here in the United States, and to start the building of such a market, the growing fear and unrest in the minds of our own people can be a factor of great importance.

Among other steps, there is a carefully prepared case in progress in the Federal courts to terminate all control of newly-mined gold through Treasury regulations.

Our citizens have watched their bank accounts wither and fade in the purchasing power of their deposits and they have plunged into the stock market to multiply their shrinking dollars only to find that this is now even a bigger gamble than horse racing.

They want something tangible, that could be safe and dependable but whose value can grow as it attracts increased public demands for its possession.

Throughout history, this has always been the function of gold. It has not been permitted to register its value in this country during the past 25 years. That value should soon show at more than $100 per ounce.

Let us therefore view this as a fresh start when we turn away from the past and foresee a far different future.

In Defense of the Small Business Administration

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MULTER. Mr. Speaker, Barron's weekly recently published an article criticizing the operation of the Small Business Administration. George J. Burger, vice president of the National Federation of Independent Business, immediately took exception to this criticism. Under date of February 9, 1959, he wrote to the editor of Barron's giving facts and figures which negate the conclusions contained in the article.

Let us continue to be critical of Government agencies when they are wrong. But let us always be fair and by all means constructive.

I commend Mr. Berger's letter to the attention of our colleagues.

FEBRUARY 9, 1959.

EDITOR, BARRON'S WEEKLY,
New York, N.Y.

DEAR SIR: You take the cake for emphasizing the negative in your article, "Easy Mark", dealing with the Small Business Administration, which appears in your February issue.

If one's knowledge of this agency were limited to the facts and charges presented, he could reach only one conclusion: that the Small Business Administration and those it

serves are leeches on the body taxpayer. We believe this is just not an accurate picture.

For instance, you cite the need for a "long, hard look" at the agency. Why not advise your readers that the Small Business Administration is under constant scrutiny by Congress and congressional committees?

You refer to the agency's distribution of "largesse." Why did you not bother to inform your readers of the fact that the agency's lending functions are under constant policy control by a three-man board composed of the SBA Administrator and the Secretaries of Treasury and Commerce. Even if the SBA Administrator were a free-handed man with Government funds (we have heard him criticized frequently for being too stingy), certainly there are few who would charge this to the two Secretaries.

You talk about the rising rate of delinquencies and defaults. Why did you not advise your readers of the fact that out of $364,981,000 in business loans disbursed to June 30, 1958, the agency had suffered a loss totaling only $235,316.91, which amounts to 0.0007 percent of all moneys allocated to that date. Why did you not report that some 7,704 of the 8,135 businesses who actually received payments from the agency to June 30, 1958, were right on the button with their payments?

You cite some instances in which lending functions have been handled unwisely. May we ask if you have made any check to find if these questionable procedures are the rule, rather than the exception to the rule. Frankly, for the past 3 years I have been making trips across the country, making on-the-spot investigations of the agency's operations. From what I have seen I can say, without fear of contradiction, that by and large Small Business Administration personnel are doing as efficient and as honest a job in their lending activities as any of the private banks (ranging from the Chase of New York down to country banks). I have had the pleasure of doing business with in my 50 years experience in the business world. I say this as a person who owned and operated his own business for 35 of these 50 years.

Believe me, I do not hold, nor does the federation hold, that the Small Business Administration is perfect. There is room for improvement in it, just as there is in every last other organization in the world. The important thing, as we see it, is that the agency is rendering a necessary service to small businessmen, and that as it goes along it is taking steps to make its operations more efficient and effective. We believe it and its operations should be open always to inspection and criticism. However, in all fairness, we believe these should be of the balanced variety.

With all best wishes,

Sincerely,

GEORGE J. BURGER,
Vice President.

Economic Lifeline Severed

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. MOORE. Mr. Speaker, while the subject of the following article from the Charleston Gazette is not located in my district, it is a parallel to similar conditions which exist in my district.

I am indebted beyond measure to my colleague [Mr. SLACK] from the Sixth West Virginia District who has undertaken the arduous task of touring his southern West Virginia area for a first-hand experience with the stark facts of hunger due to unemployment.

The community in point used to contain the operation of the coal mine, one of our Nation's major steel operations. It, thus, reflects a condition afflicting not only the coal industry, but other industries as well.

This town is located in a rather remote section of West Virginia. It is situated in Boone County, W. Va., and there is nothing by which industrious men may earn their daily bread, other than the coal-mining industry.

It is, as is quite common in southern West Virginia, a one-industry area and when a mine is exhausted or when a lack of markets shuts off production, unemployment results.

I will not confine my observations to the southern section of my State—which, as a whole, outproduces the world in soft coal—since there are many coal communities in my district which share a common burden of economic distress.

This is the third graphic newspaper account of our West Virginia situation which I have inserted in the Appendix to the RECORD, and I respectfully call the House's attention to this article:

NELLIS' LIFELINE CUT BY SHUTDOWN IN 1956

(By John G. Morgan)

NELLIS.—The economic lifeline of the little community in Boone County coal country snapped 3 years ago.

One hundred and fifty men lost their jobs when the mine shut down.

They were the last on a payroll that at one time carried 400 names.

A closed theater and snack bar and a failing real estate venture under the fancy name of Acorn Village are evidence of the times that were.

Bethel Pauley, a small, meek, 40-year-old man with auburn hair, lives in a little yellow house on a hill in this oddly-situated town.

He is an unemployed coal miner. He and his wife have six children who are 6 to 18 years old.

Representative JOHN M. SLACK, Jr., of West Virginia's Sixth Congressional District paused to visit the Pauleys during his tour of coal regions hit by unemployment.

In the neat little four-room house, the Congressman was given a word picture generally brighter than that for most families victimized by economic trends and mechanization in the mines.

Among other things, Pauley has clerical skills that have enabled him to land and hold the part-time job of recording secretary for the local union, which still carries on.

Pauley explained that he studied bookkeeping at high school. As a soldier during World War II, he continued his studies in night school at the University of Hawaii.

His part-time job pays $40 monthly, but all of that is earmarked as the precise amount of the monthly payment on his house. Original cost of the house was $3,000. He has chopped it down to $1,800.

The ex-miner has been out of a full-time job only a month. But this isn't the first time. His employment in small mines has been sporadic over a long period.

He's a man who likes to go by the record. When asked about his employment history, he consulted a book that he had stowed away in a small safe.

Pauley said he owns a 1947 car which he bought during a period of employment for $150. He has a garden and a small amount of other land near the house.

His TV set works, and he has been subscribing to a newspaper.

Despite the fact that his living conditions are better than those of perhaps thousands of other unemployed miners, Pauley admitted:

"The future doesn't look too good."

SLACK asked him if he had thought about seeking employment in another State.

"I have studied about it, but I haven't found the answer," he said.

In Nellis, the Congressman also talked to Harold Javins, Earl Dodrill, Billy Joe Prichard, Russell T. Hoover, and Griff Abshire.

At least one of them has been unemployed since March, and most of the others are dependent on small punch mine operations for a substandard living.

While in a small restaurant within the lonely town, SLACK accommodatingly dropped a few coins into a juke box and chose selections to meet the tastes of two teenage couples.

They danced rather wildly but with a measure of grace across wavering boards, just as any teenagers will dance when so much of life is before them and when there is so little to worry about.

Proposed Amendment to the Constitution

SPEECH
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. BOYKIN. Mr. Speaker, the proposed amendment to the Constitution introduced by my good friend and colleague from my neighboring State of Florida, Mr. SIKES, has my wholehearted support and I fully concur in his remarks concerning the urgent necessity for the adoption of this amendment by this Congress.

I have read the report which was adopted by 36 State chief justices at their 1958 meeting, in which report these chief justices from 36 of our sovereign States declared that our Supreme Court has tended to adopt the role of policymaker without judicial restraint. I have had occasion to personally discuss this report with nearly half of these chief justices, and on many occasions before and since this report was issued I spent hours with many outstanding men, going over this matter, including a great and good American who we thought made one of the greatest speeches ever made on this issue, and I am referring to our own Judge J. Ed Livingston, Chief Justice of the Supreme Court of Alabama, one of the most learned lawyers of all time.

I believe that all right-thinking Americans will support my good friend and colleague, BOB SIKES, in his proposed amendment.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. SCHENCK. Mr. Speaker, today marks the 41st anniversary of the Lithuanian Declaration of Independence. Because of the many folks of Lithuanian descent in my Third District of Ohio, I feel that it is especially fitting to call attention to this day in the CONGRESSIONAL RECORD.

In 1918 our country rejoiced with the Lithuanian people when they became a free nation. By decree in 1940 Soviet Russia cut short this independence by absorbing this little, freedom-loving nation. Nevertheless, this act of tyranny could not stamp out the steadily-burning flame of liberty which lives in the Lithuanian people.

We as citizens of a free, democratic nation join with these people and with those of Lithuanian descent in the United States in the fervent hope and prayer that freedom will one day be restored to this long-suffering nation.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Monday, February 16, 1959

Daily Digest

HIGHLIGHTS

Life insurance company taxation bill cleared for floor action by Rules Committee.

Senate

Chamber Action

Routine Proceedings, pages 2063–2156

Bills Introduced: 34 bills and 2 resolutions were introduced, as follows: S. 1041–1074; S.J. Res. 49; and S. Res. 79. **Pages 2068–2069**

Secretary of State Dulles: In accordance with provisions of S. Res. 79, adopted today, Senate stood in silent prayer for the early and complete recovery of Secretary of State Dulles. **Page 2063**

Nominations: The following nominations were received: 1 civilian; 4 judicial; 705 Foreign Service; 298 postmasters; 2 to be alternate representatives to 13th Session of General Assembly, U.N.; and 2 Army. **Pages 2157–2162**

Confirmations: The following nominations were confirmed: Philip W. Bonsal, of D.C., to be Ambassador to Cuba; Philip K. Crowe, of Maryland, to be Ambassador to Union of South Africa; Sheldon T. Mills, of Oregon, to be Ambassador to Jordan; William C. Trimble, of Maryland, to be Ambassador to Cambodia; and Raymond A. Hare, of West Virginia (who is Ambassador to United Arab Republic), to serve concurrently as Minister to Yemen. **Page 2162**

Program for Tuesday: Senate met today at noon and adjourned at 4:54 p.m. until noon Tuesday, February 17. **Pages 2121, 2156–2157**

Committee Meetings

(*Committees not listed did not meet*)

PRESIDENT'S FARM PROGRAM

Committee on Agriculture and Forestry: Committee heard Secretary of Agriculture Benson and his associates testify and answer questions with regard to the President's farm recommendations.

Mr. Benson will continue his testimony tomorrow.

AIR FORCE NOMINATIONS

Committee on Armed Services: Special subcommittee continued its executive consideration of the nominations of 22 Air Force colonels for promotion to temporary brigadier generals, but made no announcements, and adjourned subject to call of the Chair.

POWER MARKETING

Committee on Interior and Insular Affairs: Committee continued its hearings on Federal power generation and marketing in relation to the Department of the Interior, with testimony from Governor Loveless, of Iowa; Representative Coad; Gus Norwood, Northwest Public Power Association; Alex Radin, American Public Power Association; and Lloyd Caulkins, of LeMars, Iowa.

On Saturday, February 14, testimony on this subject was heard from G. W. Cornog, KEM Electric Cooperative, Linton, N. Dak.; Ed Schlender, Snake River Power Association; Howard Scott, Upper Colorado Basin Preference Users Committee; Norton Davis, Plains Electric G. & T. Cooperative, Albuquerque, N. Mex.; William Fraser, Omaha Public Power District; W. P. Venable, Consumers Public Power District, Columbus, Nebr.; and Dewey J. DeBoer, Nebraska Public Power System, Columbus.

On Friday, February 13, committee began these hearings, with testimony from Senators Mansfield and Langer, the latter of whom introduced a North Dakota delegation; Charles Mahoney and Henry Swenson, both of the Upper Missouri G. & T. Cooperative; Kenneth Holum, A. S. Wendel, Robert St. Cyr, Eugene E. Hull, and Oscar Bergman, Jr., all of the Midwest Electric Consumers Association; J. W. Grimes, South Dakota Water Resources Commission; Virgil Hanlon, East River Power Cooperative, South Dakota; S. A. Forseth, Williams County Electric Cooperative, North Dakota; R. L. Potts, Burke-Divide Electric Cooperative, North Dakota; Teleford Anderson, North Dakota Statewide Association of REA Cooperatives; William E. Trommershausen, a utility engineer, Columbus, Nebr.; Max Stanley, Iowa Committee on Missouri Basin; E. C. Myrland, Northwest Iowa Municipal Power Group; A. L. Chantry, Cuming County Rural

Appendix

Asleep Under Spires

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. DODD. Mr. President, the U.S. Senate and the Nation are indeed fortunate during these years of crisis to have in the post of Senate Chaplain so great a spiritual leader as Dr. Frederick Brown Harris.

Dr. Harris brings to the deliberations of the Senate each day a clear perception of the moral nature of the struggle between freedom and communism. He brings to us as well an informed and scholarly view of national and international affairs, and a determined courage to speak the truth as he sees it.

Not often do we find all these qualities so wonderfully combined in one man.

Fortunately, the good influence of Dr. Harris is not confined to the Senate. He is a nationally renowned churchman. His writings are widely read and his highly esteemed newspaper columns are syndicated and appear in many papers across the country.

We in Washington are particularly fortunate to have his column appear each Sunday in the Washington Star, and I earnestly recommend it as "must" reading.

We are living in a period when we hear a great deal about flexibility, accommodation, and mutual concessions. It is therefore vitally important that as wide a hearing as possible be given to Dr. Harris, who has such a clear understanding of the uncompromising evil of communism and the inflexibility of moral values.

I wish to join Dr. Harris in recommending to all Americans the book, "What We Must Know About Communism," by Harry and Bonaro Overstreet. And I also invite all to read Dr. Harris' fine column, "Asleep Under Spires," which appeared in the Washington Sunday Star on February 15, 1959.

I ask unanimous consent to have this column printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASLEEP UNDER SPIRES

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

Everything a spire symbolizes is now under the most formidable assault that Christianity has faced since the first spire was lifted against the sky. It is for the defense of the values at the heart of that faith that astronomical sums are being spent as a shield from the threatened massive attacks of the godless who scorn our Christ and assail His ways. The most vital debate now raging inside our Government has to do with making sure that we have the physical weapons to meet even surprise attempts to enslave us. Our standard of morals, the outgrowth of our religious faith, deters us from attacking first, no matter what the peril may be. Only the enemy's fear of our arms saves them and us from a world holocaust.

It is startlingly true that the next 2 or 3 years may determine the fate of the American Republic. We are now faced not by a secret but by an open conspiracy. The failure of America to preserve its promise and its life will not be due finally to America's weakness at decisive moments. It will be due to the refusal of the American people to see the obvious, to believe what the enemy has openly put on paper, to be so comfort-loving as to refuse to believe what the enemy disdains to deny.

Nothing could be more clear than that the present competitive coexistence drive is nothing but an invitation to assist in cutting our own throats. The recent smiling Soviet salesman in this as yet land of the free did not, in any of his applauded blandishments quote a recent declaration of his Kremlin master, "We must recognize that we cannot coexist eternally. One of us must go to his grave. We do not want to go to the grave. They do not want to go to their graves either. So what must be done? We must push them to their graves."

But what has this to do with spires? Answer: everything. Strange and unbelievable as it may be, some church leaders, especially members of denominational hierarchies, rather than pastors, are more concerned about the faults of democracy than they are about the ominous plottings of the sinister system constantly growing in strength, fantastically dedicated to the destruction of democracy, faults, and flaws and all. The results of the tranquilizers and sleeping tablets being concocted by doctors of divinity to lull the church to slumber in this fearful day of destiny are plainly indicated as exhibit 1 in the recent report of certain churchmen meeting in Cleveland. Their recommendations regarding communism are like lifting an umbrella with the funnel of a cyclone headed for those singing complacently "what can shake our sure repose."

History repeats itself. There were religious leaders during our American Revolution who made George Washington's almost impossible task harder. There were many of the best people in that day, including religious leaders, who were spiritually and morally asleep to the implications of the Revolution and agitated for negotiation and appeasement with the British forces. There are some in the present global conflict who might profit by reading the correspondence of George Washington with church people—especially with preachers who wanted nothing but peace, even if it was based on supine surrender to the English tyranny. Even in the struggle which brought our freedom there were those, as now, asleep under the spires.

Will Rogers once said that what Americans needed most was to have their speedometers taken away and exchanged for alarm clocks. An alarm clock is now available for America and for all the free world. Its bell tolls for all who remain asleep and perhaps for the rest of us, too. It is a volume whose reading is a must for every intelligent American. Its authors are Harry and Bonaro Overstreet, whose ability to capture, in scintillating chapters, deep human insights, is already well known. Its arresting title is, "What We Must Know About Communism." And it is just that. What we must know before it is too late. When America knows the unvarnished truth about this diabolical conspiracy the battle will be half won. Our dedicated might will complete the conquest.

The clanging truth in this book transferred to the minds of the American people would be terrible as an army with banners. Between the covers of "What We Must Know About Communism" this foul thing stands revealed in all its horror and terror. Here it is with all masks off, its doubletalk made plain, its twisted duplicity, its seductive lullabies, its refuge of lies, its continuing revolution which can never end until this putrid despotism of freedom is dead.

To be sure, at times, this abomination of abominations may be like the smiling flower, but always it is like the serpent under it. What happened to Hungary and to the murdered millions in their own coerced lands as they continue to liquidate all opposition is the fate they decree for every people who defy the Marxist wave of the future.

In a dozen years this is the first time "Spires" have urged the reading of a modern book. It is done now at no one's suggestion or request, but because we verily believe that this stark revelation, accepted by our people, will go far to save all we hold dear. This book is a call to arms. If necessary, sell your coat or radio to get it, and then, when all the family has read it, loan it to neighbors. It is available at all bookstores. It is a must in this day of danger and of destiny—"What We Must Know About Communism." On its cover could well be emblazoned St. Paul's words to the ancient church, "Awake, O sleeper, arise and Christ shall give you light. Make the most of time, because the days are evil." And time is fast running out.

The Growing Horror of Lung Cancer

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. NEUBERGER. Mr. President, the renewed illness of our illustrious Secretary of State has made us all conscious of the great questions of medical research, cancer, heart disease, and other serious illnesses.

It is particularly distressing when people punish themselves so deliberately that they may come down with one of these diseases. An article published in Today's Health, official periodical of the American Medical Association, on the whole question of cigarettes and lung cancer, raises just this burning and crucial question. The article from Today's

Health by J. D. Ratcliff, noted writer on medical problems, is reprinted in the March 1959 number of the Reader's Digest.

This article notes that deaths from lung cancer in the United States have risen from 2,500 in 1930 to an estimated 35,000 last year. The article claims that this is almost exactly proportionate to the increase in cigarette sales.

The article from Reader's Digest, entitled "The Growing Horror of Lung Cancer," is based on information from the internationally known chest surgeon, Dr. Alton Ochsner, of New Orleans, La. I believe all Members of the Senate and House should be informed as to the contents of this article and, therefore, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GROWING HORROR OF LUNG CANCER

(Condensed from Today's Health, published by American Medical Association)

(By J. D. Ratcliff)

William Brown[1] is a successful businessman in a large southern city. Had he drawn up a personal balance sheet last spring, it would have shown that life had been good to him. At 55, he owned a thriving business and an attractive home. He was happily married and had two sons doing well in college. Except for minor ailments, he had enjoyed excellent health all his life.

True, in recent months Brown had been coughing with increasing frequency. But all smokers cough, and he paid little attention. An increasing shortness of breath he accepted as a normal part of the aging process. A small decrease in weight he put down on the good side of the ledger. Also, he had had a slight chest pain, but nothing serious enough to bother a doctor with. Then one morning last June while brushing his teeth he coughed deeply and brought up sputum slightly streaked with blood.

Brown, of course, had read about lung cancer and its apparent association with smoking. A two-pack-a-day man, he had even thought vaguely about cutting down. Now as he shaved he ran through the lung cancer symptoms he knew: bloody sputum, he remembered, was one. By the time he had finished he was frankly worried, and after breakfast, instead of driving to his office, he went to his doctor.

The physician's suspicions were immediately aroused by the symptoms. Yet a number of things could cause chest pain, cough, weight loss, bloody sputum—such things as lung abscess, inflamation, tuberculosis. Diagnostic step No. 1 was chest X-rays. When they revealed a suspicious shadow the doctor advised Brown to go to a chest surgeon.

Two days later Brown reported to the specialist. Another set of X-rays was taken. Then came a sputum test. Lung cancer frequently sheds cells which the pathologist can identify in specimens from the deep chest. This test gave a positive answer. To resolve all possible doubts, a bronchoscopic examination followed. A slender tube was slipped down Brown's throat. Through the barrel of this instrument the specialist can often see the suspicious mass and even take a pinch of it for examination by a pathologist. This test, too, said yes. Brown had lung cancer.

"Those two words, 'lung cancer,' are the ugliest in all medicine," says one physician. But Brown had the emotional stability to face the facts, and was told the truth. He asked about his chances.

Of 100 people who get lung cancer today, the physician told him, 45 will be inoperable by the time they consult a doctor, their cancer so widespread that surgery would be futile. Chests of the remaining 55 will be opened. This is drastic surgery and as many as 11 of the 55 patients may die of it. Inspection of the chest cavity will often give clear evidence of cancer spread, possibly even to the heart itself. In such cases the surgeon may leave the lung untouched and simply close the wound. These patients—perhaps 12—will be dead in a few months.

By now the original 100 has dwindled to 32 patients who are operable. The surgeon removes all or part of the diseased lung and prays that no cancer seeds have been left behind. But in a distressingly large percentage of cases, clusters of these cells lurk in hidden recesses, to continue their growth. According to present statistics, only 5 of the 32 patients who survive the operation will be alive—and presumably cured—at the end of 5 years. Thus the score stands: 5 survivors out of 100 victims.

Brown accepted these grim statistics with outward calm. Advised that haste was all-important, he said a week would be sufficient to get his affairs in order. It was, understandably, a bad week.

When he reported to the hospital there was still much to be done. Before surgery, doctors have to decide whether the patient can get along with one lung, or will face gasping suffocation. The average healthy adult has about eight times as much lung function as needed in sedentary activity, but years of heavy smoking wreck lung tissue and erase the margin of safety. "Then," says Dr. Alton Ochsner, internationally known chest surgeon, "we have only the dregs to work with."

Brown's tests indicated that he would have barely enough reserve to get by. During the next 3 days he took a course of breathing exercises to prepare himself for life with one lung. On advice of the physician he had stopped smoking a week earlier, at the time of his first visit.

Finally, the day of surgery arrived.

In many kinds of surgery, one is impressed by the delicacy of the technique. In pneumonectomy—lung removal—the strongest impression is of the bloody massiveness of the operation.

Brown was propped on his side on the table, arm above head. A tube was slipped down his windpipe to give the anesthesiologist a clear airway. Then the surgeon made a great sweeping incision extending nearly halfway around Brown's body. It began under the nipple, dipped under the arm, ended just short of the spine.

Layers of skin, fat and muscle were parted, exposing the ribs. With heavy shears the fifth rib was removed and discarded. Spreaders were then applied to push other ribs apart. The resulting opening was vast, cavernous, to permit the surgeon to examine the entire chest cavity for signs of cancer's spread.

With Brown's chest cavity exposed, the first step was to sever the pulmonary artery. Two ties of cotton about an inch apart choked off the flow of blood. Then the artery was cut between the ties. The stump leading to the heart was curled back, delicately surtured.

Next the two pulmonary veins were similarly treated. That left one final point of attachment for the lung: the main bronchus, one of the Y forks from the windpipe. This too was clamped and out, then the lung was lifted out of Brown's chest. Subsequent examination showed the cancer to be approximately the size of a goose egg.

Now the surgeon turned his attention again to the bronchus. It is vital that this be sealed off with absolute tightness, otherwise bacteria-laden air from the outside may seep into the chest cavity to cause devastating infection. To seal it, the tube was sutured tightly, and a bit of tissue borrowed from the chest wall was grafted over the end. The seal was then checked for leaks, much as an inner tube is checked: the chest cavity was filled with saline solution and the observers watched for telltale bubbles. In Brown's case the seal was tight.

A minute examination of the chest cavity came next. Often there are little pea- or grape-sized cancers, usually gray-pink in color, along lymphatic ducts. These are meticulously dissected away and so are any other bits of obviously cancerous tissue—a painstaking task that may take up to 6 hours. But Brown was fortunate. There was no indication that the cancer had spread beyond the lung.

There were still several final steps to be taken. Chest nerves were injected with pain-deadening drugs whose effect would persist for several days. The ribs were pulled back into place and wired together. Finally, the gaping wound was closed over the huge emptiness where the lung had been. In time the remaining lung will enlarge to fill part of the space, and the rest is soon filled in with fibrous tissue.

For a day after surgery Brown was in an oxygen tent, to ease the burden on his remaining lung. Despite the drugs he was beset by almost constant pain and racked by coughs. But gradually the pain subsided and wound healing began. After 10 days he left the hospital to convalesce at home.

His prospects? It is too early to say. If he survives, he will have to live with uncertainty for 5 years. Only at the expiration of that period will his cancer be considered cured.

A few years ago, lung cancer was a medical problem of no consequence. A survey of world medical literature in 1912 showed a total of only 347 cases reported. Today annual deaths are measured by the tens of thousands. Tomorrow?

"It frightens me to think of what is going to happen in another decade when our present smoking habits catch up with us," says Dr. Ochsner. "Already, lung cancer has achieved pandemic proportions. Holland had a twentyfold increase in deaths between 1924 and 1951. Death rates in England and Wales have climbed tenfold. In the United States the record is about the same—the toll rising from 2,500 in 1930 to an estimated 35,000 last year. It is significant that the sharp increase in lung cancer is almost exactly proportionate to the increase in cigarette sales. It is my firm conviction that every heavy smoker will develop lung cancer—unless heart disease or some other sickness claims him earlier."

Is there, then, any protection for the heavy smoker? Dr. Ochsner, a nonsmoker himself, believes there is. Most lung cancers appear to grow rapidly. It is therefore highly important to detect them at the earliest possible moment before they have spread to other organs or tissues. In sum, before they give any outward symptoms.

Only X-ray and sputum tests can discover cancer at this stage. Dr. Ochsner believes that after the age of 40 every pack-a-day smoker should have chest X-rays at least every 6 months, preferably every 3 months. A set of chest X-rays, front and side views, usually costs from $15 to $25—expensive, but no more so than the cigarettes themselves. If enough people took such precautions, Dr. Ochsner believes, lung cancer might become 50 percent curable, instead of 95 percent fatal.

[1] The name is fictitious for obvious reasons.

The Farmer's Problems

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three of the GTA Daily Radio Roundup Digests, for February 5, February 9, and February 12, 1959.

There being no objection, the digests were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF FEBRUARY 5, 1959

Here is a United Press news item that deserves the close attention of every consumer, farmer, and businessman. We'll read it to you: "The Agriculture Department says the farmer's share of the consumer food dollar dropped to 39 cents in the last quarter of 1958. The drop was caused by lower farm prices and higher costs of processing and distributing farm products. Despite the farm price decline, retail grocery prices in 1958 were three percent higher than the year before."

So you see, farm prices are down, retail food prices are up. An old story, familiar to both farmers and consumers. Nobody likes inflation, but it is doubly hard on farmers when they have inflation for what they buy, and deflation for what they sell.

Maybe you farmers noticed a big advertisement that ran in most of the Nation's daily papers a week or so ago. It had a headline that went like this: "Do You Want to Buy Even Less for a Buck." The large illustration showed two baskets of food, one full to represent what a dollar bought back in 1939, and the other almost empty to show what a dollar buys now in a grocery store. The ad ends up with a big boldface type line that says: "Inflation robs us all."

Who paid for the ad? The American Iron and Steel Institute. Maybe the steel industry ad writers didn't understand the farm and food price situation, which is shown so clearly in the news item we just read to you. No doubt, the farmers themselves could write some pretty good advertisements about inflation, because they know how much tractor prices, and the prices of other heavy machinery made mostly out of steel, have gone up.

Still, that is beside the point here. The unfortunate thing is that the millions of consumers in the big cities, who, undoubtedly, read that steel industry inflation ad, will tend to blame farmers.

And as every farmer knows, this is an unfair situation. Farm prices are down more than 20 percent from 1952 levels, and that's been a tremendous brake on inflation. This farm depression has held food prices down, because surely they would be considerably higher if farm prices were not way down. This has meant that consumers have more money left over, after buying all the food they can eat, for purchases of houses and cars and clothes and TV sets. That's been of direct benefit to businessmen, manufacturers, and consumers.

And it is fair to ask, are food prices really high? The Federal Government has done some research into this question. It says that a worker in an American factory buys—today—a loaf of bread, a quart of milk, a dozen eggs and a two-pound chuck roast with what he earns from 1 hour of labor. That's pretty good eating. Back in 1940, he had to work an hour and one-half for enough pay to buy that much food.

So we wonder if it is fair to say, as the steel industry does in this big advertisement, that food prices are high and "inflation is robbing us all."

Maybe the steel industry, and all the rest of us, should be grateful to farmers for holding back inflation, and furnishing us with all the food and fiber we can use, with some left over.

GTA DAILY RADIO ROUNDUP OF FEBRUARY 9, 1959

The experts are calling it VI now, but you'll recognize it as "vertical integration." It is becoming a familiar term in almost every farm household, as it becomes more and more a part of family farm living.

Just what is vertical integration? It is a concentration of business activities under one single management. Just for example, a chain of grocery supermarkets that owns processing plants, and distributing centers to gather and prepare the food. It may contract directly with farmers to raise crops or livestock. It may even own the farms, and hire the farmers.

A lot of people are concerned about what may happen to family farms and food prices as vertical integration expands. Farm, Government, religious leaders, and many businessmen, too. Your co-ops are very concerned, because your survival and theirs depends upon the direction vertical integration takes.

The Reverend Louis J. Miller, Catholic rural life director of the Sioux Falls, S. Dak., diocese, writes about the problem in the diocese newspaper. He warns that if VI goes the wrong way, farmers may be forced to surrender their traditional management responsibilities—such as marketing, feeding, purchasing, breeding stock selection, and so forth.

In California, he says, 90 percent of the beef cattle are produced by 275 farmers, and they are not family farmers. "How would you like about 300 such operations fattening an average of 14,000 head in our fair State of South Dakota?" the Catholic leader asks.

And Reverend Miller gets right to the core of the vertical integration problem with these questions: "Who will control it? For whose benefit will it be operated?" That's what farmers all over are asking. They understand that vertical integration—is an invention of corporate business—because it was logical in the drive for more profits. That's fair enough, and good business, but the farmers don't want to lose control of their family operations, and they feel they are entitled to their share of the profits.

One cooperative leader put it this way: "It makes a great deal of difference whether contract farming (another form of vertical integration) originates with the farm, or cooperative on behalf of the farm, or whether it is started by outside interests, usually at the expense of the farmer."

And Reverend Miller has a direct message for farmers. He says: "Vertical integration is here in strength. You, the farmers, can control it. You cannot ignore it, except to lose farming as a way of life. You must study it through your farm organization, and find means of controlling it through your farmer's cooperative, so as to channel a just share of its benefits to your families on the land."

That's quite a challenge, of course. But your cooperatives are moving to meet it. And how can you help? How can the individual farmer help? First, buy and sell co-op all the way. It is your business that makes your co-ops strong enough to meet bigness with bigness. Build your co-ops to work for you.

GTA DAILY RADIO ROUNDUP OF FEBRUARY 12, 1959

These are busy days for cooperatives, here at home, and in the State legislatures, and in Washington. President Eisenhower made news when he used interest-payments as an excuse to tell REA co-ops that they were being subsidized.

The President talked to 8,000 delegates, and got a cool reception when he told them, "REA co-ops do not need, do not deserve, and should not accept any special help from the Government."

Many delegates pointed out that it was Government policy and special help that boosted bank interest rates from 2 to 4 percent, and bankers did not complain.

And this approach by the President comes on top of the unpalatable recommendation by his Secretary of the Treasury that gives the impression co-ops do not pay taxes. The Secretary said, in effect, "We'll tell you how to run your business, and here's how: You must pay 4 percent interest on your savings. You must pay out everything after 3 years; liquidate your savings. And, if you do that," he said, "I'll recommend that you pay no income tax to Uncle Sam."

All self-respecting co-ops would turn down such a deal as undesirable, unsound, and in bad faith. But the reason there's so much confusion about co-ops is that the propaganda mills keep grinding away on half-truths, complete untruths, and outright lies.

And the erroneous statements in papers like the Wall Street Journal do not help, as it's sharp readers well know. For example, here is one letter the editors of this business and financial paper got. It is from C. H. Lishbough, a reader. Mr. Lishbough says: "Your editorial in the Wall Street Journal, 'Share and Share Alike,' contains several misleading and incorrect inferences regarding the business and taxation practices of cooperatives.

"Although you do not mention it by name, the patronage rebate to which you repeatedly refer is, of course, non-taxable to any type of business, whether legally organized as a cooperative or not.

"Thus, in that long-forgotten year when Henry Ford refunded $50 to the purchaser of each new car he produced, he was paying a patronage rebate.

"Under today's tax laws, Ford Motor Co. could do the same thing with impunity fully equal to that enjoyed by the cooperatives. The much happier owners of new Fords would not have to pay income tax on the rebate either.

"But the interesting fact is that the issuance of stock dividends by noncooperative corporations is usually undertaken for much the same reason used by the cooperatives in establishing revolving funds for the delayed disbursement of patronage rebates: The conservation of working capital. In each case, such action must be taken with the support and approval of the stockholder owners.

"And this may be the crux of the matter, for while we hear a great deal, indeed, about the great tax advantages enjoyed by cooperatives, we see very few corporations taking advantage of the opportunity which is legally open to all, to organize themselves as cooperatives.

"Perchance, the basic reason for this is the very substantial difference in the exercise of controls by the stockholders in the cooperatives, as compared to ordinary corporations. The cooperative stockholder has one vote, regardless of the number of shares which he may own, while the owner of common voting stock in other corporations has one vote per share.

"Many corporate managers, born and bred in the world of proxy contests, would sincerely prefer to avoid confronting themselves

with such an utterly democratic group of stockholders—and no doubt many cooperative managers feverishly wish they didn't have to either. And so the practical disadvantages must outweigh the small tax advantages which certainly carefully defined types of cooperatives do enjoy."

And that is the view of a reader of the August Wall Street Journal, on co-ops. And, concludes reader Lishbough, "Alas, the cooperative society is not just around the corner."

Excerpts From Remarks Made by Governor Williams, of Michigan, at a Meeting of the Michigan Soil Conservation Districts, Michigan State University

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. HART. Mr. President, this week the Committee on Agriculture and Forestry, on which I am privileged to serve, has been hearing the testimony of the Secretary of Agriculture, Mr. Benson. It strikes me that the remarks of Hon. G. Mennen Williams, Governor of Michigan, at a meeting of the Michigan State University Soil Conservation District personnel on January 23, would be of help to all of us as we seek to improve our agricultural economy. I ask unanimouse consent that the text of the remarks be printed in the Appendix of the RECORD.

There being no objection, the text of the remarks was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM REMARKS BY GOV. G. MENNEN WILLIAMS AT A MEETING OF THE MICHIGAN SOIL CONSERVATION DISTRICTS, KELLOGG CENTER, MICHIGAN STATE UNIVERSITY, EAST LANSING, MICH., JANUARY 23, 1959

It certainly is a pleasure to have this opportunity to speak to a group whose work is as important to the future of the State of Michigan as is the work you are engaged in.

It's not necessary for me, I am sure, to tell you how important soil conservation is, nor how we have progressed in this area over the years. As in many other programs, we've come a long way, but we still have a long way to go.

In 1938, there was one soil conservation district in Michigan. In 1949, there were 18. Now there are 75.

In other words, Michigan in the decade preceding 1949 added 17 soil conservation districts, and in the decade since 1949, we have added 57. This is a record of growth in which every citizen can take great pride.

Soil conservation districts now embrace more than 90 percent of the land area of Michigan. There are, I am told, more than 34,000 farmers actively cooperating with these districts, while uncounted thousands more have been persuaded to improve their farming practices through the varied activities sponsored by these districts.

It would be difficult to overemphasize the importance of this growth in soil conservation work. Sound conservation practices are among the most precious gifts one generation can pass on to the next. Truly you build a stronger Michigan for your children by the work that brings you here.

Among the activities related to soil conservation is reforestation, and in this area Michigan has a bright record indeed. More than 54,000 acres of State land have been reforested in the last 10 years.

In the same period of time, the capacity of State nurseries to produce seedlings has been increased from 6 million a year to more than 25 million.

Ten years ago, the forest-planted areas of the State totaled 874,000 acres. Now the total is close to 1,300,000 acres.

It is worth noting that of this gain in forest acreage, more than one-half is in private plantings, and a great part of this was brought about through the use of State-grown seedlings made available at cost.

Tree farms, as against forest-planted areas, also show a steady growth in Michigan. Under the State's tree farm program, there are now close to 1,443,000 acres involved in the State's tree farm program, ranging in size from farmer's woodlots to sizable commercial holdings.

And we're saving what we're growing—as witness the sharp reduction in forest fire losses in the past 10 to 15 years. For example, one report shows 106,385 acres of forest lost through fires in the period 1945 through 1949, compared with 32,095 acres in the period 1950 to 1955.

Michigan's forest growth today exceeds the amount removed by harvesting and fires. We are therefore renewing a great resource, and at the same time realizing from that resource concurrent benefits in conservation, and in food for Michigan game animals. As you know, thousands of deer have been saved from starvation by the renewal of feeding areas.

Commercially, not including the Christmas tree business, the forest products industries in Michigan taken together are a $300 million a year business, and show every promise of playing an increasingly important role in our economic growth over the next 25 years.

So much for figures. The evidence of progress in Michigan is heartening. This does not mean, however, that the job of conservation is finished. It is not finished. Every generation faces all over again the great struggle between those who would deplete the soil, either through ignorance, carelessness, or greed, and those who would conserve our soil, and other basic resources, as a gift from the past to be improved as it is turned over to the future.

This century has seen two eras of dramatic attention to conservation. The first era was opened by President Theodore Roosevelt. Natural resources, he told the Governors' Conference on Conservation in May 1908, are the final basis of national power and perpetuity. Almost a year before, he had signed the Forest Reserve Act, which was the the beginning of the end of the American cycle of cut, slash, fire, and land abandonment, as one observer described it.

The other era came with President Franklin D. Roosevelt. The dark cloud of depression unemployment produced the silver lining of tremendous conservation projects through the famous Civilian Conservation Corps. People today are reaping the benefits of the work done by the CCC. Not only were idle men given useful work, but the land they renewed has benefited the people ever since.

This characteristic of conservation—the wise use of today's resources in order to provide tomorrow's growth—is a pretty good description of what your State government is trying to do to meet the challenges which face us.

During the next several months, it is likely that questions of taxation and appropriations will dominate most of the governmental news out of Lansing.

Debates over budgets for an enterprise the size of this great State, as well as discussions of how such budgets can be equitably financed, quite frequently become so involved that it is easy to lose sight of what the discussion is all about.

Fundamentally, the question is the level of State services. Are we going to increase our educational facilities in keeping with the increasing population of school-age children and youth, or are we going to hold off the tide of new pupils coming up each year?

Are we going to give proper treatment to the mentally ill and retarded children, or are we going to neglect them? Are we going to have better parks for our people? Adequate State police protection? Are we going to treat our senior citizens like human beings deserve to be treated, or are we going to discard them?

These are just some of the things the State budget means when it is translated into human terms.

Your State government is concerned both with the immediate needs of the people—public health and public safety measures, for example—and also with the longer range problems arising out of the revolutionary scientific changes in the world about us.

Michigan pioneered the age of the automobile, and put the whole world on wheels. We became the arsenal of democracy in World War II, dazzling the free world with prodigious feats of production. Well, now we've got to find our way into a new era—an era of electronics, automation, atomic energy, missiles, and the exploration of outer space.

We're going to master this new era as we have the other challenges in the past. It's going to take hard work and a lot of cooperation, but the rewards are well worth the effort.

Right now, 100 of Michigan's leading business and industrial leaders, along with labor and agricultural leaders, are working together as a Commission on Michigan's Economic Future—or COMEF. This group will blueprint workable plans for the future, based upon a realistic assessment of resources human and natural with which we are blessed.

Also at work is a science advisory board, composed of top scientists from our industries and our universities. They already have given a preliminary report which clearly shows how important science is in Michigan's economic future, and what we must do now to move ahead in the science-based industries of the future.

So let's not let the immediate crisis of State finances—serious as it is—obscure the fact that Michigan is rich in opportunities for growth. We have the resources, we have a dynamic population, we have great leaders in every kind of endeavor—if we put them together in the right combination, we'll build a new economy for the people of Michigan, bigger and better and stronger than any since our history began.

You who are in conservation know better than others how important it is to keep driving for long-range gains while you work through the immediate problems. So it is in State government today.

The immediate needs and the long-range problems are both being worked on. I think the results will be worthwhile both in resolving the financial distress of State government, and in providing an atmosphere for future growth.

School-Aid Program

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. WILLIAMS of New Jersey. Mr. President, I have read with considerable interest an editorial in the Newark Star-Ledger of February 10, 1959, concerning

the school-aid program in New Jersey. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO HELP FOR US

The school-aid program proposed yesterday by President Eisenhower is not likely to have much effect on financing construction programs in New Jersey.

At a news conference on the President's bill, Welfare Secretary Flemming emphasized that it would apply only to those areas which lack the financial resources to do the job themselves.

New Jersey, with a high per capita income, is not likely to qualify as a distress area. But this leaves the delicate question of deciding just what constitutes a distress area.

Willingness to shoulder the burden of school costs also plays a part in determining how much an area will do to provide more and better schools. The voters in school districts where classrooms are badly overcrowded have been known to reject bond issues to pay for new school buildings. In these cases, would the districts be considered distress areas? The parents of children doubled up in overcrowded classrooms might think so. But their opinion might not be shared by authorities in Washington who will dispense the school-aid dollars.

Areas which do not have the resources to provide adequate schools merit aid. But some sound basis must be developed for determining just what qualifies an area for help.

Land Reform in Pakistan

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times on Monday, January 26, 1959, dealing with the subject of "Land Reform in Pakistan." I recently had the pleasure of discussing this subject with the distinguished Ambassador from Pakistan to the United States, His Excellency Mohammed Ali. I want to take this occasion to wish the people of Pakistan and their President, General Ayub, the very best in their efforts to strengthen the stability of their nation. It is my sincere hope that the Government of Pakistan will, without unnecessary delay, act to restore constitutional democracy to the people of Pakistan so that both the spirit and the letter of representative government will reign. President Ayub has given every indication that he wishes these constitutional reforms to get underway expeditiously. The friends of Pakistan in the United States await this development.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAND REFORM IN PAKISTAN

When General Ayub took over sweeping powers in Pakistan last October, assumed the Presidency and set aside the previous constitutional structures for the time being, it was remarked here that his action would ultimately have to be judged by the use to which he put those powers. He has now set into operation one of the sweeping reforms that he promised, a drastic revision of the land tenure system. Pakistan will have agrarian reform with a vengeance.

The pattern, however, is totally different from that of the agrarian reformers in Red China, where the program was simply to kill the landlord, take his land, give to to the peasants with much fanfare and then systematically take it back. In Pakistan the large estates—about 6,000—will be broken up, but the landlords will receive just compensation in the form of interest-bearing bonds. Former tenants will have the opportunity to purchase on easy terms, and security of tenure will be guaranteed.

President Ayub insists that he is acting on scientific and economic grounds rather than on the basis of any doctrinaire emotion. In spite of the fact that West Pakistan is about the size of Texas there is enormous pressure on the land from its 40 million people, because relatively little is arable without massive irrigation.

Two problems have to be faced. The first is absentee landlordism, which has proved economically unsound and has also, according to President Ayub, built up undesirable concentrations of political power. The other problem is at the opposite end of the scale. This is fragmentation through inheritance customs. Thus, while some of the holdings are too large and will be reduced in size, many others are much too small and there must be a program of consolidation.

As the plans have been outlined there appears to be a high regard for both human and property rights and an attempt to safeguard them. The reform is needed, and the President is committed to it and has acted boldly. He is deserving of congratulation and of success.

Where Integrated Schools Break Down

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Where Integrated Schools Break Down, published in the Daily Press, of Newport News, Va., on February 16, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE INTEGRATED SCHOOLS BREAK DOWN

From time to time in this space, there has been an exploration into what has been called "the disintegration of the public school system under integration."

And, almost without exception, these observations are followed by letters from readers who deplore our pessimism about the continued operation of racially mixed schools.

We venture into the fray again, with our arsenal filled with reports supplied by Richmond Times-Dispatch researcher Larry Weekly. He reports that the classroom problems resulting from the integration of Washington schools, where Negroes outnumber whites by 3 to 1, were so severe that the Washington school officials immediately started a drastic regrouping program.

After a year of integration, for instance, Washington school officials found that two-thirds of the ninth-graders couldn't read as well as the national average; two-thirds were below the norm in arithmetic, and more than one-third of the retarded group were from 1 to 3 years behind their age group.

Furthermore, 90 percent of the retarded students, according to the national achievement tests, were Negro.

With these results, Washington school planners immediately tightened their standards of grading. Failure rates in the elementary schools have increased from 5.3 percent when integration was ordered started to 12.7 percent this past June.

Now the Nation's Capital is beginning to think about expanding its programs.

When integration began in 1954, there were the usual two tracks or preparatory programs, under which a student prepared himself for further study, or, in the general course, a student prepared himself for immediate entry into the commercial world.

Now, Washington officials have found it necessary to break up (or down) their school system into six different tracks in order to maintain their requirement for eventual promotion of the students. There is the usual preprofessional course, and a college preparatory course which does aim him at a general college. Then there's a general course for those who don't expect to attend college, and at the bottom is a fourth track for youngsters, most of them Negroes, who expect to need elementary reading, writing, and arithmetic to get self-sustaining jobs.

But in addition to these 4 tracks, there are 2 more. A fifth program is strictly vocational, in which the student is taught basic skills of the easier trades. And a sixth is for boys, mostly Negroes, who are severe behavior problems.

There is a wide gap existing between the dropout age of 18 and the working age of 18, filled mostly with Negroes. One police officer reported "most of them wouldn't work even if you gave him a job."

They blame this pool of idle youth for the sickening waves of crime that have made Washington streets almost bare after the early evening hours.

But it boils down to this:

Washington, the showcase of integration, is finding it cannot operate a successful, efficient school system on a racially mixed basis. Two-thirds of its ninth-graders are below the national average in reading and arithmetic, the two basic subjects for an elementary education. And in spite of some tightening of standards, the situation does not improve, in spite of the efforts being made to show the Nation integration will work.

It won't, and Washington and Harlem are showcasing the problem before the world.

Annual Report of Dr. A. J. Kreft, Oregon State Izaak Walton League President

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. NEUBERGER. Mr. President, one of the most useful organizations in the Nation is the Izaak Walton League, which consists of sportsmen who are dedicated to the cause of wise use and preservation of our natural resources. The instances of its leadership in this field are too numerous to detail here.

On November 28, 1958, the State president of the Izaak Walton League in Oregon, delivered his annual report to the membership. Dr. Alfred J. Kreft's address is so full of valuable information on such topics as cleaning up our polluted rivers, enhancing safety in the woods during hunting season, safeguarding upland watersheds and encouraging young people in conservation education, that I believe it should be printed in the Appendix of the RECORD for the benefit of the Senate.

Accordingly, Mr. President, I ask unanimous consent that the report of Dr. A. J. Kreft, of Portland, to the State convention of the Izaak Walton League of Oregon, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF STATE PRESIDENT DR. A. J. KREFT AT THE STATE CONVENTION, NOVEMBER 28, 1958, EUGENE, OREG., UPON THE OCCASION OF HIS RETIREMENT AS DIVISION PRESIDENT

Fellow Waltonians and guests, I wish to thank each of you for coming to this convention and helping us mold our policy for next year and the future. As a president retires from office, he has an opporunity in his final report to place in the record the accomplishments of his regime.

There is much of which we may boast, but little of it is due to my personal efforts. In the 2 years that I was honored to serve you, I only called a few signals, the teamwork was yours.

During this period, you have added nine new chapters to the Oregon division. You have won national recognition and citation for your work, as two members of the Oregon division, Art Roberts and Irv Luiten, won national IWL honor awards at the Colorado Springs National Izaak Walton League Convention. The American National Cattlemen's Association and the Oregon Farm Bureau recognized your work in the two citations awarded to Jack Binford. In addition Mrs. Marion T. Weatherford and Ken McLeod—both members of the league, won coveted American Motors-Nash conservation awards the past year.

Several years ago we were in debt, now we have a sound bank balance. Part of this is due to the savings accomplished by the contribution of Art Roberts and his secretary, Mrs. Barbara Wood, and their organization in helping with the secretarial work. At this convention there will be distributed to each chapter president only a copy of the booklet, "So Now You're Program Chairman." This is the work of Kramer Adams. The booklet was printed by his company, the Weyerhaeuser Timber Co., and the cover was done by Art Roberts and the West Coast Lumbermen's Association. This work, done in the name of the Oregon division, will surely gain more recognition for the division.

Four of our chapters—Waldport, Salem, Eugene, and the Portland Air Force—will be Gavel and Gong award winners in 1958.

The Eugene chapter is pioneering in the formation of a youth chapter. I hope that each of you meet the members of McKenzie High School group and encourage them. We again are privileged to hold another Young Waltonian Conference—this is the fourth year that Jack Binford has been chairman; and as usual, he has an excellent committee to make for another successful youth conference.

On the national legislative front in 1958 you will hear this has been a very wonderful year in the passage of much excellent conservation legislation. The most important bill to win congressional approval, you will recall one of your resolutions of last year, was the recently enacted amendment to the Fish and Wildlife Coordination Act (Public Law 732). The act clearly authorized Federal construction agencies to include fish and wildlife conservation measures, for both mitigation of damage and for enhancement and improvement, regardless of the date of authorization of the water-use project. An existing backlog of 800 authorized projects, costing an estimated $10 billion, are subject to this provision.

Fish and wildlife conservation can now have an equal place at the bar of public opinion and congressional decision in the development and disposition of water in related land resources. This has been basic in the Oregon water resources law from the beginning—thanks to those Waltonians who helped Governor Patterson and the 1953 legislators in formulating our model water resources board.

Congress also authorized the $3 duck stamp law, to take effect next year. All of the income will be spent for wetlands acquisition and development—as it was intended in the original Duck Stamp Act.

The successful termination of the Klamath Indian Termination Act (Public Law 587) is history. For his efforts in this legislation, Senator NEUBERGER will be given special recognition by the division at Saturday's luncheon. We owe much also to Rollin Bowles for following closely the legislation and getting the South Dakota and California divisions alerted at a crucial time in the legislative proceedings. Again, the importance of belonging to and having a strong national organization is pointed out.

You are all familiar with the Outdoor Recreation Resources Act and the fact that Joe Penfold, our Washington league representative, was appointed by the President as one of seven citizens of the United States to the Commission. It will be up to the division to cooperate with this body and help in supplying the necessary information to help them make their report, which is due in 1961. We also are fortunate in having two of the Oregon congressional delegation selected to the 15-member Commission.

You have read of all the national legislative achievements in Outdoor America in Joe Penfold's column.

Again, this year as in 1957, the Waltonians in Oregon have erected a bronze plaque to the memory of highly deserving, pioneering conservationists. I refer to the tablet erected on October 25, 1958, at the Malheur Refuge in honor of William Finley and Stanley Jewett.

The past year saw the passing of two past State presidents; we lost Rex Sanford, State president in 1951 and Clark Bachman, president in 1945. These men may not be known to new members of the league, but let us never forget those conservation giants of yesterday who did so much—who gave of themselves so completely—when the conservation idea was not as well known as it is today. Both of these men did a lot for the Oregon division. It is up to all of us to carry on in the manner that they would want, so that the league will continue to grow in prestige and membership.

Today througout Oregon, your chapters are a respected group of conservation leaders, whose influence goes far beyond your membership. Some of you have heard a lot from me about increasing your membership. However, we have not concentrated all of our energies in solicitation to show numerical gains. The league has to be judged on the basis of service to resource management; and membership, as such, is important only, as it contributes to this effectiveness. Since we don't have any fund-raising projects for the benefit of the division treasury, it is necessary that adequate funds be on hand to carry out the work in Oregon on the high level that we expect of all great organizations. And the amount of work is increasing so a higher membership is necessary.

The division's record of conservation achievement is a source of inspiration to the national organization and to other divisions. This fact was mentioned to me several times at the national convention at Colorado Springs, which I was privileged to attend as your representative.

I visited the new national office in October. It is a fine place, and I hope that each of you will have an opportunity to see it sometime. They are a busy group—trying to help you do a better job. The new Outdoor America is a magazine that I am proud to display in my office. I would like, however, to see a newspaper type of format used several times a year, so that all league activities could be printed. Their new share-the league membership campaign is well conceived and well written. I hope that each chapter board of directors will carefully read the material and apply it to their community.

We are hopeful that each chapter and individuals will donate at least $50 to help equip the library of the new national headquarters. I ask that you prayerfully consider this so that the Oregon division will be successful in this project. Let's show them that we are behind them in their program which is really our program. It is our organization also, not just that of the members of the Middle West.

I am particularly impressed with Frank Gregg, our national executive secretary. I hope that he can visit us at a future State convention. Ed Cooney is a consecrated Waltonian, struggling always with the membership problem. It is a big job.

Mr. Gregg Smith is the editor of Outdoor America. He asks that our chapters send in material for publication. He is very anxious to hear what you are doing.

The chapters of the Oregon division continue to work with others who do not always agree with us. We have discovered that we are a potent pressure group that can influence legislation and public opinion; but we have endeavored with humility and unselfishness to wield the influence for the public good.

The recent attempt by petition to make steelhead a game fish put this policy to a severe test. We Waltonians want our magnificent game fish, the steelhead, set aside entirely for recreational pursuit. The quandary is in the Columbia River where steelhead will inevitably be taken while there is a commercial fishery. It seems that the subject of a February closure could be more realistically reviewed by the Oregon Fish Commission. The bulk of that season's catch have been steelhead fish that support a great winter recreation, followed by thousands of ardent anglers in southwest Washington and on the Willamette and Sandy River watersheds in Oregon. The sportsmen of the two States will not be put off on assignment of those winter steelhead to recreational fishing. It can be done here with the least interference to the overall fishing industry on the lower Columbia River. The steelhead petitions will be back, if this is not done.

I wish to again commend the Oregon Game Commission and their employees for their participation in our affairs and the cooperation that they have given us.

I wish to commend John McKean for his studies on the Silver Lake deerherd. The league recognizes that this type of study should have been done years ago. They are now doing excellent research on the effect of heavy harvesting, studying hunter attitudes, range habitat, actual numbers of deer present and taken out by hunters, what numbers of bucks and does are harvested, the condition of the animals and other important items. I wait with great interest their continuing reports.

Our treasurer has reported on the dollars that have passed through his hands, but these figures will not reflect more than a

small portion of the money expended in league work.

Our national directors, Jack Binford, Rollin Bowles and Luhr Jensen, Jr., have made many trips to national meetings and on national business. Prior to them Bill Niskanen, Joe Smith and Dr. Charlton were our national directors. Dr. Charlton has been attending national meetings for over 20 years—when he was the only person present from the Pacific coast. We owe these men a great deal for their personal contribution in energy, time and funds.

We are indebted to Charles Hoonan for being editor of Outdoor Oregon. My wish is that we have an issue every 2 months or oftener. There is much material that could be sent out.

The convention folder lists our division committees. Some of the committee chairmen have put in a lot of time in league work for the division. I especially commend Carl Etling, Colonel Weiland, Dave Dobbins, Dan Allen, John Benneth, and Hardy Glascock—just to name a few. You will hear from many of the committee chairmen at this meeting. Hardy Glascock has spoken to you on three occasions in 1958 on the wilderness bill. The State division, after months of deliberations and three meetings, presented a statement at the Bend hearings on November 7, according to your instructions. The statement was given by Vick Withrow, president of our Salem chapter. Senator NEUBERGER may touch on the wilderness bill tomorrow noon.

This year we again are presenting four Golden Beaver awards to very worthy recipients. You will enjoy meeting these fine men at the Saturday luncheon. Also, in line with the new national policy of recognizing deserving members of the league who have made outstanding contributions to the cause of conservation, the Oregon division is recognizing the work of a member of the Portland chapter. I mentioned the contribution of Senator NEUBERGER in the Klamath Indian Termination Act legislation. Each of you is eligible next year, so I hope that all will become more active and try to win this award. I hope that you will approve of the award appearance. It is being done by Irwin McFadden, a Portland artist.

I am asking the convention to approve a change in the bylaws to allow for more vice presidents, who can help the division president be of more service to the chapters. It is impossible for a few to visit all of our chapters at least twice a year to help them with their programs and meetings. (As we increase in numbers, so increases our bureaucracy.)

The Conservation Education Workshop at Hoodoo Ski Bowl was again a big success. Sixteen teachers had to be denied admission to the courses because the enrollment was full. So next year the school will run for three 1-week periods. The league has made a big contribution to the success of the workshop; but in my personal opinion, we are not getting the credit for it.

Now let me make some suggestions for the future work of the division.

Next year will be a legislative year. Get to know your legislators real well so that they will have confidence in you. Someone has said, "The man with the voters' mandate gets the job done best." It is going to be hard to replace Rollin Bowles now that he has become a member of the State Game Commission. Give your 1959 legislative chairman all the help possible. He will need your considered opinion and also your presence at legislative hearings.

Hunting safety courses should be a prerequisite before any juvenile 16 years of age or younger can obtain his first hunting license. We don't just give a child the keys to our car and tell him to go drive away. In the State of Washington anybody below the age of 17 must take such a course. To make this successful will require the help of a lot of sportsmen. Some of you will have to give up some of your leisure time to make the program a success in order to qualify our youth for hunting licenses.

Tonight you will hear the report of the joint house-senate interim committee to investigate fish and game conditions and their recommendations for the 1959 legislature. I wish to thank the many chapters who made statements at the 33 hearings that this committee held throughout Oregon this summer.

One of their chief recommendations will be that of combining the game and fish commissions. In considering this, I urge you to consider what is best for the resource. Each of us has our own opinion on this. If proper safeguards are written into the bill, the sportsmen should approve this recommendation. Three of our chapters have already given their approval at hearings. Dan Allen, chairman of the Portland chapter committee which did a lot of careful work on this problem, will be glad to explain his report to you. Copies are available. The committee did an excellent job.

The antilitterbug campaign is at a standstill. Maybe we should develop a keep Oregon clean committee, as is functioning so well in Maryland. We have the red hat days committee to use as a guide in getting other organizations to work with us.

The red hat days committee did another excellent job. You will hear their reports tomorrow. This committee should be continued, but another method of selecting county chairmen is needed. We hope to remedy this in 1959. To continue to show success accidents by juvenile hunters must be reduced.

You will be asked to vote on a resolution concerning a more aggressive campaign of pollution abatement. One hundred and six Oregon communities require 186 projects to speed up the cleaning up of Oregon streams. The league has traditionally fought for cleaner streams and lakes. I urge that you give your help in the next legislature to get additional funds for the sanitary authority so that it can do the job that we expect of them.

Our division watershed usage committee has been doing a superlative job the past year. This committee should be encouraged to continue their research. I hope that the division publishes the findings of this committee and make it more effective, by asking other groups to have representation on it. I await tomorrow's panel with a great deal of interest.

There are a lot of problems connected with logging at the higher elevations that have not been entirely solved. There has been some discussion about the Windego Pass timber sale to the Diamond Lake Lumber Co. Concern has been expressed about the future of the Cascade Crest—the future of the snow water basins. We have been assured that the Forest Service will follow the cutting of the sub-alpine timber very closely. The slope is gentle. There will be small cutting units. From the water standpoint, there will be a possible increase in water yield as the snow pack will be increased. Slash disposal will be guarded.

In this connection we are having problems in the Siletz and Rogue River watersheds. The temperatures of those two great streams was quite high last summer so that concern for fish life was expressed. Chapters are urged to do more research to help our State and Federal agencies and private operators do a better job.

We could make better use of the soil bank plan in Oregon. The Eugene and Silverton chapters for the past few years have been working with farmers to improve wildlife habitat. Linn and Lane Counties are good examples of usage of this program.

More high school chapters should be encouraged. I hope that the present youth conference will be of great help to you in this regard. However, the chapters will need the benefit of adults who know basic league policies and programs, or trouble will arise.

In regard to membership, the goal in Oregon is a healthy chapter in every county-seat town. There are many vacancies, so let's reach this goal.

I have had ready telephone access the past 2 years to our immediate past State presidents and have consulted them often. I appreciate very much the help of Rollin Bowles, Dan Allen, Jack Binford, Joe Smith, Dr. Charlton, and Merle Brown. I pledge to my successor the same cooperation that these gentlemen have given to me.

Your secretary and I have tried to keep the chapters informed of all developments through a monthly chapter bulletin and letters. In checking up I find that only 160 envelopes remain out of the 3,500 that we purchased, so your division officers have sent out 3,340 communications to league members and on other league business. A number of telegrams were sent, when needed; and many telephone calls were made. I like to use the telephone rather than write a letter. Telephone calls are a good business practice, so why not apply the principles of management to conservation?

The whole is greater than the sum of all its parts—due to organization. I hope that I leave the Oregon division with a better organization, due mainly to better training of chapter officers by you. My four vice presidents have had a great deal to do with improving our organization. I am very grateful to all of them and to our division treasurer and secretary for their prompt help.

To your new officers may I counsel them to make a great effort to get improvement in understanding with other groups. As our standard of living rises, more and more of our renewable and nonrenewable resources are being used up. Let us try to keep Oregon the place that we want to live in. We in Oregon are not crowded to death. We have so much to be thankful for. Let us appreciate what we have out here. Teach others also to be appreciative, and become league members.

So in the spirit of yesterday, when we gave thanks to God for our many bountiful blessings, let us pause occasionally and orientate ourselves. Let us attend frequent chapter meetings; read a lot about conservation; teach others to do likewise.

Let us be thankful that we live in a country where we can have a great organization like the Izaak Walton League and are permitted to hold meetings like this. The fact that I was State president is not important, but what is important is that an organization like the league exists.

It has been a great honor to me to have been your president. I am thankful for the opportunity of having been of some service to my State and country. It has been a very pleasant and enlightening experience, most especially for the wonderful people that I have met.

The Benson Farm Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have received from the Fargo City Commission, regarding the farm policy as administered by the Secretary of Agriculture, Mr. Benson.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Throughout this general area people are keenly interested in the growth, progress and economic development of the city of Fargo and its inhabitants. Correspondingly, the people of Fargo are also keenly interested in economic conditions and the well-being of its friends and neighbors in surrounding rural areas.

It is universally recognized these days that our economy is an interdependent economy, and that which adversely affects agriculture sooner or later has an adverse effect on business, labor and the general public. It has now been clearly established that one vital segment of the economy such as agriculture cannot suffer without there being cumulative effects on the rest of the people. Therefore, the interdependence of agriculture, industry, business and labor must be recognized.

Fargo is the center of a great farm belt and our people depend upon agriculture for their sustenance and livelihood. Therefore, Fargo, like any agricultural community, cannot afford to stand back and permit the deterioration of our agricultural economy, and the continuing decline of farm income, accompanied by the general accelerated move away from the farm.

The news reported by the Associated Press as late as last Saturday, January 31, was headlined "Farm Income to Decrease by Many Millions—Benson Shakes Up Price Supports in Agriculture" and heralds the downward spiral of farm income and its ultimate effect on this area and our people.

Therefore, recognizing that the peril of agriculture is the peril of all citizens in this area, whether they live in villages, towns or cities, or on the farm, we call for the immediate resignation of Secretary of Agriculture Ezra Taft Benson, whose policies have contributed to this unfortunate decline in our agricultural economy and farm income. We regret that Secretary Benson, by his policies appears to regard farmers and farms as just so many increments or statistics on a chart, and Secretary Benson also appears by his policies to lack feeling or concern for the plight of the individual farmer.

The Benson policy, as announced and administered by the Secretary of Agriculture, can only mean eventual ruination to many of our family farms and imposes a cumulative unfortunate effect on the rest of our economy.

In the event Mr. Benson does not submit his resignation, we respectfully call on the President of the United States to ask for Mr. Benson's resignation and to replace the Secretary of Agriculture with a new face and a new policy, based upon determined bipartisan attempts to help restore farm income and save the family sized farm.

FARGO CITY COMMISSION,
HERSCHEL LASHKOWITZ.
J. W. MARKEY.
E. J. MCCANNEL.
FRED C. HAGEN.
PAUL K. LEWIS.

Meeting of February 3, 1959.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. HART. Mr. President, on Sunday, February 15, it was my great privilege to be the guest of the Detroit Lithuanian Organization Center in connection with the 41st anniversary of the Lithuanian independence commemoration ceremonies.

A magnificent program was presented by men and women who are faithful to their God and church, devotedly loyal to America, and strong in their contributions to the city of Detroit and the State of Michigan.

The organization adopted a resolution which reflects their firm convictions, and I ask unanimous consent that it be published in the Appendix, along with the remarks I made, so that all may know the sentiments and plea of these fine Americans of Lithuanian origin.

There being no objection, the resolution and statement were ordered to be printed in the RECORD, as follows:

PROCLAMATION

During the 41st commemoration of the reinstatement declaration of Lithuanian's independence, sponsored by the Detroit Lithuanian Organization Center, held at Western High School, 1500 Scotten Avenue, Detroit, Mich., on February 15, 1959, the following resolution was unanimously adopted:

"Whereas in June 1940, Soviet Russia did invade the sovereign independent Republic of Lithuania with armed forces to protect Lithuanian independence and, against the will of the people, annex her to the Soviet Union; and

"Whereas the armed forces of the Soviet Union are still presently residing in Lithuania in complete and total disregard of the agreements, policies, and treaties which existed between the Soviet Union and other allies of World War II: and

"Whereas Russian Communists are still currently perpetrating deportations and exterminations of whole ethnic groups, plundering people and institutions, and separating the members of family, one from another: Therefore be it

"Resolved—

"That, on this 41st anniversary, we express our deep gratitude to the Government of the United States for nonacknowledgement of the fabricated incorporation of the Baltic States into the Soviet Union and for allowing the many thousands of refugees to find new homes in this country.

"That, we respectively recommend that our U.S. Government abstain from entrance into any alliance, pact, or agreement which would in any way whatsoever recognize the present day Russian empire.

"That the Government of the United States be urged to use all possible means to protect enslaved peoples from genocidal destruction and preserve their hope of eventual liberation.

"Finally, that a copy of this resolution, signed by the presiding officers, be transmitted to the President of the United States, Secretary of State, U.S. Ambassador to the United Nations, Michigan State Governor, and U.S. Senators and Congressmen from the State of Michigan."

DETROIT LITHUANIAN ORGANIZATION CENTER,
ALFONSAS NAKAS, *President.*
JONAS GAIBUTIS, *Secretary.*

EXCERPTS OF REMARKS BY SENATOR PHILIP A. HART, DEMOCRAT, OF MICHIGAN, TO THE DETROIT LITHUANIAN ORGANIZATION, DETROIT, MICH., HONORING LITHUANIAN INDEPENDENCE DAY

Tomorrow, February 16, marks the 41st anniversary of the restoration of the independence of Lithuania. From 1918 to 1940 Lithuania stood among the family of free nations and made her contribution to the society of free peoples.

Thereafter, Lithuania was absorbed behind the Iron Curtain. There is no commerce, either commercial or cultural, between our shores and theirs. Not even newsmen are allowed to visit the occupied country.

And yet we have ways of knowing that the spirit of independence there has not been crushed. We have every reason to hope that one day it will again be a free and independent nation. Meanwhile it is noteworthy that our own country has never recognized the annexation of Lithuania by the Soviet Union,. and that our broadcasts in the Lithuanian language are providing a tangible evidence of our interest as well as a source of knowledge of the free world.

We are also fortunate that our own civilization is enriched by a million Lithuanian Americans who are making their special contribution to the growth of our Nation. In our own State of Michigan, they are counted among our most civic-minded, upstanding citizens.

It is my hope and belief that you can be counted upon to insist that our foreign policy be based on a realization that as the strongest free nation of the world we must cooperate with the peoples of the world who are aspiring to gain or regain the right to determine their fate and the opportunity to improve their standard of living. This may mean some sacrifice on our part; and there are some 4½ million in this country, unemployed, who are in no position to be sharing at this time. But I am confident that we have the resources and the ability, given the proper leadership, to solve these perplexing problems here at home and still be able to lend a helping hand to those in other lands temporarily less fortunate than ourselves.

With the best effort of us all, I'm sure we can do it.

Tribute to Wendell Willkie

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. HUMPHREY. Mr. President, this week we celebrate the birthday of a great American, Wendell Willkie. Mr. Willkie was born on February 18, 1892.

Upon the death of Mr. Willkie in 1944, a 16-year-old girl, Mary Taylor Pryor—now Mrs. Lowell Thomas, Jr.—set down her thoughts on this fine man. Mr. Willkie had been her parents' house guest for 2 weeks prior to his death.

His stature is fully reflected in what this young girl put down in writing. It was read at his funeral by the late Mayor Fiorello La Guardia.

In commemoration of the birth date of this great American, I ask unanimous consent that the inspired words written by Mary Pryor, as delivered at the funeral by Mayor La Guardia, be printed in the Appendix of the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE ECHO

(By Mary Taylor Pryor)

The flames of the fire leapt upward piercing the blackness of the night. Seated on the sand around it, each of us stared hypnotically at the strange dancing shapes. The night was cold and clear, and millions of stars formed the roof over our heads. The rippling lake reflecting the starlight stretched from our feet to the purple mountains in the distance.

He seemed reoccupied that night. Sitting apart from us his thoughts were far away. Then the shrill cry of a loon pierced the stillness, and seemed to awaken him. He came forward by the fire. His face lit up and his eyes shone, and the soft night breezes rumpled his hair. Suddenly all was still, even the crackling of the fire seemed to cease. He was speaking, not only to us but to everything under that roof of stars; speaking in a strong, husky voice; speaking of something familiar to every element of nature, freedom. Everything listened, even the stately old pine trees seemed to be bending toward him so as to hear all of his philosophy. His words rang with sincerity and his unwavering convictions gave them amazing strength. They were words that reflected his warm, friendly personality, his determination and above all his honesty.

Then, as though some unseen force had beckoned to him, he withdrew into the shadows. The fire had suddenly died down and dark clouds hid the stars. But above the moaning of the pine trees his ringing voice still echoed over the silent lake and mountains. And today everyone everywhere hears the echo of those words of Wendell Willkie.

Advisory Council on Global Strategy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. JAVITS. Mr. President, the path ahead for the free world is beset by obstacles, obstacles which it is important for us to discern and to surmount. Mr. Goodhue Livingston, Jr., chairman of the Policy Committee of the Committee for Collective Security, has advanced a stimulating proposal as to how we can achieve effectiveness in planning and programing in the difficult days ahead. I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Livingston's suggestions, in the form of a letter to the editor of the Christian Science Monitor, and invite the attention of my colleagues to it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GLOBAL STRATEGY

To the Christian Science Monitor: The major problem facing the free world is the steadily growing threat of Communist aggression. The relatively monolithic Communist bloc has a more dynamic and united leadership and is more effective in its propaganda and subversion because it is both ruthless and unscrupulous.

The basic principles motivating the free world can prevail if soundly expounded and forcefully prompted. However, the free world suffers from inept leadership, whether the Democratic or Republican Party or a conservative or labor government is in power in the two great countries to which the rest of the free world looks for direction.

Our foreign policy should be formulated on a sounder basis and should provide alternative policies to meet possible contingencies. For example, what will be our position on Germany when Chancellor Adenauer is no longer in power? What steps should we take to offset indirect aggression by Soviet Russia if it continues its present policies? What would be our attitude if Yugoslavia rejoins the Communist bloc? What will we do concerning Formosa when Chiang Kai-shek is no longer president?

What will be our position if the growing industrialization of the People's Republic of China makes it an important factor in world trade? What disarmament plans will we propose if the smaller nations acquire the capacity to wage nuclear warfare? How should we mobilize pressure by the free world upon the Arab States and Israel to adjust their differences if the present efforts of the United Nations fail?

Our foreign policy, seeking universal peace and justice, should be based on global strategy rather than on tactical maneuvering. The Committee for Collective Security proposes the establishment by law of an advisory council for global strategy, to consist of private citizens, appointed by the President, qualified to advise the Department of State on matters of policy. This group, with a permanent secretariat and access to classified information, should include representatives of the natural and social sciences skilled in dealing with political, psychological, and economic problems.

Perhaps too frequently the State Department sees the trees but fails to see the forest, and a group of private citizens would help in broadening its vision. Our foreign policy should be determined on the basis of a balanced assessment of all the dimensions and approaches of the problems facing this country and the free world. We should initiate a course of action rather than seek to effectuate our aims only when action is forced upon us. The keynote of our efforts to attain our global strategic objectives should be action, not reaction.

GOODHUE LIVINGSTON, Jr.,
Chairman, Policy Committee, Committee for Collective Security.
NEW YORK, N.Y.

Boggs-Daniel Narcotic Control Act

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 9, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Representative HALE BOGGS, Democrat of Louisiana, today released statistics on the results of the Boggs-Daniel Narcotic Control Act of 1956.

Congressman BOGGS said:

"Since the Congress passed the Boggs-Daniel Narcotic Control Act of July 1956, with its severe minimum mandatory penalties against illegal sellers of narcotics, the improvement in the narcotic situation in the United States has been remarkable. One of the most realistic and accurate yardsticks to gage this improvement is the number of addicts reported in 1958 as compared with the number reported in 1956.

"The District of Columbia shows that the count of new addicts dropped from 200 in 1956 to only 60 in the first 11 months of 1958. In Louisiana there was a decrease in the number of addicts reported from 142 in 1956 to 50 in the first 11 months of 1958."

Mr. BOGGS also pointed out other States which show a significant overall improvement. These are as follows:

State	1956	1958 (1st 11 months)
Texas	523	175
Ohio	92	37
Michigan	543	264
New York	4,138	2,836
Illinois	908	631
Missouri	210	133
California	1,568	1,276

In considering the statistics given above for Ohio, it should be pointed out there had already been a decrease of 80 percent in 1956 from 1955, the year in which the Ohio State law providing for a 20-year minimum mandatory penalty for illegal sale of narcotics was enacted.

"I am tremendously gratified," the Congressman said, "by the figures which have now been compiled showing the operation of the Boggs-Daniel Narcotics Code. Despite the tremendously growing population, the number of addicts has decreased since the enactment of the act.

"I would hope that these figures would persuade some of the people both in the medical and legal profession who have been attempting to sabotage the Boggs-Daniel Narcotics Code. I do not question their good intentions, but it seems to me that these figures show that their approach providing narcotics for addicts is wrong."

Nixon Now Leads Rockefeller by 2 to 1

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. SPRINGER. Mr. Speaker, I attach hereto an article from the Washington Sunday Star of February 15, which is a compilation of the Trendex News Poll. This poll indicates that NIXON now leads Rockefeller by more than 2 to 1 across the country.

The poll, showing NIXON a 2-to-1 favorite, is among all voters. Among Republicans NIXON leads Rockefeller by better than 5 to 1.

This is some indication of the impression which the Vice President has made not only upon Republicans, but on people generally throughout the country.

The article follows:

NIXON NOW LEADS ROCKEFELLER BY 2 TO 1

(By Jack Boyle)

NEW YORK.—Public opinion has dramatically switched from Nelson A. Rockefeller to RICHARD M. NIXON as Republican President nominee, last week's Trendex News Poll shows.

Governor Rockefeller's program for a $277 million tax jump in New York was an important factor in his loss of popularity nationally.

Vice President NIXON now is almost a 2-to-1 favorite over Mr. Rockefeller. Among Republicans, he ranks better than 5 to 1.

Last November Mr. Rockefeller was a 5-to-4 favorite over Mr. NIXON.

Immediately after the last election, when Governor Rockefeller easily defeated Averell Harriman, Trendex interviewers asked a scientifically selected cross section of Americans: "As of right now, do you think RICHARD NIXON or Nelson Rockefeller would get

the most votes for the Presidency as the nominee of the Republican Party?"

Last week, while Governor Rockefeller was defending his budget and Vice President NIXON was in Venezuela for the inauguration of Romulo Betancourt as President, Trendex terviewers asked the same question of a similar, though not identical, cross section.

Here is a comparison of responses by regions and in percentages:

	East	West and Mid-west	South	Total
Rockefeller:				
November 1958	34.5	36.2	48.6	45.9
Now	23.1	33.4	27.8	27.9
Nixon:				
November 1958	30.3	44.0	37.1	37.6
Now	60.4	38.3	66.4	51.8
No opinion:				
November 1958	15.2	19.8	14.3	16.5
Now	16.5	28.3	5.8	20.3

The figures show that Mr. Rockefeller's greatest losses, and Mr. NIXON'S greatest gains, were in the East, which includes Governor Rockefeller's own State, and in the South.

In the current poll, interviewers asked the party leanings of those interviewed. This was not done during the 1958 poll. When the preferences were divided by parties and independents, the current opinion was, in percent:

	Democrats	Republicans	Independents
Rockefeller	36.5	13.8	34.3
NIXON	44.3	76.4	29.8
No opinion	19.2	9.8	35.9

While independents seem to favor Mr. Rockefeller, more than a third of them have not yet made up their minds.

All interviewed were invited to explain their answers and the dislike of the Rockefeller tax plan appeared strongly in replies.

Many favored either Mr. Rockefeller or Mr. NIXON because of their personality or "because he appeals to me most."

Some said they favored one or the other because he was younger. (Mr. Rockefeller is 50, Mr. NIXON, 45.) Some said they favored one or the other because he had greater experience in foreign affairs, or more experience in government. Mr. NIXON has made several trips out of the country; Mr. Rockefeller was coordinator of inter-American affairs during World War II.

Many of those who had no opinion said the question was academic because the Democrats would win the next election.

National Shoreline in Danger, but Oregon's Seacoast Preserved for Public

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the February 15, 1959, issue of Parade magazine entitled "What's Happening to Our Shoreline?" The issue of Parade was published with the Washington Post and Times Herald and with the Oregonian in my own native city of Portland. Author of the article is Michael Frome.

Mr. Frome's article warns that the coastal and beach areas available for the recreation of 173 million people are becoming less in quantity and quality nearly every year. I am making this inclusion in the Appendix in tribute to one of Oregon's illustrious ex-Governors, Oswald West, who still lives in retirement in Portland at the age of 85.

Oswald West was Oregon's Governor from 1911 to 1915. During that period he kept one of the most beautiful seacoasts anywhere from being exploited for private greed and gain. He saw to it that the law of riparian rights safeguarded the 300-mile Oregon shoreline for perpetual public benefit, rather than permitting it to be gobbled up for dredging, wharving, and similar commercial uses. Today a great State park on the seacoast is named Oswald West State Park in tribute to this deed.

Oregon's seacoast is praised as the most magnificent on earth in an article in the February issue of Holiday magazine by Robert Carson, noted novelist. He even calls it more lovely than that of his own California. That this shore of white, sandy beaches and timbered headlands has not been defiled or looted is due to the foresight, vision, and courage of ex-Gov. Oswald West. In his honor, I ask that Mr. Michael Frome's article from Parade about our national shoreline be printed in the Appendix of the RECORD, Mr. President.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S HAPPENING TO OUR SHORELINE?

(By Michael Frome)

On sun-flecked sandspits like Miami Beach, Waikiki, Coronado, and others the winter season is in full cry. As you read this vacationers fleeing winter's bite lie on poolside patios soaking up sunshine. Visitors in shirt sleeves promenade in grand hotels and talk about the temperatures back home.

Sunshine and warm weather have their appeal, but a few feet from the hotels laps the greatest appeal of all: the ocean. Winter or summer, in Miami, Cape Cod, or even Fargo, N. Dak., America's greatest natural resource is water. Water nourishes industry, feeds crops, and soothes parched throats. And water—and the land bordering it—provides almost boundless opportunities for fun.

Today both water and land—the Nation's thousands of miles of seacoast and major lakefront—have problems. They are under tremendous pressures from many different directions. And these pressures are steadily growing stronger.

One simple statistic measures some of this pressure:

In 1904 in the United States 15,000 boats were used for recreation. By 1947 the number had increased to 2,440,000. Last year the total was 7,330,000, and it probably will top 8 million this year.

Where will all these boats manever, dock, gas up? How will they compete against other demands for water and shorefront—for industry, irrigation, defense, wildlife preservation, navigation, home use?

While demands come from all sides, the supply of available shorefront is being eaten up. Recently, the National Park Service surveyed 3,700 miles of Atlantic and gulf coast, found only 240 miles used for public recreation, marked 640 miles more still available and worth saving.

A Park Service survey just completed of the 2,410-mile Pacific coast, which is due to be released soon, shows only 17 percent in public lands, recommends saving 75 areas. California's division of beaches and parks is conducting a similar survey of its shore. A third Park Service survey, on the 8,300-mile Great Lakes shore, will be released in June. It is expected to suggest preserving 65 acres, many in Michigan.

In the meantime, industry, attracted by bountiful water (the most-used industrial chemical), has been edging into the shore, particularly around the lakes. In its lake survey, the Park Service is expected to point out that recreational, primitive lakefront is fast losing ground to smokestacks. In a similar survey, the Michigan department of conservation said much the same thing.

Complicating matters on the coastline is that many beaches are being eaten away by wind and waves, narrowing the amount of space even more. Complicating the water-and-shore problem countrywide is the increasing use of water. Industrial, irrigational and domestic use is expected to double its 1955 consumption by 1975—with possibly severe effects on water levels for recreation and wildlife.

EVERYONE'S IN THE WATER

And recreational demands themselves increase by leaps and bounds. No one, for instance, can catch up with the statistics on skindiving and water skiing—two rapidly growing sports that virtually were unknown 10 years ago.

And every day some water lover seems to come up with a new water sport. In the last few years officials of the National Recreation Association have watched the rise of houseboating, "boateling," underwater archeology, backyard swimming pools (now increasing at the rate of 30,000 a year), surfboarding, water "shoeing," even hunting for pirate gold.

Then there are 21 million fishermen, spending nearly $100 a year apiece and asking that trout and mackerel be considered in all debates over water and shore. Their numbers are increasing steadily.

And there is the greatest success story of all: boating. Along with the increase in number of boats has come an increase in average horsepower of boats. The average outboard sold today has a beefy 20-plus horsepower engine. What this means is that boats are being used less for fishing, more for speedboating, cruising and water skiing, all of which require elbow room.

With these demands from all sides, conflicts are frequent and sometimes violent. Recently, recreation leaders have cast covetous eyes at Army installations on Sandy Hook, in New York Harbor. The Navy once discussed plans for expanding its Cape Hatteras installations at the expense of the National Seashore Recreation Area. (A compromise finally was worked out.) Inland, in Iowa, farmers, fishermen, and boat enthusiasts are wrangling over whether irrigation is ruining fishing and boating.

Is there any way to shoehorn all these interests into the fixed amount of coastline and shorefront?

The offensive to ease the pressure on the shoreline is underway on all sides:

Beach erosion

The Army Corps of Engineers now has underway 69 projects, costing $118 million, to keep beaches from crumbling. Included is construction of sand feeder beaches, concrete jetties, expensive seawalls. In addition, studies of erosion are being conducted by officials of New Jersey, San Diego, Calif., and Long Island, N.Y.

Stream pollution

Many experts believe a major answer to water and shorefront pressure is to clean up inland rivers and streams, thus offer industry clean water for its needs and recreation lovers beach resorts not now usable. This project is making headway; in the Ohio Valley alone, $1 billion a year is being spent to clean up streams.

New lakes

Multipurpose dams are being thrown up rapidly around the country, answering needs for flood control, irrigation, water supply—and recreation. By one estimate, there are now 2,800 such new lakes. Even such unlikely places as Oklahoma and South Dakota are affected. In Chamberlain, S. Dak., site of an artificial lake, a car dealer now makes more money from outboards and boats than from car sales.

Government programs

The Park Service shoreline surveys point the way to preserving some beachfront for recreation. Other Federal agencies, such as the Reclamation Bureau, Corps of Engineers and Forest Service, now work to preserve land around artificial lakes. TVA led the way in the South 25 years ago, now has 12 State parks on its lake shores.

Better use

The country's great new dams and lakes fill a comprehensive mission—providing power, water storage, wildlife refuge and recreation. Carefully planned Glen Canyon Dam, under construction in Arizona, will be a dramatic example of the true multipurpose concept.

More use

For more use of the shoreline, there is no organized program; it depends on waterlovers themselves. Often, while some shorefront areas are overrun, others are underpopulated.

Last month, the United States added 25,000 miles of virtually unused shoreline by admitting Alaska to the Union. But even in the other 48 States, sections of shoreline often are overlooked. In more extensive and more sensible use of all her shoreline may lie the solution to America's problem of her hard-pressed shores.

Public Law 480: Food in Democracy's Service

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, February 17, 1959

Mr. JAVITS. Mr. President, democracy's arsenal is no mere armorer's shed; it is a library, it is a university, it is a newspaper, a radio transmitter, and a grain elevator. Golden grains combine with golden ores to fill the treasury houses of democracy. The over $30 billion of annual American farm production comprise in great part democracy's sinews not only because of the intrinsic worth of this production as food products but also what these farm products can do for us.

Since Public Law 480 was first enacted in 1954, it has served as the catalyst to transform our vast agricultural production into an effective instrument of foreign policy. This program has been extended by the Congress several times and expires this year—its continuation should be again authorized by the Congress.

I am submitting articles from Foreign Agriculture, Capper's Farmer, and the Christian Science Monitor, devoted to the Public Law 480 program. I insert this explanation and comment for the information that it conveys and in tribute to the public servants who operate it for the Public Law 480 program has not only been an operation in agriculture but also one in diplomacy, one in national and international economics, and one in the service of humanity.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD various articles on the extension of Public Law 480, to continue our farm export programs in 1959.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Foreign Agriculture, December 1958]

EXTENSION OF PUBLIC LAW 480 TO CONTINUE FARM EXPORT PROGRAMS THROUGH 1959

When Congress voted this fall to extend the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480) through 1959, it retained a basic export tool for U.S. agriculture. This law has accounted for a fourth of all U.S. farm exports in the last 4 years.

To cover sales for foreign currencies under title I of the act, Congress authorized $2.25 billion. The previous authorization of $4 billion, which expired June 30, 1958, was fully committed under agreements with 37 friendly countries, and about 90 percent of this program has already been shipped. Some products it covered are:

Wheat	million bushels	617
Corn	do	66
Barley	do	64
Grain sorghums	do	21
Rice	million hundredweight	28
Cotton	million bales	3.2
Soybean and cottonseed oil	billion pounds	2
Tobacco	million pounds	208

Public Law 480 specifies the ways the foreign currencies received may be used. The agreements usually set aside a large share for economic development loans—both to the foreign government and to U.S. and foreign private companies. Other important uses include military procurement for the common defense, developing U.S. agricultural markets abroad, educational exchange, and paying U.S. Government expenses overseas. New uses now added include these: Financing scientific activities abroad; acquiring sites and buildings for U.S. Government use; purchasing and handling foreign publications of technical or cultural significance here; aiding U.S. sponsored educational institutions abroad; supporting foreign workshops and chairs in American studies.

The new law also extends the title II program of famine relief and other assistance. It does not, however, increase the previous $800 million authorization, for more than $300 million of that fund is still uncommitted. This program permits the President to make emergency grants of farm commodities from Commodity Credit Corporation stocks to friendly governments, or to friendly peoples without regard to the friendliness of their governments. For instance, 65,000 tons of U.S. wheat went to Lebanon, to aid people affected by severe drought and crop failure, as well as by the reecnt disturbances. Also to relieve hardship from drought, 3,000 tons of U.S. wheat were programed for Libya. In Tunisia, U.S. wheat is being supplied to help pay workers on public works projects designed to relieve unemployment and emergency famine conditions. Over $9 million of wheat flour and rice went to Ceylon for those in need due to floods.

In title III, revised language instructs the Secretary of Agriculture to barter or exchange CCC commodities for strategic or other materials when he determines that such action is in the best interests of the United States. It also instructs him not to put restrictions on the free world countries into which barter deliveries may be made, except insofar as he finds it necessary in safeguarding usual U.S. marketings and assuring that these deliveries will not unduly disrupt world prices or replace cash sales for dollars. USDA recently reviewed its barter program in the light of this new language, to devise the best way of continuing the program as an important tool in disposing of CCC surpluses.

Title III also authorizes donations of surpluses to needy people at home and abroad. An amendment now permits distribution on the same basis in areas under U.S. jurisdiction, such as the trust islands of the Pacific and the Ryukyu Islands. It further authorizes CCC to purchase products of oilseeds and edible oils and fats, for donation to needy people outside the United States, and to purchase wheat flour and corn meal for donations instead of processing its own wheat and corn.

During the past year, all the Public Law 480 programs together—foreign currency sales, emergency grants and loans, and barter—accounted for more than half the volume of U.S. wheat, rice, and vegetable oil exports and for about a quarter of the corn and cotton.

[From Capper's Farmer, September 1958]

YANKEE FARM PRODUCTS M-M-M GOOD—WE'RE BOOSTING OUR EXPORT SALES WITH TASTY SAMPLES AND ATTRACTIVE EXHIBITS AT FOREIGN TRADE FAIRS

We are not just telling foreign buyers about U.S. farm products—we're showing them. And that means more dollars in your pocket. Our salesmen are carrying attractive samples of what we want to sell. They are going where they can meet the most customers—to the fairs.

Folks in foreign lands are seeing, sniffing, and tasting products of American farms. And they like 'em. Wheat-flour do-nuts, fried chicken, potato chips, recombined whole milk—all hit the spot, the world over.

Your products, ready for use, have been put on exhibit at 21 of these foreign trade fairs thus far. Grower groups, like the wheat and soybean associations, trade organizations, and the Foreign Agricultural Service of USDA are combining forces in this sales effort.

Our trade fair exhibits are a part of the growing effort to expand our export markets for a variety of foods.

Here's how important the foreign market is to U.S. farmers. Production from one crop acre in five moves abroad. Twelve cents of every U.S. farm income dollar comes from export sales, on the average. The figure is 51 cents for wheat, 37 cents for soybeans, 57 cents for cotton, 43 cents for dry milk, 85 cents for rice. About $4.7 billion worth of U.S. farm products were shipped to other lands last year, a new high both in volume and value.

Besides selling for dollars, we have three other channels for maintaining our farm exports: (1) We trade some of our products for strategic goods like chrome ore and industrial diamonds; (2) we sell some for foreign money, which we in turn spend in those countries; (3) the Government gives from our surpluses to countries in need due to drought, disaster, poverty.

[From the Christian Science Monitor, Sept. 13, 1956]

SALESMANSHIP FOR FARM SURPLUSES

(By Josephine Ripley)

Go almost anywhere in the world and you can buy American goods, from soft drinks and phonograph records to cameras and automobiles. That is because far-traveling, fast-talking American salesmen have been there before you.

That is the kind of salesmanship Agriculture Secretary Benson has envisaged for American farm products. To him it is the key to farm prosperity—a worldwide market for the bounty of the fields, a bigger market.

This is the kind of salesmanship which Congress also had in mind when it put up money in 1954, and recently increased it, for the purpose of underwriting a vigorous sales campaign abroad.

This sales drive has been the least publicized, but perhaps one of the most dramatic aspects of the entire farm program. Samples of milk and ice-cream cones made from powdered milk, sweet rolls and cake made from American surplus flour have been handed out in Japan.

In Rome, Italians swarmed to see a fabulous American-made supermarket exhibit, full-scale and complete in every major detail. In South America, salesmen have spearheaded a drive for the sale of American wheat flour in Colombia.

There is a campaign to work off some of the Government's tobacco surplus in Spain. Tobacco buyers from Thailand and Korea have been invited to the United States to inspect the supplies personally. Cotton buyers from Japan and France are also planning to come here to discuss business, at the invitation of the U.S. Government.

American soybean and poultry experts are now in Europe drumming up trade for these excess commodities. There is also a drive to interest Japan in American soybeans and tobacco.

American advertising and sales techniques figure prominently in all these activities. Cooperative programs to expand the use of cotton in France and Japan have been undertaken. A Japanese-American soybean council has been set up to promote the use of soybeans and soybean products.

Trade fairs featuring American products—machinery as well as food—have been held all over the world. These exhibits are organized in cooperation with private trade groups. The U.S. Government organizes and manages the exhibits, rents the space, provides for the design, construction, and operation of the exhibits, and ships exhibit material.

All in all, as of July 1, 1956, funds equivalent to approximately $20,300,000 in foreign currencies have been tentatively planned in 26 countries for the development and expansion of foreign markets for American farm surpluses.

It has been a long pull. The work, up to this point, has been unspectacular. But at last, it is proceeding on a worldwide scale, although it is still in the early stages of what is seen as a long-range operation.

It is an effort in which the United States is competing with other nations also in the business of making sales, but at least this country is now better represented in the foreign field than previously. There was a time when Soviet Russia and its satellites dominated the international trade fairs.

American representatives abroad sent urgent pleas for more and better U.S. participation. The result has been a marked stepup in trade representation abroad, both in the interest of sales and as a weapon to counter Russian anti-American propaganda.

Meanwhile, under another phase of the farm program, the Government has been almost spectacularly successful in its effort to sell surplus farm products to foreign governments.

Up to date, the Government has disposed of some $2,300 million worth of these surpluses. Largest single sale so far was the highly publicized deal with India involving some $360,100,000.

All this does not furnish a basic solution to the problem of farm surpluses, but it does indicate that the surplus disposal program is now well off the ground.

Lithuanian Independence Day

SPEECH
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. HALPERN. Mr. Speaker, today is an anniversary—the anniversary of Lithuanian independence. We in the United States have never known the haunting fear of having our independence physically threatened, let alone the reality of foreign occupation. We can speak of the plight and the bravery of the Lithuanian people, but for most of us we understand their plight only through our imagination. But, nevertheless, here are people—almost 3 million people—that are realistic symbols of man's inhumanity to his fellow man.

The significance of Lithuania to those of us of Western culture is this: From a glorious and ancient past in which the Duchy of Lithuania stretched from the Baltic to the Black Sea the Lithuanian people have again and again been bled by richer and more powerful neighbors. From 1385 until the end of the 18th century Lithuania was part of Poland; then when Poland was annexed by Czarist Russia in 1795 Lithuania shared the same fate. Finally, in 1918, taking dual advantage of President Wilson's 14 points and the Russian revolution, the Lithuanian people declared their independence. This was their first taste of freedom since the 14th century; it lasted 22 years. In June 1940 Soviet troops took over the country. Then almost immediately the land was overrun by the German Army. German occupation lasted from 1941 until 1944, when it was displaced once again by the death grip of the Russian Bear.

I give this thumbnail sketch of the woes of Lithuania not to prove that history can be cruel but, rather, to point a meaningful moral. The Lithuanian people have been relentlessly submerged by force. They are now the unwilling victims of a political religion that seeks converts by every means known. The people of Lithuania in their present political dilemma represent the very thing that America fights against in word and in deed the world over. As such, we honor the people of Lithuania and their friends, relatives, and countrymen that live in the United States as men who have upheld the tenets of western political culture. These men and women believe in the highest ideals of freedom, justice, and right. They have not been corrupted by Russian words but have seen and felt the sword of social and political tyranny beneath the phrases.

On this anniversary of Lithuanian independence I am proud to be one of those Americans commemorating this day in hopes that Lithuanian independence will soon be the reality that so many have fought, died, and lived for.

State Sovereignty

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. NEUBERGER. Mr. President, in the Milwaukie (Oreg.) weekly Review for February 5, 1959, State Senator Monroe Sweetland, who is well versed in Oregon history, published a brief essay by Governor West himself regarding his theories of riparian rights.

In tribute to Governor West and Oregon's centennial year, I ask unanimous consent that Senator Sweetland's article from the Milwaukie Review to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE SOVEREIGNTY

(By Oswald West, former Governor of Oregon)

It was Governor Oswald West who, during his administration 1911–1915, secured for the people of Oregon the use and enjoyment of the beaches of the Pacific forever. In many States the beaches may be blocked to public access, and ownership is permitted out into the surf. But Oregon's matchless beaches, from the Columbia River to the California line, are freely available to all the public, thanks to Governor West's interest almost 50 years ago. Because of interest in making more firm and certain this policy of the State, Governor West has written us recently on the subject, and we are glad to publish his comments. The present session of the legislature may have this problem before it again.

The settlers of Oregon, like the colonists of the Atlantic States, coming from a country in which the common law prevailed to one that had no organized government, brought with them, as their birthright, the principles of that common law—insofar as suited to the conditions in their new home. The jurisprudence of Oregon, therefore, was based on that law.

The land laws adopted by the provisional government of Oregon regulated occupation only; the settlers acquired no title to the soil. The United States, on assuming dominion over the territory, became the owner of all the lands therein, but the provisions of the then general land laws were not applicable to Oregon Territory. Not before 1850 was there a statute (D.L.C.) under which anyone could acquire a legal title from the United States to lands in Oregon.

Public lands, as habitually used in legislation, are such lands as are subject to sale or disposal under the general laws of the United States. The seashores, and other lands under tidewater, being incapable of ordinary private occupation, cultivation, and improvement, become incident to sovereignty.

As the U.S. Supreme Court in the leading case of *Shively* v. *Bowlby* (152 U.S. 1) pointed out: As such lands are of great value to the public for the purpose of commerce, navigation, and fishery, title and control are vested in the sovereign power for the benefit of the whole people.

In the United States, all navigable water courses are a species of highway, and come under the control of the State (subject to the right of Congress to control commerce and navigation). A State has the same power to improve such waters as it has in the case of any highway—and collect tolls.

The riparian proprietor owns to high water mark only on all navigable rivers. The beds of such streams, between the lines of ordinary high water on their opposite sides, belong to the State, to be held and controlled by and for the public.

The navigability rule, as administered by the courts of this country, is that all rivers which are found of sufficient capacity to float the products of the mines, the forests, or the tillage of the country to market are regarded as navigable. On unnavigable streams the riparian owner owns to the center of the stream.

Problem of Federal Debt Management

EXTENSION OF REMARKS
OF
HON. DANIEL B. BREWSTER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BREWSTER. Mr. Speaker, the Baltimore Sun, which is universally recognized as one of our country's great daily newspapers has recently commented editorially on the Federal Treasury's refunding difficulties. This editorial graphically illustrates the seriousness of the situation which faces the Treasury. I believe the editorial is significant and worthy of the attention of the American public and of the Congress. Under leave to extend my remarks I include this editorial:

HAND TO MOUTH

Getting back to the Federal Treasury's refunding fiasco of last week.

The Treasury has to meet matured obligations of $14.9 billion, but hasn't got the money. It sought to stall off its creditors by offering more attractive obligations (bearing a higher interest) in exchange. But Government securities aren't snatched up the way they used to be. The Treasury was unable to find takers to cover the maturing obligations. It fell short by about $2 billion.

So what is the Government going to do now?

It is doing two things:

1. It is making heavy drafts on the accounts which it has in private banks, planning to scrape up about $500 million in this way. These account consist of funds, such as accumulated withholding taxes, which under balanced-budget conditions would normally go to pay current Government expenses. This move is a form of robbing the piggy bank.

2. Today it is putting up for auction $1.5 billion of 7-month tax anticipation bills, maturing on September 21 and acceptable for the payment of taxes due on September 15. On these tax anticipation bills it does not even venture to set an interest rate. It sells them at whatever discount the market will offer.

This is about as close to hand-to-mouth financing as a government can get. It is an admission that faith in Government securities, and confidence in the stability of the dollar, has sunk to a point where orderly debt management is not possible. The Government is a little bit like a man being hounded by creditors, who first borrows to pay his bills, then borrows to pay that loan off, and is finally reduced to pledging the wages he needs for current expenses. Not a pretty picture. A very good argument for balancing the budget and not making the nightmare of debt management any worse.

The Textile Industry

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Lancaster News, Lancaster, S.C., of February 9, 1959.

OFF THE RECORD

Congress is beginning to feel some alarm over the future of the American textile industry. It's about time. Congress signed a death warrant for the industry back in 1947 when the Trade Agreements Act was passed permitting the State Department and its economic advisers to participate in an international poker game organized at Geneva, Switzerland, under the General Agreement on Tariffs and Trade.

At regular intervals the 35 nations belonging to GATT gather at Geneva to play for high stakes. This Nation's blue chips are American prosperity, our high standard of living, and our productive ability. We play against I O U's. Other nations promise not to go Communist and to remain friendly to the United States in return for tariff concessions and a slice of our trade.

Cotton textiles, one of the big blue chips in the American economy, was tossed into the pot in 1955 to prevent Japan from being overinfluenced by trade opportunities with Communist nations. Although the State Department has steadfastly denied that the American textile industry was considered expendable, the effect was the same. Tariffs on Japanese imports were cut to the bone, American cotton was sold to Japanese mills at 10 cents per pound less than it could be bought by U.S. mills and the administration turned a deaf ear to the howls of anguish from domestic manufacturers.

The idea behind all this, stripped of its diplomatic and economic doubletalk, was somewhat Freudian. This Nation had a guilt complex because of its prosperity and high standard of living. The one-world idea was in its acendancy. We would export our prosperity and standard of living.

The record of that experiment since 1955 has been one of mill closings, bankruptcy, and general deterioration in the American textile industry. Foreign manufacturers have taken over a large part of our world market and are shipping goods made of American cotton back into the United States at prices no domestic manufacturer can match.

Now Congress is alarmed. Last week the Senate Interstate and Foreign Commerce Committee called for mandatory quotas on textile imports as an essential step in a program to save an industry vital to our national defense. This was based on a finding by the Defense Department that textile mill products rated second only to steel in terms of military needs.

This reversal of attitude has been a long time in coming. While a committee report does not mean that favorable action will inevitably follow, it does present the issues clearly and in terms which Congress can hardly ignore.

Columbus Discovers Itself

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 17, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Columbus Discovers Itself," which appeared in the December 1958 issue of the Kiwanis magazine.

The article tells how this progressive Montana community is successfully developing small industries. I place this article in the RECORD because I am proud of this Montana community's accomplishment, and because the example of Columbus may inspire and benefit civic leaders in other towns.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLUMBUS DISCOVERS ITSELF

(By Lafayette Smith)

the town of Columbus, Mont., isn't considered large even by Montana standards. Its population barely exceeded 1,000 when the 1950 census was taken, and most of the residents seemed to feel that it had slipped since then. With the trend in agriculture going toward larger farms and fewer farmers, there didn't seem to be as much room for the little farmer any more—and Columbus was mainly a town of little farmers.

As Columbus was a small town, so was its Kiwanis club, averaging between 20 to 25 members. For its size, though, the club was active. It conducted a countywide 4–H Club fair and livestock sale every year. It also entertained the townspeople with a minstrel show, thus collecting some money, and built a park in the center of town, planting grass and providing benches. "If we didn't have faith in the town's future," claims Club President William B. Witt, "we never would have built that park."

That faith got its first practical expression one noon during the fall of 1956. Gene Davey, who sold and fixed automobiles and was the Kiwanis president too, showed up at the Liberty Cafe, where the club met every Tuesday, with clipping in hand. The clipping noted that the old building down by the railroad tracks was for sale.

The building, measuring 200 feet long and 115 feet wide, had been built during the war by the U.S. Government and was used as a service station for trucks coming out of the Beartooth Mountains 35 miles to the south, laden with chromite ore. After the war the Bureau of Reclamation used it for some time as a warehouse, but now it stood empty.

Following the Kiwanis meeting, 10 members stayed late to talk about the building. "Why don't we buy it, and use it as a lure to bring a new industry to our town?" said Gene Davey. The idea was discussed, accepted, and soon eight Kiwanians were pulling checkbooks out of their pockets, and two others were running home to get theirs.

Within a few hours $10,000 had been pledged. Thus was Columbus Enterprises, Inc., formed—by men who were pledged to the preservation of their home town.

Bob Johnson, editor and publisher of the town's only newspaper, the Columbus News, journeyed to Seattle, Wash., to make a bid on the building. Gene Davey soon received a wire: "Purchased building for $26,000 stop find us an industry."

Finding an industry, now that they had acquired a site for one, proved to be no easy task. Columbus Enterprises advertised in the Wall Street Journal and Business Week. A variety of answers soon flooded Gene Davey's desk. One man wanted to use the building as a cattle feed lot, but he didn't intend to employ anyone. His offer was respectfully declined. A company manufacturing trailers and busses applied. No prospects for future growth, decided the Kiwanians. Several obliging contractors offered to dismantle the building. They were politely thanked.

Then as chance might have it, Gene Davey and Bob Johnson heard of two men named Ralph Heiken and Thelmar Mosdal, who during the lax winter season were building barn beams in a small corrugated steel shed in nearby Broadview, only 55 miles from Columbus. They needed more room. Soon they were invited to come to Columbus.

Also invited to come to Columbus was another Montana citizen named Ken Davenport. Ken had graduated from Montana State College of Engineering in 1950, had spent an inevitable 2 years in the service, then had sold Fords in Big Timber, Montana. Ken, however, wasn't quite certain that he wanted a Ford in his future, so when several of his friends in Columbus told him that a new industry was starting he offered his services. Another Montanan, Russell Wolfe, was hired as a sales expert, and these two, along with Mosdal and Heiken, left for the West Coast to observe and report on the beam manufacturing industry. They were particularly concerned with the prospects of glue lamination in beam construction.

"Today, 60-foot trees are a rarity," they reported on their return. "Within a dozen years or so, 30-foot trees will be just as rare. Yet with modern construction demands, structural beams of over 100 feet are needed, especially in the construction of modern schools, churches, and auditoriums."

With this favorable report, the construction of laminated wooden beams in Columbus began and the organization was officially titled Timberweld, Inc., with Ken Davenport, president and sales manager; Wolfe, secretary-treasurer; and Heiken and Gene Davey, vice presidents. The 15 members of Columbus Enterprises purchased $50,000 worth of stock, while approximately 75 other Columbus citizens accounted for $50,000 more. Very shortly that stock began to pay dividends, and has been doing so ever since.

Ken Davenport explains his company's success this way: "In Montana, it is very difficult to find types of industry that can be carried on economically for manufacturing and shipment of material to other points in the United States. There are many reasons for this: freight, the availability of raw materials, and concentration of markets. However, in the case of glu-lam material, we have found that it can be manufactured and shipped to virtually 75 percent of the United States on a very competitive basis with other glu-lam fabricators in other parts of the country. Presently we've shipped glue-laminated material for schools, churches, and industrial buildings to New York, Pennsylvania, Michigan, Minnesota, North and South Dakota, Wyoming, Colorado, and other Midwestern States. Our intended volume for the year 1958 has been doubled over our sales for 1957." With the country in the midst of a recession, these were encouraging words.

The increase in Timberweld's sales for 1958 was first reflected in the increase in manpower in their plant—later, in the pockets of Columbus citizens. At present, 30 men and women are employed by the company with an annual payroll of more than $100,000. According to estimates made by the State planning board, for every additional four persons brought to a town, it takes one more person (such as a grocer, druggist, dentist, etc.) to service him. Conversely, when a town loses four residents through migration to another area, one of its shopowners might as well close up.

Kiwanis president William B. Witt has commented on this situation: "Already we notice a lot of new faces on the streets. Timberweld's payroll has stabilized the real estate market for one thing. Before, there wasn't enough demand for living quarters and prices were dropping. Now prices are remaining where they should be."

Shortly after Timberweld received its start in Columbus, Kiwanians and the townspeople in general began passing the word to their friends and business acquaintances that the welcome mat was out to new industry. In July of 1957, Sherman Lang, an engineer for Mouat Industries, a chemical producing firm, appeared in Columbus to have a look at this town he had heard so much about. His company was leased 5 acres of land at tax cost and within a few months a pilot plant to process chrome had been established under his supervision. Eight men began carrying on daily experiments to determine whether or not to establish a larger factory. Should that occur, it would perhaps mean a payroll of 300 employees.

The fame of Columbus spread even further. The Montana State Planning Board in Helena issued a pamphlet called simply: "The Columbus Success Story." It was subtitled: "Community Action for Economic Development Pays Dividends." This pamphlet was distributed throughout the United States.

As for the town's future, Bob Johnson is glad to talk about it: "Mouat Industries have been successful in producing their basic product (sodium chromate), and are enthusiastic about their future in this field. While no other industries have moved into Columbus to date, there have been several inquiries. The American Chrome Co. south of Columbus has received a go ahead on construction of a pilot smelter to test the feasibility of producing ferrochrome on a competitive basis with foreign ores. If successful, and they are reasonably confident that they will be, Columbus may become the railhead for movement of this ore to the steel mills."

At a recent meeting of the city council, three Kiwanians moved that a strip of land 1 mile long by 300 feet wide along the railroad tracks be set aside for potential industries. Their motion was unanimously carried. Columbus, as usual, was looking ahead.

Anniversary of Lithuanian Independence

SPEECH
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. LINDSAY. Mr. Speaker, yesterday was the 41st anniversary of Lithuanian independence. I consider it an honor and a duty to record my congratulations to the people of Lithuania, whose determination to achieve independence has set an example for all free people. Now, once again, despite the most ruthless suppression at home, Lithuanians everywhere keep alive the embers of liberty. The Soviet efforts to extinguish Lithuania's national identity are a sufficent answer to any who would relax our vigilance or our resistance to further efforts of Soviet expansion. Ultimately Lithuania's determination to regain independence must win out.

Remarks to Florida Division, Investors League, Inc., by Dr. J. W. Annis

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. HALEY. Mr. Speaker, I offer for printing in the Appendix of the RECORD, the text of a speech delivered by Dr. J. W. Annis before the members of the Florida division, Investors League, Inc., at Winter Haven, Fla., on January 19, 1959. Dr. Annis is an eminent physician and a very prominent and capable civic leader at Lakeland, Fla. He is presently serving as president of the Florida Medical Association:

REMARKS TO FLORIDA DIVISION, INVESTORS LEAGUE, INC., BY J. W. ANNIS, M.D., PRESIDENT OF THE FLORIDA MEDICAL ASSOCIATION, WINTER HAVEN, FLA., JANUARY 1959

When I received Dr. Odeneal's letter asking me to pinch-hit for Dr. Orr, president-elect of the AMA, in addressing this organization, I wondered why I should be asked to fulfill such an assignment. I am still wondering, gentlemen, why I am here to talk to you—the Florida division of the Investors League—certainly not to speak to you about an investment program. I am definitely not qualified in that respect. Nor was I, I am sure, asked to come before you—an organization of whose existence I have not even been aware until I recived Dr. Odeneal's letter—to discuss reduction or repeal of any specific tax levies which might effect personal gain for you, or me, or any other individual. This would certainly be a very mean and personal motive which could in no way justify my taking my time from my practice, and you yours from your businesses.

Why, then, am I here? The reason I came, at least, was to bring to you, from another discipline, a discussion and a point of view of a much broader principle—of a fundamental concept on which our forefathers founded this country—the principle and concept of free enterprise—the privilege and right of unrestricted individual endeavor and achievement, just as long as we trespass against no other man. I mentioned our forefathers. We have inherited from them a certain free and reactionary approach to life—a revolutionary spirit, if you will, which molds our thinking and guides our actions—and should provide us with a kind of moral integrity by which we can conduct our daily life.

As you know, my profession is that of medicine. It stems from the earliest recorded history, indeed from legendary times. Perhaps the first real individual, of whom any actual record and objective proof exists, was a physician, Imhotep, personal physician to the ruler of Egypt, and designer of the Step pyramid, the oldest manmade structure in the world. Certainly this profession of ours,

which is the oldest of all professions, has ever been one which has advocated and carried out a system of free enterprise—a system advocating a completely free and unrestrained search for truth—a system of freedom of action, thought, belief and enterprise, where the importance of opportunity and accomplishment replaces that of security. Physicians, like priests, have died for their beliefs and for the refusal to give even lipservice to a lie or a liar—or a dictator. And physicians today resent and oppose regimentation in any form which will hamper their freedom of action—their freedom to practice their art.

We feel that a fundamental human right is this freedom of enterprise—this competitive spirit—this right to be wrong—that has made our country as great as it is. We feel that, through our daily contact with the human body and soul, in sickness and in health, we have come to know it fairly well, and we feel that its innate frailties must be as realistically viewed as its many virtues. We believe that competitive and unrestrained enterprise is essential for that sense of achievement—that sense of accomplishment—which is so necessary for our physical, mental, and moral growth. This is the reason that we feel so strongly that freedom of choice of a physician—and a physician of his patients—is so necessary to our way of life. A patient should select his physician carefully and without pressure of any sort, and should realize his obligation to him, just as the physician must accept this employment and realize his deep obligation to the patient. This right must remain inviolate if we are to continue providing the best possible medical care.

Let me now speak to you briefly about two subjects in which the Florida Medical Association has been extremely interested, and in which areas we have already taken decisive, and I hope, fruitful action. The first is the problem of indigent medical care within our State. This certainly is a very real problem, and a very real obligation; but, in our opinion, it is one which falls within the realm of responsibility of the local community and the State. It is our conviction that the care of these unfortunate individuals is, again, the obligation and the responsibility of the neighborhood, the community, the county, and lastly, the State. We feel that the Federal Government should not be called—nor should it insert itself—into the problem of financing this care. We feel that the local physicians should willingly give of their services here without charge, just as they have done in the past. We feel that the local community should provide part—if not all—of the ancillary care necessary to these patients. We can see no advantage in sending our dollars to Washington, only to get them back shrunk to less than half their original size, to be used in the case of these same patients. This is a luxury which we can ill afford. The responsibility of our indigent sick is our own. The responsibility of providing a livelihood for the personnel of a Washington office—to care for these sick folks—is definitely not ours.

Furthermore, we believe that the problem of the indigent sick, or the medically indigent, is the problem of the total medical care of the people in Florida—not a problem of the indigent care of Florida people by the U.S. Government. The health of us all—its standards, its criteria, and its performance—depends upon a properly balanced and administered program of medical education throughout the State. This involves teaching hospitals, universities, residencies, scholarships, and training programs. This is important if we are to develop and maintain proper standards of medical care—so that you and I, as individuals who can afford to pay for this care, may have it available. This can be done only if the medically indigent are fitted into this program—particularly into its teaching facet—so that progress can be made and students can be taught. For this reason, as I have said before, we consider this problem of the medically indigent primarily a medical problem—not one of public assistance.

With this philosophy in mind, the Florida Medical Association, several years ago, approached Governor Collins with the suggestion that he appoint a committee to study the problem of indigent medical care throughout the State. He agreed, and this committee, after quite an exhaustive study, came up with a very concrete and workable recommendation. The State legislature, in turn, appropriated $4 million for the last biennium to be used in the hospital care of these individuals. Briefly, the procedural technicalities are as follows:

State money is made available to the various counties as matching funds—that is, the county puts up a given amount of money, which the State then matches up to a limited and proportioned amount. This money is for the sole purpose of defraying hospital expense in already-existing institutions within the county, and is not to interfere in any way with any program which the county may have for the care of these indigent people. In other words, the county hospitals in the various areas are not eligible for these funds. The purpose of this is to use the already existing beds, rather than building additional beds, and to put the responsibility back where it belongs—on the county—so that it shall provide at least half of all funds necessary for the hospitalization of these people. No provision is made for the payment of the physician, it being felt by the profession that he should make no charge in the case of truly indigent people, unless some other member of the family or friend wishes to pay the bill. Practically all the counties of the State have participated in this program. I believe that there are only four—these all small counties in west Florida—which have not taken part in it. The program has worked well and has just about used up the funds at the scheduled rate.

In other words, about half a million dollars are being spent quarterly for this program. Unfortunately, hard times may be ahead for the program, inasmuch as the Federal Government has apportioned $12 million for the State of Florida, which money can be obtained for the use of the sick in the State, provided the State itself supplies matching funds. This is a very tempting offer—an apparent something-for-nothing deal—and obviously is contrary to the principle about which we are talking; that is, the principle of the responsibility of each community for its own local problems. This paternalistic approach, which would strengthen the Federal Government immensely, is an extremely tempting and juicy plum to dangle before the coming legislature, inasmuch as it involves $12 million. I hope that the legislature will resist this tempting offer and beware of the Greeks bringing gifts. Our problems—and this includes our successes and our failures—our losses, as well as our gains—should be our own and not the responsibility of our Federal Government. I am sure that our program of indigent care can be improved upon—and I am sure that it will be improved upon. The important thing to me is that we, as a State, have made a definite and sincere attempt to solve this problem for ourselves and not go running to Washington with it. Once this kind of initiative and enterprise ceases to exist, we will have forsworn our American type of democracy.

The second subject which I wish to discuss with you is that of the aging population within the State, particularly with regard to their medical care, since it is with this aspect of the problem that I am best acquainted. It is no new problem, nor is it one which we in Florida are just beginning to investigate. For the past 4 to 5 years there has been a State committee studying it; and one of the members of our State association has been very active in its operation, as well as in the national program.

Just about 1 year ago, the Florida Medical Association's Committee on Legislation went to Washington to talk with our Representatives and Senators. We spent 1 day in a most profitable discussion of many problems with these gentlemen; and perhaps the most interesting talks which we had with them were in regard to H.R. 9467, with which I am sure you are familiar. It was surprising that several of our Representatives knew little or nothing of this bill, but all were most cooperative in looking into it and discussing it with us. Furthermore, all agreed that this was unsound legislation, and they individually and collectively stated that they would oppose it. We have followed this bill from its inception. Members of our State committee on aging have perused the many volumes of published hearings pertaining to it, and we of the medical association are well aware of the fact that there is no logical or scientific basis for the enactment of this type legislation. The idea of adding the medical, surgical, and hospital care of some 13 million Americans to a program which is already basically unsound and insolvent, as is the social security program, is so ridiculous as to be laughable, if the seriousness of the situation were not so apparent. Indeed, the only thing which outstrips the unsoundness and ridiculousness of this type legislation is its vote-getting ability. There can be no question of this, nor can there be any question that such legislation, if introduced on the floor of the House of Representatives, would, in this coming session of Congress, be passed. This is not my opinion, but that of each of the half dozen or so Representatives to whom I have talked. Florida, fortunately, has a conservative congressional delegation.

In Washington, a year ago, our group spent considerable time with Mr. Schottland, the Commissioner of the Social Security Administration, discussing our views on the care of the aging and the medically indigent. We were politely and respectfully received, but had the feeling that we had accomplished nothing insofar as changing the opinion of the bureaucracy which manages and manipulates this large department of the Government. Consequently, we appointed a comittee within our association to study the problems of the aging in our own State, to determine, insofar as possible what these problems were, with particular regard to the ability of these people to meet their medical needs. In the first place, what are these medical needs? What is the average amount expended for medicines, physicians, hospitals, nursing homes, etc.? And how is the average family in Florida, beyond the age of 65, equipped to meet these needs? What sort of health insurance can they afford on a voluntary basis? What would they be willing to pay for health protection? How many of their problems could be handled in the nursing-home rather than in the hospital? How many by an attendant or companion within their homes? What is the place of meals-on-wheels in supplying these individuals with the proper diet and warm meals regularly at their homes? All these—and many other questions—remain unanswered. Of course, they are of little import to legislators who, not bothered with the problem, concern themselves merely with the remedy—knowing nothing of the magnitude of the difficulty which they are undertaking to correct.

As I have said, we of the medical profession in Florida, in cooperation with certain

other agencies, are in the process now of conducting such a thorough and complete investigation, so that we can definitely and scientifically outline the problem of supplying adequate medical care to the aging population, and then propound a reasonable solution. What that solution should be, certainly no one knows at the present time until the problem itself is more clearly outlined. Only then can we intelligently hope to evolve a workable corrective procedure.

We earnestly hope that the Congress will be good enough to postpone any hasty action in this regard until the results of our survey, and those of others, can present to them a clear and detailed picture of the ills which they are being asked to correct. It is certainly touching to see the deep concern that is expressed for the "poor old folks" of this country. These elderly people are as appealing a group as the little children—and they have the further advantage that each one of them has a vote. Here again we return to a fundamental divergence on the basis of principle between a group such as those of us who are gathered here today and those individuals in Washington who advocate a Strong Central or Federal Government. Here again we become involved as to whether the responsibility of this aging population is a Federal or a local and State obligation—whether we are dutybound and honorbound to take care of our own in sickness and in health, or whether we should pass on the responsibility of their care to an omnipotent and somewhat callous Federal Government.

These principles, gentlemen, can never be reconciled. We must accept the obligations implied in a Government based on the principle of States' and individual rights, if we are to reap its rewards. We must believe either in the competitive free enterprise system of our forefathers which has made America a great country—or we must believe in the strong, centralized anarchistic or fascist governments of Europe. We must make up our minds whether we wish to raise our families in a democracy or in a socialistic or communistic state. And, having made up our minds, we must act accordingly to see that the proper legislation is enacted in Washington which will support our views. There can be nothing mean, personal, or selfish in our approach. It must be independent of any personal gain or reward on our part as individuals. It must carry the banner of an ideal which will be for the betterment of our immediate community, our State, and our entire Nation.

Let us look ahead for a minute and anticipate, if we can, what the opponents of the philosophy which we are championing propose for the future. Let us try to understand the enemies' viewpoint and the ways and means by which they plan to promulgate it. Since everyone loves to make predictions, let me give you mine. Briefly, they are as follows:

I believe that one of the first items of business which will be introduced into the Senate at the beginning of the new Congress will be a resolution to change the rules of the Senate, so that new rules would be enacted with each new Congress, just as they are in the House. This is a complex and seemingly innocuous procedure. However, it does away with the continuity of the Senate as a body. As you know, Senators are elected on a staggered basis and the Senate is thought of as a continuing body—the majority of which are always held over from the previous sessions. The same rules govern it from one year to the next, and its personnel never completely changes at one time. This is in contradistinction to the House which is elected or reelected in its entirety every 2 years, and in which new rules are laid down for each separate group. The effect of such a change in the Senate would be to periodically allow such things as the limitation of debate, etc., to come up and periodically jeopardize the rights and privileges of a minority group. If, for instance, debate were limited and the filibuster done away with, the South in particular would lose a great deal of its effective guardianship of the conservative principles of government. It would, I am sure, be an extremely bad thing for our kind of America—and I certainly hope that you will oppose any such change by all the means at your disposal. The effects of such a change would by extremely far reaching and deleterious.

The second thing that I predict will take place early in the 86th Congress is the introduction of legislation along the lines of H.R. 9467. As you know, the composition of the House of Representatives this year is such that passage of legislation of this type is a foregone conclusion. This type of legislation, however, is so palpably impractical and costly that, even in a favorable Congress, I predict that, when introduced, it will be considerably watered down; that it will take care, perhaps, only of hospital payments on individuals 70 years of age or over (instead of 65), and that it will not provide for younger people or for medical and surgical payments. This would sugarcoat the pill to the degree that it might be acceptable to Congress and would provide the wedge, or foot in the door, necessary so that next year, and the following years, additional benefits could be added to the existing skeleton program to make it as broad, or even broader, than the original. Any such legislation of this type must, of course, be resisted and resisted as vigorously as possible, if we are to preserve our democratic principles and keep from becoming an entirely socialistic state. I believe that the Senate will defeat it in this first session if we advise them of our opposition—but their action in an election year is an entirely different proposition. Between now and then, groups such as this throughout the country must make their voices heard—their will known—if we are not to be inundated by the threatening and all-engulfing wave of socialism.

Conventional Death or Unconventional Survival

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the development and stockpiling of weapons whose power is so immense as to threaten the very existence of the human race has been a constant preoccupation of the major powers ever since the end of World War II. With a few notable exceptions, people in policymaking positions seem to have assumed that this treadmill to oblivion is the best and even the only possible way in which we can proceed. To suggest that weapons posing as grave a threat to the user as to the intended victim are not really contributions to defense has been assailed as soft and unrealistic thinking. But recently, at a meeting in Washington of the American Association for the Advancement of Science, a paper was read which proposed some new, though perhaps unconventional, ideas in the realm of defense. But, more significantly for our purposes, this paper made some very penetrating observations about the difficulties which are faced by the Congress in attempting to exercise our clear constitutional responsibility for the direction of the Nation's defense policy. The author's ideas have been described by the editors of the Saturday Review of Literature as "unsponsored, controversial, imaginative and, we hope, provocative of new ways to peace." Since every Member of the Congress would welcome suggestions, which might even indirectly lead to new and fresh thinking about ways to peace, I ask unanimous consent that the following article, by Lewis A. Dexter, from the Saturday Review of Literature of February 7, 1959, be printed in full in the Appendix of the RECORD.

CONVENTIONAL DEATH OR UNCONVENTIONAL SURVIVAL?

(By Lewis A. Dexter)

The Constitution of the United States of America plainly says that "all legislative powers herein granted shall be vested in a Congress." Among these powers are specifically included "power to provide for the common defense * * * to raise and support armies * * * to provide and maintain a navy * * * to make rules for the government and regulation of the land and naval forces" and further "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers."

Yet the Congress does not in any very significant degree exercise these powers to check and balance the military or the Executive in shaping military policy. Indeed, in interviews I have conducted during the last 7 years (among others, under contract for the Center for International Studies at Massachusetts Institute of Technology and for the Advisory Committee on Civil Defense of the National Research Council) several Members of Congress and congressional staff executives have expressed the belief that because the President is Commander in Chief of the Armed Forces the Congress does not actually hold the same responsibility in military matters as it does in other affairs. My own contention is that scientific analysis of the role of Congress in military policy is not only proper but could aid in reducing the likelihood that we will suffer the worse consequences of modern warfare.

How has our constitutional system come to be modified in practice from the system intended by the men who wrote the basic document on which American government is built? The departure occurs through failure to distinguish military policy from war plans, tactics, weapons manufacture, and other aspects of warfare. By military policy I mean the grand strategy, or what has been called the politics of warfare underlying, guiding, and limiting strategic, tactical, and material decisions. Military policy is thus concerned with such questions as: What kind of war are we going to fight? What kind of military doctrine(s) are related to our overall political and long-range purposes as a people?

It is entirely possible for a nation to conduct a cold war or a hot one without a military policy. So far as the naked eye of this particular observer can discern, it is not clear that we have in this country at the present time a military policy. We do, of course, have a military doctrine, or perhaps several military doctrines, of which the best known is deterrence through the threat of massive retaliation. But it is not clear that this is related to political objectives. In fact, the doctrine of massive retaliation arose in very large measure from our prior and for some time unique possession of the A-bomb.

An overall military policy would commence not with weapons but with the question: What kind of weapons do we need for the kinds of wars—or deterrence—which empirically and ideologically are most likely to fit our political purposes? This question may be asked at the highest levels—by the National Security Council or the President—but if so it and the answers to it are classified or held *in petto* and not in the public domain. Similarly, military policy would determine such questions as unification of the Army, Navy, and Air Force in accordance with the answer to a larger question: What kinds of organization of the military services are likely to produce the kinds of military thinking and action which will best fit our overall political purposes? Although some discussion of unification and service missions purports to be in these terms, questions of military organization are tackled in general as though military organization and political purpose are autonomous, separable entities.

The idea of military policy just put forward will serve to reveal the writer's biases, the reasons why I am concerned with the position of the Congress in the formulation of military policy. Probably, a person largely satisfied with current military doctrine would be less likely to ask questions which at least suggest that policy could be formulated differently. However, those who do not share my doubts about our current approach to military problems may nevertheless find some interest in exploring how in a complex society do politicians legislate on technological issues where some element of crisis is involved and whether the suspicion of the expert and the specialist can be utilized in any sensible way to guide military policy decisions.

My interviews with Congressmen have brough met to five conclusions:

1. Most Congressmen believe that Congress has very little to say about military policy. They allege that the military matters it is concerned with are the peripheral matters of production, waste, living conditions, etc.

2. Most Congressmen are suspicious and distrustful of the military, its representations and claims. But they have no technique by which they can get at them except by leaks and differences of opinion arising from conflicts among the services, which they therefore welcome.

3. No Congressman interviewed claimed that he heard from constituents or persons of prominence about overall problems of military policy or about purposes of military organization—in the way in which Congressmen do hear overall economic views as well as arguments for or against specific economic proposals.

4. A number of Members interviewed would like to have some resource—they don't quite know what—in the field of military policy which would provide them with the stimulus and ammunition about overall purposes which they do get, for instance, on economic matters.

5. The legal background and experience of Members of Congress play a larger role in how testimony is sought, received, and evaluated than is always recognized. Again and again, members of committees refer to their quasi-judicial function. For instance, a member of an Appropriations Committee panel said, "We're like a grand jury; the plaintiff may ask $50,000, the defendant offer nothing, and we say it should be $22,350.08. We're like a grand jury * * * that goes out and investigates * * * that can walk into the homes of litigants * * * and haul people in, high and low."

A grand jury does investigate complaints; but the complaints usually have to be offered by someone. A judge even more clearly decides between litigants. But who are the litigants here? Except in cases of waste, graft, local complaint, or personal injustice, there are on matters of military policy only one set of litigants—the armed services, struggling for prestige missions and a higher proportion of defense appropriations. This differs from political conflicts coming before Congressional committees over tariff protection and reciprocal trade, national fiscal policy, taxes, agricultural programs, conservation of natural resources—for in all these latter instances general arguments of national policy, national interest, and political philosophy are presented on both or several sides. It is quite possible that analysis of testimony on military matters during the 1930's would show far more concern with fundamental issues of military policy than is shown now, because in those days isolationists and pacifists were heard; their challenges of the military were expected and were considered.

It is not without relevance to free inquiry into military policy today that three or four senior civil servants in the Defense Department have objected to any notion of Congressional responsibility in this area. One of them whose responsibility and training orients him constantly towards civil-military legislative relationships told me vehemently that he thought it improper to even begin any such study as I was undertaking. Of what conceivable use could it be? When I replied that possibly my work might help crystallize awareness on Capitol Hill of how military policy is dealt with, he said "G. . . d . . . it, that's just it. That's downright unpatriotic; D . . . it, if a Congressman wants to know what he should think about such matters, all he has to do is ask us!"

Upon my refusing to give up the study, this man swore that he would see to it that the study was given up, and he did in fact write an extremely strong letter along that line to my supervisor at MIT. He is, I judge and presume, an aberrant case; but sometimes the explicit assertion of an extreme opinion helps shed some light on the drift of elements in the general point of view.

The critic of prevailing military doctrines is thus seen not engaged in a relatively innocuous intellectual disputation; he is threatening the status, the securtiy, and in many cases the sense of dedication of a number of his colleagues and comrades. Because weapons systems, service missions, etc., are all dependent upon military doctrines, and weapons systems and service missions encyst the status, security, and aspirations of a good many men.

It would be at least worth exploring the part which the defense contractors play in determining military orthodoxy. If, as has been quoted in testimony before congressional committees, 70 percent of the weapons ideas come thence, it is likely that the ideas put forward will be selected according to a process which does not encourage radical revolutions in conception because radical changes are (a) expensive to a contractor with a given staff and way of doing things, and (b) dangerous in the sense that if they are rejected they may destroy the contractor's good relationships with the military.

So the Congress, practically speaking, finds itself forced to rely upon those whom it distrusts—distrusts because it knows or believes it knows they are speaking for vested interests. One Member epitomized the situation by saying perhaps a dozen times in the course of a 1-hour interview, "Who am I to say 'No' to the military? They say a certain thing should be done; who am I to say 'No'?"

He is right in one sense. Committees of Congress are not now properly staffed to analyze Executive recommendations on military matters. However, any committee which chose to do so could provide itself with an adequate staff of reasonably critical and imaginative natural and social scientists as free as possible of loyalties to current military institutions and doctrines. The subcommittee members of the House of Representatives Appropriations Committee who study the budget requests for the Defense Department and the Office of Civil and Defense Mobilization are more continuously in touch with military operations than any other group in Congress; and it is encouraging that one of these men, Representative DANIEL FLOOD, of Pennsylvania, has proposed that the House set up a select committee on Fiscal Organization and Procedures by resolution, "for the purpose of strengthening congressional control over the public purse through the * * * strengthening of its review of the annual budget * * * enabling (the Congress) better to meet its responsibilities under the Constitution." I showed Mr. FLOOD the first two paragraphs of this paper, and his reaction was that the precise reason why Congress "does not in any very significant degree exercise its power to check and balance the military" is that Congress lacks the tools to get behind budget requests or to determine their operational meaning. Whether a select committee is necessary, or whether his purpose could be achieved simply by a present Appropriations Committee decision to utilize politically sophisticated natural and social scientists routinely to study the meaning of the budgets that committee is asked to approve, may be open to discussion.

There are several other congressional committees which have or could have significant responsibilities along the same line. The Armed Services Committee comes to mind. The House Foreign Affairs Committee has a special responsibility in the field of military aid. And, in fact, as an experienced staff member once remarked to me, "In Congress, 9 times out of 10, assertion is jurisdiction." So almost any committee could—if its senior members wished it to do so—tackle the problem of a really new look at military policy.

Any committee approaching the problem along the lines here suggested could profitably start by raising a question posed earlier in this essay: What kinds of war would best fit into the political purposes which we have in mind?

Such an approach would demand at least one revision in the characteristic picture of war now drawn in this country—that war must be as destructive as possible, to the death, an unconditional surrender type of thing, with the corresponding mechanisms of savage threats and promises of retaliation. Such a war, and such an attitude toward cold war, does not involve policy at all. Policy implies consideration of the best and least hazardous way of achieving ends.

I would guess that consistent, significant concern by any congressional committee which would make military policy a subject of serious intellectual interest to civilians would very shortly lead to a questioning of premises. For instance, the theory of deterrence, as its very name implies, rests upon a psychologically unproven premise; the belief that a potential enemy will refrain from acting because he fears your capacity to injure him. There are times and circumstances, no doubt, when the belief is true, but the relative unsuccess of both American and Russian police in controlling hooliganism and juvenile delinquency leads one to doubt its universal applicability. The practice of deterrence may, in fact, provoke preventive or preemptive action.

There is another solution: The development of weapons to fit our purposes. It is apparently possible to develop giggle gases, sleep-inducing gases, sneezing gases, if need be gases producing the symptoms of dysentery for a couple of weeks, which have no lethal or long-range destructive effect on a civilization or a people. It is conceivable, indeed, that gases can be produced which merely have the effect of making people so

extremely happy, so euphoric, that they simply will not take the pains or bother to man attack or defense stations, launch missiles, or do any productive work. These gases would, in effect, intoxicate the whole population.

Whether such gases can in fact be delivered, nobody knows; but surely the whole atomic bomb would have seemed incredible in 1930, even to most atomic scientists of that date.

Suppose that, as a result of a reconsideration of national military policy of the sort which Senate Majority Leader LYNDON JOHNSON has indicated he hopes to see the Congress undertake this session, the Congress should, by resolution, make some such announcement as the following:

"We have been devoting x billion dollars over the last 15 years to thermonuclear weapons and their delivery. This threatens the survival of the entire human species. We propose therefore that beginning tomorrow we reduce this sum by x dollars and that the x dollars which we save be devoted to the development and delivery of gases which cannot possibly exterminate the species.

"Since we know that in basic research, there are no secrets, we freely offer (a specified portion—perhaps one-quarter) of the whole sum to the United Nations to be spent and developed under United Nations auspices."

Our friends, and those who are not so sure of our good intentions as we like to think they are, would immediately see the advantages of happy gas over tactical nuclear weapons. Happy gas could be used by a U.N. police force, for example, to prevent aggression against Lebanon or Iran without fear that such police action might lead to destruction of the human race. If the idea were publicized to the people of Russia it could exert a considerable pressure on the regime itself. As publicized among the scientists of the world, it would recruit the full enthusiasm and capacity of many who in recent years have stayed away from defense work or dragged their feet on it; and it would give a period of hope, during which other matters of bitter dispute could be better negotiated.

During that period of hope, of course, both the U.S.S.R. and the United States would keep thermonuclear weapons; through aggression or miscalculation they might still go off. It is essential that our approach provide a basis for honorable disarmament and reconciliation. It must refocus the loci of terror in such terms that both major groups of powers will in their own self-interest work toward an early solution and that each will be convinced that the other is not going to engage in preventive war.

The elements of such a solution could include exchange of hostages. An exchange could be arranged between Russia and her satellites and the United States and Great Britain of 2-year visits by relatives and associates of the leading political, military, and perhaps economic figures in each country to the other. If, for instance, Maj. John Eisenhower were to be assigned to spend a year teaching literature or some other field in which he is qualified in some Russian city, not far removed from one of their major industrial complexes, and bring his family with him, the Russians surely would realize that President Eisenhower was not likely to launch planes or missiles against the U.S.S.R.

The strain on parental feelings and on the feelings of those involved must be considered. But if people realize that otherwise thermonuclear war might take place, I believe most of them would be willing to take the risk involved. Many families today send young children away to summer camp, partly to be hardened. Such an exchange as here proposed would be no more difficult than that—and it would have advantages for the individuals themselves, in most instances, far greater than the best summer camp.

While this experiment in restoration of good will was proceeding, pinpricks (or massive insults, however they are regarded) in connection with passports, trade barriers, and the like should be removed. The emphasis must be on what we can and shall share and exchange.

The key word here is emphasis and the spirit underlying it must be "accentuate the positive; underplay the negative." There will continue to be, presumably, developmental techniques in weaponry which it would be idiotic to share. But American policy, so far as the rest of the world knows it (with the exception of point 4 and the atoms-for-peace program) in recent years has frequently stressed what cannot or will not be done or what will be done in an unpleasant and bothersome manner. We have rarely proclaimed what we are trying to do.

There are always a great many people who would rather die by techniques which have come to seem familiar and natural than take the risk of the unfamiliar with its somewhat unconventional methods. Such people (doctrinaire Marxists in Russia, conventional military men in this country, enthusiastic nationalists in some other nations) may lead the world to disaster. Clearly we must go as far as it is possible to go to reassure them. Is there any stronger reassurance for them than the traditional, open working of the checks and balances in our own democratic system? Could we possibly do better than to resolve the conflict which many Congressmen feel between the technologically based Defense Department of today and the hope for civilian responsibility and civilian protection tomorrow? May it not be that the cure for science is more science—science in the Congress?

Poison in Your Water—No. 12

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the RECORD an article appearing in the Seattle (Wash.) Post-Intelligencer on March 2, 1958. The article describes how sanitary conditions of Lake Washington and Puget Sound are so bad that it is expected to shortly have a disastrous effect on real estate values in the area.

This is just another consequence of the dirty, foul water in this country. The water which was once pure and clear has become clouded with sewage, municipal waste and industrial waste so that it is no longer fit to drink or even swim in.

This is just another reason why the full appropriation of $45 million under Public Law 660 should be made and why that law should be extended and liberalized so that our country may once again become a land of pure, clear water usable for drinking, industrial purposes, fishing, boating, and swimming.

The article follows:

POLLUTION SEEN AS THREAT TO PROPERTY VALUE

Continued pollution of Lake Washington and Puget Sound will have a disastrous effect upon real estate values. Seattle realtors Henry Broderick and John L. Scott warned Saturday.

They estimated waterfront property values will drop at least 50 percent unless pollution is halted. They said such a situation would be a civic disaster.

Broderick said the Metro plan is the only solution proposed to halt pollution.

"I feel confident Metro can do the job," Broderick declared. "The important thing is that it must be done right now. If we wait, it will be too late."

Scott said the sanitary condition of Lake Washington is already so bad many lakeside residents are building swimming pools. He said waterfront property's chief asset comes from swimming facilities and that such property will greatly decline in value if it becomes merely view property.

Coal by Wire

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. HECHLER. Mr. Speaker, for 40 years the gasoline-powered automobile has dominated the American road. The old steam-powered and electric-powered cars have long since vanished into limbo—or museums. At any rate, that is what we have been taught.

However, I would like to commend to your attention the following article which indicates the electric auto may be making a comeback. It relates how manufacture already has begun on a new type of electric car which is cheap to operate, has few complicated parts, and is ideally suited to certain types of business use.

This article, which was published in the Parkersburg (W. Va.) News and was written by a personal friend of mine, Marie Wood, details fully the description of this new car, which soon will be a familiar sight on the streets of Parkersburg, and soon may be in general use all over the country.

My interest in these cars, and my purpose in bringing them to your attention, is more than incidental. Because they are powered with electricity, I am particularly interested in their development. Electricity is cheap and plentiful in my home State of West Virginia, because of the abundance of coal, which powers the huge generators throughout the region. In fact, the utility companies boast that electricity is coal by wire.

I wish every success for the popularity of these new vehicles, which are another outstanding use of coal by wire:

NEW ELECTRIC AUTOS ARE COMING TO CITY

(By Marie Wood)

Electric automobiles with a 55-mile-an-hour speed, a driving range of 80 miles (enough for 1 day) and constructed of fiberglass and aluminum are about to make their appearance in Parkersburg with Monongahela Power to have one of the first, it was learned last night.

Fuel costs will be 8 cents a day if the cars are plugged in to 220 volts for recharging and 18 cents a day if plugged in to 110 volts.

A west coast company which formerly manufactured airplanes is turning out the

4-passenger small cars and Monongahela Power is one of a number of eastern utility companies which have ordered—and paid for—the first 100.

Cost will be around $2,000.

The cars will weigh 1,875 pounds empty with the body accounting for 300 pounds and the batteries (1 to each rear wheel) another 528 pounds.

Utility companies plan to assign the electric cars to meter readers as speedily as they can get sufficient number.

The first electric car to go into production in approximately 40 years these "Volts Wagons," as they already have been nicknamed, will have a fiberglass body and measure 13½ feet long and five feet wide—with choice of black, blue, gray, or bronze.

Height will be 4 feet 9 inches. The electric motors and transmission will be in the rear (eliminating any floor tunnel) and the trunk will use all the space up forward under the hood.

The welded aluminum frame will be strong enough to prevent crushing in case the car should flip over.

There will be no exhaust—so no smog problem.

The only motor sound will be a slight whine when the car is in operation.

When it is halted for any reason—including traffic lights—the car will be silent. It won't be using any current.

To go backward there is a backward button on the dashboard.

The steering post will have a hand shift with two positions: low range for brisk takeoffs or hills and driving range for average touring.

Hydraulic brakes will be equipped with 2-inch wide drums because an electrical braking system would have increased cost, complexity and weight.

There will be no oil or temperature gauges but a voltmeter with a face that reads like a gasoline gage will have two-thirds of the range painted green. The remaining one-third will be yellow and red.

When the needle hits red it's time to head for the nearest charging outlet.

If the car dies on the road manufacturers have arranged the batteries so they have a last-gasp recuperative power they promise—and the driver sits idle with power off for five minutes and then he can drive 6 more miles at 30 miles per hour.

Manufacturer is the Stinson Aircraft Tool & Engine Co., of San Diego, Calif., and the electric car has been christened the Charles-Town in honor of the financial godfather, Dr. Charles H. Graves, 40, a San Diego dentist, inventor and real estate man.

Congressman Carl Elliott Receives Parents' Magazine Award for Outstanding Service to Children in 1958

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McGOVERN. Mr. Speaker, our able colleague, Representative CARL ELLIOTT, of Alabama, who guided the National Defense Education Act of 1958 through the Congress, has recently been given a most coveted award—the Parents' Magazine Award for outstanding service to children in 1958. As one who served on the subcommittee chaired by Congressman ELLIOTT, I came to appreciate his intense devotion to the welfare of America's youth and his earnest desire to strengthen American educational standards. I know that the Members of Congress and those interested in the future of our Nation's young people, join Parents' magazine in saluting CARL ELLIOTT for his remarkable record in the Congress on behalf of youth.

I include at this point a press statement from Parents' magazine together with the citation which appeared in the January 1959 issue of the magazine:

Congressman CARL ELLIOTT, of Alabama's Seventh District, was today presented with an award by Parents' magazine for outstanding service to children in 1958.

The award was presented in Washington, D.C., by Robert Cramer vice president of Parents' Institute, publishers of the magazine.

Congressman ELLIOTT was cited as a stanch supporter of education, who has worked hard over the years to help America's schoolchildren." The passage of the National Defense Education Act in the closing days of the 85th Congress was hailed as "a singular achievement for Mr. ELLIOTT, who as chairman of the Subcommittee on Special Education of the House of Representatives took the lead in piloting the bill through rough legislative seas."

The award for outstanding service to children has been an annual event since 1928. In past years the award has gone to such persons as Senator Lister Hill, of Alabama, former Senator Charles Potter of Michigan, Dr. Jonas Salk, and Defense Secretary Neil McElroy.

A stanch champion of Federal aid to education, this distinguished legislator from Alabama has worked assiduously over the years to help America's school children. Passage last August of the National Defense Education Act—most important aid-to-education measure enacted by Congress in 40 years—was a singular achievement for Mr. ELLIOTT. As chairman of the House Education Subcommittee, he took the lead in piloting the bill through rough legislative seas. Today and in the future, this 45-year-old lawyer and father of four can be counted on to strive for what he believes—better education for all U.S. youngsters.

Loan Act Questions Our Loyalty

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BURDICK. Mr. Speaker, I should like to call your attention to student reaction to provisions of the National Defense Education Act as appears from the following editorial from the February 13 issue of the student paper, the Dakota Student, which is published on the campus of the University of North Dakota at Grand Forks:

LOAN ACT QUESTIONS OUR LOYALTY

In the last session of the United States Congress the National Defense Education Act was passed. This act provides $826 million in Federal funds to help support education in the next 4 years.

During the hectic hours at the close of the session, Senator KARL MUNDT, of South Dakota, added to the bill a loyalty oath requirement which reads as follows: "No * * * funds * * * shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, is not a member of, and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

The addition of this loyalty oath requirement has since raised a great deal of controversy. Arthur Flemming, Secretary of Health, Education, and Welfare has noted publicly that the provision would do little or no good.

The University of North Dakota Chapter of the AAUP has also voiced its objections to the provisions of the bill. Princeton University has declined to apply for funds under the act, in part because of the loyalty oath requirement.

Why has this act raised such a furor? There are several reasons. First of these is the nature of an oath itself. It, by its very existence, implies a doubt and distrust of a certain group of people—the students and educators of America. When any group is singled out for a test such as this is, it indicates a general suspicion of the group.

Secondly, although the oath creates a general atmosphere of distrust in regard to these people, it will be ineffective in regard to its primary purposes. It will not uncover Communists in education, since any Communist would sign the oath with no scruples. It would be odd indeed if a movement aiming to swallow a whole country by force were to choke on an oath.

Third, it is a direct violation of civil rights, and it suppresses the necessary experimentalism of a person's college years. If certain groups are taboo, how is the student to know what they are? The end result is that students will join no groups. Can the oath be so construed that a student or professor studying Russian economics will be accused of supporting communism by subscribing to an economics journal? The very vagueness of the provision eats away at academic freedom and the right to know.

In the long run this loyalty oath provision will catch no Communists. It will create a distrust of students and their teachers as a group, it will stifle academic freedom, and in truth it strikes at the very core of the democratic philosophy.

If students cannot be trusted to sift truth from error, if indeed we fear that education is going to lead students astray from democracy, it will take a good deal more than loyalty oaths to help us.

Alaska: Salute to the 49th State

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. WIDNALL. Mr. Speaker, one of my constituents, Mrs. Greta Drumm, Shuart Lane, Ramsey, N.J., recently composed a poem saluting the entrance of Alaska into statehood. It was published in the Ramsey Journal. I feel that the message it carries deserves a wider audience and I am pleased to in-

clude the fine tribute that it contains in the Appendix of the RECORD:

ALASKA

(Salute to the 49th State)

The Stars and Stripes forever
And every shining star
Flashes a welcome twinkle
To her sister from afar.

Now in the breezy weather
When the flag blows wild and free
We'll salute the forty-niners
Who are not here to see.

The grim men, the lost men,
The seekers after gold—
The pioneers who lingered
Through bitterness and cold.

The loud men, the rough men,
The dreamers, too, who saw
The future in the Northern Lights
Upon that barren shore.

The women, all the women,
The faithful and the gay,
Who lived in little shanties
And cheered men on their way.

The diggers and the builders,
The good and not so good,
Who laughed and cried and labored
For this day of proud statehood.

So dip your stars a moment
In wonder and in awe—
She's coming into statehood
As her sisters came before.

Forever, now, a forty-niner
In memory of her past.
May their spirit ever guide her,
And all they dreamed of last.

—*Greta Drumm.*

Surplus Food in a Hungry World

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McGOVERN. Mr. Speaker, one of the most challenging paradoxes of our time is the accumulation of farm surpluses in a world where nearly 1 billion people are crying for food. Recently I introduced House Concurrent Resolution 60 expressing the sense of the Congress that the American people must more fully employ the plentiful resources of the American farmer to enhance the standard of living throughout the free world and to bolster the political and economic stability of those nations which have embarked upon programs of economic construction.

Writing for the McClure Newspaper Syndicate in a column dated October 15, 1958, Mr. Ray Tucker has effectively posed the No. 1 problem confronting a large share of the world's population—the painful and demoralizing problem of human hunger. I urge my colleagues to read Mr. Tucker's article which follows:

NEARLY BILLION PEOPLE IN WORLD WHO NEVER ENJOY A SQUARE MEAL

(By Ray Tucker)

WASHINGTON.—While Washington and Moscow wrangle over desert lands in the Middle East and the rocky islands of Quemoy and Matsu, the principal cause of war and the world's greatest need today is food. It means more to millions in allied and neutral countries than even the American concepts of democracy and liberty.

With $7 billion of surplus edibles in Secretary Ezra Taft Benson's granaries at a storage cost of a million dollars a day, it is almost impossible for Americans, including our highest officials and diplomats, to appreciate or seek to solve this basic problem.

Nevertheless, according to United Nations surveys recently released, there are a billion persons who, from their cradles to their graves, never enjoy a "square meal." There are more than 100 million babies who go to bed hungry nightly.

Millions die from starvation, although their deaths are attributed erroneously to tuberculosis, malaria, tropical diseases, Asian germs, etc. The real cause of this mortality is hunger.

WHERE HUNGER STALKS

Nor is it only coincidence that hunger stalks humanity most severely in the very areas which are current sources of international friction and possible war—the Far East, Asia, the Middle East, and north Africa. In Latin America, these conditions result in revolutions, popular unrest and outbreaks like those against Vice President NIXON.

The world's hungriest nations today are China, north Africa, Asia, and the countries which have joined Nasser's United Arab Republic. It is hardly necessary to emphasize the equation between want of food and envy of well-fed Western peoples, which can easily lead to war. It should also be noted that they do not eat too well within Khrushchev's Communist empire.

Fortunately, Western humanitarians have recently begun to move into areas where statesmen and politicians fear to tread.

NEW HOOVER GROUP

The United Nations Economic and Social Council has invited all interested countries to consider establishment of an international food reserve. Countries with surpluses would contribute or sell at low prices their unusable crops to a central distributing body.

When a similar project was proposed by Costa Rica in 1954, before the Middle and Far East flare-ups, it was opposed and blocked by the United States and Great Britain. They objected on the ground that the scheme would upset commodity prices and trading, and on the further fact that the U.N. was studying the question.

Under the auspices of Herbert Hoover, Columbia University has set up an international institute of nutrition science. With expert guidance, it will explore and try to solve the imbalance in world food supplies and production.

Philanthropic Giving by One American Corporation—Polish National Alliance Has Benefited American Education in the Amount of Nearly $5 Million

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. MACHROWICZ. Mr. Speaker, most leading statesmen of this country agree that furnishing opportunities for more education to a greater mass of our American youth is one of the most important problems facing our Nation today. Many of us in Congress and Government have been urging that Federal action and aid be augmented to relieve the critical shortages. But this is not merely a Federal problem. State and local organizations, private corporations and individuals must also do their part.

It is, therefore, as a member of the Polish National Alliance that I take great pride in advising my colleagues what that one fraternal corporation has done and is continuing to do in that field. I submit herewith a statement made by Dr. Arthur P. Coleman, president of the Alliance College, Cambridge Springs, Pa., of which I am proud to say that both I and the gentleman from Connecticut [Mr. FRANK KOWALSKI] are alumni. I should add also that this educational institution is open to all students, regardless of racial or national origin, or sex, providing that they have the required educational qualifications.

Dr. Coleman's statement follows:

In connection with the recent interest on the part of many American corporations in supporting independent higher education I take pleasure in calling attention to the magnificent record of the Polish National Alliance, a fraternal benefit insurance corporation doing business in 32 States and the District of Columbia. Founded in 1880 in historic Philadelphia, this great American institution has long benefited independent higher education in America. When the first Poles landed in Jamestown in 1608 they little realized the impact of their successors on this continent.

Up to 1929 the Polish National Alliance (headquarters now in Chicago) had given to Alliance College alone the considerable sum of $1,595,190.58. Annual gifts thereafter have amounted to:

1930	$119,985.73
1931	124,496.28
1932	124,377.04
1933	116,149.70
1934	116,995.60
1935	110,946.34
1936	133,449.21
1937	126,229.58
1938	129,032.77
1939	122,814.03
1940	82,240.37
1941	76,497.72
1942	76,143.68
1943	80,511.33
1944	81,486.93
1945	83,894.03
1946	85,588.14
1947	83,816.48
1948	135,208.75
1949	78,650.07
1950	80,515.73
1951	92,249.08
1952	123,079.46
1953	119,069.70
1954	119,161.12
1955	115,732.92
1956	164,026.69
1957	113,713.40
1958	108,363.24

Total from 1912 through June 30, 1958, $4,719,615.75.

This makes a grand total of nearly $5 million already given to American higher education by this one American corporation, composed largely of the sons and daughters of immigrants from Poland, a land now suffering under a Communist dictatorship.

Alliance College, beneficiary of this generosity, is naturally grateful, but I submit that the general American community should be proud of the pioneer efforts on behalf of American education by this single corporation owned by some 340,000 Ameri-

cans of Polish or Slavic extraction. With the Polish National Alliance, corporate aid to education is not something new, rather it has been practiced for many years.

I should like, as an American educator, to express my admiration for this distinguished pioneer example of wise and long-range aid to independent American education.

I believe Americans of older stock will agree with me that if privately supported higher education is to survive, in the United States we need many more such corporations.

Bill Could Help Depressed Areas

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. SILER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert in the RECORD the following editorial which appeared in the Lexington Herald, of Lexington, Ky., under date of February 14, 1959, as follows:

BILL COULD HELP DEPRESSED AREAS

Opposition to the proposed bill of Representative EUGENE SILER, of the Eighth District, which would provide tax exemption to corporations setting up plants in depressed areas, was expressed recently by Representative FRANK BURKE, of the third, or Louisville district. The Louisville Democrat did not elaborate on his reasons for saying that the bill would not work.

The measure introduced by Representative SILER would amend the Internal Revenue Code of 1954, and set up some rather rigid conditions under which tax relief would be provided corporations moving into any depressed areas. The measure appears sound, and any defects, if such exist, easily could be ironed out through amendments while the measure is under study by the House Ways and Means Committee. Basically, the Siler bill would exempt from corporate income taxes corporations which would operate in economically depressed areas and where a minimum of 200 workers would be employed.

The exemptions would continue for a maximum of 5 years, after which the corporations would begin paying the regular taxes. There is a large reserve of employable labor in the depressed areas of this and other States, and more men will be thrown out of employment in Eastern Kentucky under the new coal contracts unless some concessions are made by the United Mine Workers of America. No new coal companies are expected to take advantage of such tax relief programs, however, because they will not have the question of profits to worry about if they try to operate under the new contract. But other industries could come into the coal fields of Eastern Kentucky, where many counties are listed as in the depressed areas.

The minimum employment specification of 200 workers would serve to attract big industries. The bill will not allow benefits where an industry decides to move from one depressed area to another, which is sound. It is to be hoped that the House committee entrusted with this measure will give it an early hearing so that defects, if any, may be brought to light and remedies provided. Tax exemption for 5 years may be just the thing that is needed to bring industry into an area where labor supplies are abundant and the people are ready for any program that will help restore the economy.

Needed: A Balanced Educational Policy

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to call the attention of my colleagues to an article written by Dr. Earl McGrath, former commissioner of education, who is presently executive officer of the Institute of Higher Education, Columbia University. The article, "Needed: A Balanced Educational Policy," follows:

NEEDED: A BALANCED EDUCATIONAL POLICY

(By Earl J. McGrath)

American citizens have properly been proud of their educational system, which they have considered superior to any other. It is not surprising, therefore, that in October 1957 we as a people were shocked to learn that in at least one field of intellectual endeavor we had been surpassed by another nation. For this very reason, the success of the Russians in space science will doubtless prove a boon to American education. What have been the consequences during the past 15 months?

The launching of the first satellite focused public attention on certain inadequacies. But the basic information about the deteriorating condition of American education has been available for years. Debate concerning needed action has, to be sure, been obfuscated by uninformed or prejudiced reactionaries, in the profession and outside, who have viewed the schools of today as in a state of decadence, as well as by some Micawber-like educators who have described our educational institutions as better than any we, or other nations, have ever known. Between these two extremes the realities lie.

Some of our educational institutions today are better than any of their predecessors and better than those in any other land. But, unfortunately, the percentage of schools with adequate educational programs and the essential facilities to carry them out is very small and, in the main, such schools are located in atypical wealthy school districts. And almost all colleges and universities are operating below their potential contribution. In many communities, schools are understaffed, physically inadequate, and manned by teachers with preparation below accepted professional standards. Many colleges and universities are likewise undermanned; short of buildings, laboratories, and library facilities, and operating on deficit spending.

The explosion of the space age has shocked thoughtful citizens into an awareness of this situation and the realization that education is our most important asset, the element in our society without which we cannot continue to prosper, nor even to endure as a first-class Nation.

Ever since this Nation became a highly developed society with rapid mobility and all-embracing social, economic, and cultural problems, education should have been a matter of national concern. But the tradition of State and local control has resulted in a lack of any real national educational planning. America has come of age in most other aspects of its national life, but in education it still exhibits the stumbling, halting, and insecure gait of childhood.

The mastering of our material and human resources in the effort to advance the cause of human freedom against the thoughtfully conceived and well-organized efforts of totalitarianism must be a national enterprise. And since education is one of the most effective instruments in this effort, the lack of a comprehensive Federal policy and program for eduaction weakens our international position and impairs our domestic well-being. The Federal Government has the responsibility of considering the whole of our educational effort in relation to the large purposes of American society, domestic, and international.

A SICKLY CONDITION

Why is the educational enterprise in a sickly condition when most other features of our economic and social life have been in such relative good health? Many factors are at work in this complex situation. One, however, not so obvious as others, is the general view that the doctrine of State and local control of education implies no studying, planning, or financing at the national level. The broad principle that education is a State and local matter, sound enough in its proper context, has actually become an obstruction to the necessary consideration of an adequate program for American education.

Indeed the thoughtless mouthing of this idea and its deliberate use as a bogy in public discussions of the responsibility of the Government for education largely explain the present halting efforts to come to grips with educational problems on a national scale. If there had been the same lack of governmental concern for the military, business, labor, agricultural, maritime, and aviation affairs of the Nation as there has been for education, our national posture would be weak indeed.

Logic does not require that he who believes in State and local control of education must also believe that the Federal Government should have no responsibility for examining the condition of education in the United States, for pressing educational authorities to correct inadequacies, and, if need be, as is now clearly the case, for providing the financial assistance needed to bring the total educational enterprise up to the working efficiency required in the national interest.

As a matter of fact, all the heated discussion about whether the Federal Government should take responsibility for education is merely rhetoric. The Government has played a part in education from the earliest days of the republic. The small initial grants have increased enormously through the years, to the point where the total now runs into billions of dollars scattered unnoticed through virtually every branch of the Federal structure. The national welfare now demands even greater expenditures. No one in Government or outside knows how much.

Before added subventions are provided for education, the present meaningless patchwork of Federal aid ought to be replaced by a design developed upon a clearly conceived philosophy. A comprehensive Federal policy on education is imperatively needed.

Millions of dollars have been appropriated for hearings, some in the most recent session of the Congress, on one or another educational program which the Government has been asked to support. Thousands of pages of congressional publications record these discussions. Even the casual reader will observe, however, that in the main these discussions have not dealt with fundamental matters—with policy—but rather with the relative merits of special projects under consideration.

The 86th Congress could do nothing more instrumental in advancing American education than to appropriate a sum of money for hearings and other appropriate activities concerned with the development of an unequivocal and firm Federal policy in respect to education.

These hearings should not be concerned with such matters as whether the Federal

Government should provide more or less support for vocational education, for education by television, for school lunch programs, for military education in the colleges. Instead such broad subjects should be considered as the condition of education in the United States and the responsibility which the Federal Government ought to assume in connection with current and future educational problems, so closely connected with our welfare and destiny as a people.

SPECIAL CONCERN LAST

Leaders in the educational profession and outside it should have an opportunity to express their views on public policy, views which under the present circumstances surrounding such hearings are often neglected, suppressed, or disguised in behalf of the special interests of the moment. With skillful direction, such public discussions should lead to the shaping of a comprehensive and stable Federal educational policy. A statement of such policy, unmistakable in intent and unequivocal in language, should serve as a guide to the legislative, executive, and judicial branches of the Government and instruct our people generally in regard to the things which the Government should or should not be expected to do in the field of education.

If this were done, pressure groups for special educational projects would in the future be required to defend their requests in terms of large national policies rather than their own special concerns. And special interest lobby groups which oppose any Federal aid for any form of education would be required to face the larger implications of their position in terms of the general welfare of the Nation. They would be forced to raise the discussion above the type of debate on detailed figures which has been the refuge of those who will choose any alternative to that of increasing Federal expenditures for education.

The development of a national policy would also provide the basis for a reappraisal of the present large governmental expenditures for education as well as for evaluation of the many new proposals annually urged upon the administration and Congress. The present interest in education, excited by the launching of the satellites, guarantees a strong affirmative support for such an effort. As a byproduct, the responsibilities of State and local governments would simultaneously be clarified.

In addition, such hearings would highlight the further responsibilities which individuals, corporations, alumni groups, and professional organizations may be expected to assume if private interest and support of education, especially at the higher levels, is to continue to be a significant feature of American education. If these things could be accomplished, recent scientific developments in Russia would have assisted indirectly in the improvement of American education.

NOT AN UNMIXED BLESSING

The interest generated by orbiting artificial moons has not, however, been an unmixed blessing. The very nature of the instruments which initiated the present preoccupation with educational matters has narrowly limited the thinking of many of our people with respect to what ought now to be done to restore our educational effectiveness and prestige.

Because the penetration of outer space was based on scientific and mathematical knowledge, many have proposed corrective measures which would excessively emphasize instruction in science and mathematics and thus upset the proper balance in our educational efforts. It has been proposed, for example, that all students be required to study more science and mathematics, that standards be set high in these subjects, and that all who cannot reach them be placed in vocational programs, or sent to work; that larger salaries be paid to science teachers; that a special branch of the Government be established to deal with science education, and a host of other procedures and policies conceived in a moment of quick and unreflective reaction to an event in another country which hurt our national pride.

Most of these proposals to aggrandize science education at the expense of other forms of instruction are at best fruitless and at worst culturally damaging. They are futile, because recent observers of education in Russia, such as the U.S. Commission on Education, have reported that the Russians intend to surpass us in all branches of cultural endeavor.

INFINITE RANGE OF ABILITIES

The Russians are doubtless working on many other discoveries and inventions in no way related to space science. Trying to match them item by item, as their various developments are revealed, would place us behind them at every turn. And such a policy would introduce fitful changes of policy and practice which would eventually lead to chaos, or the domination of education in this country by the shifting events and policies of a totalitarian regime.

There is only one permanently sound plan for maintaining intellectual superiority in the world and simultaneously preserving the free society we cherish. The policies of all educational agencies—public and private, local, State, or national—must rest on the principle that all the infinite range of abilities and interests of all our people must be cultivated to the fullest extent. This is the plan which, in principle at least, has guided the development of our educational system from the beginning.

Except in time of great national danger, when customary policies and practices may temporarily have to be suspended for the more compelling purposes of the moment, any policy which imposes on any youth an intellectual activity, a curricular program, or a vocation repugnant to his basic interests, or uncongenial to his demonstrable abilities, is inconsistent with our democratic philosophy and with the national welfare.

Such a policy will lay the basis for later personal disgruntlement and social instability. It will wither the vital force without which no educational program can achieve lasting results. It will narrow the collective achievements of our people. And in the long run it will, perhaps imperceptibly, change the United States from a free into a controlled society—into the type of social order and political system we are now spending much of our personal and national wealth to combat. Few Americans would consciously embrace policies which involve Government dominance, or even policies among private educational agencies of the kind implied. Yet the same results could occur through forces operating indirectly to the same ends.

The U.S. Cultural Attaché

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. McGOVERN. Mr. Speaker, recently there has come to my attention an excellent article by Mr. George W. Oakes which appeared in the September 28, 1958, Washington Star in which the author discusses the difficult problem of securing qualified persons to serve as cultural attachés with American embassies abroad. Recognizing the importance of our cultural relations with the other people of the globe, I believe that the Members of Congress will find the article by Mr. Oakes, which follows, of considerable interest:

HARDEST GOVERNMENT JOBS TO FILL

(By George W. Oakes)

The Government is having a hard time filling one very desirable kind of job because the intellectual standards are so high.

It's the job of cultural attaché in our embassies of important foreign countries. And the word "cultural" is not used loosely. The Government means what it says, for the man who fills the job must know: American history, literature, the social sciences, education, music, painting, philosophy, sports.

And what is more, he must know also what the foreign country is doing in cultural affairs so that he may compare our achievements.

In practice these are the things that the cultural attaché must know. In Government words this is what he is expected to do with this knowledge:

To act as consultant to the Ambassador on all cultural matters, to direct our Government's educational and cultural program in the foreign country, to address intellectual and educational organizations, and to conduct extensive personal contacts in academic and cultural circles.

It is the last named that, perhaps, contains the most pitfalls. A man can get by with knowing less in a formal speech than he can in the give-and-take of a fast conversation with a real intellectual. To mix on an equal footing with a country's top figures in education, literature, and the arts, the cultural attaché must be an individual of superior ability, reputation, and personality.

IMPORTANCE OF THE JOB

Americans abroad, aware of the fact that cultural relations provide one of the most lasting and least controversial ways to foster a truer understanding of the United States, especially in the minds of leaders of thought and opinion, have frequently observed that next to the ambassador the cultural attaché has perhaps the greatest single opportunity to reach a receptive audience and to make a favorable impression. From London to Tokyo there is a widespread and intense curiosity to learn more about American culture.

The cultural attaché can fulfill a special function in the emerging countries of Asia and Africa. These nations in transition, trying in a few years to bridge the gap from colonialism to independence, are desperately seeking advice and help in spreading literacy, developing their educational setup, and achieving scientific and technical competence. In this quest they turn to the best-qualified representative of a foreign country—American or Russian.

Educators, just back from consultations in southeast Asia, report that the United States is weak in cultural attachés who have proper acceptance, can assess local needs, and can assist the governments and peoples of these underdeveloped areas. Cultural foreign aid, they point out, is no less vital than economic in alining these areas with the West.

The post of cultural attaché originated in 1941 when cultural officers were assigned to Latin America. In 1946 the program was expanded to nine countries outside the Western Hemisphere. Today there is a cultural attaché in 51 countries throughout the world, plus more than 100 cultural affairs officers in 58 countries.

MOST ARE U.S. EMPLOYEES

Although a few cultural attachés in the major capitals are university professors specially recruited for a short period, the

great preponderance of our cultural representatives are longtime government officials with a certain amount of academic background.

In a major European country, the recently appointed cultural attaché is a philosophy professor on 2 years' leave of absence. In a most important Asian country, the cultural attaché is a former provost of a State university. But, in a smaller European capital, the attaché is a former public-school official who has been in government educational programs abroad ever since the war. Some have had publishing experience before entering government.

Twenty-five foreign countries have diplomatic officers in Washington who devote at least part of their time to cultural activities. Germany, Spain, Indonesia, and some smaller countries consider the post sufficiently important to assign a special cultural counselor. Most are Foreign Service staff officers. However, the German cultural counselor is a former free-lance writer, art and drama critic. The French, who place great stress on their cultural tradition, are represented by a former public relations counselor who heads all their informational and cultural activities.

The British do not have an Embassy official designated as cultural attaché. Instead they arrange for distinguished educators and cultural leaders to lecture and travel in the United States under private auspices such as the English-Speaking Union.

THEY ARE HARD TO FIND

The USIA, which chooses the cultural attachés, has great difficulty in recruiting outstanding individuals, especially for the most important posts, who can adequately transmit the pulse of our cultural life. Nine men were aproached before one could be found to serve as cultural attaché in a major Western European capital. In order to fill such a position it frequently is necessary to select men who are not up to their responsibilities and opportunities. Few of those now serving have a recognized reputation even in this country.

That too many of our cultural representatives are inadequately qualified for their important duties is being increasingly noticed by Americans prominent in the academic and cultural world in the course of their travels.

PROFESSORS PREFERRED

The search for suitable cultural attachés centers largely in the academic world. Experience indicates that university professors are most likely to have the breadth of knowledge, ability to speak well, and the personal quality of mixing easily in intellectual and cultural circles.

Yet the demands of academic life are most frequently given as major reasons why outstanding educators refuse to accept the job. Frst of all, it is essential that he serve at least 2 years in order to develop the minimum contacts and get himself known. Universities generally grant leaves of absence for only 1 year and considerable pressure is required for even another 12 months. Consequently, more use has been made of retired faculty members.

Many professors who would be eminently qualified are unwilling to interrupt their academic careers and postpone their research and writing commitments. They much prefer a 1-year visiting professorship, such as a Fulbright, during which they can concentrate on their own special fields of study.

It is generally agreed that salary consideration is not a major deterrent. In the top embassies the cultural attaché can be given in pay and living allowances as much financial compensation as he is likely to receive in his professional post—even in the best-paying universities.

DISCOURAGING ANGLES

Prominent educators feel that the present status of the cultural attaché in the embassy discourages many outstanding prospects. Distinguished academic figures often instinctively distrust and shun any connection with a Government organization like USIA engaged in official propaganda and cold war activities. They feel that American culture is too vital and all-embracing an aspect of our national life to be tied to such an association which also is inimical to acedemic ideals of objective scholarship. Then, too, an eminent retired university president, for example, cannot be expected to serve, as do present cultural attachés, under the USIA's public affairs officer who is also the embassy's top press and public relations man.

Leaders in the cultural, educational and foundation world are convinced that if the cultural attaché were given equal status on the ambassador's staff with the military naval and air attachés and relieved of operating and administrative duties and USIA connections, top-flight prospects could be attracted.

As a State Department diplomatic officer, he would feel free to devote his entire time to personal contact work and public appearances which our most successful cultural attachés have found to be particularly effective. Then, too, the dignity of the position would encourage more pressure to be exerted, if necessary by the Secretary of State or even the President, to persuade reluctant universities and other organizations to forget about convenience and release outstanding individuals who can represent American culture abroad with distinction.

Peace on Earth Through World Law

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. KASTENMEIER. Mr. Speaker, one of the last meetings I attended in my hometown of Watertown, Wis., before leaving for Washington, D.C., to take up my duties in the 86th Congress was the December meeting of the Jefferson County Bar Association. The speaker was a distinguished member of the Wisconsin bar who now is serving as chairman of the State bar association's committee on world peace through law, Mr. Bruno V. Bitker.

Mr. Bitker has studied this timely topic with great erudition and with a real feeling of urgency. As men search for ways to establish peace and order in the world, I think that all of us must ponder the proposals made by Mr. Bitker and others in the bar association.

The United States has frequently turned to arbitration of international disputes when it suited our purposes. Do not the horrible prospects of thermonuclear warfare present us with the necessity for relying more and more on arbitration through the International Court of Justice as a means of averting the possible extinction of mankind?

The Milwaukee Journal has featured the substance of Mr. Bitker's speech in a special Sunday section article. Under leave to extend my remarks in the RECORD, I include the Milwaukee Journal article:

PEACE ON EARTH THROUGH WORLD LAW

(By Bruno V. Bitker, chairman, committee on world peace through law, State bar of Wisconsin)

This is the age of science. It is science which through advances in transportation and communication has changed the phrase "It's a small world" from a bromide to an almost overwhelming fact. It is science which has devised weapons capable of destroying a civilization in a few seconds. It is science which is struggling to devise adequate defense.

As conditions exist today, we can only hope that our scientists can produce new and better armaments as fast or faster than our potential enemies.

But great as are the brains of these scientists, they alone cannot save us from the destruction which they have made possible. Unless we are to exist, if at all, in an endless, uneasy stalemate, some solution outside science must be found through which all the peoples of the world can live at ease and at peace together.

WHEN COURTS CAME, SHOOTING IRONS WENT

Peace will ultimately rest, as the late Judge John Parker said, not upon scientific achievement but upon the establishment of law in the world community.

Peace through law is not the same as peace through disarmament. The first is legal, the other political. We will deal here with the legal approach, which may be a necessary foundation for stable political arrangements.

There is long historical precedent for first creating a court system as a basis for political progress. Examples are to be found in ancient Greece and Rome, with their law codes extended into many lands.

In medieval England, it was only after the king's courts were established that the lords and barons gave up their armies and let the law resolve their disputes. And on our own western frontier it was only after the courts began to function that the settlers gradually gave up their shooting irons. This may also be the case in the world today.

If there were to be established a system of world courts, what law would the courts apply?

While there is already in operation a world court, the International Court of Justice at The Hague, it is true that there exists no worldwide legislative institution. The United Nations is a world organization but not a world government. It has no law-making powers.

Despite the lack of a universal parliament, there actually is universal law. When men deal with each other across international boundaries, rules and standards are devised which are enforced by the common consent of civilized peoples.

These rules and standards are frequently recognized by court decisions, by treaties between nations, by the writings of legal scholars. They become international law. If a peaceful world order is to exist, such law must be developed further.

THE ARBITRATION RECORD

There is also strong historical precedent for settling international disputes by such legal-like means as arbitration. This is the voluntary submission of differences to a third party other than a court.

The whole modern development in international arbitration stems from the Jay Treaty of 1794 between Britain and the United States after the Revolutionary War. The treaty provided for settling any remaining disputes between the two nations by arbitration.

The principal dispute concerned the boundary line between Maine and Nova Scotia. The treaty originally set the boundary at the St. Croix River, but it was discovered that there were two rivers by the same name. The arbitration commission

split it down the middle and set the boundary midway between the two rivers.

During the 100 years after the Jay arbitration, similar settlements of disputes between nations were used in over 177 cases. The United States was a party to 79 of these decisions.

Many of the disputes were of a highly controversial political nature.

In the presidential election of 1844 President Polk campaigned and won on the slogan "54–40 or fight." Despite intense nationalistic emotions against Britons, the dispute was peacefully settled by arbitration. The boundary was placed at the 49th parallel.

In 1872 the prestige of arbitration reached another high point in the *Alabama* claims case against Great Britain arising out of damage during the Civil War by English-built warships. The arbitration tribunal awarded the United States $15,500,000, which Britain paid.

HAGUE COURT CREATED NEARLY 60 YEARS AGO

As relationships between nations grew more complex, the need for a real court grew with it. In 1899 leading nations created the Permanent Court of Arbitration for the Pacific Settlement of International Disputes at The Hague, Netherlands. The Hague Court was not actually a court of law. It was a permanent panel from which the parties could select arbitrators to resolve disputes.

Before World War I, The Hague Court decided 15 cases between nations. One of these was a dispute of long standing between the United States and Great Britain over the fishing rights of Americans off the coast of Newfoundland. The arbitrators decided favorably to the United States, and Great Britain abided by the award.

During the early 1900's, various nations, including the United States, made treaties whereby they agreed to submit to arbitration any future disputes between thm. Despite President Theodore Roosevelt's strenuous support of these treaties, the Senate in 1905 refused to ratify them without a reservation requiring the submission of each decision to the Senate for its advice and consent. This action was a major setback to this method of settling disputes between nations.

It was not until 1920 that there was created a real court. In that year, the League of Nations established the Permanent Court of International Justice, in The Hague. This was the first judicial body in history with worldwide jurisdiction over controversies between states. It was the greatest single advance in the judicial settlement of international disputes.

Though never a member of the League of Nations, the United States took a leading part in creating the new court. In 1923, President Harding asked the Senate to ratify the treaty establishing the Court, but the two-thirds majority required for ratification was never obtained.

NEW WORLD COURT

Although the United States failed to adhere to the permanent court, during its existence it rendered 32 judgments and 27 advisory opinions. It performed its duties fairly and competently and its decisions were never disregarded. When the League of Nations was dissolved in 1946, the Court was abolished.

The present International Court of Justice was established in 1946 as the judicial organ of the United Nations. Although 36 nations, including the United States, have accepted the compulsory jurisdiction of the International Court, only some 20 have done so without significant reservations.

United States participation excludes from the Court's jurisdiction, disputes on matters within the domestic jurisdiction of the United States as determined by the United States. This is a serious deterrent to the Court's power.

Great Britain, too, has reserved from the Court's jurisdiction, matters which in its opinion affect its national security. France has done likewise. Russia never has recognized the Court's jurisdiction.

SCHUMAN PLAN COURT SET UP

Meanwhile, there have been growing up procedures for the peaceful settlement of international disputes within specified regions.

In 1948 the International Conference of American States adopted the so-called Bogota pact, providing that controversies between the states of North and South America were to be referred to the world court. The United States attached to its acceptance of the Bogota pact also jurisdictional reservations. Our example unfortunately was followed by several other nations.

In Western Europe regional procedures have also developed since World War II. The so-called Schuman plan treaty of 1952 created a court open not only to the member states but to individuals as well. This court likewise serves the Europeon Economic Community and the European Atomic Energy Community. The Council of Europe in 1957 named the World Court as the place of reference for all legal disputes under the treaty.

What is the situation at the end of 1958? While arbitration was a great success during the 19th century, in mid-20th century no major nation is willing to recognize, without strings attached, the jurisdiction of the World Court which it helped create.

Yet there are many encouraging developments. One is the increasing realization, particularly among lawyers and bar associations everywhere, that the same rule of law applying between individuals must be followed within the community of nations, if we are to survive.

The American Bar Association participated in the establishment of the present World Court. It favors the repeal of the U.S. reservation which allows the United States to determine whether a dispute is of domestic jurisdiction only. This article is based in part on material published by the association.

OBJECTIONS RAISED

Objections have been raised, of course, to expanding the use of law to settle international disputes. Some of these were outlined and answered by Charles S. Rhyne in a recent address to the American Bar Association:

"1. The plan is too idealistic. It is true that the rule of law among men is an ideal: But the basis of our own Government is the rule of law. Such a plan was pure idealism when adopted, but it has worked.

"2. The court might make some erroneous decisions adverse to us. It is true that the World Court system would be manned by human beings, who might decide cases contrary to our wishes. But no one would demand the abolition of the courts within nations simply because some decisions are questionable.

"3. An effective international judicial system will be too difficult to get going. Man has never let difficulties prevent him from accomplishing other seemingly impossible goals. A short time ago the manmade satellite was a fantasy.

"4. Russia will not cooperate. True, it is unlikely that Russia at the outset would recognize the rule of law in a worldwide court system. But that is no reason for the rest of us to refuse to try it. If it worked for the Western Nations it would be bound to attract the neutrals and thus grow toward wider use. Moreover, if Russia refused to use the courts while the free world did so, it would be one more blatant demonstration to the world that Russia prefers the law of the jungle to the law of civilized man."

SEVERAL RECENT HOPEFUL SIGNS

The prospect that attainment of world peace through law is no idle dream is based upon several practical considerations:

1. Man's new weapons. The destructive potential of the new nuclear weapons defies imagination.

2. Special pressure from smaller nations which come more and more directly under the threat of destruction by nuclear weapons, particularly ballistic missiles carrying nuclear bombs.

3. The money burden. As of 1957–58 the annual world cost of armaments is estimated at $100 billion. This expense holds back the economic and social progress of many nations, even the richer countries.

4. Outer space. Recent achievements of both the United States and the Soviet Union is the firing of satellites and current programs of space exploration make urgent some agreement on the international law of outer space.

The ideal of turning to law instead of weapons will not be easy to achieve. There is formidable opposition to be overcome—fear and hatred, narrow nationalism and the fetish of sovereignty. But strong as these influences are, the desire of mankind to survive is stronger still.

The Arab Refugees

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 4, 1959

Mr. MULTER. Mr. Speaker, it is time we learned the down-to-earth truth about the Arab refugee problem. It is bad enough that our stagnant foreign policy is satisfied with the status quo—reluctant to take a single positive step to relieve the situation by insisting that refugee camps are no place for human beings. It is far worse that we allow the problem to be used to fraudulently mulct us of our money. We are the most generous people in the world, opening our heart and our pockets without hesitation to all needy, regardless of race, color or creed. Without changing that divinely inspired trait, let us refuse to be made to look like fools, because of our well-intentioned charity.

The following article by Joseph B. Schechtman which appeared in Congress Bi-Weekly of February 2, 1959, is most apropos.

A CENSUS OF ARAB REFUGEES

(By Joseph B. Schechtman)

At the last session of the United Nations General Assembly, the United States served notice that it did not favor the continuation of the UN Relief and Works Agency (UNRWA) program of aid to the Arab refugees beyond June 30, 1960, when the Agency's mandate expires. George McGregor Harrison, the U.S. representative on the General Assembly's Political Committee, described the 10-year effort to solve the problem of Arab refugees as disappointing and said that it was not good enough to perpetuate relief. Some better system must be found, he declared. What the better system was to be Mr. Harrison was apparently not authorized to explain, and was thus not in a position to offer any definite alternative to the present mere relief. Yet the suggestion

of a revision of the absurd and patently bankrupt practice of international dole was in itself an important step in the right direction.

This valiant attempt at putting some sense of perspective into the UNWRA operations failed. The carefully worded U.S. resolution (cosponsored by Great Britain, New Zealand, and the Netherlands) proposing a U.N. study of what should be done for the Arab refugees after 1960, to be submitted to the next session in 1959, met with fierce resistance on the part of the Arab delegations. They unconditionally opposed any suggestion not only of discontinuing the relief operation but even of having the U.N. examine such an eventuality. And they had their way. The U.S. resolution contained a modest provision that U.N. Secretary General, Dag Hammarskjold, makes a special study of the refugee problem and report back to the next assembly. But even such an innocent proposal proved objectionable to the Arabs and was dropped. Instead, the assembly took notice of a statement by the Secretary General that as part of his regular duties he would look into the technical operations of the Arab refugee aid program and make such proposals as he deemed helpful to the next assembly.

The outcome of the U.S. initiative is, of course, unsatisfactory and disappointing. It represents a clear victory for Arab immobilism. Although the 10 delegations of the Arab States abstained from voting even on the modified resolution, along with the Soviet bloc, they were, after the session, outspoken in interpreting it as endorsing the status quo and as being tantamount to an indefinite continuation of international aid.

Nevertheless, if Mr. Hammarskjold earnestly intends to carry out his charge, or even if he only looks into the mere technical operations of the Arab refugee aid, there is one crucial aspect of these operations which he cannot, at the very least, avoid singling out and recomemnding for drastic change. He is duty bound to insist on conducting the first genuine census of the Arab refugees.

Incredible as it may seem, the actual number of Arab refugees has never been established by a really thorough count. All the figures—nearly a million, 900,000, 875,000—submitted with such assurance by UNWRA and accepted unquestioningly by the U.N. budgeting bodies, as well as by public opinion, are either guesswork or based on fraud.

The First Interim Report of the U.N. Economic Survey Mission for the Middle East, headed by Gordon R. Clapp, candidly stated on November 17, 1949, that no one knows exactly how many refugees there are. Testifying 3 months later before the House Foreign Affairs Committee, Mr. Clapp admitted that his mission did not undertake to count the refugees and that population statistics in the Middle East are tricky. Years elapsed, and in 1955 Dr. Marguerite Cartwright, a sociology professor at New York's Hunter College, met Henry R. Labouisse, then head of UNWRA, in Lebanon and asked him, "How close do you feel that you have come to estimating the actual number of people in the camps?" "Not very close," he confided. "In fact, we really don't have any idea. * * * We just can't get in for accurate count."

The governments of the Arab countries, in which the sixty-odd refugee camps are located, have indeed refused permission to the relief agencies to get in for conducting a census of the camp inmates. As late as January 25, 1956, the Jordan daily Falastin reported smugly that the Amman Government had forbidden UNWRA to make a count of the newborn children among the refugees A similar intransigent attitude was adopted by the Arab authorities in Syria, Lebanon, and the Egyptian-controlled Gaza strip. Obviously, the Arab Governments are not interested in establishing the actual number of refugees in their respective countries.

All the figures bandied about since 1948 are, therefore, based not on a census but on the number of applications for refugee ration cards registered by relief agencies operating under agreements with the U.N. bodies. How such registration has been handled from the very beginning can be seen from a report related by Associate Court Justice William O. Douglas in his book "Strange Lands and Friendly Peoples." On a visit to Amman, the Justice was told by a Franciscan monk, Father William, in the presence of Karl Reiser, head of the Red Cross in that area, of Reiser's experiences in registering a group of Bedouin refugees on the Red Cross roll: "The first day he enrolled 300. The next day he enrolled 500." Puzzled by these swollen figures, Reiser hired a local Arab to mingle with the Bedouins and determine the origin of the exaggeration. He learned that there were in actual fact barely 100 Bedouin refugees, but that those who had already registered "went off on their camels behind a hill about a mile distant, reorganized their group, and reappeared as new Bedouin refugees. * * * Some had registered 20 times under different names * * * all a Bedouin with a mustache had to do the second time was to cover it with his kaffiyah. They appear with different women and children. A man with a donkey would ride a camel the next time, and so on."

This technique was, however, not limited to the Bedouins of Transjordan. Dr. Marguerite Cartwright raised the question of an accurate count with one of the camp workers in Lebanon. His answer was: "We try to count them, but they are coming and going all the time; or we count them in Western clothes, then they return in aba and kaffiyah, and we count the same ones again." He admitted that "fingerprinting had never been tried, nor did it seem that the counting had been taken very seriously."

And, indeed, the U.N. relief agencies seem to have accepted this state of affairs complacently, almost fatalistically. The report of the U.N. Relief for Palestine Refugees (UNRPR—the precursor of UNWRA) for the period December 1, 1948-September 30, 1949, claimed that "considerable duplication in relief operations and registration was inevitable." The agency's director "did not consider it practicable for the operating agencies to impose any kind of eligibility test" and he himself "had no observers of his own for this purpose." Thus it appears that an accurate check was neither intended nor carried out from the very start.

The slovenliness—and indeed the fraudulence—of the original registration has been perpetuated by every imaginable stratagem and subterfuge on the part of the refugees, The UNWRA report of October 19, 1950, admitted: "There is reason to believe that births are always registered for ration purposes, but deaths are often, if not usually, concealed so that the family may continue to collect rations for the deceased." At one time the refugees were offered a burial bonus of $14, but this sum was weighed against the advantages of keeping their deceased on the ration rolls and the offer found no takers. A ration card is too precious an asset to be surrendered. Its holders, as Time magazine put it, "gradually found themselves better off materially than they had been at home: they have a higher daily calorie ration (1500-1600) than some of the fellahin in Nasser's Egypt, better health and sanitation services than they had ever known in Palestine." There is a thriving black market in ration cards, and in oil, sugar, flour, and clothing rations.

Ration cards have thus been accumulating incessantly, with relief rolls swelling accordingly. And since every ration card is supposed to stand for an Arab refugee, the inflated figures of alleged registered refugees have been mounting from year to year, unchecked and unverified. The Clapp Mission estimated that in the third quarter of 1950 about 492,000 relief rations would be needed monthly, but when UNWRA took over its field of duties on May 1, 1950, it distributed more than 860,000 rations—an increase of 75 percent over the Clapp estimates. By the end of 1950, there were already 960,000 refugees on the agency's roll. During the following 3 years (1951–53) sizable deletions from ration rolls were made, and in 1953 the total was reduced to 871,748. But soon thereafter the total again began to swell, and by the end of 1957 the number of registered refugees rose to 1,037,821—an average yearly increase of 41,000.

These numerical ups and downs testify to a complete absence of any reliable system of control for counting the refugee mass. The UNWRA personnel in charge of the camps are not at all eager to check the rolls scrupulously. It is little know that UNWRA field workers in the camps, on whose reports the agency's leadership are fully dependent, are almost to a man themselves Palestinian refugees. They are the least likely to care for the accuracy of the relief count, and prefer to keep the camps hermetically sealed to any outside control.

Not all refugees, however, live in the camps. Hundreds of thousands who are classified as refugees and receive relief live elsewhere, in cities and villages. In Jordan, this outside category even constitutes an overwhelming majority—357,000 as against some 177,000 living in 25 camps. Many among them have in the meantime established themselves in business or trade, in government service, and have grown quite prosperous. But they jealously hold on to their ration cards and their refugee status. Recent reports relate that thousands of well-to-do families—merchants, artisans, civil servants, members of liberal professions—were sending their domestic servants once a month to relief stores to collect their rations.

This state of affairs makes no sense and should not be allowed to continue. The international community, which in the last ten years has spent $300 million for Arab refugee relief, is entitled to know the exact number of genuine, not faked, Arab refugees. The prerequisite for a realistic approach to, and solution of, their problem is a general census of the refugees, both inside and outside the camps. The falsely magnified figures frustrate any sober discussion. It is therefore to be hoped that the Secretary General of the United Nations will earnestly look into this technical aspect, and that his investigation will lead to a census of the Arab refugees.

People-to-People Contacts To Promote International Understanding

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. LANE. Mr. Speaker, as the cold war continues, with both sides separated by the wide gulf of suspicion, fear, and stubborn refusal to consider new approaches, it behooves the peoples of the various countries to take matters into their own hands in an effort to thaw the rigidities of government-to-government contacts.

The American people, because they are free, are in the best position to extend the hand of friendship.

The cultivation of this program can do much to ease international misunderstandings.

When the people of Russia get to know us, I am sure it will be mutually beneficial.

Pointing up this need is a hopeful editorial of much substance titled "People-to-People," that appeared in the February 8 editorial of the Lawrençe Sunday Sun. Under unanimous consent I include this editorial for reprinting in the RECORD:

PEOPLE-TO-PEOPLE

In September 1956 President Eisenhower called a group of some 50 leaders in American life to the White House and presented a plan. Its aim, he said, was to build a massive system of communications between Americans and the peoples of other countries. This marked the official launching of the people-to-people program.

The thought behind it was a compelling one. Governments operate on high levels of political, military, economic and diplomatic affairs. But governments are remote and impersonal. So, the President emphasized, Americans outside of government must work out thousands of methods by which people can gradually learn a little bit more of each other. People-to-people, in sum, involves a sort of grassroots approach to better knowledge and understanding. Additionally, as Secretary Dulles told the original White House group, "You have got the job, and others like you, of making it clear throughout the world that freedom is the preferable form of society."

People-to-people has come a long way since that original meeting. Some 40 committees were formed to reach into virtually every phase of American life and activity. These committees have more than 1,100 members, of which 700 represent organizations, associations, clubs, and other groups. Their geographical spread blankets the nation, and practically all vocations and professions are represented.

Prior to this, other groups—such as the Lions International and the 4–H Clubs—had been conducting comparable activities on a person-to-person or group-to-group basis. The formal people-to-people-program, however, brought these groups into closer contact with each other, and sharpened the focus on the objective of greater international understanding through a multitude of contacts between Americans and other peoples.

The success of such a program, in which all Americans in every walk of life can participate, is largely measured by the multiplicity of the projects which are undertaken. Judged by such a yardstick, people-to-people has compiled an impressive record. To select a few examples, the public relations committee drafted a pamphlet entitled "Make a Friend This Trip" for Americans preparing to visit other countries, and a million copies were distributed. To meet a specific request from the Sudan, another committee collected 16,000 books and sent them overseas. More than 70 American communities in this country are now affiliated with communities of comparable size and kindred interests abroad, and a like number are in the planning stage. A sports committee sponsored the American tour of the Pakistan Cricket team. A 50-member American rifle team was sent abroad to compete in Germany, Switzerland, Sweden, and the Soviet Union. There are committees of the handicapped, of cartoonists, of people concerned with hobbies and the arts, and so on and on. The internationally publicized achievement of the Texas pianist Van Cliburn in winning the great Tschaikovsky competition in Moscow was an end result of one committee's work.

In Senator HUMPHREY'S words: "People-to-people efforts at building friendship are not bound by the restrictions and handicaps which encumber official government-to-government dealings and can often be more effective." And the program is and must be a two-way street. As the chairman of its Foreign Affairs Committee phrases the matter: "If it is important that the peoples of foreign lands understand the American position, American policies and American way of life, it is equally important that we have similar understanding with respect to other countries."

Equalization of Pay for Retired Officers

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. KOWALSKI. Mr. Speaker, on Saturday, February 14, I was privileged to join the members of the New London, Conn., Chapter of the Retired Officers' Association for luncheon and to address the group on a subject most vital to them—that is, legislation necessary to correct the discrimination and injustices of Public Law 85–422.

A distinguished gentleman and soldier, Raymond T. J. Higgins, captain, U.S. Army, retired, made the opening presentation. I shall always remember the stirring picture of Captain Higgins seated in his wheelchair, proud and dignified, appealing to the 86th Congress through me to restore equality in retired pay for the "inferiors" who retired prior to May 31, 1958, with the "elites" who are now on active duty.

To experience the full emotional impact of Captain Higgins' presentation, one would have to hear and see him. However, because what he said was so significant, I should like here to record his presentation in full:

SPEECH BY RAYMOND T. J. HIGGINS, CAPTAIN, U.S. ARMY, RETIRED

Our chapter president, Admiral Moseley, has given me the assignment of presenting to our honored guest, Col. FRANK KOWALSKI, U.S. Army, retired, Congressman at large from the State of Connecticut, a résumé of the feelings of retired officers about Public Law 85–422, known as the military pay bill of 1958. Colonel, because you, yourself, are a retired officer, and in addition are a member of the House Armed Service Committee, I know that you know a great deal more about the feeling of officers, both active and retired, concerning the 1958 pay bill than do I. But, if you will permit me, I will try to sum up the effects of Public Law 85–422 on the uniformed services in an attempt to explore the possibility of finding a cure for the ills resulting from that legislation.

One of the greatest defects of Public Law 85–422 is the discrimination made in the pay of retired officers. The effect of this discrimination has been to create the so-called elite list and the so-called inferior list of retired personnel. The elites are those retired after June 1, 1958, and their retired pay is computed on the basis of their active duty pay, which was considerably increased by the new law which was effective after June 1, 1958. The inferiors are those retired before June 1, 1958, and their retired pay continues to be computed on the basis of active duty pay prior to the new law.

Included among the inferiors are many distinguished officers—officers who, on active duty, held high commands in war and in peace. The cruelty of this discriminatory legislation may be illustrated by the fact that a major general of 30 years' service who retired prior to June 1, 1958, receives, I am told, $2,125 less annually than a major general of 30 years' service who retired after June 1, 1958.

Since the inception of the present military retirement system, it had been practically the undeviating policy that the pay of a retired officer be directly geared to the active duty pay of an officer of the same rank and length of service. In the past, whenever the pay of the active duty officer was increased, the pay of the retired officer was automatically increased correspondingly. Public Law 85–422, however, scrapped this cardinal principle in the military retirement system.

The action of the Congress in departing from this long established principle upsets the traditional relationship between active duty and retired pay and creates unwarranted and unjust disparities between the pay rates of retired officers of similar rank and terms of service. The establishment of two pay scales for equal merit and equal service is not consistant with a policy based on fairness.

Perhaps the greatest defect in Public Law 85–422 is that the breaking of faith with previously retired officers will have an adverse effect upon the retention rates of personnel currently on active duty, thereby destroying the principal objective of the law in question. This pay bill was primarily intended to provide material incentives for service careers and, hence, to reduce the tremendous turnover of personnel and the loss of skilled men. The increase in pay would indeed be a stimulus to men in uniform—but the act defeats itself by breaking the traditional relationship between active duty and retired pay. For years, one of the chief attractions of a service career was the provision made for retirement. Young officers who might make the service a career will not be blind to the discrimination made in retired pay rates. If officers already retired can be discriminated against, this can happen again now that the tradition has been broken and a precedent established.

Now, Colonel, here is a situation that many retired officers cannot understand. The establishment of two pay scales for retired officers was not proposed by the Congress but it was recommended to the Congress and insisted upon by the Defense Department. Even the 6-percent increase eventually given by the Congress to the retired officers was vigorously opposed by the Defense Department. It is a fact that it was common gossip last spring in Washington and the service journals published that if the Defense Department policies prevailed never again would retired officers receive a raise in pay.

The Secretary of Defense, his deputies, and the secretaries of the subdivisions of the Department are civilians. But, is it not true that a very large part of Defense Department personnel is made up of active duty officers of the uniformed services? How shortsighted can these officers be? True, they recommended that Congress feather their own nests, so to speak, but in so doing they have broken the tradition and have established the precedent for discriminatory legislation against themselves by a new crop of Defense personnel sometime in the future. It is the feeling of some retired officers that the knife of discrimination was plunged into our backs by our own flesh and blood—our brother officers pres-

ently on active duty with the Defense Department.

I once heard the retiring president of an organization say, "There is nothing so past as a past president." But he is wrong, there is nothing so past as an officer who days of active duty are past.

What can be done to correct these injustices?

Retired officers can expect no help from the Defense Department.

Retired officers have no might political power organization. There are about 300,000 officers on active duty and about 115,000 retired officers. Out of a potential strength of 415,000 there are only 35,000 of us banded together in the Retired Officers Association, of which this group here assembled is the Connecticut chapter. If we hope to right the wrong done retired officers, our only salvation is to urge the 86th Congress, in its mature and broad judgment, to reestablish the time honored national policy with reference to the computation of retired pay, and restore the inferiors to full retired pay percentages, to equality with the elites.

Colonel, this is our story, we place our reliance in the fairmindedness of the 86th Congress. If you find merit in our cause, will you help us?

American Farm Bureau Declaration Enunciates Important Fundamentals

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. CEDERBERG. Mr. Speaker, the American Farm Bureau, representing over a million and a half member families in 48 States, has just presented Members of Congress with that organization's philosophy of government, and I commend its study to all of my colleagues.

There is a tendency in many areas today to drift away from the concept of government enunciated by the original framers and this declaration focuses the spotlight on the fundamental principles of our Government, and we must protect and respect these principles if our land is to continue as the government of the people, by the people, and for the people.

The Farm Bureau declaration follows:

FARM BUREAU PHILOSOPHY OF GOVERNMENT

The Constitution of the United States of America was conceived and purposely designed to make secure the God-given liberties of each individual against the domination of government. This provision was made by a division of authority among the legislative, executive, and judicial branches of our Federal Republic, the diffusion of government powers, and the retention by the people of those powers not specifically delegated to government.

America's unparalleled progress is based on the freedom and dignity of the individual, initiative, and equal opportunity, sustained by our faith in God and our basic moral and ethical values.

The principles of our competitive enterprise system derive from, and are consistent with, our religious values and the highest goals that mankind seeks. Through this system the American people have produced abundant goods and services and provided widespread educational advantages and religious opportunities.

The full realization of man's dreams as envisioned by our Founding Fathers can only be achieved if each individual assumes active responsibility for maintaining and strengthening of the principles upon which our Republic was founded and vigorously opposes all programs and policies which erode the very foundation of our American system.

We, as Farm Bureau members, believe:

In our constitutional form of government and its division of powers.

In freedom of speech, press, and peaceful assembly.

In separation of church and State and in the right of each individual to worship according to the dictates of his own conscience.

That self-government is a precious heritage which can be preserved only by the active, intelligent assumption of basic citizenship responsibilities by all people.

In the American competitive enterprise system, in which property is privately owned, privately managed, and operated for profit and individual satisfaction, and in which supply and demand are the ultimate determinants of market price.

That efficiency of production and maximum per capita production are primary elements in determining standards of living.

That property rights cannot be separated from human rights and are essential to the preservation of individual rights guaranteed by the Constitution.

That the exercise of free will, rather than force, is consistent with the maintenance of liberty.

In the right of every man to choose his own occupation; to be rewarded according to his productive contribution to society; and to save, invest, and spend, or convey to his heirs, his earnings as he chooses.

That the centralization of power and authority in the Federal Government, the movement to socialize America, the apathy of the American people toward this trend, and the apparent lack of responsibility on the part of individual citizens are among the greatest dangers threatening our Republic and our system of competitive enterprise.

That the Constitution is the basic law of the land and that it should be interpreted in accordance with the intent of its authors.

That the trend toward increased centralization of power in the Federal Government, if left unchecked, will lead to socialism and thus to communism.

That such "planned economy" concepts as socialism, fascism, communism, and other forms of totalitarianism should be opposed wherever and in whatever form they may be found.

That their personal beliefs with respect to private capitalism, socialism, and communism should be stated by candidates for public office and employees of governments at all levels.

That, in his quest for "security," the individual must oppose policies leading to the curtailment of individual freedom and opportunity.

That monopoly in any form—whether by government, industry, labor, or agriculture—jeopardizes freedom and self-government.

In government by law, impartially administered, without special privilege.

That government propagandizing of the electorate threatens the maintenance of self-government.

That establishment by the government of organizations of citizens which may in any way remain under its political influence or control threatens the continuation of self-government.

That secrecy in government affairs should not be tolerated except as actually essential to national security.

In strong and responsible State and local units of government and in protection of State laws against Federal preemption.

That farm people have the right and the responsibility to speak for themselves through organizations of their choice without government coercion or intervention.

That the powers not specifically delegated to the Federal Government by the Constitution are reserved to the States or to the people and that such powers cannot be preempted by Federal statutes and must not be preempted by the courts.

Alexander Hamilton, His Spirit Is Alive Today—An Address by J. Harvie Williams

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. REECE of Tennessee. Mr. Speaker, one of the most respected, influential, and patriotic of our forebears was an immortal American, Alexander Hamilton. His ability, influence, and foresight played one of the most important parts, if not the most, in the defense, establishment, and future of the United States of America.

There recently appeared in the February issue of the American Bar Association Journal an article based on a speech made by a very dear and close friend and a most outstanding American, the Honorable J. Harvie Williams, during the bicentennial celebration of his birth. Mr. Williams was at that time the director of the Alexander Hamilton Bicentennial Commission. He served that body well and devotedly.

This discourse by Mr. Williams has attained national recognition, and its reproduction in the Journal is a great distinction. I am proud that such attention has been paid both to a great student and to his subject of such import.

Alexander Hamilton was the incomparable man of the American revolutionary period and of the following era that brought about the Constitution of the United States and its adoption by the States. Mr. Williams has pointed out many of the pertinent and important facts of his reasoning and foresight to apply them to the problems of today. I think it advisable that this body attend the sound thinking and modern views of Alexander Hamilton and ask that the remarks of Mr. Williams be included in the RECORD at this time.

On Saturday, October 19, 1781, the decisive battle of the American War for Independence took place at Yorktown, Va. In 1957, the celebration of the 176th anniversary of this battle was a major event in the bicentennial years of Alexander Hamilton and the Marquis de Lafayette, and in the celebration of the 350th anniversary of the establishment of the first permanent English colony on this continent.

Alexander Hamilton led the American troops in the successful bayonet assault at night on Redoubt 10, which made Lord Cornwallis' position untenable.

Alexander Hamilton should be a subject of extraordinary interest to young people. He did so much while so young. His career is a challenge to every young man and woman on every college campus in the United States.

At 19, before he had finished Kings College (now Columbia University), he was given command, as captain, of the Provincial Company of Artillery of New York. Hamilton and his company were engaged in the Battle of Long Island, at White Plains, at Trenton and at Princeton. His growing reputation brought him to the attention of General Washington.

At 20, Hamilton was appointed aide-de-camp to General Washington, with the rank of lieutenant colonel. During the 4 years he served on Washington's staff, Alexander Hamilton was at the center of events. Washington entrusted him with the most delicate missions—missions on which hung the success of the war and his own reputation. Hamilton also handled Washington's correspondence with the Continental Congress.

Even during these busy years Hamilton found time to broaden his knowledge and indulge in extracurricular activities. At 20 he was writing to Robert Morris about what a constitution should include for adequate administration of government and using the doctrine of separation of powers.

The next year he published his first Publius letters, deploring the feebleness and laxity of the Continental Congress. Two years later, May 1780, Hamilton submitted anonymously to Robert Morris, Superintendent of Finance, his first plan for a national bank to stabilize public funds. That same year, at the age of 23, Hamilton wrote to James Duane the first of his great treatises on constitutional government and called for a convention to establish a general confederation with adequate power.

In the midst of all this activity, being a normal young man, Hamilton found time for the successful courtship of Elizabeth Schuyler, whom he married in December 1780.

On the 1st day of April 1781 Alexander Hamilton resigned from General Washington's staff. It was not until July 31 that he was given command of a battalion of light infantry and ordered to Virginia. During these 4 months of military inactivity he began the publication of a series of six papers entitled "The Continentalist." The final number, published on July 4, 1782, 8 months after Yorktown, ended with these tremendously significant paragraphs:

"There is something noble and magnificent in the perspective of a great Federal Republic, closely linked in the pursuit of a common interest, tranquil, and prosperous at home, respectable abroad; but there is something proportionably diminutive and contemptible in the prospect of a number of petty States with the appearance only of union, jarring, jealous, and perverse, without any determined direction, fluctuating and unhappy at home, weak and insignificant by their dissensions in the eyes of other nations.

"Happy America, if those to whom thou hast intrusted the guardianship of thy infancy know how to provide for thy future repose, but miserable and undone, if their negligence or ignorance permits the spirit of discord to erect her banner on the ruins of thy tranquility."

Thus, at the age of 25, 5 years before the Constitutional Convention, Alexander Hamilton had a clear vision of the great Federal Republic he wished to see established on this continent. For the next 2 decades he worked unremittingly toward that objective.

In this world of 1959, it is not easy to realize the one-time nonexistence of the United States. Nor is it any less difficult to realize that the United States of today began in 1789 with only 11 States and less than 4 million people—about one-half as many as now live in New York City.

Nevertheless, in order to understand and appreciate what was done for us by those now long gone, we must educe in our mind's eye a clear picture of those early days for comparison with what we see today.

Today the political and economic growth of the United States is unprecedented in the annals of mankind. This unique position was achieved in only one and two-thirds centuries (1789–1959).

To students of history and government who have inquiring minds and possess the gift of wonder and power of analysis, the why and how of the United States must always be an absorbing subject.

Shortly after Yorktown, Hamilton was relieved from active Army service and returned to his family at Albany. Here, the following spring he began to read law in the office of his old friend, Robert Troup. After three months' study, Hamilton was admitted to the Bar as attorney-at-law. During that brief time, however, he wrote a legal handbook, Practical Proceedings in the Supreme Court of the State of New York, which became the groundwork for subsequent treatises by others. This item is the prize possession of the library of the Association of the Bar of the City of New York.

That same month, July 1782, Alexander Hamilton persuaded the New York Legislature to pass a resolution calling for a general convention of the states to amend the Articles of Confederation, and the following day that legislature appointed him a delegate to the Continental Congress. There he had wider opportunity to work for a general convention to provide for a closer union of the States.

Four years later, as a member of the 1786 Annapolis Convention, Alexander Hamilton wrote the report which set in motion the events which brought on the Constitutional Convention in Philadelphia, of which he was also a member.

Alexander Hamilton has rarely been given credit for his achievements at the Philadelphia convention. Most historians, reading the dry records, conclude that he was without influence because his two colleagues from New York decided the vote of that State. The fact is that his great speech on June 18, 1787, was designed to defeat—and did defeat—the New Jersey plan and brought success to the Virginia plan as the basis of the convention's work. Thus, the notion of a continuing league of sovereign States was put aside in favor of a National Government under a limited Constitution.

THE FEDERAL CONSTITUTION, A UNIQUE DOCUMENT

The Constitution signed on September 17, 1787, was unique in all time:

1. It created a limited constitution of government—a national sovereignty limited to its proper objects, and by certain specified exceptions to legislative authority; and State sovereignty limited to its proper sphere. This divided sovereignty was seen as reconcilable.

2. It established the formal separation of the national sovereign powers into three functional categories: legislative, executive, and judicial.

3. It established a representative Federal union of States on the basis of unequal representation in the House of Representatives, according to the unequal populations of the States, and equal representation in the Senate as coequal political societies regardless of populations. These two different principles of representation were combined to give each State the exact numerical representation in the electoral college, which underpins the executive branch, that it has in a joint session of the Congress.

4. It provided for an independent judiciary under the Constitution.

Although the proposed Constitution was a mere rearrangement of familiar things, it was sufficiently different to arouse substantial opposition in many quarters, especially from officeholders whose prestige would be diminished under the new system. While the campaign for ratification was the most important campaign ever waged in this country, it was also one of the most intense. In this campaign Alexander Hamilton, who had done more than any other man to prepare the way and bring on the Constitutional Convention, rose to new heights. He was 30 years old.

Some 172 years ago there appeared in The Independent Journal, a New York City newspaper, an article addressed: "To the People of the State of New York." This article by Alexander Hamilton, over the nom de plume "Publius," the first of 85 Federalist Papers, raised a question that remains unanswered. It was, and is:

"Whether societies of men are really capable or not of establishing good government from reflection and choice, or whether they are forever destined to depend for their political constitutions on accident and force."

As crucial as the question was then, it is equally crucial now. And we can say now, as Hamilton said then, "A wrong election of the part we shall act may, in this view, deserve to be considered as the general misfortune of mankind."

"The Federalist" is universally regarded as the classic work on government, especially on the Constitution of the United States. Thomas Jefferson said it is "in my opinion, the best commentary on the principles of government which was ever written." On two occasions, the Supreme Court, in opinions by Chief Justice John Marshall, gave it unstinted praise.

In *McCulloch* v. *Maryland* the Court said in 1819:

"In the course of the argument, 'The Federalist' has been quoted; and the opinions expressed by the authors of that work have been justly supposed to be entitled to great respect in expounding the Constitution. No tribute can be paid to them which exceeds their merit."

Two years later the Court said in *Cohens* v. *Virginia:*

"The opinion of 'The Federalist' has always been considered as of great authority. It is a complete commentary on our Constitution; and is appealed to by all parties in the questions to which that instrument has given birth. Its intrinsic merit entitles it to this high rank; and the part two of its authors performed in framing the Constitution put it very much in their power to explain the views with which it was framed."

In addition to the many editions of "The Federalist" published in this country and in England, it has been translated into French, German, Spanish, Portuguese, lately into Italian, and, I am told, into Russian.

Here I should like to be personal for a moment. For the good of the future of the United States I should like to see "The Federalist" a required textbook in a required course in government in every college and university in the land. My reason is, understanding of the nature, structure, and scope of the Constitution of the United States, the capstone of the American political system, is constantly narrowing. Formal study of "The Federalist," as I suggest, would broaden and deepen that understanding and give a new lease on life to the greatest constitution of government ever written and established.

When publication of "The Federalist" was completed, Alexander Hamilton was well prepared for the New York convention to consider ratification. In the membership of the convention, which met at Poughkeepsie, Hamilton's forces were outnumbered by more than 2 to 1. But before the debate was concluded, after 44 days, Hamilton carried the day by the vote of 30 to 27, including the vote of Melancthon Smith, leader of the opposition. This result, which brought New York into the Union, is regarded as one of the greatest forensic achievements of all time.

With the Constitution adopted by the necessary nine States—New Hampshire was 9th and Virginia 10th—and with New York in the Union, the Continental Congress resolved that the Presidential electors meet in their State capitals on February 4, 1789, and that the new Government become effective 1 month later.

George Washington was unanimously elected President and was inaugurated on April 30 in New York City. At the President's request, Hamilton prepared a detailed plan of Presidential protocol for entertaining and receiving public officials.

President Washington's first Cabinet appointment on September 11, was Alexander Hamilton to be Secretary of the Treasury. Ten days later the House of Representatives requested a report on a plan for the support of the public credit. On January 9, 1790, Hamilton submitted to the Congress the first of his great state papers, the "First Report on the Public Credit."

The next of Hamilton's great state papers was the "Report on a National Bank," which was followed by his even more important letter to the President on the constitutionality of the bank, more important because of his criteria of objects for the constitutionality of measures, and because of his development of the doctrine of implied powers.

These reports were followed by the "Report on Manufactures" at the end of 1791, and the "Second Report on the Public Credit" in January 1795, just before his resignation from public office.

During his 5½ years as Secretary of the Treasury in Washington's administration—during which the new Government of the United States was organized and set in motion—Alexander Hamilton became, in effect, Washington's "prime minister." No other Cabinet member in any administration has wielded such influence and power. Hamilton's hand was active in every aspect of government.

After returning to the private practice of law in New York City, Hamilton continued to be President Washington's principal adviser and the administration's number one publicist. After leaving office, Hamilton not only drafted the President's messages to Congress on the state of the Union, but he wrote at length for publication on questions which were agitating the public mind. His "Camillus Letters," 38 in number, in defense of the second treaty with Great Britain, rank with, if not above, his contributions to "The Federalist." In them he discusses and exhausts the question of relations between nations and the constitutionality of treaties, and reconciles the treaty power with the legislative power under the Constitution. It is ironic that these writings were not even referred to during the recent Senate debate on the treaty power.

In a letter to Rufus King, then Minister to Great Britain, Hamilton wrote:

"The object of the legislative power is to prescribe a rule of action for our own Nation, which includes foreigners among us.

"The object of the treaty power is to prescribe a rule of action between two nations, binding on both.

"These objects are essentially different, and in a constitutional sense, cannot interfere.

"This construction reconciles the two powers and assigns them distinguishable spheres of action.

"[Thus] whatever is a proper subject of a compact between nation and nation, may be embraced in a treaty between the President of the United States, with the advice and consent of the Senate, and the correspondent organ of a foreign state."

Alexander Hamilton's last great literary service to President Washington and the United States was Washington's Farewell Address, in describing which I would join Vice President John A. Krout of Columbia University who says that if any paper deserved to be called "coauthored" this was it—coauthored by George Washington and Alexander Hamilton.

One cannot briefly describe all of Alexander Hamilton's contributions to the United States. To become familiar with them requires a good deal of reading time. To understand them requires actual study, which means rereading until the whole of it comes into balance, proportion and clear focus.

I hope I have touched upon enough to justify my assertion that Alexander Hamilton was the architect of American Union; and that his understanding of the structure he built will serve us mightily today if we but recur to his own work, passing over what so many others—friends and foes—have said about him.

Before coming down to specific contemporary problems for which Alexander Hamilton has clear solutions, may I bring on two supporting witnesses. The first is the late Prof. Ansel Daniel Morse, of Amherst, who wrote:

"Any just estimate of Hamilton's work must take into the account what he did for the education of the public. His usual method of seeking support was through appeals to the reason of thoughtful and patriotic citizens. In this his success was phenomenal. Friends and foes testified that in the qualities which enable a writer to convince, Hamilton was without a rival. In what he wrote there was rarely a trace of the partisan, never of the demagog. Much of his work was done while questions relating to the Constitution engaged the attention of the public. For the treatment of such themes he had a singular aptitude. The extent of his writings is as remarkable as their solidarity. He wrote, often at considerable length, on every important public question which arose during the Federalist period. The result was a collection of writings which embody the best political thought of the time. Indeed, considering both range and quality, it is scarcely venturesome to say that Hamilton's works exceed in value those of any other American statesman."

The second witness is Chief Judge Ambrose Spencer of the State of New York, who had this to say:

"Alexander Hamilton was the greatest man this country ever produced. I knew him well. I was in situations often to observe and study him. I saw him at the bar and at home. He argued cases before me while I sat as judge on the bench. Webster has done the same. In power of reasoning Hamilton was the equal of Webster; and more than this can be said of no man. In creative power Hamilton was infinitely Webster's superior. • • • It was he, more than any other man, who thought out the Constitution of the United States and the details of the Government of the Union; and, out of the chaos that existed after the Revolution, raised a fabric every part of which is instinct with his thought. I can truly say that hundreds of politicians and statesmen of the day get both the web and the woof of their thoughts from Hamilton's brains. He, more than any other man, did the thinking of the time."

I agree with Judge Spencer that Alexander Hamilton did the thinking of the time. But I would add that Alexander Hamilton has done much of the fundamental thinking for our own time. As a leader, as youthful as he was, Hamilton saw clearly what his followers and supporters saw only dimly.

In fiscal policy the detail of every Hamilton proposal was grounded in honor and integrity. For these are the bases of credit, public or private, in any political system.

In foreign policy the missionary complex was as alien to Alexander Hamilton as the devil is to holy water. To him the long-term interests of the Nation were paramount to every other consideration. With him international prestige was based on national strength, honor, integrity and fair dealing. Anything else was illusory, and therefore dangerous.

To Alexander Hamilton the treaty power of the United States is limited to proper objects of treaty—things over which the United States lacks complete jurisdiction and can only gain such jurisdiction by agreement with the other nation or nations concerned. By that token, objects over which we have complete jurisdiction are outside the limits of the treaty power.

Alexander Hamilton was ever clear on the principle that public officials were bound by the Constitution. Of public officials and their powers he stated:

"If they exceed them it is a treasonable usurpation upon the power and majesty of the people, and by the same rule that they may take away from a single individual the rights he claims under the Constitution, they may erect themselves into perpetual dictators."

Of courts, including the Supreme Court, Hamilton wrote: They "must declare the sense of the law; and if they should be disposed to exercise will instead of judgement, the consequence would equally be the substitution of their pleasure to that of the legislative body."

To Hamilton the exercise of will by a court was outside the scope of judicial power and an invasion of the field of legislative power. To him judges were bound, by their oaths to uphold the Constitution, to exercise judgment only, on the intent of the Constitution and the laws pursuant thereto, in deciding cases at the bar.

Recalling the case in ancient Macedonia where the condemned man appealed from Philip drunk to Philip sober, we must give consideration to situations in which appeals can be taken from the will of a court to its judgment. The historic rules for judgments by judges are clear enough.

To Alexander Hamilton, will was the prerogative of the legislator. But judgment was the sworn duty of the judges. It follows that the exercise of will by a high court results in a spurious edict pretending to be law but not law at all, and not binding on any other judge mindful of his own oath to the Constitution and not to the higher court.

Alexander Hamilton well knew that law long antedated the Constitution. He knew well that law was the eternal sense of justice of the community; that law is because law was, unwritten and unfolding as man moved slowly toward civilization. He knew all too well that spurious edicts of kings, courts and parliaments were struck down when the law was restored.

But Hamilton knew even better that constitutions, once adopted by the people, were fixed permanently, were unalterable by government, or by any branch of Government, legislative, executive or judicial; and were alterable only by the people in the manner they had ordained for the making of such changes.

I suggest that Alexander Hamilton is as alive today as he was when he was laying and clarifying the foundations of the Government of the United States. Many among us are unhappy—some, even bitter—about the direction of the drift in American public affairs. I must confess that I, too, am uneasy in the great constitutional crisis in which we are enmeshed.

Nevertheless, I am confident that if we recur to the hard and clear thinking of Alexander Hamilton, and spurn the sentimentality of nonsensical phrases that abort liberty and the Republic, this Nation will live forever.

Slichter Says "Need To Raise Productivity and Per Capita Income Comes First"

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. LANE. Mr. Speaker, Sumner H. Slichter, the distinguished economist at Harvard University, disagrees with President Eisenhower. In Slichter's opinion, inflation is a secondary problem.

This substantiates the current policies of the Democratic Party in the Congress of the United States that are aimed at an expansion of production, an increase of per capita income, and the removal of color barriers in employment.

The excessive caution of the administration is endangering national defense, and is restricting the economic development of the Nation. Isolated from the mainstream of American thought and action, and depending more and more upon the advice of those who lack confidence in our people's determination and in their capacity for progress, the administration is thinking in terms of holding the line instead of going forward.

As Professor Slichter observes:

The misunderstanding [about inflation] is attributable to the spreading of fallacies by many distinguished businessmen, Government officials, and economists who discuss inflation without having informed themselves of the facts.

In support of the Democratic Party's insistence on the vigorous leadership that reflects our past, and is even more necessary for our future, under unanimous consent, I insert in the RECORD the following article titled "Slichter Holds Inflation Is Not Chief Problem," that appeared in the February 8, 1959, edition of the Boston Sunday Herald.

SLICHTER HOLDS INFLATION IS NOT CHIEF PROBLEM—HARVARD ECONOMIST SEES PRODUCTIVITY, JOB RACE BIAS FIRST

(By Juan Cameron)

Is the chief economic problem of the United States today that of halting inflation?

President Eisenhower believes it is, and said so in his recent Economic Report to Congress.

HE DISAGREES

But one of the Nation's eminent economists, Sumner H. Slichter, Lamont University professor at Harvard, contends that inflation is a secondary problem. Far more important, he says, is the need to raise the Nation's productivity and per capita income and to remove color barriers in employment.

In deliberate overstatement to emphasize his point, the economist, in an interview with the Herald last week said:

"The only people who talk about inflation are the President and a few well-heeled businessmen, who by no stretch of the imagination are hurt by rising prices. They are honest, but don't understand conditions in America. They are, in fact, a group of spokesmen without followers."

Slichter does not think inflation is a good thing. But slowly rising prices are infinitely preferable to price controls, restrictive use of the Federal Reserve's credit weapon, or wage controls that might be used uncertainly to control inflation, he argues.

SEES EXAGGERATION

And, he adds, at any rate the evil effects of inflation on people with fixed incomes; on the foundations of our society; on the integrity of our dollar are exaggerated.

Suggestions, such as that put forth by the President in his economic report, that labor must limit its demand for higher wages without increasing productivity correspondingly, Slichter characterizes wishful thinking.

He adds:

"The misunderstanding (about inflation) is attributable to the spreading of fallacies by many distinguished businessmen, Government officials and economists who discuss inflation without having informed themselves of the facts."

Some misunderstandings Slichter points to and refutes:

1. Creeping inflation becomes galloping: No country outside the Iron Curtain in Europe, Canada, and the United States, all of which have had creeping inflation (1 to 2 percent a year), have experienced a faster rate of inflation in the past 10 years. Generally on the contrary, the rise in consumer prices has slowed between 1953 and 1957; as compared to 1948–53. (In the United States, for instance, from 11.1 to 5 percent in these two periods.)

2. Inflation discourages production: When unions are strong, as in the United States, inflation tends to encourage production. Inflation adjusts the price level to rising labor costs that accompany strong unionism. If prices didn't rise, much productive capacity could not be profitably operated.

3. Inflation discourages savings: The opposite is often true. Investment determines the rate of savings. Inflation encourages investment, therefore savings also. Remember investment is the cause, savings the result in this cause-effect relationship.

4. Creeping inflation causes injustice, but does not avert it: It does both. The alternative to creeping inflation is creeping unemployment. Who can say whether creeping unemployment (brought about, for instance, by Federal Reserve credit stringency) is a worse evil than the slow decline in purchasing power of pensions, life insurance, and fixed-dollar assets? (Slichter says these types of income can be adjusted various ways to adopt them to an age of inflation.)

Prices, the labor economist admits, can be stabilized if U.S. unemployment is kept around 5 or 6 percent of the labor force (unemployment was 6.1 percent in December 1958 when 4.1 million people were out of work). But the cost of this unemployment would be about $9 to $14 billion annually in lost gross national product, the Nation's total output of goods and services. This is intolerable, Slichter believes.

Wage and price controls, found by the Nation during wartime to distort production, are both alien and too objectionable in peacetime, the economist adds. (Slichter points out manufacturers find ways to bring out new goods—sport shirts, for example, instead of white shirts—to get away from price ceilings.)

Sovereignty in Space

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. FULTON. Mr. Speaker, the problem of how outer space is to be controlled is facing us today in the 86th Congress. We all agree that the rule of law must prevail if world peace is to be insured. The problem is, what law shall apply to outer space? My good friend, Prof. John C. Cooper of the Institute for Advanced Study at Princeton and McGill Universities, one of the world's most eminent authorities on air law has written a brilliant article on this topic. I commend its careful study by my colleagues.

SOVEREIGNTY IN SPACE

(By John C. Cooper)

Airpower, as I have long insisted, is the ability of a nation to use controlled flight. Such airpower is indivisible, used at times for civil air transport and at times for military striking force. A major limitation, however, of the Nation's airpower springs from basic political and legal considerations which may be thus summarized:

Every sovereign state in time of peace, and every neutral state in time of war, has the complete, unilateral, and exclusive right to control all foreign movement in its territory, unless such movement is authorized by its prior consent or accepted rules of international law.

The territory of a state is three dimensional, including the airspace above its lands, internal waters, and national marginal seas.

Each state may, therefore, at will determine which, if any, flight instrumentalities of foreign origin, are permitted to enter or pass through its national airspace, either in transit or for the purpose of landing.

The doctrine of freedom of innocent passage, applicable to the passage of foreign vessels through national marginal seas, has never been accepted as part of the law of international flight.

The principles thus stated are implicit in certain treaties to which the United States is a party and in our own statutes. For example, article I, entitled "Sovereignty," of the Chicago Convention on International Civil Aviation of 1944, which the United States signed and ratified says "The contracting states recognize that every state has complete and exclusive sovereignty over the airspace above its territory."

And section 1108(a) of the recently adopted Federal Aviation Act of 1958, reenacting similar provisions in the Air Commerce Act of 1926 and the Civil Aeronautics Act of 1938, reads as follows: "The United States of America is hereby declared to possess and exercise complete and exclusive national sovereignty in the airspace of the United States, including the airspace above all inland waters and the airspace above those portions of the adjacent marginal high seas, bays, and lakes over which by international law or treaty or convention the United States exercises national jurisdiction."

Every state in the international community claims similar airspace sovereignty. But neither the Chicago Convention nor our statutes define airspace, nor do they fix the status of usable space beyond. Obviously the extent of our national airspace will determine, in many cases, the measure of our right to control foreign flight above us. Similarly the extent upward of the national airspace of other states will limit our rights to high-altitude flight. Both of these factors wil affect our ultimate airpower. What is meant by "airspace" is an airpower factor which must not be pushed aside.

INTERNATIONAL USE OF TERM "AIR SPACE"

Article I of the Paris Convention of 1919 on the Regulation of Aerial Navigation signed but not ratified by the United States, said: "The high contracting parties recognize that every power has complete and exclusive sovereignty over the air space above its territory."

The background of this acceptance of a prior existing rule of international law was, briefly, as follows:

From 1911 various states asserted a unilateral right by statute, decree, and other-

wise, to regulate flight and admit or deny aircraft entry above their surface territory.

At the outbreak of World War I, belligerent and neutral states closed their air boundaries.

During the 1919 Paris Peace Conference, an Aeronautical Commission was organized for the purpose, among others, of drafting a convention on international air navigation in time of peace. A draft was submitted by Great Britain which opened with the statement that "The high contracting parties recognize the full and absolute sovereignty of every state over the air above its territories and territorial waters. * * *"

At an early session, the Commission, on the motion of an American delegate, Rear Admiral Knapp, adopted the following principle: "Recognition: (1) of the principle of the full and absolute sovereignty of each State over the air above its territories and territorial waters carrying with it the right of exclusion of foreign aircraft; (2) of the right of each state to impose its jurisdiction over the air above its territory and territorial waters."

The legal subcommittee, in its report to the commission, submitting the text of the eventual convention, referred to the accepted position of the "full and exclusive subjection of the air space to the sovereignty of the territory underlying it," adding that "it is only when the column of air rests upon a res nullius or communis, the sea, that freedom becomes the rule of the air"; and, "It follows that in consequence of its sovereignty the underlying state within the limits of its frontiers may forbid flight over, and a fortiori, landing upon its territory."

The Paris Convention was signed officially in French and Italian as well as in English. The words "air space" in the English text appear in the French version as "espace atmosphérique" and in the Italian as "spazio atmosferico." No distinction was made between air space and atmospheric space as designating the area above the earth's surface characterized by the presence of "the column of air." This area was declared to be under exclusive territorial sovereignty of the subjacent state.

In many articles of this 1919 Paris Convention the flight instrumentalities to be regulated are described as "aircraft" and their nationality is recognized. Certain subsequently adopted annexes, part of the convention itself, provide that the word "aircraft" shall "comprise all machines which can derive support in the atmosphere from reactions of the air." Included in the classes of aircraft were balloons, airships, land planes, and helicopters. The term "atmosphere" was certainly here used as meaning the same area called in article I of the convention "air space," and "air" was the gaseous substance providing aerodynamic lift.

Article I was nothing more than a declaration of the law as it already existed. The article referred to every power as having airspace sovereignty, whether such power was or was not a party to the convention. States had, in fact, by their acts before and during World War I, asserted rights to control flight in the superjacent airspace then used by aircraft. Taking the declaration in article I with the definition of aircraft, it may be argued that the 1919 Paris Convention did nothing more than state customary existing international law recognized by all states accepting, as part of the territory of the state below, those areas of space where sufficient gaseous air was present to lift and support balloons, airships, airplanes, and any other type of flight instrumentality which could derive support in the atmosphere from reactions of the air. Man had not yet conceived of the possibility of any other type of flight instrumentality, nor had he had occasion to regulate areas of space, other than those used by aircraft. Consequently, no customary international law existed as to the use of areas above the airspace, and the airspace meant, as pointed out by the legal subcommission which drafted the convention, the area characterized by a column of air.

Nothing, however, in the Paris Convention limited the territorial sovereignty of a state by the technical ability of that state to control the upper areas of the airspace. This would have resulted in strong states having sovereign rights to great heights and weak states having practically no such rights. The preamble of the Paris Convention recognized that "the establishment of regulations of universal application will be the interest of all." Any construction of the convention providing unequal airspace sovereignty between states based on power to control the superjacent airspace would have been inconsistent with this objective.

As improved types of aircraft were produced, the sovereignty of each state in the international community became equally applicable and effective up to the limits of aerodynamic lift then scientifically available to any state. The existence of this sovereignty was recognized as a right inherent in each state, just as the international community recognizes the sovereign territorial rights of such comparatively weak states as Nepal, which includes Mount Everest within its boundaries, even though Nepal cannot make its laws effective up to the vast heights of the Himalayas.

At the same time the Paris Convention cannot be construed as recognizing state sovereignty upward without limit into space. As said earlier, no flight existed nor was considered in the area beyond the column of air.

The Paris Convention was followed by the less important Ibero-American Convention and the Havana Convention. Both asserted the same doctrine of national airspace sovereignty. Nor did the legal situation otherwise change prior to the outbreak of World War II.

THE CHICAGO CONVENTION

The Chicago Convention of 1944 reasserted in article I practically the same statement as to national airspace sovereignty found in article I of the Paris Convention. The fact that rockets of the V–2 type had been in actual combat use for a few months before the Chicago Convention was drafted was not discussed or taken into consideration. The Chicago Conference recommended a definition for the term aircraft in approximately the language of the Paris Convention Annex, limiting the term to those instrumentalities "which can derive support in the atmosphere from reactions of the air."

Article I of the Chicago convention was, like the Paris sovereignty article, a restatement of existing customary international law. International practice by which each State recognized the right of every other State to control then existing types of flight instrumentalities in areas then used had matured into a principle of law. At the same time, nothing in the Chicago convention sought to limit claims of any individual State to additional sovereignty, nor did the convention directly or indirectly deal with areas of space not then used.

With this background, various definitions of the term air space have been suggested seeking to fix the upper limit of the right of a State to admit or refuse the entry of flight instrumentalities in space above its lands and waters. Since sputnik I was launched, these discussions have left the academic area and become both practical and important. On the height of the upper air space boundary hinges the answer to the question whether the satellites launched during the past year have passed through the sovereign territorial air space of many States. The minimum height above the earth of their orbits have been as follows:

	Miles
Sputnik I	142
Sputnik II	140
Explorer I	224
Vanguard I	404
Explorer III	118
Sputnik III	130
Explorer IV	178

An examination of the suggested definitions is in order. It has been authoritatively stated that the United States has in no way committed itself as to the height of its sovereign claims.

UPPER AIRSPACE BOUNDARY IN CERTAIN PROPOSED DEFINITIONS

(a) Height up to which aircraft (instrumentalities requiring aerodynamic lift) can ascend.

(b) Height at which aerodynamic lift ceases and Kepler force takes over.

(c) Height at which a satellite may be put in orbit.

(d) Height at which atmosphere is found in space.

(e) Height without limit.

(f) Height to which a state may exercise effective control.

PROPOSAL FOR NEW INTERNATIONAL AGREEMENTS

A. Agreements fixing upper airspace boundary

Jurists are not in entire accord as to whether it is possible legally, or practical politically, to enter into new agreements to fix the upper air space boundary. Some believe that a solution such as (a), (b), or (c) above should be reached as to the present extent upward of territorial airspace, and that when this is done, astronomical and other factors prevent any agreement extending sovereignty farther upward into space.

Others feel that nothing in the Chicago Convention, or in general customary international law, or in the physical status of space, prevents an agreement fixing an upper limit of sovereignty for the protection of the state below at heights above those suggested in (a), (b), or (c) proposals have been made for possible agreement to include in the air space of each state areas up to a limit which would include all flight except completely free satellite flight where drag is practically nonexistent, or even higher so as to include areas of guided missile flight, thus preventing belligerent guided missile flight over neutral states without violating the neutrality of the latter. If any such new agreement is to be made, all possible physical data must be considered dealing with flight problems in areas both within and beyond the atmosphere. No new agreement should be made until all needed data as to the areas concerned is available.

B. Agreements for control of high altitude flight without fixing boundary between airspace and outer space

Many jurists are convinced that it is impossible, or at least impractical to agree on any definition of airspace, or to fix an outer boundary by new international agreement. They feel that it is much more practical to leave the legal situation as it stands insofar as the technical legal status of different areas of space is concerned, and to direct efforts toward international understanding as to the conduct of high altitude flight generally, or as to particular flights or categories of flight generally, or as to particular flights or categories of flight instrumentalities. For example, it has been suggested that as an early step, each state about to launch a satellite could register its intent to do so with an international agency and furnish technical data. Agreement might be reached to refrain from using certain instrumentalities, or use them only under international

inspection. If a gradual approach toward international control is thus developed, it is argued that no need exists to fix a definite upper boundary or state sovereignty.

These views have been ably argued. They impel the jurist as well as the statesman to proceed with caution. A mistake made now in fixing an upper airspace boundary might lead to grave future difficulties.

CONCLUSION

The purpose of this memorandum has been to state the problem—not to suggest an answer. It is hoped, however, that the analysis of the difficulties may assist in a final policy solution.

A Budget Also More Meaningful

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks, I would like to insert the following editorial, "A Budget Also More Meaningful," which appeared in the February 2, 1959, issue of Life magazine:

A BUDGET ALSO MORE MEANINGFUL

Any effort to draw clean political lines around a U.S. budget has one drawback: our budget system, in the words of Dr. Gabriel Hague, is "nearly obsolete and meaningless." The U.S. Government does not even have a budget in the sense that a responsible household, or most State governments, or the British government has a budget. At no point in the fiscal year does Congress, which votes both the income and outgo sides of the Federal ledger, take a bifocal look at what it is doing and adjust either side to the other.

This procedural defect has been a scandal for years. It got a lot of attention from the Hoover Commission. Congress in 1946 experimented with a joint budget committee to set ceilings on spending, but it never established its authority and the budget remains a mere ritual admonition. Already the Democrats have introduced expensive new bills (housing, airports, etc.) without having any plan for where the money is coming from.

Besides aiming at a balance, it is an additional virtue of Eisenhower's 1960 budget that it takes several steps toward checking this nonsense and making the budgetary process more meaningful. First, it urges Congress to have another try at enabling itself to "look at the fiscal situation as a whole." More important, it implements one of the few major budget reforms since the war, which Congress with a great effort of will authorized last year. This is the accrual system of accounting long urged by the Hoover Commission. It means that instead of letting past appropriations pile up as carryovers, Congress can annually reconsider these old appropriations which the executive has not managed (or managed not) to spend. Thus Congress regains some say in the actual rate of Government spending. But a third and still more important reform will be necessary before our system of divided powers is really capable of keeping these huge budgets under rational control.

This reform is the item veto. President Eisenhower, like Presidents Grant, Hayes, Arthur, Taft, Wilson, F. D. Roosevelt, and Truman before him, has repeatedly asked Congress to give him this power. It would enable him to veto the obviously wasteful parts of an appropriation bill without killing the whole. It would stop those logrolling and pork-barrel appropriations of which President Arthur said: "As the bill becomes more objectionable it secures more support." Most State governors enjoy the item veto, as did the Presidency in the Confederate constitution. It is the commonsense way to check a built-in thriftlessness of the democratic process. But because it would jiggle the balance of budgetary power between Congress and the Executive, Congress has refused to consider it seriously. When he came to this recommendation in his state of the Union address to Congress, Ike was greeted by a hearty and rather sinister laugh.

It's easy for a Congressman to make headlines these days by attacking the administration. Members should first look at Congress' own defects. The many technical flaws in our system of government can be corrected, even those most hallowed by tradition. Democracy to stay alive must keep its own procedures up to date. The whole idea of a formal budget dates only from 1921. With modern budgets taking a fifth of the Nation's income, the item veto has become essential to good housekeeping. Any Congressman or Senator who wants to defy his colleagues' laughter and espouse this reform now will earn the Nation's gratitude in the long run.

Greater Phoenix Must Tap the Highlands

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 5, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD the third of three articles by the Honorable John Murdock, of Arizona, a former Member of the House, in which he sets forth his proposal for the development of the waters of the Little Colorado River in Arizona.

The two previous installments dealt with the details of his proposal for furnishing water to the Navajo and Hopi Indian Reservations. Mr. Murdock's comprehensive plan also contemplates the supply of municipal water for the rapidly growing city of Phoenix. Under the Murdock plan water would be transported from the Little Colorado River to the Verde River for use by the Greater Phoenix and central Arizona areas by use of the principle of exchange of water, a principle which has long been established in the semiarid regions of the West.

Mr. Murdock's article follows:

GREATER PHOENIX MUST TAP THE HIGHLANDS
(By John R. Murdock)

Phoenix, the capital city of Arizona, is the largest of Arizona cities and growing most rapidly. It is in the heart of the largest agricultural area of Arizona, and its urban water supply is inextricably mixed, physically and legally, with the irrigation waters of the valley. Several times already in recent decades Greater Phoenix has had to go far beyond the limits of the valley to augment its city water supply. At the rate at which the metropolitan area of Phoenix is growing, including more than a half dozen surrounding cities, it could rival Los Angeles or San Francisco in frantically reaching out for a dependable source of water.

Of course, it should do this without totally depriving the 250,000 acres of the richest and most productive lands in the West in our big reclamation project in the valley of all irrigation water. Only to the extent that the farmland is being paved and turned into urban areas may the city transfer irrigation water into its mains for municipal use. And although this transfer is taking place, and will continue to take place, the time will soon come when Greater Phoenix must depend upon distant sources of water in the northern highlands. Her outside sources now, other than the Salt River, are the Verde River and its tributaries which have their heads in northern Arizona not far from the Little Colorado River. And while I believe that much additional water can be developed on the Verde watershed, I believe that some water will have to be imported for the city of Phoenix into the Verde watershed from another river or rivers. The other river or rivers could be the Little Colorado at a point near Williams, or it could be the main Colorado River at a point near Peach Springs and Diamond Creek, or from both. My preference would be the former, if engineering and economic data will permit. My plan for the Little Colorado River project fits in well here.

LONGEST TUNNEL NOT FAVORED

At this point I must most emphatically say that I am not proposing the long tunnel—140-odd miles—from the Grand Canyon to Oak Creek Canyon in the vicinity of Flagstaff which has so often been suggested. Several engineers and planners have proposed such a long and deep tunnel to bring the waters of the Colorado River by gravity to Oak Creek Canyon or into one of the other tributaries of the Verde. I am not here now passing judgment upon such a tunnel, whether I think it feasible or not, but it has been so long and so often discussed that I want it clearly understood such a tunnel is not a part of my proposal. There is little similarity between that proposal and mine except the exchange of the same water involved.

Central Arizona, including Salt River Valley, is the heart of the State, and any water development of great importance to Arizona, must have a vital relationship to the central Arizona area. In an earlier statement I said that the development of my Little Colorado River project would have a vital bearing, not only upon northern Arizona Indians, but upon the entire State as well. That vital connection I want to make clear now in this statement. Naturally I am concerned here with municipal water supply. Of course, the agricultural supply for irrigation is tremendously important, too, but I expect to deal separately with that later.

PHOENIX HAS LESSON IN LOS ANGELES

Phoenix has already spent millions in dollars to bring water from the Verde into her city reservoirs, but such is only a beginning. Greater Phoenix, including more than a half dozen small cities which have heretofore relied upon well water, is now making a heavy pull upon the Verde River, and it is a question how much more water there is in the Verde River watershed for Greater Phoenix. Obviously there could be some more water coming down from the north by development, but to get it is going to require expensive engineering.

Phoenix is already larger now than Los Angeles was five decades ago when Los Angeles reached out hundreds of miles up into the high Sierras to supplement her municipal supplies. Later, Los Angeles spent upward of $200 million for an aqueduct to bring water from the Colorado River to her metropolitan area. This was and is an expensive water supply because every gallon of water taken out of the Colorado River for use by the metropolitan district of Southern California has to be pumped over the mountains,

and thus lifted more than 1,600 feet before it will flow to the west coast cities of southern California.

Of course, one would suppose that Los Angeles would much prefer to get most of its city water, if possible from the melting snow of the high Sierras, and have the water come by gravity, producing power as it comes rather than to get inferior city water from the distant Colorado River and be required to use expensive power to lift it over the mountains. The point I want to make here is, that the growing city of Los Angeles is now and has been to this hour getting most of her good water by gravity from the high mountains, and a smaller part of her less desirable water by an expensive pump-lift from the Colorado River. When Los Angeles, years hence, gets around to using their canal to its full capacity—if it ever does—the cost of its capital investment will have been doubled.

In the case of Greater Phoenix, she may expect to get a part of her augmented water supply from the high mountains of Arizona, but also the chances are good that Phoenix may have to resort to an expensive pump-lift to get main stream Colorado River water. Even so, I believe that Phoenix can get Colorado River water—certainly Little Colorado River water—with less of a pump-lift than the 1600-foot lift required for Los Angeles from the same source.

ARIZONA'S GEOGRAPHY POINTS WAY

Let us study the geography of this highland area on which Phoenix would have to depend. The Verde River reaches far north to the Mogollon Rim in the mountain divide near Williams. Oak Creek originates under the Mogollon Rim. Further west, Sycamore Creek heads near the rim in the mountain divide near Williams. There is, west of the San Francisco Mountains, a comparatively low area where the water divides, some going south into the Sycamore, and some going north into the Little Colorado. I am positive from a study of maps and from numerous inspections by automobile trips and from the air that it would not be anything like an impossible task to transfer water from one of the upper man-made lakes on the Little Colorado—such as I indicated in one of my preceding articles—over this relatively low divide to the Sycamore Canyon watershed. This transfer might be served by a short tunnel, but more than likely could best be done by high pressure pipeline for pumps.

Hold in mind that we are talking now about municipal water and not irrigation water which cannot bear so high a cost. Of course, any water imported by Phoenix would have to come from Arizona's allotment of Colorado River water either as confirmed by court decree or through an exchange of water, as for instance, out of the 50,000 acre-feet furnished Arizona annually under the upper basin States compact.

HOW USE THE ASSURED 50,000 ACRE-FEET?

In my discussion of the Little Colorado River project I could only suggest, and of course not be sure, that the annual 50,000 acre-feet guaranteed to Arizona by the upper basin States would thus be freely assigned to the Indians. Many will say that that is a reckless assumption, when we consider how short Arizona is of water. Perhaps so. It may be recalled that I undertook to say clearly that my Little Colorado project plan almost absolutely depends upon that "block of water"—50,000 acre-feet annually—being assigned to the use of those Indians, and that to prevent its going to them would go far towards wrecking that project. That is the way I view it.

It might occur to some that I made the suggestion that this block of "compact water" go to the Arizona Indians merely to gain good will for the Little Colorado River project through the natural good will of the public for our neglected Indians, and now it may seem that I am making that "safe and sure" quantity of water—50,000 acre-feet annually furnished by the upper basin—an Indian gift in another sense, in deliberately trying to take it away from the Indians to bring it to Phoenix. No, I have not tried to deceive anyone. I really mean that that assured quantity of water can be used in a pump priming sense and this stabilizing supply may be the means of getting some mainstream Colorado River water to Phoenix. If this engineering plan is viewed in all of its prospects there is nothing mystical about it. The same water can serve both purposes even if not actually used in both places.

THE "EXCHANGE" PRINCIPLE

How would that be possible? A clear understanding of my proposal in the Little Colorado project reveals that it will yield to the Indian reservation much more water than it will take out of the main Colorado for those Indians. When the system is complete and functioning the Little Colorado system water will be more than enough for the Indian reservations, and there will be water to spare to be imported by Phoenix as well as return flow from the reservation. The whole arrangement legally would simply involve an exchange of water so that it may serve both purposes. The exchange of water is an old and well known legal and engineering principle in the West, and, desperate as semiarid regions may be for water, they know well how to make its usefulness go further by the exchange principle.

Let it be known that it doesn't matter so much whose water the 50,000 acre-feet annually of the upper basin contribution may be legally, so long as the exchange principle will permit it to be used in perpetuity in Arizona. So much the better if it can be used both ways as here indicated. Let it also be known that without its use for the benefit of the Navajo and Hopi Indians and also its use for the benefit of Greater Phoenix, it cannot be used any other way in the State of Arizona with such maximum results. In fact, it might otherwise go on down the river as the rest of the Colorado River flow is going and not be used as consumed water any place in Arizona. This sobering thought should cool any hotheads who might emphatically declare that the block of 50,000 acre-feet of water should never go to any Indians.

OF WHAT IS THIS WATERSHED CAPABLE?

Those who know the Little Colorado now in the state of nature may not agree with me that it could furnish as much water to the Indian Reservations and also to contribute additionally to Greater Phoenix as I have suggested in this article and in other statements. Even assuming an average constant daily contribution from the main Colorado River totaling 50,000 acre-feet annually, used as intended as a regulatory and pump-priming effect, doubting Thomases may say there would not be that much water in the Little Colorado system.

To answer that objection, I would say that there would be a contributing factor, not heretofore participating, as follows: First, it is a detail of my plan that additional useful water can be developed on sites in the reservations. To illustrate: Of the first 20 deep wells put down 9 or 10 years ago by the Navajos, 19 were producers, and there are other possibilities of increasing the water supply on the reservations by conservation methods. Modern science can bring the Indians rain better than can their rattlesnake messengers to the rain gods. These same conservative methods will also contribute to the useable supply in the Little Colorado River for additional uses.

The Vanishing American

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. MINSHALL. Mr. Speaker, Americans have fought on many battlefields to preserve their individual freedom. Ironically, over the last 25 years, during peacetime, they have gradually surrendered to the Federal Government more and more of those responsibilities which are inseparable from personal liberty.

This Congress is being urged by powerful pressure groups to enact legislation which would encroach still further on the fundamental right to make our own decisions and to plan our own individual futures. The threat of socialism is grave and real.

My good friend, Mr. Elmer Lindseth, president of the Cleveland Electric Illuminating Co., accurately evaluated this threat in an outstanding speech recently before the Cleveland Rotary Club. Mr. Lindseth's speech can be classified as "recommended reading" for every citizen concerned about his country's future—and "required reading" for every Member of Congress whose votes will help decide that future.

Under leave to extend my remarks, I submit Mr. Lindseth's speech:

THE VANISHING AMERICAN

(An address by Elmer L. Lindseth, president, the Cleveland Electric Illuminating Co., at a luncheon meeting of the Cleveland Rotary Club, Cleveland, Ohio, January 29, 1959)

I

When the United States was born, some 200 years ago, it was dedicated to a new and bold concept of citizenship: freedom of the individual from domination by government. This philosophy became the so-called American way of life, which by any yardstick is an impressive phenomenon.

Materially, it has given us Americans the highest standard of living in the world.

It has given us more years and better health too, with which to enjoy our material wealth. Since 1900, the average American's life expectancy has risen from 47 to 70 years.

It has brought the benefits of education within reach of all. Some 3 million young people are today enrolled in our institutions of higher learning alone.

And, notwithstanding the jibes of some critics both foreign and domestic, it has given us a rich cultural life.

But I need not go on. As a Nation, we have grown rich. And by all indications, we have every intention of growing richer, materially, culturally, and in every other way.

Few of us doubt that we can grow richer. We look back at what has been accomplished in the past 200 years by hard work in an atmosphere of freedom, and we feel that without question we have the formula for unlimited progress. With freedom, we have traveled far; with continued freedom, we can travel a lot farther yet.

II

With continued freedom? Let's think about that for a moment. Are we as free as we think we are?

The fact is that the American, as the world knew him not many years ago, is today a vanishing breed.

The thing he feared most—the thing he tried to prevent in his Constitution—has been happening apace. The bonds he placed on Government have been loosened, one by one, while for the most part he stood idly by. And the American people, who once stood out in sharp relief as individuals, are fast becoming regimented into the mediocrity of collectivism.

Because this process has been gradual, spanning generations, it has largely gone unnoticed. Only when we look back do we see what a tremendous change has taken place in the social, political, and business climate of these United States.

In the beginning, we assigned to Government only its legitimate functions—foreign affairs, national defense, law enforcement, the postal service, to name a few of them.

Today, the Government is not only carrying on all those legitimate functions, but in addition is regulating the economy and engaging in business in a big way, in competition with its own citizens. A whole multitude of Government regulatory bureaus and business agencies has sprung up, playing so prominent a part in the Nation's life that people recognize them by their initials alone: FHA, FPC, TVA, ICC, SEC, NASA, FTC, and so on. Some even bear affectionate nicknames like Fannie Mae.

The Government today has become the most dominant single factor in our economy. It buys, sells, competes, regulates, protects, subsidizes, manufactures, lends, borrows—and, of course, spends on a corresponding scale.

In 1950 the well-known American Communist, Earl Browder, spoke these words: "State capitalism, in substance if not in formal aspects, has progressed farther in America than in Great Britain under the Labor government, despite Britain's nationalization of certain industries, which is a formal stage not yet reached in America. The actual, substantial concentration of the guiding reins of national economy in governmental hands is probably on a higher level in the United States of America."

III

American business is full of success stories, in the Horatio Alger tradition. But ironically enough, the biggest success story in all the annals of American business is the Government's rise to wealth and power in business.

How did this happen?

Many Government-in-business operations began as emergency measures, particularly in wartime. It was tacitly understood that they would be dissolved as soon as the emergency had passed. But many of them were overlooked, and, like Old Man River, "they just keep rollin' along."

In 1933 a special committee of the House of Representatives took a look at Government business enterprises. The committee found 232 of them created during World War I and still operating, although the war had been over for 15 years.

If 232 Government business enterprises sounds like a lot, it is only a drop in the bucket by today's standards. Last year there were over 19,000 commercial and industrial enterprises in the civilian branches of Government alone. And there were at least 2,500 more in the Defense Department.

This the Hoover Commission brought out in a scholarly and monumental work which created quite a stir when it was published some years ago. A citizens committee was formed to press for curtailment of these unnecessary Government activities.

But their efforts and similar efforts have met with very limited success. True, the Inland Waterways Corporation was liquidated around 1950. In the midfifties, 900,000 Government housing units were disposed of, and 27 synthetic rubber plants were sold to private industry. In 1957, the Director of the Federal Budget reported that 137 business operations in the civilian branches of the Government had been closed. Nevertheless, Government's stake in business went on getting bigger, not smaller.

Today, the U.S. Government manufactures surgical, medical, and dental equipment, rope, chain, watches, clocks, fertilizer, paint, and a thousand other commercial products. It operates motion picture studios, coffee roasting plants, sawmills, rum distilleries, furniture repair shops, printing plants, powerplants, and garden nurseries. It is in the aluminum-sweating business, the plastic-laminating business, the cement business, the railroad business, and the wood-preservation business. At military posts all over the country are Government-run supermarkets and department stores selling at tax-subsidized prices, in competition with local retailers.

We obviously have not time to name all the businesses the Government is in. If it is not yet in your business, you—and we—are lucky. But it may be only a matter of time.

Some of you may be in the life insurance business. If so, you are well acquainted with national service life insurance. By 1957, this Government-operated business had written 6½ million life insurance policies with a total face value of $44 billion, one-sixth of all ordinary life insurance in force in the country.

This vast Government insurance business exhibits all the bad features of virtually every Government business enterprise. It pays no tax on property or income, leaving the entire taxload to be carried by citizens who for the most part are not its customers. It taxes these same citizens again for direct subsidies. And because of these financial advantages it is able to undersell private business and thus weaken our free enterprise economy through unfair competition.

Its administration requires a vast number of civil servants in Washington and throughout the Nation, who become entrenched in their jobs and effectively resist any effort to displace them. It develops a core of friends and supporters in Congress who are able to perpetuate its existence by log rolling and trading votes with other legislators, in return for support of their pet projects.

Thus it lives—and grows—and prospers.

In 1932, just a quarter of a century ago, two-thirds of all tax dollars went to local and State governments, and one-third to the Federal Government. Today that proportion is reversed. The Federal Government now gets 2 tax dollars out of every 3. And I hardly need add that the total number of tax dollars is vastly greater today than it was in 1932.

Competent economists say a free society is in trouble when 20 to 25 percent of its wealth goes to government in taxes. Today, our various levels of government—local, State, and Federal—take more than 30 percent of the wealth we create. One in every six employed persons in America today works for the Federal, State, or local government.

What does this mean in plain language? It means that we—you and I and our fellow Americans—have abdicated to government the responsibility for controlling almost one-third of this country's total income. If we think we can throw away that much responsibility without losing some of our freedom, we are sadly deluding ourselves.

IV

All these pieces fit into a pattern, the name of which is an ugly word: socialism.

Repeatedly, through surveys and public opinion polls, Americans have stated they want no part of socialism. When a socialist government came into power in Britain, we shook our heads sadly at the folly of the British. When that same government was defeated, we told ourselves that the British had finally regained their senses.

Yet all the while we were buying socialism for ourselves, piece by piece.

This is certainly a paradoxical state of affairs. But it is not particularly astonishing, because it could have been predicted. In fact, it has been predicted by Socialists themselves, who played a prominent part in bringing it about. They knew us better than we knew ourselves.

The Fabian Society in England became well known for its philosophy of gradualism. The society was founded in 1883 by a group of British intellectuals, and took its name from the Roman general Fabius, who made some notable conquests by avoiding major battles. His method was to isolate small parts of the enemy's forces and wipe them out, one at a time.

That's the method the Fabians used in putting socialism over in Britain. They were smart enough to see that the Marxists, with their "all-or-nothing" approach, would get nowhere. But they had the shrewd idea that people would buy so-called welfare schemes, one by one, until they wound up with a Socialist society.

It took the Fabians a long time in Britain—from 1883 to 1945—but they succeeded.

It is already well on its way, in part because we have our Fabians here too, using the same methods that worked so well in Britain. The prominent American Socialist Stephen Raushenbush, advocated "encroaching control" in the New York Leader in 1927. He urged Socialists to get jobs in the Government; to work toward a program of Government ownership of electric power; to work for political control and management of all key industries.

Another well-known American Socialist, Norman Thomas, said this in 1940: "The people of America will never buy socialism in one package. But they will buy TVA, social security, compulsory health insurance, Federal aid to education, and all the others, one at a time." The language is his.

Those are the key words: "one at a time." No matter how loudly we Americans may protest that we want no truck with socialism, we are today buying socialism by that typically American method, the installment plan. The end result, unless we do something about it, inevitably will be outright ownership—except that rather than our owning socialism, socialism will own us.

V

Let's look for a moment at a single case history, a classic example of how a socialistic measure, once it gets its foot in the door, starts taking over the entire household. This is the electric power business. I use this example, first, because I am in the business and know something about it at first hand; and second, because the power industry is so fundamental to our economy that it is a prime target of Socialists everywhere in the world.

In the early decades of this century, with the growth of the conservation movement in the West, a number of Government dams were erected for irrigation and flood control purposes. Rather than waste the water power available at these dams, the Government installed generators and began the incidental production of electric power.

But in 1933, with the creation of the Tennessee Valley Authority, the picture took on a different aspect. True enough, the TVA Act specified that the dams on the Tennessee River were for navigation, irrigation, and flood control, and any electric power produced was to be incidental. But those who nurtured the TVA had their own definition of the word "incidental." Soon TVA assumed the role of sole supplier of electric power to the surrounding territory, and achieved the complete elimination of all

investor-owned power companies in the area.

This was accepted by the people in the valley, because TVA electric bills were low. Naturally they were low, and still are. TVA pays no Federal taxes at all, and only one-third as much in local taxes as a privately owned power company would pay. It pays no interest on money loaned to it from the Federal Treasury, and returns to the Treasury virtually none of these borrowed funds. Thus relieved of three of the biggest cost items on taxpaying power companies' books, it can well afford to price its power below theirs.

It wasn't long, either, before TVA began building coal-burning generating plants. By this time the word "incidental" had lost all meaning.

Today, 25 years after TVA's birth, more than four-fifths of its total investment is in electric power facilities. It is the Nation's largest electric power producer, generating almost two-thirds of its power in coal-burning plants. Estimates of how much tax income has been lost through TVA vary between one-quarter and one-half billion dollars. Total investment of taxpayers' money in TVA as of June 30, 1958, is just under $2 billion. To date, the interest payments alone that TVA has escaped paying to the Federal Treasury total some $240 million. And it avoids taxes of $55 million a year.

We Ohioans, however, lose more than our share of the amounts paid out directly to TVA. The tax on electric power must be collected from somebody, and since TVA customers are exempt, the entire burden falls on the customers of taxpaying utilities—you and me. Our taxes are thus higher than they otherwise would be. Further, untaxed electric power is a drawing-card for industry, especially those companies whose power usage is high. Many an industry which might otherwise have located in Ohio, creating jobs and paying taxes here, has gone to Tennessee to take advantage of the low-priced power that we help to subsidize.

It would seem that TVA has already expanded far beyond any proper place it might have in the economy, and become a liability rather than an asset. Yet every session of Congress sees bills introduced by the backers of so-called public power which seek still further to expand the TVA empire. A typical bill, S. 1869, introduced at the last session, had provisions that would remove TVA from the limited budgetary control Congress still has over it and would give it virtually unlimited spending rights. It would authorize TVA to spread over another 25,000 square miles of adjacent territory, an area greater than the combined areas of Delaware, Massachusetts, Connecticut, New Jersey, and Rhode Island. Similar bills can be expected to be introduced during the present session. Most Americans are never even aware of them. The President's so-called balanced budget is in part predicated on passage of a TVA revenue bond bill which would remove TVA spending from the Federal budget and from congressional control.

TVA is the biggest Federal power project, but by no means the only one. Prominent among the others are the Southwest Power Administration in Arkansas and Texas; the Southeastern Power Administration, in Georgia and North and South Carolina; and the Bonneville Power Administration in the Pacific Northwest.

All told, Federal power installations supply power for one-fifth of the population of this country. This means that one American in five receives tax-free power, at the expense of the other four. Of revenues received by tax-paying electric utility companies, about 25 cents out of every dollar goes to the various levels of government in taxes. Customers of such companies comprise four-fifths of American citizens, who pay higher taxes in order that a privileged one-fifth may obtain power subsidized from the Public Treasury.

When government power expands, so does this privileged class of customers expand, and the demand on those who pay the subsidy grows heavier. Thus, whenever public power wins—you lose. Whenever public power wins, we move closer to the complete socialization of a major industry already one-fifth socialized.

VI

But we need not go outside our own State for examples of government in the power business. There are 102 tax-free municipal power systems in Ohio alone. In fact, we need not go outside our own city. The municipal electric light plant in Cleveland is government power on a substantial, though local, scale. Fewer customers are involved, and lesser amounts of money than in the TVA for example. But the principle is precisely the same.

The municipal light plant competes directly with the Illuminating Co. for customers and business. However, it pays no taxes of any kind, while the Illuminating Co. must of necessity charge its customers enough to cover its taxes as well as its ordinary operating expenses. And those taxes amount to more than 24 cents out of every dollar we take in.

The municipal light plant does render certain services to the city at rates lower than the fully taxed and regulated rates of the Illuminating Co. But such reduced rates are quite inadequate to offset the amount of taxes avoided through Government ownership. The vast bulk of the tax exemption is passed on to private residential, commercial, and industrial customers, many of them your competitors.

The municipal light plant serves about one-fifth of the electric customers in Cleveland—which is just about the same proportion of customers, you may remember, that is served by Federal Government power projects on a nationwide scale. Thus, the same picture holds true in Cleveland as across the country: one-fifth of Cleveland's citizens enjoy tax-free electricity, while the entire utility tax bill is carried by the other four-fifths.

Imagine what would happen if one-fifth of the people of Cleveland were to be exempted from paying the 3-percent sales tax on retail purchases. Suppose this one-fifth were picked at random—say, all those whose names started with the letters J through N. Wouldn't the other four-fifths have a valid basis for charging preference and discrimination? Fair play dictates that they would.

Yet, that's precisely the situation we have in regard to the tax on electric service, except that whether or not you pay it depends not on the first letter of your surname, but on whether you happen to be a customer of the municipal light plant of the Illuminating Co. It's just as inequitable, but the victims of this inequity—80 percent of the citizens of Cleveland—don't seem to be concerned about it. Many of them aren't even aware of it.

Incidentally, there's a simple way to remedy the unequal distribution of taxes on electric service in Cleveland, just as there is nationally. It won't cure the evil of socialistic ownership, but it will end the tax discrimination. It would involve merely raising the rates of the municipal light plant service to private consumers to the level of Illuminating Co. rates, which are commission regulated and include a full component of Federal, State, and local taxes.

The increased income to the municipal light plant—the equivalent of its tax exemption—could then be applied for the benefit of the entire community by the municipal plant reducing rates charged for public uses, such as city buildings, street and traffic lighting, and other similar charges against the general fund; water pumping and sewage disposal; countywide services; and other similar public users, thus reducing correspondingly the tax revenues collected from you and me.

The municipal light plant, with its tax-exempt rates to some private citizens, is only a small slice of the socialism that we in Cleveland have bought. It is all of a piece with national service life insurance, Government-operated factories and truck lines, TVA and all the other 19,000 Government-owned business enterprises which you and I pay to support and which compete with private citizens in at least 142 different fields of business, probably including your own.

VII

We Americans—if our words are to be believed—consider individual freedom as precious as life itself.

Then why, one asks, do we buy this socialism a piece at a time?

I believe it is because we are just plain complacent and apathetic. And our complacency and apathy stem from the fact that we fail to see what is going on before our very eyes.

It is like putting together a jigsaw puzzle. As we fit the pieces of socialism into place, one by one, the picture grows steadily bigger. But we still haven't quite recognized the whole picture for what it is.

Surveys repeatedly have shown that the American people are unaware of the danger they are plunging into. Typical is a 1955 nationwide survey conducted by Opinion Research Corp. In replying to questions about broad issues, those questioned clearly favored free enterprise over Government control. For instance, 72 percent were opposed to Government ownership of industry. Sixty-three percent preferred free competition to price control, to keep prices fair. Seventy-eight percent were against imposing a top limit on salaries. When asked their opinion of the business setup in this country, only 10 percent gave unfavorable replies. And 72 percent said the best way to keep the country prosperous is to let business do its own planning, as against only 19 percent who favored Government planning.

But when the questions narrowed down to specific issues, it was a different story. Nearly half—48 percent—favored farm price supports. Three out of four favored government housing. Five out six—83 percent—favored Federal aid to education. And three out of four favored Government help for small business.

Apparently people don't think of these things as socialism. The Fabians, it seems, were 100 percent right.

Another national public opinion poll, this one by Central Surveys, revealed the extent to which the American people are misinformed and uninformed. One-third of those interviewed had never even heard of TVA; presumably they didn't even know the Government is in the power business at all. What about the two-thirds who had heard of TVA? More than one-half said they approved of TVA. Only one in eight disapproved of TVA. One-third didn't even have an opinion.

This looks like a clear-cut victory for socialized power. But there's more to it than this. Those people who had heard of TVA were asked whether TVA pays taxes at the same rate electric companies do. Only one in three was aware that it does not. More than one-half didn't know.

There are a lot of people—among those who say they favor TVA and other socialistic measures, and among those with no opinion—who would be against these same socialistic measures if they only knew the facts. This was brought out too in the survey, which asked if they thought TVA should pay taxes at the same rate electric companies do. A majority said they thought it

should. Even in the very area which TVA serves with tax-free power, only one in five thought TVA should not pay taxes.

These and other surveys have shown beyond question that the better-informed a man or woman is, the more opposed he or she is to socialism. Obviously, a vigorous campaign to inform the public could work wonders in stimulating active opposition to socialism in the American economy. Once people know the facts, they'll make the right decisions.

VIII

But who is going to see that they get the facts?

George isn't going to—so it's no use saying "let George do it." That's the very philosophy that got us started on the socialistic road in the first place. It's a job for you and me. It's the biggest and most important do-it-yourself project any of us has ever faced.

We do we start?

Right now. The hour is late enough at it is. And on top of that, we are just embarking on the most challenging era in history—an era that promises a lot of changes, including social upheavals. That means that this issue of socialism will intensify, unless we do something about it now.

We are on the threshold of the atomic age, the space age, and the age of automation. A new dimension is being added to international affairs with the emergency of the so-called backward nations. A quarter-century from now, today's world will seem mid-Victorian.

These developments lend a special urgency to the need for decision. We have our choice, but we may not have it much longer. With a rebirth of self-reliance, we can fit these changes into the framework of our free institutions. If we remain apathetic, the new forces in our society will be harnessed to the cause of socialism.

If we want to keep the freedoms we still have, there's a big job for each one of us of informing and enlightening. We can start right here at home. It's a good place to start—one of the most highly industrialized areas in the Nation, and one of the leading educational centers.

What, specifically, can we do, you and I?

Our first job, obviously, is to inform ourselves—and be sure that we keep informed.

Second. Let's inform others. Our audience is everybody—friends, neighbors, employees, chance acquaintances, anybody who will listen. It's later than we think, and government in business is something we should all be taking about, writing about, giving speeches about—using all possible means for getting the facts across.

Third. Let's help the younger generation through our educational institutions. Surveys show that today's young people, if anything, are even more misinformed and uninformed about economic facts than their elders. The schools sorely need all the support and cooperation we can give them.

Fourth. Let's take a more active part in self-government. Let's each support and take part in the political party of his choice. Each of us can join, and provide leadership to, one or more organizations dedicated to opposing creeping socialism. We must take time from our leisure to do this, while we still have leisure.

Fifth. It goes without saying that we should all be sure we are registered as voters, and that we vote. You may be sure that the people who want more socialism are voting. More support at the polls for those candidates who are opposed to socialism would encourage them to keep up the fight. It might even affect the thinking of those politicians who support socialistic measures, not because they believe in them, but because they think that's the way to get elected.

Sixth. Let's resolve to make our views known to our elected representatives. There's no other way in which they can find out what we want them to do.

And, finally, let's make sure we are never guilty ourselves of using Government as a crutch. If the abuse of subsidies is wrong for other people, their abuse is wrong for us. If Government favoritism is wrong when bestowed on some other business, it's equally wrong when it favors our business.

IX

We can never—nor do I think would we want to—get back to the life of colonial days. The world today is a different world, vastly more complex, and it will become more so. But the important principles that should govern our national life have not changed one iota. They are as simple and straightforward today as they were when our country was born. But they stand in need of protection today more than at any time in the past.

Near the outset of this talk I referred to the kind of American that built this great country of ours as a vanishing breed.

He hasn't quite vanished yet, although it's later than we think. However, it's not too late. Let's all pledge ourselves as we enter 1959 to do what we can to bring him back. For if we don't, our 200-year experiment with freedom will have been in vain. And that must not come to pass.

Poison in Your Water—No. 13

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the RECORD an article appearing in the Tulsa (Okla.) Tribune on February 25, 1958. The article entitled "Payrolls and Pollution," tells how three industrial firms in the Pryor area have agreed to start construction immediately on a plant to eliminate pollution in the Pryor Creek, in Oklahoma.

The article concludes that industry does not need to be a destroyer of nature. Pollution can be eliminated but requires vigorous action. The article is as follows:

PAYROLLS AND POLLUTION

Three industrial firms in the Pryor area—the National Gypsum Co., the Bestwall Gypsum Co., and the John Deere Co.—have agreed to start construction immediately on an aeration treating plant to eliminate pollution in Pryor Creek.

We hope the plant is big enough and effective enough to do the job, for surely the great fish-kills in Fort Gibson Lake, which were apparently set off after rainstorms flushed out Pryor Creek, have been ominous.

Industry does not need to be a destroyer of nature. The dramatic clean-ups that have been enforced on the Raritan River in New Jersey and the Wisconsin River in Wisconsin prove that there are very few industrial plants that cannot treat their wastes in such a way as to render them innocuous to human beings and fish.

Oklahoma's great new lakes have already brought the State millions in tourist spending and will be worth uncounted billions more. Oklahoma also welcomes and needs industrial payrolls. But a payroll can be very expensive if it makes our waters too foul to be enjoyed.

We hope the aeration plant at Pryor demonstrates how payrolls and nature can remain at peace.

A Real Leader Speaks

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. MULTER. Mr. Speaker, I am pleased to direct attention to the following brief but pithy remarks of the Honorable Carmine G. DeSapio, Democratic national committeeman for the State of New York, as delivered by him on February 14, 1959, to the New York State Democratic dinner at the Waldorf-Astoria Hotel in New York City:

REMARKS OF THE HONORABLE CARMINE G. DESAPIO

Mr. Chairman, reverend clergy, Mrs. Wagner, Mayor Wagner, Arthur Levitt, Mike Prendergast, George DeLuca, Edna Kelly, and distinguished ladies and gentlemen, I wish I could say that this was an evening of celebration which we Democrats might characterize as an opportunity to assess the gains which we have made in the recent past.

But I would deceive no one if I attempted to do so—nor can any of us achieve any valid purpose by pretending that our gains in the State legislature and in Congress last November were not mitigated by the loss of two important State offices and our failure to win two other posts previously held by Republicans.

And any honest attempt to evaluate the results of the 1958 State elections, in terms of the present and future of our party in New York State, must acknowledge the simple fact that, with certain significant exceptions, we did not emerge from those contests as winners.

Often, in the sadness and disappointment of defeat, it is tempting to snatch at the easiest explanation, and even to create rationalizations which may have no validity whatever. This is a natural human failing, and it would be naive for any of us to assume that politicans are immune to it. For even the most sophisticated and most experienced politician may find it difficult to accept disappointment without succumbing to certain emotional pressures—from within, from without, or both—pressures which find expression in hasty or ill-considered actions.

Now it is no secret that there are some people within our party who have reacted to our recent reverses in a manner which does not reflect the traditional resilience of which all of us here tonight are so justly proud.

There are others—let's face it—who also have fallen into the error, or who have been goaded into it, of taking sides over a nonexistent issue. And it is sad to think that our party—or at least certain of our fellow Democrats—may allow themselves to dissipate the strength we need to meet the challenge which we must face during the next 4 years.

And it is sadder still to realize that this squabbling—for it is just that—revolves around a question of semantics which has no practical application.

This question of semantics—about who or what is or is not a liberal, and which threatens to sap so much strength and vitality from our organization—can serve no constructive purpose.

Anyone can call himself a liberal. And almost everyone has at one time or another. To reactionary Republicans Dwight Eisenhower is a liberal. In 1952, Candidate Eisenhower characterized himself as a liberal. In 1958, Eisenhower denounced liberals.

Today, some Republicans will tell you that Nelson Rockefeller is a liberal, although there are others who would disagree with them.

My friends, telling people that you are a liberal doesn't make it so, nor does calling someone otherwise necessarily make him so.

The character and philosophy of a politician or of any public figure is molded and defined by his beliefs, by his principles, and by his actions.

And the character and philosophy of a political party evolves from the record of performance compiled by its members.

By these standards—and they are the only true standards—our Democratic Party is an association of men and women whose political creed is founded upon a concept of public service which has as its only goal the advancement of all of the people through a comprehensive program for social progress.

Our party is a party of and for those who subscribe to this liberal philosophy and who are not afraid to work to achieve it, who understand that political success ultimately depends upon the will of the majority of the people, and who do not interpret a temporary setback from unique causes as a manifestation of irreparable tragedy. Indeed, our country is a free nation, of and for those who subscribe to the principle of a two-party system of government.

Yes, there is a Republican Governor in Albany for the simple reason that the people of our State elected him. No crevices have opened in the earth. The structure of democracy has not come crashing down upon our heads. Armageddon has not arrived. The world has not come to an end.

But the cause of liberalism, the cause of progress, will not be advanced by disunity. Those who work divisively within our party prevent themselves from contributing to the tasks and problems which do face us. Not the least among these tasks is the election of a Democratic President in 1960. And not the least among the problems which confront us are the awesome increase in unemployment and the onerous and burdensome taxes which are contemplated for our wage earners.

These are the important issues, not the synthetic issues created by those who claim to have a monopoly on liberalism, but whose disruptive tactics served rather the cause of reaction. It may be considered by some to be fashionable to resort to name calling and characterization, but this does incalculable disservice to our party, our country, and to the very liberalism which they pretend to represent.

All of us—all of us who are dedicated to a liberal philosophy of government—must work together during the ensuing years with the legislature, within our own political organization, with responsible civic groups, and with the people, to uphold and to strengthen the tradition of liberal democracy to which every Democrat is heir.

If we can influence the course of progress in our State in the face of a Republican administration—and I believe that we can—then we will earn and we will deserve the friendship and the respect of the people. And their friendship, their respect, and their support will enable us, as a party, as their party, to reassume the titular, as well as the moral, responsibility for political leadership in our State.

Let us make that our goal. Let us work; let us build; let us gain new strength, new confidence, new inspiration, and new unity from that challenge.

Let us prove to the people that we are good losers, and that, even as losers, we are still strong leaders. And let us build upon the foundation of a forthright acceptance of adversity, a new, a greater and, ultimately, a more meaningful promise and prospect of victory.

Thank you very much.

New England Manufacturers Are Concerned About High Taxes and Debt

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. McINTIRE. Mr. Speaker, the New England Council has taken a sample of the sentiments entertained by manufacturers in the New England area. Because the findings reflect not only local but national concerns as well, I am submitting them to the RECORD:

NEW ENGLAND MANUFACTURERS ARE CONCERNED ABOUT HIGH TAXES AND DEBT

BOSTON.—Higher taxes and increasing Government debt head the list of New England's most serious current problems, according to a survey of the region's manufacturers announced today by the New England Council.

The study by the economic development organization pinpointed the tax situation and the growing debt at all levels of government—Federal, State, and local.

Manufacturers in the six States also are concerned about the cost of transporting some raw materials into the region and moving finished goods to other sections of the country because of the distance from major markets.

Concern over some labor unions and productivity by employees also were mentioned frequently in the survey.

Many manufacturers replying to the New England Council questionnaire also were self-critical. They deplored the lack of interest by businessmen in politics and mentioned the need for more aggressive management that would be alert to existing opportunities.

One northern New England company official said, "In this section of the region our problem is transportation and the import duties into Canada. Winter weather is a slowing factor but there isn't much we can do about that."

Among other quotes on New England's problems were: "Waste in government through expenditures we cannot afford.

"Lack of diversification of industry in some areas.

"Failure to appreciate that the greatest good for all is not dispensed by the Government but must be provided by the productivity and initiative of individuals.

"Need qualified politicians to halt the waste of taxpayers' dollars and who are interested in the future welfare of the region to counteract the trend toward socialism by a tendency to mass vote."

The New England manufacturers were equally vocal with their suggestions for helping to solve or alleviate the region's problems.

They called for:

"Less dependency upon Government and outside factors, and more ingenuity. There is little wrong with business which cannot be solved by a vigorous attack and more individual initiative.

"An educational program to teach our people to understand and appreciate New England.

"A reduction of Government spending and taxing, and recognition by the politicians that there can be no jobs without successful and profitable industries.

"Establishment of a conservative party with sincere men from both present parties, to speak up and espouse the old New England virtues of thrift and good government.

"Greater cooperation by business, labor and government to help halt inflation.

"A campaign for more citizens to vote, and to study what they are voting for.

"More interest by business in economic and political activities.

"Greater economy by legislators and a more active role by competent businessmen and women in local and State politics."

In the NEC survey, the responding manufacturers said that many of their problems were national in nature and not merely local. None expressed the least desire to move elsewhere and many pointed out that "New England still is the ideal part of the United States in which to live, work, and vacation."

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. WOLF. Mr. Speaker, I have received many, many letters in the past few weeks from my constituents urging that the Congress not delay action on legislation to grant statehood to Hawaii. It is my personal view that Hawaii has been more than patient in its long quest for statehood. When the measure to confer statehood to Hawaii comes before the House, I intend to vote for it.

A radio commentary on the subject by W. Earl Hall, the distinguished and learned editor of the Globe Gazette of Mason City, Iowa, which appeared in the Globe Gazette, one of the leading newspapers of northern Iowa, on February 9, states the view, I believe, of the majority of Iowans in the most cogent terms. Mr. Speaker, under leave to extend my remarks, I submit this very forceful article for the RECORD:

HAWAII, LAND OF INFINITE PATIENCE

If there's any reason, or semblance of reason, for further delay in admitting the Territory of Hawaii into the Union as its 50th State, it has been most effectively concealed It has escaped the eyes and ears of all fair-minded Americans known to me.

Everything else—and especially God—has been extremely kind to the cluster of islands known as Crossroads of the Pacific. Of the more than 60 lands I've visited in my world travels, Hawaii comes nearest to measuring up to all advance notices.

Only Uncle Sam in this one broken pledge has dealt inconsiderately with the islands, except for that act of infamy set down in world history as Pearl Harbor. For at least a dozen years or so, Congress has been playing what can only be described as the old shell game with the islanders.

Time after time an unconditional pledge has been included in the two party platforms to admit both Hawaii and Alaska to statehood. Presidential nominees have promised it in their campaigns and Presidents have pleaded for it in their messages to Congress. Public opinion polls have unfailingly disclosed an overwhelming favor for admitting both.

Last year for reasons which never made sense, Alaska was given statehood but the door was slammed shut in Hawaii's face. Here I should explain that the action on Alaska had the islanders' fullest blessing despite the affront to Hawaii implicit in the matter.

There was, and is, every good reason that the situation will be righted in the present Congress. But if I were an Hawaiian and had

seen the rug pulled out from under me as often as the island dwellers have, I'd be loath to take anything for granted. Consider this record:

The proposal to accord statehood to Hawaii has been passed by the House of Representatives in Washington three times. The first time, in 1947, it was by a margin of 196 to 133. The Senate committee decided to conduct further investigation. The bill never got to President Truman for his signature.

In March of 1950 the House repeated its approval, this time by the convincing vote of 262 to 110. After public hearings the Senate Committee on Interior Affairs reported favorably on the bill. This was in June and again the Senate failed to act on it before adjournment.

Third passage in the lower branch of Congress took place on March 10, 1953. This time the margin was 274 to 138. The Senate combined the Hawaii and Alaska statehood measures and on April 1, 1954, passed the Hawaii-Alaska enabling act, 58 to 28. But, believe it or not, Congress adjourned before the House could act on the combined statehood measure.

Instead of taking up where the previous session had left off, the 84th Congress pretty much let the statehood matter lie dormant. The House on May 10, 1955, voted (218 to 170) to recommit the Hawaii-Alaska bill to the body's Committee on Interior Affairs.

It was in the 85th Congress, of course, that Alaskan statehood was authorized, 208 to 166 in the House, 64 to 20 in the Senate. The appropriate committees in both Houses, after prolonged hearings, again issued favorable reports on statehood for Hawaii and strongly recommended passage of the bill. But nothing happened.

This Congress, the 86th, has the proposal for Hawaiian statehood before it. There is an assumption by the press and by the public that passage of the legislation is assured, that only the time of the action is in doubt. Only occasionally does one find buried deep in some political commentary a hint that Southern opposition to another State may jeopardize passage of the measure.

Alaska, of course, is just one more argument for prompt admission of Hawaii to the Union. The course with respect to the 49th State has been enthusiastically applauded by the American public. On the light side we've been glad to have a State bigger than Texas. It just isn't to be doubted that Hawaii's admittance as our 50th State would be joyfully received.

Our most northerly State has discovered that statehood isn't an unmixed blessing. For one thing, its citizens—there are 215,000 of them—are having to pick up a good many checks that formerly could be passed on to paternal Washington. Would this happen in the case of Hawaii? Probably not because Hawaii, with 2½ times as much population, is far further along in its industrial, political, and educational development.

Just why should the 575,000 people in Hawaii want statehood?

That they do, of course, has been demonstrated numerous times. Every Delegate sent to Washington since 1900 has been ardently prostatehood. In a plebiscite back in 1940, 67 percent of those voting favored statehood. In 1949 a State constitution was drafted for ratification the following year, 3 to 1 popular vote. In February 1954, 116,000 islanders signed a petition for statehood. It was addressed to the U.S. Senate.

Now for the answer to my question, "Why is statehood wanted?" I draw on a statement in a giant edition of the Honolulu Advertiser prepared for Congress and titled "The Case of Hawaii Statehood:"

"Hawaii's people have fulfilled the obligations of citizenship for more than half a century without enjoying all the privileges. "They pay taxes as residents of the States do and serve on battlefronts equally, but have no voice in either tax or draft legislation. Taxation without representation violates a basic American precept.

"Statehood for Hawaii will mean—

"1. Full voting representation in Congress.

"2. The right to vote for President.

"3. The right to elect its State officials.

"4. The right to broad lawmaking by its legislature.

"5. The right to choose its own judges.

"6. The right to eliminate overlapping Federal-local authority.

"7. The right to equal share in Federal grants.

"8. The right to a voice in amending the Constitution.

And all these rights will be irrevocable."

Now let's reverse the question: "Why, aside from the fact that we've promised it many times, does the United States need Hawaii as a State?"

The reasons for this are even more numerous and extended than the reasons why the Territory of Hawaii would like to become the State of Hawaii.

Foremost is the fact that Hawaii has an economy of proved soundness. Its gross income approaches $2 billion a year. In the years since Hawaii became a Territory of the United States (at its request, incidentally), the islanders have paid more than $2.3 billion in Federal taxes.

Sugar last year was a $147 million crop. Pineapples, second in importance, brought $110 million. A record total of 168,000 travelers, a great majority of them from the mainland, spent $77 million in Hawaii. Honolulu's airport ranked as America's 10th busiest and 1,300 overseas ships dropped anchor in the Honolulu Harbor.

Different from the situation in Alaska, Hawaii has a highly developed system of public schools, with attendance well above the national average. Again different from Alaska, there are modern roads everywhere, water systems, police and fire departments, parks, museums, symphony orchestras, community theater, libraries and numerous churches, 250 on Oahu alone.

Opponents of statehood have resorted to three basic arguments:

1. Distance and noncontiguity.
2. Small population.
3. Doubts about loyalty.

Alaska has shattered the distance argument; both Alaska and California knocked the noncontiguity objection into a cocked hat.

It's true that the individual Hawaiian voter would have a much greater voice than the average New Yorker or Californian in the selection of a U.S. Senator. But it's likewise true that one Nevada voter would have two or three times greater voice than the average Hawaiian. In the case of Alaska, the disparity would be much greater.

Hawaii's record in World War II and the Korean police action proved that its people were as loyal and patriotic as any other section of the entire United States. Though made up of many races, there was no case of espionage or treason during the war years. Hawaiians fought with distinction on every battlefront.

The average citizen of Hawaii is anything but proud of that imported character Harry Bridges, head of the International Longshoremen's and Warehousemen's Union. He didn't land in Hawaii because he was invited there by the Hawaiians, any more than he settled down on California by invitation of rank-and-file Californians.

There is no denying that Bridges and his union wield a large influence over the island economy. But the same can be said of his influence over the Pacific coast's economy. He must be dealt with by Federal law, or maybe State law. But in its Territorial status Hawaii has been without power to trim his wings.

So far as Communist infiltration is concerned, Hawaii has passed every test. Congressional committees, Government departments, military leaders, and others have marked her "A" for loyalty to America.

Statehood for Hawaii would be an example for the world of American democracy in action. As the crossroads of the Pacific, Hawaii is a showcase for the Orient and for many other uncommitted peoples of the world. Statehood would make Hawaii a center where Pacific peoples could study American traditions.

For almost as long as Hawaii has been ours by volunteer annexation, the islands have been our principal military bastion in the Pacific. Presently there are five major commands there. Statehood would be a stabilizing influence in that regard.

The people of Hawaii have proved their liking for the United States. They asked for annexation as a Territory and there was at least the implicit promise on our part that statehood would one day be forthcoming.

Our Government was wholly right in its insistence that Hawaii demonstrate its capacity for assuming the obligations and responsibilities of a commonwealth in our family of States. That test has been applied more rigorously than in the case of any Territory ever admitted to the Union, it might be added.

The people of Hawaii are deeply desirous of statehood. The people of the United States have demonstrated many times and in many ways that they want Hawaii admitted to statehood. It remains only for Congress to translate these two demonstrated desires into reality—and the sooner the better.

Someone Must Pay the Bill

EXTENSION OF REMARKS
OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Evening Herald, Rock Hill, S.C., of February 10, 1959:

SOMEONE MUST PAY THE BILL

President Eisenhower sent a delicately balanced budget proposal to Congress last month. He warned that the utmost care would be needed to keep the budget from edging upward into the red.

Congress has paid about as much attention to the warning as a youngster who's told not to eat that bar of candy before supper.

In a little more than 24 hours last week, the U.S. Senate topped Eisenhower's budget proposals by $1,250 million.

The Senate pushed through an omnibus housing bill calling for $2,675 million—or more than a billion dollars above Ike's budget request.

The next day, the Senate came up with a $465 million item for airport construction, to be spread over 4 years. Ike had proposed $200 million.

If its action on these two items is an indication of the spending mood of the Senate this year, then we are headed for a mighty big budget—one that will far exceed our income.

And if that happens, the value of your savings, insurance, social security, and pay-

check will go down, because dollars will lose just a bit more of their worth.

So far, the Senate seems to be in no mood to observe still another Eisenhower request—a to-the-point challenge that Congress provide higher taxes in every spending bill that would unbalance the budget.

Congressmen seem to find it important to increase spending—but they dodge the inescapable need to increase taxes as the spending goes up.

Is that responsible lawmaking?

There's No Scholarship Surplus: It's a Shortage

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. MULTER. Mr. Speaker, on February 5, 1959, I introduced H.R. 4220 to provide for a college scholarship program.

In this connection, I commend to the attention of our colleagues the following editorial by Dr. Charles A. Bucher, professor of education at New York University. Dr. Bucher's editorial appeared in the November 15, 1958, issue of the Saturday Evening Post:

THERE'S NO SCHOLARSHIP SURPLUS: IT'S A SHORTAGE

(By Charles A. Bucher)

A New York City newspaper recently published an article entitled "Scholarships Go Begging." The piece played up the fact that a scholarship at Pembroke College was lying idle. This Harriet Rogers Jewett Scholarship is available to an upright needy girl who doesn't smoke. The grant, established in 1932, consists of a $1,000 endowment, yielding about $25 per year. Nevertheless Pembroke received hundreds of inquiries from hopeful applicants all over the country.

Deceptive headlines I have gleaned from the Nation's newspapers during the past 12 months read: "Scholarships Wither on the Vine," "Financial Aid Going to Waste," "More Scholarships Not Needed," "Students Ignore Financial Help," "College Education for Free." These journalistic forays into the unknown do not reflect the true picture. I surveyed 135 donors of financial help: colleges, war-service groups, labor organizations, foundations, state governments, benevolent societies and industrial firms. They gave the same answer: scholarships do not go unclaimed.

There are a few restricted scholarships which lie idle. For example, Rutgers University awards a scholarship to a poultry-husbandry major from a county in New Jersey where the poultry business is rapidly disintegrating because of Western competition. It is understandable that no youngster in that area is interested in this occupation.

Then, there is the Lithopolis Scholarship for boys and girls who live in the town of Lithopolis, Ohio (population 350); a fund maintained by a small New England town for the improvement and education of young ladies who have seen better days; and an award that goes to a person with the name of Randolph who desires to study gunsmithing.

The much-publicized, out-of-focus scholarship picture builds up false hopes in the minds of many high-school students aspiring to a sheepskin. When they find out they have been deceived by some misinformed writer, drastic changes have to be made in their college plans. Dean W. J. Bender, of Harvard, who knows the accurate picture, pointed out that newspapers were doing "a grave disservice to American higher education." He continued, "It simply is not true that lots of scholarships lie idle * * * I know of no college in the country which has any significant number of scholarship funds which are not being used * * *."

Instead of scholarships going begging, there is a need for more. John S. Hafer, dean of admissions at Syracuse University, writes, "This year our scholarship applications increased by approximately 30 percent, so that we received a total of 1,800 scholarship candidates for approximately 275 scholarships. To date, we have overcommitted our funds by approximately $12,000 and still have 210 extremely worthy candidates who wish to attend the university if financial assistance is given." Colleges in the North and South paint a similar picture.

Scholarships do not go begging. Instead, they are needed in greater numbers if we are to provide college education for all those who can qualify for it.

Should Stop Selling Savings Bonds Until Inflation Halted

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an interesting resolution submitted by Mr. R. W. Robbins, Pratt, Kans., at the American National Cattlemen's convention, Omaha, Nebr., assembled on January 17, 1959:

The thrifty and patriotic citizens who own the vast bulk of the $42 billion of U.S. savings bonds outstanding are entitled to protection of the value of the principal and interest of their investment in Government bonds.

So far the Government has failed to give them that protection, and those who have held these bonds since the early offering years have lost over 50 percent of their savings in terms of buying power. This record stands as a shocking indictment of the fiscal integrity of our Government.

If this confiscation of savings by inflation continues, these bond owners, who qualify as the most patriotic of our citizens and also as the segment of our citizenry who can least afford to lose will be financially wiped out to the degree they have trusted their Government.

Accordingly we propose that the Government face up to this problem now, and that it take immediate steps to give these frugal and trusting creditors a square deal.

To this end we propose either of the following alternatives:

(1) That the sale of savings bonds be halted until the President has achieved at least a 2-year period of stability in the cost of living, or

(2) That savings bonds issued from February 1 on carry an escalator clause on both principal and interest, giving the owner a guaranteed increase of both interest and principal proportionate to further increases in the cost of living.

As citizens deeply interested in the economic and political independence of the people of America, we contend that further temporizing with this grave injustice cannot be tolerated.

We urge that President Eisenhower, in his current stand against reckless and inflationary spending, recognize the significance of this evil, and that he make its correction a project for immediate action. We suggest that such prompt action on his part would do much to halt the "flight from the dollar" that is so apparent in the stock exchanges and trading markets of the Nation.

Address of Hon. Lyndon B. Johnson Before Texas State Society

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. WRIGHT. Mr. Speaker, on Sunday last the senior Senator from Texas, Majority Leader LYNDON B. JOHNSON, made a memorable address at the luncheon meeting of the Texas State Society.

Honored at the luncheon were their Excellencies, the Ambassador from Spain, the Ambassador from France and the Ambassador from Mexico, and members of their families.

Senator JOHNSON'S speech was such a splendid contribution to our understandstanding and good relations with these countries that I am asking leave to have it printed here:

This is a pleasant occasion and, in my opinion, a significant one as well.

As a longtime member of the Texas State Society, I am most pleased to be here. And to our honored guests I would say, sincerely and from the heart: Welcome, our friends from Mexico; welcome, our friends from France; welcome, our friends from Spain.

As the official represenatives in America of three great nations whose flags once floated over the land of Texas, I want you to know we are happy you are here to break bread with us and to enjoy a period of friendly companionship on this Sabbath Day.

You are gracious to have come. You are triply welcome.

In honor of this occasion, our program committee asked that I speak today on "Our Spanish, French, and Mexican Heritage."

It says something for the character of our State that such a topic should be assigned to a man named JOHNSON.

If we are some day privileged to honor our considérable debt to the British—who built our State capital and developed much of our West—an Irishman such as BOB CASEY will probably be handed the speaking assignment.

There is to me something deeply moving and deeply meaningful in the fact that you of Mexico and France and Spain should meet with us of Texas in the Capital City of the United States.

It is a long way, in time and in distance, from the Texas in which I grew up to the great city in which we find ourselves today. Texas is a State where many, many place names and many, many person names may be traced back to the heritage that came down from France and Spain and Mexico—all powers in the world of 1959.

And this city of Washington—not so very many years ago a fever-ridden village on the banks of the Potomac—has become a place where men and women cope daily with problems in the successful solution of which

the free people of all the world have a vital interest.

We owe much to the heritage of our past. Yet, I cannot today speak of our heritage in the past tense. Nor can I speak of it in the sense of a one-way debt.

As Spain and France and Mexico each meant much to Texas in the past, so also did Texas mean much to the national experience of each of those nations.

The lure of Texas—the dream of the seven cities of gold on the Texas prairies—did much to stimulate in both Spain and France the force of their periods of great vigor and adventure and strength.

Texas, in centuries past, was for men of many nations a new horizon of hope and promise and opportunity. Today it is my strong conviction that we are returning on the cycle of history to such a time again.

Coronado, Cabeza de Vaca, DeSoto, LaSalle, and others who opened Texas were unaware that their explorations had scarcely penetrated the vastness of the American West—and that four centuries later we are only now coming to the time when the potential of the American West and of Mexico can be fulfilled.

The demands of our century leave us with no position but to build in the West a new capital of opportunity and strength for free men.

Our position today is comparable to that of the pioneers of our own country, who came into a wilderness brooding not upon the dangers they faced but joyously contemplating the opportunities they saw on the other side of danger.

With freedom as their guide and faith in the future as the force that impelled them constantly onward, those pioneers conquered the wilderness. They beat down the dangers. They embraced the opportunities. Time may have obsured our memory of these facts. But the facts remain unchanged.

We should build monuments to the past—but they should be monuments which recapture the values of the past and focus them upon the realities of the present.

One of these monuments could be the Big Bend National Park. When men first dreamed of this park, they thought of it as an international reservation where the people of Mexico and the United States could mingle freely—enjoying in common the rich beauties of the land.

I would hope that dream could be revived. I would hope that the park could lie on both sides of the border—as a symbol that our border is in territory only and not in friendship and good will.

It would be a potent force in advancing the Western Hemispheric community.

The hope of our hemisphere and the hope of free men everywhere is this: That we may have the wisdom to see in many lands greater promise than now meets the eye.

Spain, France, and Mexico were old before Texas was known. All had achieved greatness before our own Nation came into being. But today in those countries—and many more—there is a new surge of confidence and life and zest and determination. We, as Americans, are challenged to match it. In that thought is the special pride of this gathering today.

We from Texas realize ours is a young State and a strong State. A State now emerging into the fulfillment of a great promise.

We realize even more that these lands from whence came our origins are now once again young with us, and that the world is young together.

We are moving to a new world. Not new on the maps, but new in men's minds and lives and dreams.

We are hastening to the day when we shall together cross the plains of the future to seek, and I believe find, treasures greater than the fabled cities of gold. Our heritage is not of the past. Rather, it is a common inheritance of a common future, a future of peace, a future of freedom, a future of opportunities unlimited.

This new era—and we are already beyond the threshold—can be, will be, an era of new and higher standards, of new and greater accomplishments, of new and wider potentials.

My friends, fellow Texans, and honored guests, we are fortunate to be living at the beginning of such an age as the one now before us. Our thoughts, our decisions, our actions, can shape the destiny of men for all time to come. This is the challenge. And there is the opportunity.

I like to think of the answer that my friend and truly great American, Senator THEODORE FRANCIS GREEN, gave recently when a reporter asked him what was the most interesting time he had known during his 92 years of life.

"Why," said Senator GREEN, "it's right now." Let this wise man's words speak for all of us.

To the Ambassadors who are our guests, I would say on behalf of all Texas that, next to being freemen and Americans, Texans are most proud of their traditions of character.

We thank you for the pride of the Spanish, for the love of liberty of the French, and for the courage of our great neighbor of Mexico. Without these traits, Texas could not be Texas. Texans would not be Texans.

Air Force's New Agency—ADSID

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on the new management agency established by the Air Force, as prepared for publication in the Army-Navy-Air Force Journal by Maj. Gen. Kenneth P. Bergquist, USAF, Commander of the Air Defense Systems Integration Division, Laurence G. Hanscom Field, Bedford, Mass.:

ADSID—AIR DEFENSE SYSTEMS INTEGRATION DIVISION

The Air Force has established a new management agency called the Air Defense Systems Integration Division (ADSID). Its purpose is to coordinate air defense planning, programing, and implementation in accordance with Air Force responsibilities. The organization is located at Hanscom Field, Bedford, Mass.

Air Force Regulation 20-13 prescribes the mission of ADSID "* * * provide the necessary managerial guidance for command action required to insure an effective, properly time-phased, and technically compatible integrated air defense mission system, in accordance with approved plans, requirements, and procedures." The air defense mission system consists of all weapons systems, electronic environment systems, and support systems employed in air defense.

To insure that the Nation possesses the best feasible air defense capability, special effort is required to integrate the various and complex components of the air defense mission system. In the past, the operating comcand could accomplish the integration by using men as conversion links in utilizing the separate components; however, the required increase in automaticity largely eliminates the human conversion links and replaces them with mechanical and electronic devices. Effective air defense now demands technically compatible and highly automatic components, designed, developed, produced, and installed to mesh with the requirements for an overall integrated system.

The air defense mission system must be continuously operational; therefore, timephasing of changes or additions, and component relationships, are exacting stipulations. System integration has become a very intricate mixture of operational requirements, technical development and logistic support. Involved in this mixture are the efforts of the scientific community and industry, as well as various functional military organizations and other Government agencies. Coordination of activities to achieve air defense systems integration does indeed require a special mangement effort—an effort specialized and detailed to the point of being inappropriate to the Pentagon policy level, yet beyond the assigned functional responsibilities of the commands involved.

In July 1957 the Air Force established the air defense systems management office (ADSMO) as a joint ARDC-AMC-ADC organization to provide the managerial guidance for integration of air defense systems. Experience resulted in the decision to reinforce ADSMO, redesignate it as the Air Defense Systems Integration Division and support the organization with a technical group in the form of a central contractor. In March 1958 Secretary James H. Douglas enunciated the concept and basic policies by stating:

"For the past number of years the Air Force has been vitally concerned regarding the difficult task of integrating both the ground environment and the weapons associated with the ground environment to insure that this Nation will possess the best possible aid defense capability. Proposals were made over a year ago on the organization of an integrated command structure of personnel from ADC, AMC, and ARDC to form the nucleus of an air defense team which could be supported by a civilian technical systems management team.

"To further improve the status of this Air Force organization which is now called the Aid Defense Systems Integration Division, the Air Force has appointed Maj. Gen. K. P. Bergquist to command this organization. In this capacity, General Bergquist will have ample authority comparable to that enjoyed by the commander of the ballistic missile division in his field, to make final decisions for the Air Force on the integration of the air defense mission systems. He will have effective control of the funds necessary to discharge the system engineering responsibility of his office and to implement his decisions."

On March 31, 1958, the Air Force published AFR 20-13 prescribing policy and responsibilities for the formation, organization, and operation of ADSID. The new organization is a joint office manned by AMC, ARDC and ADC. The Commander ARDC is the Executive Agent. The ADSID is charged with analysis, guidance and monitorship, but not with responsibility for implementation of individual systems. Such implementation remains charged to appropriate commands in accordance with their assigned functions. The senior ADSID representatives of AMC, ARDC and ADC function as ADSID staff officers and also as senior members of the respective commander's staff.

The regulation assigned the following tasks to ADSID: (1) Assemble and maintain a current master plan and schedule for development and implementation of approved additions and improvements to the air defense mission system; (2) assemble and maintain a current set of individual system performance specifications; (3) conduct analysis and

initiate necessary actions or corrective measures to insure compatibility and effectiveness of components, systems and supporting activities; (4) monitor progress of actions and insure coordination, with respect to development, implementation, plans, schedules and funding; (5) assist ADC, ARDC and AMC in forming their plans as they pertain to the air defense mission; (6) develop test concepts to be used as a basis for system testing programs, and (7) evaluate requirements, established by other agencies, which affect the air defense mission system.

On July 30, 1958, the Massachusetts Institute of Technology entered into a contract with the USAF to serve as "principal systems adviser" on an interim basis to the ADSID. MIT proposed that the support should ultimately be given by a separate nonprofit organization, and agreed to sponsor such a corporation and support it until it could operate independently. As a part of the agreement, it was planned that those Lincoln Laboratory people directly engaged in ADSID support would be transferred to the new corporation as rapidly as possible and that the new corporation should seek a direct contract with the Air Force as soon as this could be arranged. The MIT proposal was accepted by Secretary Douglas.

The new systems engineering organization was formally incorporated as the MITRE Corporation. Heading the Board of Trustees is H. Rowan Gaither, Jr., chairman of the board of the Ford Foundation. The Executive Committee is chaired by William A. Webster, executive vice president of the New England Electric System. Included in the Board of Trustees are such well known individuals as Luis W. Alvarez, Charles A. Coolidge, Dr. Julius A. Stratton, and Robert C. Sprague. The president of MITRE is Mr. C. W. Halligan, formerly director of military engineering at the Bell Telephone Laboratories.

The systems integration task centers around the point at which decisions are made to introduce changes and additions to the air defense mission system. The principal function is to insure that the resulting system works and that it—or major segments—can be turned over to the operating commander on a specific date.

Solving the many and varied integration problems requires the utmost in teamwork. Scientific-industry-military team effort is applied to the problems to make thorough analyses, carefully balance the operational-development-logistic factors, advise as to priorities of effort within budget limitations, and prepare the managerial guidance required for coordinated action "* * * to insure an effective, properly time-phased, and technically compatible integrated air defense mission system."

Workmen's Benefit Fund Celebrates Its 75th Anniversary Year

EXTENSION OF REMARKS
OF
HON. LUDWIG TELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. TELLER. Mr. Speaker, on October 19, 1884, a small group of German-American immigrants founded the Workmen's Benefit Fund of the United States of America, to provide mutual help in times of economic crises. Since that time, this fine fraternal order has grown to a membership of 58,000 in 26 States.

This year, the Workmen's Benefit Fund celebrates its 75th anniversary with a series of outstanding events, including its 75th anniversary national convention which will be held in Atlantic City, N.J., from June 15, 1959, to June 21, 1959, and a diamond jubilee celebration which will be held in New York City on Sunday, October 18, 1959. I am very pleased that this event will be held at a site in my district and take this opportunity to welcome the officers and the members of the Workmen's Benefit Fund and to wish them success on the occasion of their 75th anniversary year.

Forty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. JESSICA WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mrs. WEIS. Mr. Speaker, I returned from Rochester, Sunday, to find 3 feet of water in my basement, and, yesterday, while others were paying tribute to the courageous people of Lithuania on the 41st anniversary of their independence, I was wading, barefoot, through my basement, in rather frantic pursuit of a number of trunks and footlockers which were floating about.

However, I do want to join with my colleagues in wishing Godspeed to the people of Lithuania in the fulfillment of their dream of once again, someday, breathing the fresh air of liberty and democratic self-government.

For century after century, Lithuania has been subjected to conquest—by Teutonic knights, Tartars, Russian czars, Nazis, and now, since 1940, by the Red terror which rules the Kremlin. From East and West alike, the power hungry of Europe have trampled back and forth across the face of this tiny nation with almost sickening regularity, pillaging and plundering, terrorizing and murdering as only ruthless barbarians are able. Yet, all of the bloodshed and brutality which has been the recurring fate of the people of Lithuania, has not, for all of its physical violence, been able to destroy the will to freedom and independence which has become their hallmark.

Forty-one years ago, at the height of the Russian Revolution, Lithuania declared her independence from the disintegrating Russian Empire, and for a little over two decades she struggled to maintain her status as a free, democratic nation. But from the very beginning her existence was a terrifyingly precarious one, for she was wedged squarely between two growing young totalitarian giants, Soviet Russia and Nazi Germany, and both were waiting only for that moment when the fortunes of history would present one of them with a chance to again engulf this little nation. The brief alliance between Stalin and Hitler gave the Soviets the opportunity for which they had been waiting, and by the summer of 1940, Lithuania was once more in the iron grip of the Kremlin.

Almost 19 years have now passed since that fateful summer, and virtually every device known to the twisted despotic mind has been employed in an attempt to destroy the passion for freedom, the deep-rooted national consciousness, and the religious fervor of the people of Lithuania. But love of God, of country, and of liberty continues to burn as brightly as ever in the hearts and minds of Lithuanians everywhere—proof positive that such inborn yearnings will never be extinguished by the godless brutes of this or any other generation.

As they celebrate the 41st anniversary of their independence, I salute the brave and wonderful people of Lithuania, and I join with them in their prayers for a better, more peaceful world tomorrow.

International Crew Race

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. WESTLAND. Mr. Speaker, throughout history sports have contributed to a better understanding between nations. And, I believe, competition in sports has and will continue to ease the strain of international tensions.

Examples along this line are the crew races in London and Moscow last summer. I am pleased that a crew representing my State of Washington perhaps brought a bit of better understanding by its members' conduct, their sportsmanship, and ability, especially when they were in Russia.

Now there is a movement to return the hospitality accorded this crew by extending an invitation to crews representing the U.S.S.R. to come to Seattle, Wash., to participate in similar competition.

Under leave to extend my remarks in the RECORD, I include a resolution unanimously passed by the Washington State House of Representatives, requesting the cooperation of the Secretary of State in assisting to bring about the contest I have mentioned.

The resolution follows:

Whereas the University of Washington is a recognized leader of the world in all phases of eight-oared crew racing, its oarsmen, coaches, shells, methods, its consistency in winning national, international, and Olympic championships, all attest to its universal preeminence in one of the few remaining sports untainted by any touch of professionalism; and

Whereas in furtherance of this highly desirable sport, the University of Washington crew accepted an invitation to compete against the crews of other nations at London and Moscow and was accorded full hospitality by the Governments of the host nations; and

Whereas officials of the civic promotional organization known as Greater Seattle, Inc., have proposed to the U.S. Department of State that the University of Washington re-

ciprocate with a like invitation to crews representing the Soviet Union to compete with the University of Washington and other invited American crews as part of the 1959 Seattle Seafair celebration; Now, therefore, be it

Resolved, That the U.S. Government and particularly the Secretary of State of the United States consider and give the greatest amount of cooperation possible to the submitted plans and assist in bringing about the realization of this highly desirable international contest; and be it further

Resolved, That copies of this resolution be immediately transmitted to the Hon. Dwight D. Eisenhower, President of the United States, the Hon. John Foster Dulles, Secretary of State of the United States, the Secretary of the U.S. Senate, the Chief Clerk of the U.S. House of Representatives, and the Members of the U.S. Congress representing the State of Washington.

Communism Brings New Dark Ages to China

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. REECE of Tennessee. Mr. Speaker, in Red China today we see the tragic picture of an entire civilization being uprooted and destroyed, a panorama of pillage on a scale never known previously in the range of modern history.

Details of this story are presented dramatically in Edward Hunter's new documentary, "Black Book on Red China." I ask that I may insert in the Appendix of the RECORD a review of that scholarly work, as prepared by Mr. Lawrence Sullivan, the Coordinator of Information for the House of Representatives. Mr. Sullivan's review is as follows:

COMMUNISM BRINGS NEW DARK AGES TO CHINA

(By Lawrence Sullivan, Coordinator of Information, U.S. House of Representatives)

WASHINGTON.—In China today roughly one-fourth of the world's total population is being starved and ruthlessly destroyed by communism.

Only fanatical class hatreds motivate the firing squads which enforce the made-in-Moscow whims of Mao Tse-tung.

A great and bountiful civilization, dating almost from the beginnings of recorded history, is being plowed under by psychopathic vandals, as a gigantic ant hill is leveled by the horse's hoof.

Full documentation of this appalling human tragedy is presented by Edward Hunter in his "Black Book on Red China," published by the Bookmailer, New York 16, N.Y., at $2 retail.

The story is told largely from Communist sources on the China mainland, as collated by International Research on Communist Techniques, Inc. Distribution is sponsored by the Committee of One Million, 17 Park Avenue, New York 17, N.Y., which is organized in all our 53 States and Territories, to block admission of Red China into the United Nations.

China's population, now more than 600 million, increases by 13 million a year, net. But only about 1 million of this new labor force are put to work each year in the Moscow-planned industrial development program. The other 12 million are added each year to the roving bands of hungry, landless vagrants, human degradation on a scale never before known on God's good earth.

"Under these unbearable conditions, people began to migrate in droves, hoping against hope to find something not quite so awful somewhere else. Farmers roamed into the cities, and city folk wandered into the country."

Such is the 10-year flower of Mao Tse-tung's progressive agrarian reform movement of 1940–45, which promised "land for the peasants, land for the tenant farmers, a plot of land for every Chinese family that tilled the soil."

It was precisely these promises which established communism in China. But today the farmers of China have been relegated to the craven status of serfs, more exploited than the serfs of czarist Russia ever were.

Roughly 500 million of these new made serfs now are shackled to the commune farm system. Before the Red wreckers moved in the average Chinese farmer had roughly 2½ acres for his family of five. Today, each prisoner in the communes gets the average yield of only 1.3 acres for his family of five. This means that under communism the living standard of the average Chinese farmer already has been cut in half, in 10 years.

How many thousands of times farmers, at the end of their endurance, rioted and even killed the intruders, then fled into the valleys and hills to form little guerrilla bands will never be known.

But these scattered defenders could never consolidate their anti-Communist insurrection.

The Chinese on Taiwan already were having some success in advising and supplying these solitary and struggling guerrilla bands when the war began in Korea (June 1950). The U.S. Fleet, hurriedly ordered to blockade the China coast, was somehow also instructed to cut off help to the mainland insurgents. That was the end of effective peasant resistance to communism on the mainland, almost precisely on the timetable foreseen in 1948 by some of the professors in Johns Hopkins University.

Red China actively encourages freedom of religion so long as the churches serve as a conscious patriotic movement. From Peiping, patriotism is defined officially by Chang Chih-yi, Minister for the United Front: "To be patriotic one must love socialism and the New China under the leadership of the Chinese Community Party." For Peiping, religion is that simple.

Humiliation and degradation visited upon both Chinese and foreign missionaries since 1945 is a story of savagery without parallel in modern history. The wrath of the Reds fell alike upon Christians, Moslems, and Buddhists. As long-imprisoned clergymen approached death in their putrid cells, they would be put on stretchers and rushed across the border to Hong Kong, so it could not be said that they had actually died on Chinese soil.

Red China's principal source of foreign exchange is the narcotics traffic. Hong Kong documents a single offer of 500 tons of opium to Imperial Chemical Industries, Ltd. The offer was rejected, although Peking had guaranteed delivery under protection of the Red army to Hong Kong. Reputable financial circles estimate that the Moscow-Peiping axis currently clears about one million U.S. dollars a week through Swiss banks to Soviet spies and narcotics pushers in the West.

Under Chiang Kai-shek, the Nationalist Government for 25 years had persistently discouraged poppy cultivation, almost to the point of extinction as a source of exports. The resumption of this nefarious trade by Peiping has restored the vast poppy fields of China.

One seizure of Chinese heroin in Switzerland in the summer of 1958 was valued at $50 million. Three peddlers were convicted, and one Swiss agent committed suicide after the trial. Another Peking shipment of raw opium seized in Bangkok measured 35 tons.

Peiping consistently directs huge shipments of opium and heroin to Indonesia and Malaya, to help break down nationalist pride by developing a steadily growing army of dope addicts—a very practical help to the roving bands of Red fifth columnists despatched earlier to the struggling independent countries of Southeast Asia.

Before all the world, the aggressive Communist dope monopoly in Peking is the true measure of Mao Tse-tung's high moral purpose toward China and humanity. Now the world is urged to make this frightful engine of human depravity an integral part of the United Nations.

Perfecting czarish Russia's advanced work in animal psychology, Red China applied Ivan Pavlov's studies in conditioned reflexes on a scale previously undreamed of in the world of science. The 20th century's new scientific terror is the result—brainwashing.

An animal can be induced to follow its master's orders unthinkingly. Lenin thought man could be made to react the same way, once indoctrinated with the appropriate reflexes. Any individual would simply have to be trained to react to a slogan, the way a circus animal responds to a signal—anything from a word to the sound of a whip.

Mao Tse-tung feverishly embraced this established theory of animal psychology and applied it to the entire animal farm of Red China.

Nor does the thought of war alarm official Peking. Mao was a visitor to Moscow in November 1957 for the 40th anniversary of the Bolshevik revolution. Mao boasted that if war destroyed even half the population of China, 300 million would be left.

To understand Communist aims, one must be familiar with the special meanings of Communist code words. "Peace" in the Communist lexicon means unquestioning acceptance of Communist disciplines by all. "Aggression" means only one thing—opposition to Communist Party directives and programs. "Learning" signifies knowledge and theory not in conflict with Communist dogma. "Progressive" means pro-Communist ideas in non-Communist countries. In official Communist tracts this word is used interchangeably with "liberal."

During the winter holidays Chinese high school students are mobilized to assist on the collective farms. Illustrating this inspired patriotism, the Chungking Daily reported on February 17, 1958: "Students of 23 schools, including Chungking No. 1 Polytechnic School, No. 1 High School, and No. 4 Girls' High School, gathered a total of more than 6 million patties of manure for the village."

Such is the more abundant life, the affluent society, in Red China today.

Is Earning Out of Date?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Evening Herald, Rock Hill, S.C., of February 13, 1959:

Is Earning Out of Date?

A magazine for parents and teachers says the old idea that children ought to earn their allowance money is out of date.

"It would be false," says the magazine article, "to pretend that a 7-year-old, or even a 12-year-old actually earns his cash through household chores. That is why the idea of the unearned allowance has gradually developed."

The article goes on to include in a child's allowance the money that the youngster spends on bus fare, school lunches, school supplies, and other necessities.

That's not quite cricket. Most parents will agree that a child has a right to expect these things. And most parents provide 'em.

But a lot of parents still feel that the money spent on luxuries and fun—candy, movies, dates, and such—ought to be earned, at least in part. They feel this helps teach children that money represents effort—that we must work for the things we want.

"We must train ourselves to remember," says the article, "that each child is entitled to his allowance in exactly the same way that he is entitled to the other things we give him."

Do you suppose this is why so many young folks figure the world owes them a living?

New Look at Rural Electrification

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 16, 1959

Mr. WEAVER. Mr. Speaker, Washington was recently the object of an inpouring of many thousands of persons directly concerned with the future of rural electrification. It was my pleasure to visit with many of these fine men and women who have dedicated their lives to the problems of making life easier for the farm families of the Nation.

Recently, the Lincoln Journal, of Lincoln, Nebr., published an editorial on the subject of REA's and their future. Without, at this time, going into the merits or possible drawbacks to the plan they suggest, I would like to place that article in the RECORD that my colleagues might read it and perhaps benefit from such a reading. The editorial follows:

New Look at Rural Electrification

Nebraska's rural electric leaders meeting in Lincoln could count more influential friends than they have had in some time.

A number of new Congressmen and Senators were elected last year with the blessing, if not the active help, of the rural power people. Veteran legislators, such as Senator GEORGE AIKEN, Republican, of Vermont, have set out with renewed vigor to help the rural electrification movement.

Nebraska's own Senator CARL CURTIS gladdened the rural folks by introducing a bill to make the Rural Electrification Administration an independent agency, free of the Department of Agriculture, and to keep able Dave Hamil as its head. Senator CURTIS is to be commended for this move.

Such friendship for rural electrification is completely warranted. Probably no other single program has done so much to improve the convenience and productivity of rural America.

Without Government help, rural areas might never have had electricity. Costs of electric service there increase because of long lines needed to serve few customers.

This might be a time, then, for rural electric leaders to bow their necks and resist any effort to change their present access to 2 percent Government loans. They might be successful—for a time.

Time for a Plan

On the other hand, this might be a good time for the rural people to come up with a reasonable, workable plan that will ease their dependence on Government financing. Official opinion is not likely forever to be so favorable to a Government-assisted rural electric program.

This is particularly true while the Government pays more for the money it borrows than the 2 percent interest it charges the rural systems for use of the same money. Taxpayers will not support indefinitely this subsidy. Growing opposition from private power interests and other groups could eventually invoke measures that would seriously hamper the rural power movement.

Leaders and friends of rural electrification would help themselves and the Nation by getting together now to reshape their program in keeping with changing times.

They should come up with a plan that recognizes the continuing need for help in some sparsely settled rural areas, in line with the original concept of the REA.

They should also recognize that in many cases expanding cities, increased rural residence of nonfarmers and the growth of industry in rural areas have made electrical service in the countryside a self-supporting enterprise.

New Approach Offered

Therefore, the Journal suggests a plan based on this principle: A graduated scale of interest rates on Government loans increasing in proportion with the density of electrical service in a rural district—determined by the number of customers or, preferably, the amount of power sold by the district per mile of line operated.

This would mean that districts in sparsely settled, strictly rural regions could continue to get 2-percent Government loans. They are the systems that need help.

More fortunate districts, with ever-expanding service, would pay proportionately higher interest rates. The highest should be comparable to that paid by private utilities, municipalities, or other public power agencies which do not have access to Government loans. These districts could either pay this rate to the Government or go into the private money markets.

The average rate of interest by all the rural systems should equal the Government's cost of borrowing money plus administration of new loans. Thus, any subsidies to low-density districts would, in effect, be paid by the more fortuitous districts, rather than by the Government.

Increased Efficiency

The plan also should outline programs by which all rural districts can cut their costs of doing business. This would call for the best possible management, merger of small districts, campaigns to boost power sales in periods of low power use, and, perhaps, a statewide engineering service to give top quality technical help to all districts.

With this program of graduated interest rates and improved efficiency, the rural power systems over the Nation could move toward their own credit institution. This could be free of the Government and operated by the borrowers themselves, much like the Federal Land Bank.

In the opinion of this newspaper, a detailed plan based on these principles would be of long-range benefit. It might be a subject for discussion at next week's convention of the National Rural Electric Cooperatives Association in Washington, D.C.

Human Values in Perspective

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. DEROUNIAN. Mr. Speaker, here is an excellent and timely editorial by David Lawrence, for the information of my colleagues:

Human Values
(By David Lawrence)

President Eisenhower was asked at his press conference last week whether, in view of his limited recommendation on school aid, he had decided that "it's more dangerous to unbalance the budget now than to run the risk of more inadequately educated citizens later." The interrogator suggested that Mr. Eisenhower differentiate between "difficult fiscal values and human values."

The President said, first of all, that he isn't sure there can be such a differentiation. He then added:

"The human values in America are not going to be promoted unless we are sane and sensible in our fiscal policies * * * I know of nothing that could injure more the great population—174 million people—we have got, than to allow the budgetary process to get out of control, fiscal measures going loosely, in such a way that inflation would absolutely be inevitable."

There seems no question but that every lobby is pressing Congress today for more funds. Each claims the right to assert that "human values" are above all other values.

But what really are the overriding values in the controversy over whether the budget shall continue to go unbalanced? Oddly enough, there isn't any agitation for a surplus, to be used to pay off debt. The drive seems to be to spend more than the Government takes in. Nor are there any signs yet of proposals for higher taxes so as to get the necessary revenues to balance the budget or to meet any increase in expenditures.

Are those "spenders" who really are pursuing a course that could lead to national bankruptcy thinking at all of basic "human values"? Are they aware of what has happened in past history as governments have spent money—and printed more and more paper money—for expenditures that seemingly were to benefit the community, but resulted later only in hardships to the individual and indescribable tragedy to the populace as a whole?

We should reread the story of what happened to paper money during the French Revolution in the 18th century and more recently in the 1920's in Germany, when the Weimar Republic went on the rocks. This writer happened to be in Berlin in 1923 when a taxi ride within the city was paid for by many millions of paper marks. In 1914 the exchange rate had been 4 marks to the dollar. By 1919 it was 30 marks to the dollar, and 4 years later 2 billion marks to the dollar. The German monetary unit had dropped to the point where the mark wasn't worth the paper it was printed on.

And what followed this period of economic and financial chaos during which the cost of living rose to fantastic heights, property values were destroyed, and widespread unemployment brought political upheavals? On the crest of that wave of discontent, which lasted several years, Hitler came into power and was welcomed by the people as a savior. Thus are dictatorships born and human values destroyed.

But it will be said, "It can't happen here." No bigger illusion could be concocted by a wishful-thinking generation. No nation is safe from financial danger if it ignores the laws of arithmetic. The people will not indefinitely retain their confidence in the monetary unit if they come to believe that the Government is wasteful and does not intend to honor its obligations.

There are disquieting symptoms already visible. Our own Government has been trying lately to convert its relatively short-term bonds into longer-term securities. The public balks. The last offering ran into difficulties, as more holders of maturing securities than had been expected demanded cash rather than accept an exchange even at a very attractive interest rate. The holders of securities showed uneasiness about the future value of the bonds they would be buying today. It is important for Congress, by a sound fiscal policy, to do at once the things that will remove such fears.

Confidence is an intangible. Nobody knows how long it will remain, and nobody can predict when a "run" on a monetary unit's value actually will begin.

There's only one safe course—to consider the human values of the millions upon millions of citizens whose fixed incomes and whose savings will be impaired if the Congress fails to heed the age-old laws of thrift. The legislators must soon convince the country that they do not intend to allow the public debt to be increased.

At a time when the Nation's safety and perhaps its survival requires more than $42 billion for armament every year, we must begin to realize that we cannot have all the "butter" we want when we need so much to pay for the "guns."

No government—any more than an individual—can long continue to spend more than it receives. To do so would destroy not merely all hope of adding the very human values that the spenders keep publicizing in their unwitting drive to bankrupt the Treasury but also the basic human values already imbedded in American life.

Resolution Denouncing Showing of Soviet Propaganda Films

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a resolution passed by the Members of the House of Representatives of the New Hampshire General Court on February 11, 1959, denouncing the showing of any Soviet film which contains propaganda either directly or hidden:

Whereas the U.S. State Department has been primarily responsible for the United States entering into a pact with the United Soviet Socialist Republics, providing for cultural exchanges, including the exchange of commercial motion pictures between the two countries to be shown in commercial theaters; and

Whereas the Soviet films may contain clever, subtle Red Russian propaganda: Now, therefore, be it

Resolved, That we, the members of the House of Representatives of the New Hampshire General Court, go on record as denouncing the showing of any Soviet film which contains propaganda either directly or hidden; and be it further

Resolved, That we respectfully request the screening or selection board set up by said pact to take cognizance of the possibility of such propaganda and refuse to accept any film which may contain such propaganda; and be it further

Resolved, That copies of these resolutions be transmitted to our Representatives in the Congress of the United States.

FRANCIS W. TOLMAN,
Clerk.

Battle of Spenders and Savers

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. CEDERBERG. Mr. Speaker, the position of the Federal budget appears destined to hold the center of attention throughout this Congress.

There are those of us who believe we should reduce unecessary expenditures, provide adequate funds to insure our national defense and strive to live within our national means. On the other hand there is the philosophy of continued high level spending in spite of an unbalanced budget.

David Lawrence has recently drawn the line between the "spenders and savers" in one of his syndicated columns. His comments follow:

BATTLE OF SPENDERS AND SAVERS—DEMOCRATIC PARTY VIEWED AS FAVORING POLICIES LEADING TO A 10-CENT DOLLAR

The battle is on between the spenders and the savers. The Democratic Party has taken its position in favor of an unbalanced budget, deficit spending, and policies that could lead to a 10-cent dollar.

The Democratic advisory council, in a statement unanimously approved by its members, claims that "the new Republican budget comes close to being a fraud on the American people. * * * The individual budget items and the related legislative program are an intricate combination of defeat, deception, and denial."

This is strong language from Democrats who, during the 1952 presidential campaign, protested the alleged characterization of the Democratic Party as the party of treason on the Communist issue.

But apparently, in employing such words as "fraud" and "deception" in a description of the Republican Party today, and particularly in applying the comment to a message delivered to Congress by the President of the United States, no holds now are to be barred on the use of invective.

Among the listed sponsors of the statement of the Democratic advisory council are former President Truman and Adlai Stevenson, as well as Governors Williams, of Michigan, and Lawrence, of Pennsylvania, and former Governor Harriman, of New York. Members of Congress on the council who approved the statement are Senators KEFAUVER, of Tennesese, and HUMPHREY, of Minnesota.

Speaker SAM RAYBURN, of the House, and Majority Leader LYNDON JOHNSON, of the Senate, resent any implication that the Democratic Party is the party of the spenders. Naturally, as southern conservatives, they oppose any such classification. But party policy apparently is being made by the Democrats from the North, where they have been winning their big majorities. Here is the Democratic Party doctrine as the advisory council sees it:

"The new budget shows, above all, that in the GOP administration there are no modern Republicans and no conservative Republicans but only men who put pocketbooks before people. This the people of the United States will surely remember. What is bad for people is also bad for pocketbooks, both private and public * * *.

"Nothing better symbolizes Republican attitudes than the one big increase in the budget. That is for interest charges which rise from $7.5 billion in the present fiscal year to $8.1 billion in the next. This is exclusively the result of the increase in interest rates. The only people who benefit in a big way from the new budget are those who have money and lend it to the Government."

But are the many millions of persons who buy Government savings bonds to be persuaded in the future to buy them if the interest rates are presumably to be reduced—if the Democrats have their way—while the securities of well-established companies pay a much higher interest rate? The reason for the higher interest payments is that the national debt is increasing and investors are, in effect, demanding an interest rate on Government bonds comparable to some degree with other bonds.

The statement goes on to lament the fact that the States and cities are assuming their local responsibilities and implies that, because they are increasing their debt, the Federal Government should do more and more to relieve them of their obligations. But the key paragraph in the statement about the budget reads as follows:

"National defense outlays are reduced, and reduced even more when proper allowance is made for price changes."

What, indeed, is bringing about those price changes? Monopolistic power exercised by nationwide unions which, by their extortions at the bargaining table, set the pattern that leaders of other unions feel they must match if they are to be reelected to their posts.

The Democratic Party advisory council apparently favors more and more spending, more and more deficits, and more and more inflation. This, they argue, is what the people voted for last November. The Eisenhower administration disagrees and, if it is wrong in its fiscal policy, there will be a chance in 1960 to resolve the issue.

Meanwhile, there must be tens of millions of citizens whose income is from the money they have saved and invested or from retirement and pension funds. Also, many millions of persons, including widows and orphans, are living on the proceeds of insurance policies. These and others on fixed incomes may soon have to decide where the deception begins and ends as they try to compare the purchasing power of their dollar today with what it will be in November 1960, if the budget isn't balanced.

In Praise of John Foster Dulles

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. DEROUNIAN. Mr. Speaker, it is repugnant to me that those presidential aspirants in the Democrat Party of the other body, who just a few days ago were most critical of Secretary John Foster Dulles, saying "we should get off dead-center" and he is "too rigid and inflexible," are now adding their voices to the

praises of his efforts. It would seem either that the gentlemen from Minnesota, Massachusetts, and Missouri, and the distinguished Majority Leader did not mean what they said and have been saying for years about Secretary Dulles' statesmanship, or their statements now might reasonably be interpreted to mean that they are not quite so sincere as they should be.

The following is a very perceptive and objective résumé of the accomplishments of our great Secretary of State, which appeared in the Wall Street Journal on February 16:

IN THE FRONT LINE OF FREEDOM FIGHT

(By William Henry Chamberlin)

John Foster Dulles has for 2 years remained at his post, working with an intensity that defies a time schedule, disregarding medical advice to let up and take things easier. His spirit has been that of the frontline soldier, who, after being wounded, fights on to his last cartridge and hand grenade.

No man in public life is indispensable. But the incapacitation of Mr. Dulles, in this year when storm clouds seem especially thick over Berlin, would be a grievous loss to the United States and to the entire free world. The trip to Western Europe, from which he returned just before his recent operation in Walter Reed Hospital, is one of many that infused an element of coordinated firmness into NATO.

Like most strong men, Mr. Dulles has aroused his full share of antagonism. Indeed some of his critics seem disposed to make him the scapegoat for everything that has gone wrong with the world since the Second World War, notably for the inevitable consequences of the growth in power of Soviet communism which the Roosevelt administration so fatuously promoted.

Undoubtedly faults of manner, timing, and phrasing can be laid to the account of Mr. Dulles. But if the Secretary finds time, during his enforced rest in the hospital, to turn from the immediate preoccupation of the looming Berlin and German crisis and to look back on the record of his 6 years in office, he will be entitled to pride in the thought of a very responsible and difficult task most ably performed.

USUALLY CORRECT

He has been right in his championship of German rearmament, right in regarding and treating Chancellor Adenauer as a key figure in the Western alliance, right in his aversion to the use of force in the Suez Canal controversy, right in refusing to kowtow to Red China, to sacrifice friends and allies in the Orient in the vain hope of appeasing enemies. He has been everlastingly right in his appreciation of the true nature and designs and tactics of Soviet communism and in his recognition of the need for a long-range policy of pertinacity, constancy, and fortitude in meeting this peril.

The full stature of John Foster Dulles will only be recognized, one suspects, when he is obliged to quit the public service permanently. It wil take a very big man in terms of judgment, experience, firmness, and consistency to fill his shoes. It was no small achievement to have preserved peace with honor during these last 6 troubled years—especially with jittery backseat drivers sometimes shouting contradictory admonitions in his ear.

The views of some possible aspirants, in both parties, for Mr. Dulles' post are enough to send chills down the spine of anyone who regards appeasement, even if disguised by some nice word like "flexibility," as very bad medicine for the prospects of peace and of national honor. For as soon as Dulles' political critics get beyond generalities into the field of positive alternatives all sorts of specters begin to loom up: cloudy and dangerous ideas of German neutralization, abandonment of Formosa and whatnot.

AUSTRIA AND CHINA

It is not true, as is sometimes charged, that Mr. Dulles is inflexible in the sense of an ostrichlike unwillingness to face realities or to negotiate with hostile governments when negotiations offer some prospect of advantage. The general evacuation of Austria was arranged during his term of office. He has waived protocol and carried on informal talks with representatives of Red China at Geneva and Warsaw—without visible results, to be sure. He has incurred the criticism of those who regard our struggle with communism as a straight moral crusade without any nuances of diplomatic finesse, by sponsoring limited economic aid to the dissident and semi-independent Communist regimes in Belgrade and Warsaw.

What Mr. Dulles believes, as he stated in his recent joint declaration with Chancellor Konrad Adenauer of Germany, is that concessions must be on a reciprocal basis. He is not willing, in the name of that famous word, "flexibility," to abandon carefully builtup political and military positions in one-sided retreat. Nor is he willing to say that the cold war is over while Moscow is waging it full blast.

History may be counted on to do justice to John Foster Dulles. His failings are likely to seem smaller in perspective, his achievements greater when others assume his heavy load of work and responsibility. Even now it is notable that voices of strident criticism in foreign capitals tend to become hushed and stilled when there is a prospect that the Dulles leadership will be missing, even for a short time.

Every Communist, every sympathizer with communism, every woolly-minded appeaser, every dreamy utopian, is a bitter critic of the Secretary of State. Perhaps this is his highest title to the respect and confidence of the patriotic majority of the American people. Perhaps, as was once said of Grover Cleveland, he deserves to be loved for the enemies he has made.

Export-Import Bank of Washington Completes 25 Years of Operation

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 29, 1959

Mr. FULTON. Mr. Speaker, our efficient Coordinator of Information, Mr. Lawrence Sullivan, has sent me an outline of the work done by the Export-Import Bank of Washington during the past 25 years. The Bank, under the able direction of my good friend, Mr. Samuel C. Waugh, is doing an outstanding job, and both he and his staff are to be commended:

The Export-Import Bank of Washington today completed 25 years of operations in support of U.S. overseas trade.

While providing direct assistance to U.S. exporters in cooperation with private banks and financial institutions, the Bank became the first public agency, either national or international, to arrange credits for large-scale economic development throughout the world.

The Bank was founded February 12, 1934, with a capitalization of $11 million. Today it is authorized to have loans and guarantees outstanding at any one time of $7 billion.

In 25 years the Bank has authorized over $10 billion in some 1,600 individual credits; disbursed over $6.6 billion (an additional $1.6 billion is committed for disbursements); collected $3.3 billion in repayments; earned gross profit of $997.6 million; paid $438 million to the U.S. Treasury as interest and dividends; paid all administrative expenses out of earnings; charged off losses of $2.9 million; retained net profits of $536 million as reserves; and encouraged more than $1 billion in private investment abroad.

The Export-Import Bank made its first credits for economic development abroad in the late 1930's and has continued making these credits, either to private borrowers or to governments, for more than 20 years. Most of the various programs for economic development have followed in general the path pioneered originally by the Export-Import Bank.

In Africa, Asia, Europe, Latin America, and Oceania, the Bank has assisted the development of steel mills; iron, copper, nitrate, manganese, and uranium mining; electric power installations; cement mills; fertilizer plants; chemical plants; innumerable types of industrial plants; large-scale irrigation projects; highways; ports; and public works. The immediate result of these credits has been to provide hundreds of thousands of orders for U.S. industries throughout the country and many millions of hours of employment for American workers. In addition, these projects have resulted in economic growth abroad which has permanently expanded U.S. overseas markets.

Throughout its 25 years the Bank has maintained a flexible lending policy designed to meet changing conditions of world trade incident to a world economic depression, a world war, and a period of reconstruction and development. It has done so within the three basic concepts which Congress has written into its governing statutes: To "aid in financing and the facilitate exports and imports and exchange of commodities" between the United States and other countries; to "supplement and encourage and not compete with private capital"; and to make loans that shall "in the judgment of the Board of Directors offer reasonable assurance of repayment."

In addition to its loans running into billions for economic development projects, the Bank has made hundreds of small loans to assist sales abroad of individual pieces of equipment, has lent approximately $1 billion to finance export sales of U.S. cotton (among other commodities), and has made various types of balance of payments credits to assist other governments in maintaining essential trade relations with the United States.

The Export-Import Bank has actively encouraged new private investment abroad. Since 1952, the earliest year for which complete statistics are available, credits by the Bank have resulted in concurrent loans and participations and equity investment by U.S. private interests in excess of $880 million without guarantee from Export-Import Bank.

Diversion of Water From the Great Lakes Into the Illinois River

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 12, 1959

Mr. BROOMFIELD. Mr. Speaker, under consideration at the moment in the

House Committee on Public Works, of which I am a member, is a perennial subject. That is the question of whether additional water should be drained from the Great Lakes into the Illinois Waterway. I would like to include my remarks before the committee on this subject in the Appendix of the RECORD:

Mr. Chairman, we who are members of the House Committee on Public Works have a relatively simple problem before us in the matter of an additional 1,000 cubic feet per second diversion of water from the Great Lakes into the Illinois River.

The question is whether we are going to keep our bucket filled after we have punched a hole in the bottom.

All of us agree that a full bucket—in this case the Great Lakes—is a desirable state of affairs, not only for our vast Midwest region surrounding the Great Lakes, but for our neighbor, Canada, as well.

From this year on, we are going to need an especially full bucket. We on this committee are well aware that the St. Lawrence Seaway, our dream in the Midwest for more than a half century, will become a full-fledged working reality later this year.

Now we are going to try to pull the plug.

We in the Great Lakes region have been bothered by inadequate channel depths for a number of years, and we will continue to be bothered in the future when the larger oceangoing ships start plying our waterways in ever-increasing numbers. The proposal before us today is to make these channels even shallower and narrower by the diversion of additional water from the Great Lakes.

We are asked to approve a 1-year test of this extra diversion which will bring the total to an average of some 2,500 feet per second, and much more when peak volumes are drained off Lake Michigan. We can only conclude that most of the water will be diverted during the height of the already short Great Lakes shipping season.

May I point out to my colleagues that there is no reason for a 1-year test of this added diversion plan under existing circumstances. Such tests can only bring harm to the Great Lakes States and Canada.

First of all, we have in the U.S. Corps of Engineers reports from last year stating that the full effects of such diversion would not be felt for a 3-year period at the very earliest. So, next year we will be faced with the prospect of these same people coming in here and asking for a continuation of the extra divergence so they can give this plan a fair test.

But this same engineer's report points out another fact which seems to have been grossly overlooked by some of the members of this committee. That is that it will take some 15 years for the Great Lakes to build up enough water to completely dissipate all effects of the temporary diversion. We are asked, therefore, to give this plan a 1-year trial. Then we will be asked to give another 2-year trial period. But if the calculations of the engineers are not correct and more damage is done to our lake shores, our channels, and our harbor depths, then it is going to take us 15 years to correct the mistake. In my opinion, that is too great a chance for our Nation to take in a matter which has such grave consequences to the economy of such a vast portion of our country.

Now, it has also been indicated in the newspapers that some of our committee members have said that Canada has no objections to this diversion. After checking, I find that such is not the case. Members of the Canadian Parliament not only continue to object to this extra diversion, but Canadian opposition has, in fact, stiffened on this plan during the past few months. As yet, the Canadian Government has not taken a formal stand on this matter. However, a statement of Canadian policy is expected within the next 30 days.

Canada has as much at stake in this matter as we have. The water we drain off the Great Lakes belongs as much to our great ally as it does to us. We should have absolute assurance that Canada has no objections and no reservations to this extra diversion before we take any action whatsoever.

Finally, we have been told that this hearing will be on the basis of facts alone. One of the facts in this matter, gentlemen, is that those States which are opposed to this extra diversion were not given enough time to prepare their cases before this committee hearing.

Because of the lack of time afforded by the committee to the gathering of new facts and the short notice given on the start of these hearings, I would recommend to my colleagues that we continue to take testimony from the gentlemen present and then give them an opportunity to be heard before this committee at a later date during this session of Congress.

Thank you.

Initiation of a Program To Assure U.S. Growth

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a thought-provoking synopsis by John L. McLaughlin, Jr., of Swampscott, Mass.:

INITIATION OF A PROGRAM TO ASSURE U.S. GROWTH

The slow economic growth of the United States in recent years, emphasized by the 1957-58 recession, has most intelligent people genuinely concerned. To reverse the trend, a systematic approach is needed, and this synopsis outlines a possibility. For success, business would have to exert leadership—far more than it has in the past—and the appeal to business would be for its cooperation in the initiation of a program designed to expand markets in predetermined orderly ways.

Such a program would be like an advertising and sales promotion campaign, except that it would lean toward the industrial type, be more rational and educational. It would be scientific and utilize all the best of the modern techniques of management, marketing, sales, and advertising and sales promotion.

The approach to the program would be via study under three main heads: Research, planning, and action. But this must be emphasized: That the study would entail looking at all three and integrating action with time. In short, there'd be some action in 6 months, 1 year, 2 years, 5 years. For simplicity, however, the kind of study that now seems indicated will be explained under each of the three main heads.

RESEARCH

History may yield clues. But it must be simplified. Gross national product looks like the best yardstick. Its four salient phases—Federal, State, and local, capital, and consumer spending—can be plotted together in, say, "an economic map of the United States from 1929 to date." Then the relationship among these four phases, and the effect that each has on the total, can be studied.

In the same way, goals can be plotted; the performance required by each phase or area can be determined and then, at any time, measured.

Thus, history soon ceases to help and statistics on the future become absolute necessities. That should probably be one of the major objectives of the program: to prove that more statistics are vitally necessary to progress. But what kinds of statistics can be ascertained only by envisioning the needs that are called for by the planning.

PLANNING

Plans for the program will be derived from the goals. The facts from the research should have sufficient authority to prove that steady growth of this country can be achieved only by expanding markets in accordance with the needs of the people. So we come to, what could be called managed markets.

Basic needs are five: Food, clothing, shelter, health, and education. Varying with population, they can be calculated, then supplied. Education—buildings, facilities, personnel—makes markets. So, too, do improvements in our cities, towns, and rural areas. Then there are the unbelievably big, and almost untapped, foreign markets. Finally, of course, there is defense.

All these constitute markets that can be managed; that is, expanded in ways that will best assure continuous growth.

Soon will arise the layman's question: Where will the money come from? The campaign will devote most minute care to explaining that hardest-to-understand portion of economics, money.

ACTION

Action would be governed by research and planning, but the kind required should be considered in the initial thinking. If something is known early about what action is to be taken, then the research and planning can be directed toward getting the necessary information.

Gradually, in this way, plans for action would be evolved. The specifics would be obtained by creative writers working closely with economists and then allowing specialists in presentation methods to translate the results into the different media for particular audiences.

Business would be the major audience: Its support is essential to success. Hence, early, the benefits would need to be outlined: managed markets would result in accurate forecasting, orderly expansion, efficient operations, and increased profits. Once sold on the general idea, business could carry on. Its brains and knowledge are needed. A big help here would be the cooperative support of the business press.

Other important audiences would be Government (via the Employment Act of 1946) and labor unions (particularly the economists). Approaches to these would be very humble—couched in terms of "we've all much to learn; is that about right?" When agreements are reached—and not too much would be attempted at one time—then the story could be broadcast to the general public. If it clicks then, the program is assured of a successful start.

The mechanics of the program would be left mainly to the advertising agency or agencies. But as I conceive them now, they would be in four parts: First, completely written-out plans, fully approved by consulting economists; second, oral presentations, with visual aids, designed for particular groups; third, booklets with more details for the same group;, and fourth, publicity of all varieties—from press conferences to news releases of many kinds.

All this presupposes that there'd be genuine news in the program. There must be (and still it must not be too controversial), if the program is to create the excitement that's needed for success.

In the long run, too, that's what our country needs most—excitement. It's been too long on the defensive; it needs to fight, it needs something to fight for—like in a war. Only with a purpose in mind—with visions of how great their country could really be—will the people make the sacrifices that are required. This program could start to supply that purpose.

JOHN L. MCLAUGHLIN, Jr.

Whither GAF?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. ROBISON. Mr. Speaker, an editorial in the Binghamton (N.Y.) Press of February 8, 1959, highlights the problem facing a community whose biggest single industry is 97 percent owned by a government which hopes to divest itself of ownership, but cannot do so without action by the Congress.

I wish to point out that my bill, H.R. 1345, offers a logical and feasible approach to this problem and I strongly hope the Congress will at long last take action this session to permit sale of the Government-held shares in General Aniline & Film Corp. to private investors.

BUT WILL IT EVER HAPPEN?

What others outside may think about a question that is close to the interests of the Triple Cities commands our attention. Donald I. Rogers, financial editor of the New York Herald Tribune, speculates, with some facetiousness, on the effects of a decision on the ownership of General Aniline & Film Corp.

The Eisenhower administration will soon propose to Congress a bill that would permit the sale of Aniline shares, of which the Government holds 97 percent, to the public. What Congress, moved by innumerable clashing interests, will do is unpredictable.

But there is a possibility that the question of ownership, already bearded like Father Time, will be so resolved. Triple Citians, whose fond hopes of the past so often have come to naught, are incapable of breathless expectancy, but hope never really dies.

If it happened?

Mr. Rogers comments that with the issue settled, composing rooms of the newspapers of the land would throw away a story that virtually has stood in type for more than 10 years, the heading of which reads roughly, "Aniline Solution Near."

Settlement of the Aniline case conceivably could produce unemployment among lawyers. Rogers notes that enough lawyers to fill all the boxes at Yankee Stadium have been engaged in the Aniline case.

These lawyers have represented German, non-Germans, Swiss, non-Swiss, the U.S. Government and a big assortment of other interests. These lawyers have to be paid. They don't come cheaply. And last year, poor Aniline for the first 9 months had profits of only $3,335,000 on sales of $103 million.

All the evidence suggests that General Aniline is a gallant ship that, under government control, never can put to sea. Always haunting management—and personnel, too—are the morale-hurting questions: Who owns us? Where are we going? What will happen tomorrow?

Government control poses inflexibilities and a rigidity of courses that stand as a bar to maximum exploitation of the company's assets, and as a bar to always needful long-distance planning and even to an adequate and uncomplex meeting of competition.

The Triple Cities has a big stake in what will be the fate of Aniline. Ansco is Binghamton's biggest industry and Ozalid is similarly a vital component in the Triple Cities economy.

We hope, we hope, we hope after years and years of disappointed hopes that a settlement of the Aniline case is near.

If and when Aniline shares pass to public ownership, will the proceeds go to the U.S. Treasury to help sweating American taxpayers?

Aw, you know the answer to that. The $100 million, more or less, will go into foreign pockets. As Rogers laments, "Alas and alack * * * into the pockets of righteous citizens abroad. For the past century or so, it seems, 'twas ever thus."

No-Man's Land in Labor Law

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. LAIRD. Mr. Speaker, the Wisconsin employment-relations board over a period of the last several years, has called to my attention the difficulties which the Wisconsin board has encountered with the so-called no-man's land in the field of labor-management relations. The absence of any remedy for labor disputes in this particular area has been deplored by spokesmen for both management and labor during the past year.

Several proposals have been made and will be considered by this 86th Congress. Among the proposals is my bill H.R. 1140, which has received widespread support throughout the United States and in particular from State labor boards who have been confronted with this problem frequently.

The Wisconsin employment-relations board has prepared a memorandum which has been submitted to the Senate Labor Committee under date of February 12, 1959. I received the following letter from the employment-relations board which I would like to place in the RECORD at this time, to be followed by the memorandum on behalf of the Wisconsin employment-relations board, which was addressed to the Senate Labor Committee:

MADISON, WIS., *February 12, 1959.*
Congressman MELVIN R. LAIRD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN LAIRD: The continuance of the no-man's land in labor relations is a serious problem for the smaller employers, their employees, and labor unions in this State. The no-man's land was brought about by the decision of the U.S. Supreme Court in *Guss* v. *Utah*, 353 U.S. 1, in 1957. As a consequence of this decision, labor disputes involving those employers over whom the National Labor Relations Board declines to exercise jurisdiction are not subject to State regulation or any regulation. The absence of any remedy for disputes in this category has been deplored by spokesmen for management and labor. Various proposals are presently being considered by the Congress to remedy the situation.

We are forwarding a copy of a statement transmitted to the Senate Labor Committee of the position of the Wisconsin Employment Relations Board on this problem. We hope that you will have the opportunity to read the statement which describes the problem of the no-man's land in detail.

When the various labor bills are considered by the Congress during this session, we hope that you will lend your best efforts to eliminate the no-man's land problem.

We would be pleased to answer any inquiries that you might have concerning pending legislation.

Very truly yours,
WISCONSIN EMPLOYMENT RELATIONS BOARD,
L. E. GOODING, *Chairman.*

MEMORANDUM ON BEHALF OF THE WISCONSIN EMPLOYMENT RELATIONS BOARD TO THE SENATE LABOR COMMITTEE

This memorandum is submitted on the question of the power of the States to regulate labor disputes over which the National Labor Relations Board declines to exercise its jurisdiction.

The State of Wisconsin has had a comprehensive labor relations code since 1939. During the 20 years of its existence, the Wisconsin Employment Relations Board has processed approximately 2,000 representation election matters, 3,000 referendums concerning union security agreements, approximately 1,000 unfair labor practice complaints involving both employer and union practices, 316 arbitrations and over 2,000 mediation cases. Prior to *Guss* v. *Utah*, 353 U.S. 1, the Wisconsin Employment Relations Board exercised jurisdiction in the regulation of labor disputes involving employers whose businesses affected interstate commerce over which the National Labor Relations Board declined to exercise its jurisdiction because said enterprises did not meet the jurisdictional standards established by the National Labor Relations Board. The Guss decision, as the opinion of the court acknowledged, created a vast area subject to no regulation, an area in which Federal power in many instances cannot be practically applied and in which the exercise of State authority has been banned. It has been estimated that the no-man's land area applied to approximately 25 percent of the working force.[1]

Prior to the Guss decision, when this Board was satisfied that the business of the employer was such that the National Labor Relations Board would not exercise its jurisdiction, this Board did so. In no case in what now constitutes the no man's land, when the question of jurisdiction was raised before the Board, was there an appeal taken to the courts on the Board's determination to exercise jurisdiction.

In Wisconsin, it has been estimated that approximately 29 percent of the working force and about 92 percent of all employers were within the no man's land as a result of the Guss decision.[2]

On October 2, 1958, the National Labor Relations Board, pursuant to one of the mandates of the Supreme Court in the Guss decision, announced revised jurisdictional standards. This action was taken subsequent to increased appropriations granted by the

[1] "County Business Patterns," pt. I, 1st quarter, published by U.S. Departments of Commerce and Health, Education, and Welfare, pp. 4–6, table IA. For statistics as to the individual States and Territories, see table IB, pp. 8–52.

[2] Heiser Ready Mix Co. decision, No. 4780, Wisconsin Employment Relations Board, June 1958.

Congress for the purpose of narrowing the extent of the no man's land. Prior to the announcement of the 1958 standards, representatives of the National Labor Relations Board had testified before Congress that the requested increase in appropriations would enable the Board to reduce the no man's land area by approximately 20 percent.[3] Applying the 20 percent assumption to Wisconsin, would still result in approximately 23 percent of the working force being included in the no man's land and about 73 percent of the employers. Regardless of whether the estimates of the National Board are correct, it is recoghized that the workload of the National Board has increased significantly, and with it a backlog of cases, to the extent that many matters which should be expeditiously determined are delayed for such a period of time that they also may be considered in a no man's land.[4]

Of major concern to the Senate committee has been the elimination of racketeering in labor-management relations. It is hard to conceive of a better opportunity for racketeering to flourish than to have no regulation available, either State or Federal, among the smaller employers and smaller collective bargaining units throughout the land. Extensive testimony has been heard by this committee indicating that the service industries, usually employing small groups of persons, have been the most easy prey for the racketeers. The continuance of a vacuum in the labor-relations law encourages rather than discourages the continuance of unsavory practices in labor-management relations.

In addition to the problems of racketeering, the impact of the Guss decision has been very upsetting to normal labor relations. From the viewpoint of administrators who must deal with everyday practical problems of labor relations, we fail to perceive how the interest of uniformity declared by the Supreme Court as a major premise in reaching its conclusion will be achieved by its decision. The only uniformity apparent to us, is the fast growing practice of returning stable labor relations, which have been fostered by State and Federal statutes, to the anarchy which existed prior to the enactment of the Wagner Act, the Employment Peace Act, and the Taft-Hartley Act. In the no-man's land, the right of employees to be represented by a labor union and to engage in collective bargaining will now be determined by economic force rather than by secret ballot; the right of employees to be free from discriminatory discharge because of union activities will be dissipated; and the rights of employers to be free from illegal picketing and from secondary boycotts will go unprotected.

When it is considered that 62 percent of all charges of unfair labor practices filed in the first quarter of 1958 with the National Labor Relations Board were filed by individuals,[5] it is difficult to understand how such individuals over whom the National Labor Relations Board will assert jurisdiction have rights and remedies more worthy of protection by a uniform Federal labor policy than those individuals who are employed in enterprises falling within the no-man's land area. This same argument applies to the rights of labor organizations and employers. We thus have a situation where neither the policies expressed in the Federal or State acts can be applied. The only uniformity apparent to us in the no-man's land is the chaos of no regulation.

The question has been raised in previous hearings before this committee that the State authority in labor relations permits regulation of uniform security agreements, including the enactment of right to work legislation. However, it should be noted that such State authority is not dependent and would not be blocked by the enactment of the proposed legislation since that authority is dependent upon section 14–B of the Taft-Hartley Act. The question has also been raised in previous hearings as to the number of States which do not have a labor relations board or agency, and thus would not benefit from the passage of legislation empowering States to act. While only twelve States and the Territory of Hawaii and the Commonwealth of Puerto Rico have Labor Relations Act, they include such important industrial States as New York, Pennsylvania, Massachusetts, Michigan, Connecticut, Minnesota, and Wisconsin. In these 10 States were located 31½ percent of the nonagricultural employees of the United States in 1955 and during that same year these States accounted for 45 percent of the strikes in the country.[6]

Furthermore, the 10 States do not include the industrial State of Michigan and the State of Kansas which have representation procedures as a part of their State mediation functions. A compilation of various State labor relations laws indicate that some 43 States and Territories have laws protecting the rights of employees to organization and to bargain collectively.[7]

The fact that any particular State chooses not to adopt labor legislation in harmony with the Federal statute, or not to adopt any labor legislation on a particular subject, does not seem persuasive to forbid States from enforcing labor relations statutes if the enterprises which might be subject to such regulation are of such little consequence as to be determined unworthy or impractical of regulation by the National Labor Relations Board.

Since the Guss decision, there has also been an increased interest in utilization of damage actions in labor disputes. Traditionally, students of labor relations have felt that damage actions were not the best means of achieving stable and harmonious labor relations, but increases in such suits can be expected in the absence of any other means of resolving labor disputes.

The Supreme Court in the Guss decision also mentioned that the no man's land could be reduced by the execution of cession agreements between the National Labor Relations Board and various State agencies provided the State statute was consistent with or had received a construction not in consistent with the Federal act. While effective arguments have been made by the States on behalf of such agreements, no cession agreements have been executed to date.[8] It is our feeling that the National Board has construed the word "consistency" to mean identical and has used such argument as means of blocking a cession agreement. Furthermore, there is no assurance that, even if a State statute was conformed to a Federal statute, litigation over consistency of construction could not be advanced in a particular case as a means of delay. With nine circuit courts of appeals passing on National Labor Relations Board decisions, it would be impossible for any State administrative agency to guarantee total consistency of interpretation no matter how hard it tried and no matter what the spirit of the administrators were toward the statute. It is our belief that most arguments against the execution of a cession agreement could be overcome if the National Board were willing to seriously consider entering into such an agreement but that to date such willingness has not been demonstrated. The unsuccessful experience of the State of New York in attempting to reach a cession agreement for the taxicab industry in New York City is the most recent and best detailed. From the legislative and administrative history of the present cession provision, section 10a, it may be concluded that a clarifying amendment of at least the consistency provision should be considered by the Congress if there is to be any hope of implementing the cession provision by the making of such agreements with State agencies.

In submitting this statement to the Senate Labor Committee, the Wisconsin Employment Relations Board wants to make it clear that our primary concern is to remedy the no man's land. The problem can be minimized by directing the National Labor Relations Board to take jurisdiction of all labor disputes arising under the national act and by providing for cession agreements to State agencies. The no man's land can be eliminated entirely in those States which have labor relations acts by amending the National Labor Relations Act so as to empower the National Labor Relations Board to decline jurisdiction and permitting State regulation over those matters which the National Board declines to handle.

As administrator of a State labor relations act, we believe there are many reasons why State administration of local disputes, especially involving smaller employers and smaller collective bargaining units in the no man's land category can be most effectively regulated by the States. However, if the Congress should not provide for State authority where the National Labor Relations Board declines to act, we would hope that the Congress would appropriate sufficient moneys to enable the National Labor Relations Board to fully occupy the no man's land, and further that if the Congress should decide to continue the cession provision of the present statute, that said provision be clarified to make cession agreements possible.

Respectfully submitted,

L. E. GOODING,
Chairman, Wisconsin Employment Relations Board.

Lithuanian Independence Day

SPEECH
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mrs. KELLY. Mr. Speaker, the Communist leaders of the Kremlin are using and will continue to use every diabolical means and method to capture the nations of the free world. These Communist leaders seek to destroy the free world by the method of divide and conquer. During this critical period in history the peoples of the free world must remain alert to the intrigue of the Communist masters in the Kremlin. The free world is forced to remain strong militarily, economically, and spiritually. It is paramount that we act as one—in unison. It is paramount that we stand firm in our commitments to one another. It is paramount that the free world agree on every issue and, last but not least,

that we maintain our faith in the Almighty. Only then can we avoid the pitfall of being engulfed into the orbit of the Communist fold. Let us recall the fate of those peoples and nations who are now the captives of the U.S.S.R.—Lithuania, Latvia, Estonia, Poland, Hungary, Bulgaria, Albania, Eastern Germany, not to mention those on the threshold of enslavement.

None of these nations have lost their craving for liberty. It is important to them that we rekindle their hope for freedom and help them maintain their morale. Therefore, on this February 16 Lithuania commemorates the day of its independence and the day of its national birthday. I join with the Lithuanians on this sad occasion and pray that the future holds for them the day of their liberation to which we in the free world rededicate ourselves.

Poison in Your Water—No. 14

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. DINGELL. Mr. Speaker, the water from the Potomac River, one of whose tributary streams is the Shenandoah River, contains the zinc waste compounds dumped into the stream by the Viscose Corp., of America plant at Front Royal. An article setting forth what happened there appeared on the front page of the Washington (D.C.) Post and Times Herald of February 13, 1959. The zinc wastes dumped into the Shenandoah River find their way into the drinking water of the people of the city of Washington, D.C., among whom at least some time during the year are all Members of Congress. This is the water that we drink:

SHENANDOAH WATER TESTED: RIVER POLLUTION FROM ZINC WASTES BLAMED FOR DEATH OF 200,000 FISH

(By Aubrey Graves)

An estimated 200,000 fish have been killed since late December in a 10-mile stretch of the Shenandoah River below Front Royal, Va.

A report made by the staff of the Virginia Water Control Board at Richmond has "tentatively" laid the blame on a high concentration of zinc compounds in wastes dumped into the stream by the Viscose Corp. of America plant at Front Royal.

This was confirmed yesterday by A. H. Paessler, the board's executive secretary. Paessler said the staff report was made to the board on January 29 after a meeting at which Viscose officials were present.

Paessler said investigation by the board and the State game commission had been going on for about a month. Analyses of water samples have been completed but complicated, time-consuming analyses of the flesh of the dead fish are still proceeding in the board's laboratory. Paessler expects a final determination within 2 weeks.

The dead fish appeared in increasing numbers until late in January, then tapered off. Some were observed this week, among them bass up to 9 pounds.

About 15 years ago, the corporation started construction of a million dollar waste treatment plant after thousands of Shenandoah River fish had died from the effects of pollution. Last year the Izaak Walton League gave the corporation an award for its efforts in behalf of conservation.

During recent months the corporation greatly increased its consumption of zinc compounds, used in processing rayon products.

Amzi G. McVay, corporation president, said yesterday he could make "no comment at this time."

Commandant of the Marine Corps, Gen. R. McC. Pate Receives the Veterans of Foreign Wars Commander in Chief's Citation and Gold Medal Award for Outstanding Contributions to National Security

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. VAN ZANDT. Mr. Speaker, Tuesday evening, February 3, it was my privilege to attend with more than 400 of the Members of Congress the annual congressional dinner of the Veterans of Foreign Wars.

Gen. Randolph McC. Pate was there to receive the coveted Commander in Chief's Citation and Gold Medal Award in recognition of his outstanding services to the security of our Nation in these troubled times.

The presentation remarks of the distinguished senior vice commander of the VFW, Mr. Louis G. Feldmann, delivered in presenting the citation and gold medal deserve the careful study of all Members.

For there in brief form we find recognition of the very real need for the qualities, strengths and professional combat readiness of the Marine Corps which this Congress strives so unceasingly to insure will always be available to the Nation.

That this tribute to the Marine Corps comes from such a fine organization of American veterans of overseas service as the VFW is highly significant. Very clearly it demonstrates the fact that the deep concern so many of us feel over the slashing cuts in these tense and difficult times in the most ready of our Nation's limited war forces is widely shared by millions of our citizens. Our continuing efforts to provide the Nation with an adequate Marine Corps force-in-readiness do not stem only from the Armed Services Committee or even the Congress itself. They but reflect the awareness of the vast majority of the citizens we represent that such a force is vital in an era of relentless Communist pressure and deliberate incursions upon the interests and the safety of the free world.

I feel that it is particularly noteworthy that the remarks stress the concern of an organization of nearly one and a half million veterans of oversea service. Certainly, of all our citizens, these are men whose judgments in matters of national defense are entitled to more than ordinary consideration.

They support without qualification the repeated efforts of Congress to provide the Nation with the three full Marine divisions and air wings the law requires. They too have noted the events of Lebanon, Suez and Quemoy and turned to view with amazement the slashing cuts—12½ percent below appropriated strength—of the very service which responded so quickly, so decisively in those emergencies.

VFW Senior Vice Commander Feldmann's views concur with the belief held by this body that never before has the Nation's need for a combat ready Marine Corps been more obvious than it is today. Through this VFW presentation those oversea veterans have assured us that in keeping with the resolutions of their last national encampment and the informed views of their national security committee they will continue to support us in our determination to have a Marine Corps adequate to the actual needs of the times.

They share the ever-growing concern that concentration on weapons of massive destruction at the expense of the more versatile, more flexible military capabilities, so well represented by our ready Marine forces, is making us less and less able to cope with the demonstrated and continuing threat of constant Communist pressure tactics.

This firm expression of unqualified support from a group of our citizens so capable and well informed as the VFW should confirm and strengthen the resolve of all of us who have fought over the years to retain in our national defense structure the unique and vitally necessary combatant skills and amphibious know-how of the U.S. Marines.

Equally significant are General Pate's brief words of acceptance. They stress a fundamental faith in the human and moral values of the individual which remain basic to the Marines in an age when too many of us find it all too easy to place our faith in the search for shiny new weapons.

Mr. Speaker, under leave to extend my remarks, I ask that both Mr. Feldmann's presentation remarks and the acceptance by General Pate be placed in the RECORD:

PRESENTATION REMARKS BY LOUIS G. FELDMANN

General Pate, as a former marine and on behalf of the Veterans of Foreign Wars of the United States, it is my privilege and pleasure to present to you this Commander in Chief's Citation with the following wording.

As a token of the high esteem in which you and the Marine Corps are held by the Veterans of Foreign Wars—and by all patriotic citizens of our Nation—it is also my privilege to present to you this gold medal, which accompanies the citation, in recognition of our outstanding services to the security of our Nation in these troubled times.

I hope this medal will, in the years to come, serve as a reminder of the sincere appreciation we veterans have for the competent manner in which you have directed

Congress for the purpose of narrowing the extent of the no man's land. Prior to the announcement of the 1958 standards, representatives of the National Labor Relations Board had testified before Congress that the requested increase in appropriations would enable the Board to reduce the no man's land area by approximately 20 percent.[3] Applying the 20 percent assumption to Wisconsin, would still result in approximately 23 percent of the working force being included in the no man's land and about 73 percent of the employers. Regardless of whether the estimates of the National Board are correct, it is recoghized that the workload of the National Board has increased significantly, and with it a backlog of cases, to the extent that many matters which should be expeditiously determined are delayed for such a period of time that they also may be considered in a no man's land.[4]

Of major concern to the Senate committee has been the elimination of racketeering in labor-management relations. It is hard to conceive of a better opportunity for racketeering to flourish than to have no regulation available, either State or Federal, among the smaller employers and smaller collective bargaining units throughout the land. Extensive testimony has been heard by this committee indicating that the service industries, usually employing small groups of persons, have been the most easy prey for the racketeers. The continuance of a vacuum in the labor-relations law encourages rather than discourages the continuance of unsavory practices in labor-management relations.

In addition to the problems of racketeering, the impact of the Guss decision has been very upsetting to normal labor relations. From the viewpoint of administrators who must deal with everyday practical problems of labor relations, we fail to perceive how the interest of uniformity declared by the Supreme Court as a major premise in reaching its conclusion will be achieved by its decision. The only uniformity apparent to us, is the fast growing practice of returning stable labor relations, which have been fostered by State and Federal statutes, to the anarchy which existed prior to the enactment of the Wagner Act, the Employment Peace Act, and the Taft-Hartley Act. In the no-man's land, the right of employees to be represented by a labor union and to engage in collective bargaining will now be determined by economic force rather than by secret ballot; the right of employees to be free from discriminatory discharge because of union activities will be dissipated; and the rights of employers to be free from illegal picketing and from secondary boycotts will go unprotected.

When it is considered that 62 percent of all charges of unfair labor practices filed in the first quarter of 1958 with the National Labor Relations Board were filed by individuals,[5] it is difficult to understand how such individuals over whom the National Labor Relations Board will assert jurisdiction have rights and remedies more worthy of protection by a uniform Federal labor policy than those individuals who are employed in enterprises falling within the no-man's land area. This same argument applies to the rights of labor organizations and employers. We thus have a situation where neither the policies expressed in the Federal or State acts can be applied. The only uniformity apparent to us in the no-man's land is the chaos of no regulation.

The question has been raised in previous hearings before this committee that the State authority in labor relations permits regulation of uniform security agreements, including the enactment of right to work legislation. However, it should be noted that such State authority is not dependent and would not be blocked by the enactment of the proposed legislation since that authority is dependent upon section 14–B of the Taft-Hartley Act. The question has also been raised in previous hearings as to the number of States which do not have a labor relations board or agency, and thus would not benefit from the passage of legislation empowering States to act. While only twelve States and the Territory of Hawaii and the Commonwealth of Puerto Rico have Labor Relations Act, they include such important industrial States as New York, Pennsylvania, Massachusetts, Michigan, Connecticut, Minnesota, and Wisconsin. In these 10 States were located 31½ percent of the nonagricultural employees of the United States in 1955 and during that same year these States accounted for 45 percent of the strikes in the country.[6]

Furthermore, the 10 States do not include the industrial State of Michigan and the State of Kansas which have representation procedures as a part of their State mediation functions. A compilation of various State labor relations laws indicate that some 43 States and Territories have laws protecting the rights of employees to organization and to bargain collectively.[7]

The fact that any particular State chooses not to adopt labor legislation in harmony with the Federal statute, or not to adopt any labor legislation on a particular subject, does not seem persuasive to forbid States from enforcing labor relations statutes if the enterprises which might be subject to such regulation are of such little consequence as to be determined unworthy or impractical of regulation by the National Labor Relations Board.

Since the Guss decision, there has also been an increased interest in utilization of damage actions in labor disputes. Traditionally, students of labor relations have felt that damage actions were not the best means of achieving stable and harmonious labor relations, but increases in such suits can be expected in the absence of any other means of resolving labor disputes.

The Supreme Court in the Guss decision also mentioned that the no man's land could be reduced by the execution of cession agreements between the National Labor Relations Board and various State agencies provided the State statute was consistent with or had received a construction not in consistent with the Federal act. While effective arguments have been made by the States on behalf of such agreements, no cession agreements have been executed to date.[8] It is our feeling that the National Board has construed the word "consistency" to mean identical and has used such argument as means of blocking a cession agreement. Furthermore, there is no assurance that, even if a State statute was conformed to a Federal statute, litigation over consistency of construction could not be advanced in a particular case as a means of delay. With nine circuit courts of appeals passing on National Labor Relations Board decisions, it would be impossible for any State administrative agency to guarantee total consistency of interpretation no matter how hard it tried and no matter what the spirit of the administrators were toward the statute. It is our belief that most arguments against the execution of a cession agreement could be overcome if the National Board were willing to seriously consider entering into such an agreement but that to date such willingness has not been demonstrated. Lithuanian Independence Day

SPEECH
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mrs. KELLY. Mr. Speaker, the Communist leaders of the Kremlin are using and will continue to use every diabolical means and method to capture the nations of the free world. These Communist leaders seek to destroy the free world by the method of divide and conquer. During this critical period in history the peoples of the free world must remain alert to the intrigue of the Communist masters in the Kremlin. The free world is forced to remain strong militarily, economically, and spiritually. It is paramount that we act as one—in unison. It is paramount that we stand firm in our commitments to one another. It is paramount that the free world agree on every issue and, last but not least,

that we maintain our faith in the Almighty. Only then can we avoid the pitfall of being engulfed into the orbit of the Communist fold. Let us recall the fate of those peoples and nations who are now the captives of the U.S.S.R.—Lithuania, Latvia, Estonia, Poland, Hungary, Bulgaria, Albania, Eastern Germany, not to mention those on the threshold of enslavement.

None of these nations have lost their craving for liberty. It is important to them that we rekindle their hope for freedom and help them maintain their morale. Therefore, on this February 16 Lithuania commemorates the day of its independence and the day of its national birthday. I join with the Lithuanians on this sad occasion and pray that the future holds for them the day of their liberation to which we in the free world rededicate ourselves.

Poison in Your Water—No. 14

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. DINGELL. Mr. Speaker, the water from the Potomac River, one of whose tributary streams is the Shenandoah River, contains the zinc waste compounds dumped into the stream by the Viscose Corp., of America plant at Front Royal. An article setting forth what happened there appeared on the front page of the Washington (D.C.) Post and Times Herald of February 13, 1959. The zinc wastes dumped into the Shenandoah River find their way into the drinking water of the people of the city of Washington, D.C., among whom at least some time during the year are all Members of Congress. This is the water that we drink:

SHENANDOAH WATER TESTED: RIVER POLLUTION FROM ZINC WASTES BLAMED FOR DEATH OF 200,000 FISH

(By Aubrey Graves)

An estimated 200,000 fish have been killed since late December in a 10-mile stretch of the Shenandoah River below Front Royal, Va.

A report made by the staff of the Virginia Water Control Board at Richmond has "tentatively" laid the blame on a high concentration of zinc compounds in wastes dumped into the stream by the Viscose Corp. of America plant at Front Royal.

This was confirmed yesterday by A. H. Paessler, the board's executive secretary. Paessler said the staff report was made to the board on January 29 after a meeting at which Viscose officials were present.

Paessler said investigation by the board and the State game commission had been going on for about a month. Analyses of water samples have been completed but complicated, time-consuming analyses of the flesh of the dead fish are still proceeding in the board's laboratory. Paessler expects a final determination within 2 weeks.

The dead fish appeared in increasing numbers until late in January, then tapered off. Some were observed this week, among them bass up to 9 pounds.

About 15 years ago, the corporation started construction of a million dollar waste treatment plant after thousands of Shenandoah River fish had died from the effects of pollution. Last year the Izaak Walton League gave the corporation an award for its efforts in behalf of conservation.

During recent months the corporation greatly increased its consumption of zinc compounds, used in processing rayon products.

Amzi G. McVay, corporation president, said yesterday he could make "no comment at this time."

Commandant of the Marine Corps, Gen. R. McC. Pate Receives the Veterans of Foreign Wars Commander in Chief's Citation and Gold Medal Award for Outstanding Contributions to National Security

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. VAN ZANDT. Mr. Speaker, Tuesday evening, February 3, it was my privilege to attend with more than 400 of the Members of Congress the annual congressional dinner of the Veterans of Foreign Wars.

Gen. Randolph McC. Pate was there to receive the coveted Commander in Chief's Citation and Gold Medal Award in recognition of his outstanding services to the security of our Nation in these troubled times.

The presentation remarks of the distinguished senior vice commander of the VFW, Mr. Louis G. Feldmann, delivered in presenting the citation and gold medal deserve the careful study of all Members.

For there in brief form we find recognition of the very real need for the qualities, strengths and professional combat readiness of the Marine Corps which this Congress strives so unceasingly to insure will always be available to the Nation.

That this tribute to the Marine Corps comes from such a fine organization of American veterans of overseas service as the VFW is highly significant. Very clearly it demonstrates the fact that the deep concern so many of us feel over the slashing cuts in these tense and difficult times in the most ready of our Nation's limited war forces is widely shared by millions of our citizens. Our continuing efforts to provide the Nation with an adequate Marine Corps force-in-readiness do not stem only from the Armed Services Committee or even the Congress itself. They but reflect the awareness of the vast majority of the citizens we represent that such a force is vital in an era of relentless Communist pressure and deliberate incursions upon the interests and the safety of the free world.

I feel that it is particularly noteworthy that the remarks stress the concern of an organization of nearly one and a half million veterans of oversea service. Certainly, of all our citizens, these are men whose judgments in matters of national defense are entitled to more than ordinary consideration.

They support without qualification the repeated efforts of Congress to provide the Nation with the three full Marine divisions and air wings the law requires. They too have noted the events of Lebanon, Suez and Quemoy and turned to view with amazement the slashing cuts—12½ percent below appropriated strength—of the very service which responded so quickly, so decisively in those emergencies.

VFW Senior Vice Commander Feldmann's views concur with the belief held by this body that never before has the Nation's need for a combat ready Marine Corps been more obvious than it is today. Through this VFW presentation those oversea veterans have assured us that in keeping with the resolutions of their last national encampment and the informed views of their national security committee they will continue to support us in our determination to have a Marine Corps adequate to the actual needs of the times.

They share the ever-growing concern that concentration on weapons of massive destruction at the expense of the more versatile, more flexible military capabilities, so well represented by our ready Marine forces, is making us less and less able to cope with the demonstrated and continuing threat of constant Communist pressure tactics.

This firm expression of unqualified support from a group of our citizens so capable and well informed as the VFW should confirm and strengthen the resolve of all of us who have fought over the years to retain in our national defense structure the unique and vitally necessary combatant skills and amphibious know-how of the U.S. Marines.

Equally significant are General Pate's brief words of acceptance. They stress a fundamental faith in the human and moral values of the individual which remain basic to the Marines in an age when too many of us find it all too easy to place our faith in the search for shiny new weapons.

Mr. Speaker, under leave to extend my remarks, I ask that both Mr. Feldmann's presentation remarks and the acceptance by General Pate be placed in the RECORD:

PRESENTATION REMARKS BY LOUIS G. FELDMANN

General Pate, as a former marine and on behalf of the Veterans of Foreign Wars of the United States, it is my privilege and pleasure to present to you this Commander in Chief's Citation with the following wording.

As a token of the high esteem in which you and the Marine Corps are held by the Veterans of Foreign Wars—and by all patriotic citizens of our Nation—it is also my privilege to present to you this gold medal, which accompanies the citation, in recognition of our outstanding services to the security of our Nation in these troubled times.

I hope this medal will, in the years to come, serve as a reminder of the sincere appreciation we veterans have for the competent manner in which you have directed

the Marine Corps during your tenure as Commandant. Our Nation and the Free World have benefited from your leadership and the manner in which your marines have responded to every call.

The brief inscription on the citation and on the medal cannot fully express the reasons why you so righly deserve this award. In these days when such great emphasis is placed upon technological and material advancement, you and your marines have continued to retain and demonstrate those precious attributes of the spirit and the heart. These characteristics, which have been notably associated with the marines, are esprit, dedication, and unfailing devotion to country and corps. Although these attributes have been the continuing features of your great organization, under your leadership the Marine Corps also has made great technological advances. Since the end of World War II, through the corps conception, and development of the large helicopter as the ship-to-shore vehicle operating from troop-carrying aircraft carriers, our marines are fully capable of being a major factor in modern warfare.

This valuable technological progress reflects the manner in which the Marine Corps is carrying out the job assigned to it by the National Security Act. Under your direction the corps has tended to its own knitting and in so doing has complied with the spirit and intent of the law in developing the techniques of amphibious warfare and in providing the hard-hitting, ready force so vital to our national defense.

As repeated international crises have so well proven—Suez, the Formosan Straits, Syria, and Lebanon—the Marine Corps, under your command, has performed in the competent manner we have come to expect from marines. Its business-like, professional response to each of these crises demonstrates why our marines today are the first echelon of our Nation's limited war forces.

These accomplishments have not come easily. In making this award the Veterans of Foreign Wars recognize that what you have done has been accomplished in the face of extreme difficulties. You are required to maintain three combat divisions and three air wings while being administratively deprived of adequate funds to do so.

Never has the need for a combat-ready Marine Corps been greater. The demands for the flexibility provided by the Marines have rarely been more obvious. Unfortunately, with so much more to do, there does not seem to be enough to go around. Congress recognized the need for an adequate Marine Corps in these troubled times and appropriated funds for the 200,000 marines necessary for you to provide three divisions and three air wings which the law requires.

The Veterans of Foreign Wars are disturbed.

We find that by this procedure of withholding appropriated funds the Marines are being reduced substantially below the strength appropriated and intended by Congress.

You have, however as Marines, gone ahead and done your best.

Speaking for the Veterans of Foreign Wars, as a result of resolutions adopted at our last national encampment and at the recent meeting of our national security committee, we want you and our congressional guests to know that we shall support the intent and efforts of Congress to provide an adequate and combat-ready Marine Corps. My personal congratulations, General Pate.

GENERAL PATE'S REMARKS OF ACCEPTANCE

Commander Mahan, Senator JOHNSON, distinguished guests, ladies and gentlemen:

I am happy and proud to accept this handsome and generous award. I do so with the full realization I am accepting it for the great organization which I have the honor and the privilege to command: The U.S. Marine Corps.

I hope you will join with me in looking upon this award as a tribute to marines, past and present. Each one has made a significant and lasting contribution to the fighting force which you honor here this evening, and to the security of our Nation.

I would like to take a moment to tell you about an incident which recently took place in our headquarters and illustrates how deeply we feel about the importance of the individual marine.

A short time ago, a distinguished American artist told me he would like to do a painting of what we in the Marine Corps consider the most notable event or achievement in our history.

I wanted to be sure that our selection was made with a care and deliberation commensurate with the honor the artist offered to our corps, so I appointed a board of officers to consider the matter.

Their conclusion, which I readily and heartily approved, was that the most notable achievement in the history of the Marine Corps is the creation of the individual fighting marine.

The individual U.S. marine, trained to stand confident, resolute, and firm in the adversities of combat is our greatest achievement and our most important contribution to the defense of the Nation.

Of course, we cannot and do not claim full credit for his creation. He is created from the American youth who comes to us from your homes, your churches, and your communities with the spiritual and physical courage, the moral stamina, to accept the rigorous demands of training for combat.

On behalf of marines everywhere I assure you that we will continue to strive to maintain those standards of combat readiness and proficiency for which you have so honored us with this award. Your Marine Corps will exert its every endeavor to continue to give this Nation a faithful performance of the duty and responsibility placed upon Marines by the law—the responsibility of being a combat-ready force of amphibious specialists prepared to move instantaneously toward any trouble spot to protect our national interests.

This is the job assigned us by law. This is the job we do.

We are determined that in doing this job Marines will continue to merit the confidence and the trust which you have accorded to us.

On behalf of marines everywhere, I accept this cherished honor which you have awarded to us this evening.

February 16 Marks the Anniversary of the Birth of an Emancipator of American Women—Susan B. Anthony

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 17, 1959

Mr. VAN ZANDT. Mr. Speaker, this past week, we in the U.S. Congress have been celebrating the birthday of Abraham Lincoln, the emancipator of an entire race. It is fitting that we now pay our tribute in the same way to one who was an emancipator of American women—Susan B. Anthony.

Her birthday is being celebrated February 16 in all parts of the country. Her statue is here in the crypt of our Capitol building, a gift from American women. The 19th amendment to the Constitution, which enfranchised women, is popular known as the Susan B. Anthony amendment. Every year comes new recognition of what she did to elevate the position of the women in our country.

Suffrage for women is, of course, taken for granted to day—and this is well, for we do not like to recall that our mothers, wives and daughters did not always share with us, their husbands and fathers and sons and brothers, the primary right—and duty—of the franchise. Fortunately man's memory is so constituted that we do take for granted what is obviously right and good.

But the ideal for which Susan B. Anthony and her valiant fellow workers had to struggle so long and so mightily—yes, and to endure sacrifices and ridicule and indignity—is not yet realized. We here have the power to complete the task and to erase the blot which makes half our Nation not equal under the law. Let us complete the task now, and within a short time—I feel confident—it will be taken for granted that in the United States all citizens are equal under the law.

On the anniversary of the birth of Susan B. Anthony 200 Members of the House of Representatives announced publicly their intention to carry to a conclusion, as far as Congress can do so, the work to which Susan B. Anthony devoted her life efforts by giving their support to the Equal Rights for Women amendment introduced by the Honorable KATHARINE ST. GEORGE and 38 other Members. There is no better way in which to bring our tribute to Susan B. Anthony.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The National Commander of the Disabled American Veterans

EXTENSION OF REMARKS
OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, Massachusetts is proud that one of her distinguished citizens, Judge David B. Williams, of Concord, is the present national commander of the Disabled American Veterans.

The Honorable Christopher H. Phillips, U.S. representative on the United Nations Economic and Social Council, spoke at a testimonial banquet in Concord honoring Judge Williams last November 29. He brought a message from President Eisenhower, and presented some valuable facts as to the work of the Disabled American Veterans. Believing that Members of Congress and others will be interested in his speech, I am including it in extension of my remarks:

Commander Williams, members of the Disabled American Veterans, ladies, and gentlemen, I feel privileged to join in this testimonial to Dave Williams. I am especially pleased to bring you greetings from the President of the United States. He has given me a message which I would like to read to you:

"Please give my congratulations to the members of the Disabled American Veterans gathered in honor of their national commander, Judge David B. Williams. It is gratifying to see the emergence of such leaders as Judge Williams from the ranks of the younger veterans of the Second World War.

"Despite adversity, he has risen in his State to a place of honor and strength and now his leadership will be felt across the Nation.

"As Judge Williams enters his new duties with the DAV, it is a pleasure to send him my congratulations and best wishes.

"DWIGHT D. EISENHOWER."

As an old friend of Dave Williams, having served with him in Massachusetts' General Court, I am much impressed by the distinguished company that has gathered for this testimonial dinner. I am almost equally impressed at seeing that such a large number of Commander Williams' friends chose to take part in this banquet on this particular holiday weekend—having taken time out for only 2 days to recover from their Thanksgiving feasts.

The presence of so many Congressmen as well as the Acting Administrator of the Veterans' Administration indicates our deep satisfaction in the fact that Commander Williams' tremendous energies, his capabilities and sense of devotion to public affairs, are being put to work nationally during the next 12 months.

On our national scene there are few causes as deserving of inspired leadership as that of the Disabled American Veterans. As they have in the past, the Disabled American Veterans have now chosen just that kind of leadership.

This good cause and its leadership have earned the widest backing from the rest of the community. And in his labors Commander Williams will be able to count on the kind of top-drawer public and official support that we see represented here this evening. To me this cause, this leadership, and this support look like an unbeatable combination.

In fact, from my own vantage point down in New York at the U.S. Mission to the United Nations, I could well be a little envious of Dave. By good fortune he and Brad are constituents of Representative EDITH NOURSE ROGERS. Since World War I, in the care, readjustment and rehabilitation of war veterans, Representative ROGERS has ranked as First Lady of the Land. Even if they were not voters in the Fifth Massachusetts District, Dave and Brad could look to Mrs. ROGERS as a legislative tower of strength, a determined and invariably successful task force in any mission concerned with American war veterans.

Every President since the Wilson administration has known of Mrs. ROGERS' unceasing endeavors in behalf of the sick and wounded. She was the personal representative of Presidents Harding and Coolidge in the care of the disabled. Her preeminence in this work was achieved even before she began her illustrious career in the House of Representatives in June 1925, as the successor to her late husband, Congressman John Jacob Rogers.

I said a moment ago that this is a distinguished company. It is distinguished most of all in its dedicated service to our national welfare. Members of the Disabled American Veterans have in heroic measure lived by the watchword of our Republic: "Eternal vigilance is the price of liberty." Mrs. ROGERS and others of you here have led in exercising eternal vigilance on the home front, both in times of war and peace.

The qualities which the Disabled American Veterans symbolize were never in greater need than they are today. Much the same kind of "guts" which these men showed in combat is needed now to wage foreign policy in the nuclear stalemate which we see hanging over our future.

In the Soviet Union, the United States faces a determined opponent. Moscow, with its tightly centralized dictatorship, is prepared to play a waiting game, to try to wear us down with alternate crises and phony peace offensives. We can be fairly sure that the Soviets won't intentionally set off a world war III in which there could be no victor. The chances are that they won't try a nuclear play through the center of our line. Instead, they will plan to catch us napping, relaxed in our vigilance, so that they can pull off a sneak end-run play by subversion and indirect aggression.

It is the Communists' cynical belief that the citizens of our democracy will prove to be weak in self-discipline, that they cannot keep their guard up in a long-drawn-out war of nerves. Making liars out of the Communist prophets will continue to be one of the toughest jobs our Nation ever tackled. And in this contest the example of vigilance given to us by the Disabled American Veterans is one of our great assets.

There is a direct parallel between the caliber of alertness which your organization has shown and the sharp watch we must keep as a Nation. The Disabled American Veterans and Congresswoman ROGERS can testify that immediately after the two World Wars our people and their Government have been more than generous in providing veterans benefits and services. But as time passes this enthusiasm tends to fade.

In the same way there is a tendency to forget all of the terrible costs of war. There is a tendency to grow weary at the infinitely smaller costs of defense and mutual security.

The Disabled American Veterans have done a remarkable job in fighting such forgetfulness. Without their unflagging efforts to mobilize public support, the programs for disabled veterans could not have been maintained at present levels. They know that it takes eternal vigilance before the voters and their elected representatives to combat indifference, to resist the wasteful dismantling of worthy programs for enabling the disabled to lead happier and more useful lives.

I see no cause for complaint or regret in this need to keep ourselves steamed up about our responsibilities. To the contrary, it is part of our pride that we can rise to any real challenge. This is the way of men who love liberty.

Turning now to the problems of national security. In keeping the shield of our Republic strong and high we are faced with a task that is like washing the dishes or mowing the lawn. No matter how well we have done the job, it is a job that never stays finished for very long.

We must never forget that our national security today involves a great many complex factors. It rests on far more than the maintenance of adequate Armed Forces—vital though they are. Political, economic, and diplomatic activities constitute a major part of our defense arsenal. Because these activities sometimes seem less directly related to national security, we tend to underestimate their importance. But we can afford to do so only at our grave peril.

Consider how the Communists view the nature of today's struggle. This is what Mr. Khrushchev said:

"We boldly challenge the capitalist world. Let us compete to see who can reach the highest level of productive forces, who will produce more per capita, who will ensure the highest material and cultural standard of living for the people, where are the best opportunities created for the development of all the capabilities of man; whichever regime insures the best conditions for the peoples will win. We are convinced that it is the most progressive socialist regime that will win. The future is with our socialist system. Capitalism is at its ebb, heading for collapse. This does not mean that it is already lying down with its legs stretched out; much work has yet to be done to bring it to such a state but this is inevitable, just as death inevitably comes to a living organism."

This Soviet challenge is reflected in the vast ruble offensive it has undertaken during the past 3 or 4 years. Its activities on the economic front constitute a sort of sneak end-run play that could penetrate where tanks and ballistic missiles would not succeed. Since 1954 the Soviet bloc has made available $2 billion in aid to the underdeveloped countries. During the same period it has double its trade with these have-not countries.

This is one field in which the United States is especially well equipped to meet the So-

viet challenge. Long before the Soviets became interested in these matters, the United States was taking steps to help strengthen freedom in many parts of the world. We have done this through our mutual security programs. Today we are moving to strengthen these programs to make them more effective in meeting this Soviet economic offensive. With bipartisan congressional support, we hope there will emerge during the coming year a new look and increased vigor in our foreign economic policies.

There have already been several indications of increased activity in this field. For example, we have increased the lending authority of the Export-Import Bank by $2 billion. We have taken the initiative to increase the lending authority of the World Bank. We have expressed our willingness to participate in regional economic development institutions in Latin America and the Middle East. And finally, we are considering the possibility of increasing the lending authority of our own Development Loan Fund.

All of these activities are, as I have emphasized, directly related to strengthening our national security.

In Geneva today two conferences are being held which bear directly on another vital matter of national security. These are the talks on suspension of nuclear tests and on the question of surprise attack. Both are part of the broader problem of disarmament. Let me say a brief word about this complex subject.

In the first place, the word "disarmament" is somewhat of a misnomer. What we are really talking about is not disarmament in the literal sense, but rather a limitation of armaments so as to reduce the danger of war. And, of course, closely related to this objective is the problem of minimizing the dangers of surprise attack.

Now, these matters have been under consideration in the United Nations for several years. Progress has been at a snail's pace. This is due to the intransigent position taken by the Soviet Union when it comes to the question of effective inspection and control of any disarmament agreement. For some time now they have engaged in a "ban the bomb" campaign. They have been all too willing to make paper promises. Until more than paper promises are in sight, no really effective arms limitation can take place. For, to agree to a mere paper pledge would give the Soviets a serious toe hold on our security. Despite these obstacles, we will continue to persevere in our efforts for a meaningful agreement. The stakes are high and the need for effective arms limitation is real. If we continue to be persistent and determined, the day may yet come when the Soviets will see the logic of our view.

Now I would like to conclude my remarks with this observation. I have pointed to the parallel between two noble causes—the cause of the Disabled American Veterans and the larger cause of our national security. Members of the DAV have set for us a high standard, as a guide for the exercise of vigilance in guarding our liberties.

All Americans are indebted to them for their wartime sacrifices. Nevertheless, you have an enviable opportunity to do battle again—but this time with words and actions rather than weapons of war.

The Disabled American Veterans have the prestige and respect which can make them a potent force in keeping our guard up as a nation. You are an organization with proven political know-how. You can be a powerful force for bolstering our national strength for what is likely to be a long drawnout contest with the Soviet world. We need perseverance. We need dedication. We need courage. All of those qualities you possess in abundance. Under the distinguished leadership of your new national commander, I know the American people can look to the Disabled American Veterans to set an example of vigilance and perseverance which today, as never before, is indeed the price of liberty.

Free Kosher Kitchen Banquet

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article about the annual dinner of the Free Kosher Kitchen located in my district. This humanitarian effort is directed by my good friend Joe Pearson. The article was published in the Williamsburg News, a weekly newspaper, and reads as follows:

ABOUT IMPORTANT PEOPLE

(By Harvey Rosenfeld)

If we would compare the history of this year's Free Kosher Kitchen banquet—its preparations and occurrence—with last year's, we would find distinctive variations between the two. We would discover that the events preceding the banquets differ somewhat; and even the celebrities attending the affairs were not the same. Yet, the consequences will be the same. Poor people will again be contented, the unfortunate ones will once more be contented.

A few days before the banquet, we revisited "Big Joe's Happiness Exchange Program" on WABC radio in an attempt to aid the cause for the free kitchen. The previous year, we interviewed "Big Joe" on WMGM. But this time, he was on vacation—a very deserved one, indeed. Charity does not take vacations, however. His lovely sister-in-law, Julie Mitchell, filled in for him—ready to talk and assist. Along with us was Ira Pearson, whose father, Joe, directs the humanistic work for the kitchen, located at 228 South First Street. He was there doing his share, too.

Julie called the charitable work that she was performing on the happiness exchange, fun. The former social science schoolteacher said that it was thrilling to see a person in despair leave our program completely changed. The change from sadness to happiness is a most gratifying one to observe. And, to work on behalf of the kitchen was no different.

At the banquet this year there were new faces. But many of the kitchen's old guard returned. There were some of the regular guests, who for personal reasons, were not able to be in attendance. But the poor people will be eating again, as they did last year.

The dais and tables were once more filled with the elite of communal and civic life. Political names and the people's elected officers and delegates were there to guarantee that the food baskets will once again be carried away by the needy. These profiles included: State Senator Harry Gittleson; Edward Lentol, neighborhood assemblyman; comptroller of the State of New York, Col. Arthur Levitt, and his worthy assistant, William B. Volet. In this bracket there were the judges all pronouncing praise on the dedicated institution. In this celebrated clique there were: Judge John MacCrate, chief judge of the appellate division, now in retirement, and his former secretary, Benjamin Groberg; Judges Flagg, Williams, and McLaughlin of the municipal courts; and Judges Marasco and Blangiardo, other vital organs of our judicial systems.

When the stentorian voice of Master of Ceremonies Ira Pearson introduced the personages of the medical world to the audience, one senses the fact that these men will be working with Joe Pearson to help the mentally depressed, and to secure an exit for those who do not belong in those institutions. The list of the doctors include: Charles Buckman, Nathan Beckenstein, and John Bianchi.

Businessmen and members of other dignified vocations were there to express their thanks to Joe Pearson, a man who has solved intricate welfare problems. The Dropkins of the welfare department; Beldner's of Greater New York Mutual; Sylvester P. Eisemann, manager of the Big Four Insurance Co.; a table of the New York League of Locality Mayors; Berko's, of the chocolate sirup company bearing their name; Ringleheim's of the Marcy Do-Nut & Culler Co.; Philip H. Elice, furniture store proprietor; Francis J. Greco, and Sidney Katz, lawyers; Rabbi Stern, Murray Ohl, and the Flintenstein's, and Charles Psaty, who with his Packard delivers food for the poor—all these signify the masses who were ready to guarantee that the poor will once again eat this year.

Even the entertainment was varied from that of the previous year. Lou Stimel and his men returned to play tunes for dancing; Elvira Helal was there with her soprano voice. But Rita Elice, pretty recording and TV personality was missed; as were Sid Katz' jokes. Yet, the unfortunate will still be able to sing their anthem of thanks.

The banquet was once again, this year, in honor of Congressman VICTOR L. ANFUSO and "Big Joe" Rosenfield, Jr. The former's speech began with an anecdote, as it did last year. But this time it was in a humorous vein. It was about the internal revenue man who ascended to heaven before the rabbi because he had scared more hell out of people on earth than anyone else. However, before leaving for Washington and his Space and Preparedness Committee, he reiterated last year's theme: "Joe Pearson" serves the people all year long.

"Big Joe's" message to the throng differed a little from the previous year. On one count it was longer, and secondly, more personal. But the motif was the same—"If Joe Pearson spent the time he donates to charity on a personal business, he would be a wealthy man."

The Free Kosher Kitchen banquets of 1958 and 1959 show recognizable differences. Yet, to the needy and unfortunate they remain the same.

Progress of Wyoming Historical and Geological Society of Luzerne County, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of February 12, 1959:

HISTORICAL SOCIETY PROGRESS

The progress, reported at the annual meeting of the Wyoming Historical and Geological Society at the annual meeting last night as it completed the first year of the second century of its existence, was most gratifying.

During 1958, the society added 76 names to its membership roll. Through the generosity of Mrs. Frank G. Darte, it acquired Swetland House, to be converted into a public museum. Exhibits and lectures it sponsored attracted thousands of local residents, including many adolescents. This constitutes a substantial contribution to local culture.

Obviously, the society has taken a new lease on life with the completion of the first 100 years. The new interest in its affairs, as the expanding membership and program of activities indicates, is a happy omen for the future. Its possibilities are tremendous.

Formed to commemorate the 50th anniversary of the burning of anthracite in a grate, the society has extended into many fields and with stimulating results. With colleges, high schools, and organizations like the Boy Scouts taking advantage of its facilities, there is added reason for public support and encouragement. To be affiliated with a group, motivated by the high idealism and practical service of the historical society, should be regarded as a high privilege.

Our REA Program Under the Eisenhower Administration

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. SHORT. Mr. Speaker, last week the national REA convention was held here in Washington, and many of us who are interested in, and sympathetic toward, the REA program had an opportunity to visit with friends from our home States who were here for the convention. These people justifiably feel a great deal of pride in this program which they have helped to initiate in their respective areas and have guided to successful maturity as a stable cooperative enterprise bringing electricity to rural areas.

Having lived beyond the reach of an electric powerline all my life, until REA brought electricity to our ranch 7 years ago, no one has a greater appreciation of what REA has meant to people living in the country. As I have said many times, no one in his right mind has any desire to see the REA program anything but stable and successful in the years to come.

For some reason, there are some folks who would try to make a political football out of REA. For some reason that I can only interpret as a means of attempting to bring discredit to our present administration, the inference has been made repeatedly that the REA program, under the Eisenhower administration, has been curtailed, and restricted in its operation. I believe the record of REA expansion during the past 6 years speaks for itself. I do not believe that that record indicates that anything but friendly, constructive direction and administration has been given to the program.

The remarks of Secretary of Agriculture Ezra Taft Benson at a press conference on February 12, 1958, outline clearly the real progress that the REA program has made during the Eisenhower administration.

Under unanimous consent, Mr. Speaker, I insert in the Appendix of the RECORD the transcript of these remarks of Secretary Benson as follows:

TRANSCRIPT OF REMARKS BY SECRETARY OF AGRICULTURE BENSON ON THE REA PROGRAMS AT PRESS CONFERENCE, FEBRUARY 12, 1959

Thousands of the directors and managers of our rural electric co-ops financed by REA end their Washington meeting today. I would like to salute this fine group. We all know they have built well.

Because there have been some efforts through demagoguery and other means to mislead and distort the facts, I would like to set the record straight on a few points this morning.

Some of the so-called friends of REA claim, first, that the Secretary has taken away the authority of the Administrator to approve loans. This is untrue.

Second, they say this administration is destroying REA. This is absolutely false. The record speaks for itself—and let me give you just one or two items from the record.

First, the greatest progress ever made in REA has been made during the last 6 years; loans of $1.2 billion have been made, compared to $2.6 billion loaned in the previous 17½ years.

Annual power sales are approximately 22 billion kilowatt-hours, double the sales made in 1952.

Third, borrowers who are delinquent on loans have dropped from 45 to 6 in the last 6 years; and these co-op organizations today are $139 million ahead of payments. The records of the past have not even approached this splendid record of repayment.

And fourth, the net worth of cooperative borrowers has more than tripled in the last 6 years.

Now, I think we should keep in mind that REA and the REA program, and the area served, have changed somewhat in recent years. Today over 95 percent of the farms and ranches of America have electric service; 75 percent of the new customers being added are industrial and nonfarmer residential consumers, and one-half of the total power sales by the REA system today is for nonfarmer use.

In other words, REA has come of age. It has rendered a great service; it is rendering great service now. But it has come of age. In the interest of fairness to all and in the interest of its own future financial strength, we feel that the system should first pay interest rates at least equal to the cost of money to the Government.

This would eliminate one of the criticisms of REA and a criticism that will increase unless a change is made.

And second, the system should start moving forward to obtain supplemental financing from private sources.

Now, such actions I feel, and my associates feel, would be in line with tradition and with the sound policies followed by the Farm Credit Administration which started out rather heavily helped by the Government and is gradually paying off the Government capital and getting its loan rates on a realistic basis. Such a policy will reduce unnecessary Government participation and thereby protect and strengthen the free enterprise system of which these electric and telephone cooperatives are a vital part. And so this administration will continue to support and strengthen the services of REA to our farmers.

We will just as vigorously oppose efforts to socialize electric power or any other segment of our economy, including agriculture. As one who has spent most of his life promoting farmer cooperatives, I strongly feel that these recommendations, these suggestions will further strengthen the REA system.

FACTS OF REA GROWTH 1953–59 (DISTRIBUTED AT SECRETARY BENSON'S PRESS CONFERENCE, FEBRUARY 12, 1959)

1. Loans of about $1.2 billion have been made. This is almost one-third of the $3.8 billion approved since the start of the program.

2. Some 800,000 new consumers and 180,000 miles of line have been added to REA systems, to the point where almost 96 percent of our farms have electricity, more than half of which are served by REA borrowers.

3. Power sales on REA systems have reached an estimated 21.7 billion kilowatt-hours, or double the sales in 1952.

4. Loans were approved to provide facilities for 1,116,000 kilowatts of generating capacity, almost double the total provided in the previous 17½ years.

5. The number of electrification borrowers behind in their loan payments dropped from 45 to 6 out of a total of nearly 1,000. (The systems have made payments on principal and interest in excess of $1 billion. At year-end the systems were ahead on their payments in the amounts of $139 million.)

6. The net worth of electrification borrowers has more than tripled, increasing from $161 million to $512 million. (On January 1, 1959, net worth was about 16.4 percent of total assets.)

There are two other facts which indicate a significant trend in the growth of the REA systems:

1. Three out of every four new customers being added to the systems are industrial and nonfarm residential consumers.

2. About one-half of total power sales by the REA system is now being made to industrial and nonfarm residential consumers.

Airline Safety Before Frills

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the February 10 issue of the Rockford Register, Republic, Rockford, Ill., entitled "Airline Safety Before Frills":

AIRLINE SAFETY BEFORE FRILLS

President Eisenhower and Gen. Elwood Quesada, Administrator of the Federal Aviation Agency, take the proper stand that Federal appropriations for civil airports should be earmarked for safety features—runways, control towers, taxiways, and improved ground landing-control devices. Need for this emphasis was pointed up by last week's Electra crash in New York City; the plane was headed for a runway lacking a safety beam to guide its rate of descent.

Yet, Senate Democrats, continuing their hasty rush to pass spending bills, last week approved a $465 million 4-year program of Federal airport grants that would provide funds for terminal buildings, waiting rooms, and other passenger comforts and conveniences.

The President noted that the Federal Government has not built railroad or bus depots, and General Quesada said that facilities "beyond the gate" having nothing to do with aviation safety should be the responsibility of State or local authorities and the airlines themselves. In this respect, it will be noted that future improvements to Chicago's O'Hare field will be financed in part by landing fees charged the airlines.

President Eisenhower, who vetoed an airport-aid bill last year and suggested it was time for the Government to get out of the business of subsidizing airfields, included $50 million a year for 4 years in the 1960 fiscal budget for facilities falling strictly in the safety category. Democrats, however, agreed only to trim the original $565 million bill by $100 million—and then at the urging of their Senate leader, LYNDON JOHNSON.

If the airport bill clears Congress in its present form, it will face the distinct possibility of a presidential veto. The inclusion of funds for nonsafety features is an old trick of congressional spenders; they know that the President lacks powers to disapprove individual items in appropriation bills, so they tack pork-barrel provisions onto measures calling for desirable projects.

Perhaps the House, which last year had a better economy record than the Senate, will trim the fat from the upper Chamber's bill. Taxpayers ought to tell their Congressmen to vote for greater aviation safety, but not for plush airport terminal facilities.

Washington's Dream of Great Port Here Near Realization

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 11, 1959

Mr. BROYHILL. Mr. Speaker, it is with a goodly measure of pride that I take this opportunity to report on a wonderful civic endeavor undertaken by a group of public-spirited citizens of Alexandria, Va., and the Washington Metropolitan area.

I am inserting in the RECORD a fine article written by Mr. Raymond L. Tolbert, president of the Potomac River Port Association, entitled "Washington's Dream of Great Port Here Near Realization." This article is a summary of a larger item which appeared in the Alexandria Gazette, the oldest daily newspaper of the United States on the occasion of its 175th anniversary edition, February 5, 1959:

WASHINGTON'S DREAM OF GREAT PORT HERE NEAR REALIZATION—METROPOLITAN WASHINGTON NEEDS SEAPORTS—POTOMAC RIVER PORT ASSOCIATION SEEKS WATERFRONT DEVELOPMENT

In 1789 Virginia ceded to the Federal Government a portion of its territory, part of which was the waterfront of Alexandria, to help make a 10-mile square area for the Capital of the United States, and it was of this area that George Washington said, "It is at the head of navigable water reaching to the ocean, so that large vessels could come from all ports of the world. It is likewise on the coastal road from north to south, so the transportation of commodities and persons between these regions would be by way of the Capital City. Here bulk cargoes would be broken up for shipment to the interior. Here great markets and exchanges would be established. The National Capital would become the center of trade and industry, as well as government. It would be the economic capital of the Nation as well as political capital."

GREATEST NATURAL ASSET

It has been 160 years since George Washington gave these reasons for selection of the Capital site—but, at long last, his vision may be close to realization for the pressures of economic growth and an expanding population have made the people of this community conscious of the fact that their greatest natural asset lies decaying on their waterfront. What once was a busy port, a trading post to the world, has, like Rip van Winkle, let time and events pass it by. But the time for sleeping has passed and, belated through it may be, our citizens have awakened to the need for development of the Potomac River channel and for resurgence of their cities as thriving ports.

It is evident that the Alexandria of the early colonial days was conscious of its position in the world of commerce for the seal of the city represents a merchant's scale over a square-rigged merchant ship. Alexandria did, in fact, owe its early prosperity to waterborne commerce. From the back country great caravans of wagons rolled into the city, laden with tobacco, wheat and other farm products for export and returned to their plantations with glass, crockery, and fine merchandise from overseas. And as an evidence of their eagerness to make Alexandria a more thriving port, the good citizens of the community approved a plan which in 1776 resulted in cutting away the hilltop, upon which the early city was founded, to enable carts to traverse a gentler incline to reach the warehouses and wharves at the river's edge.

SIXTH IN NATION

After the Revolution, Alexandria's commerce expanded and flourished. It was common to see many European ships, and some from other parts of the world, alongside the docks, unloading their native goods, or loading the produce of this area into their holds. Alexandria at one time ranked sixth among the ports of the young Nation, in tonnage handled at its docks.

However, the early years of the 19th century saw the decline of Alexandria as an important port. President Madison's embargo on American shipping, imposed in 1809 in an atempt to stop seizure of our ships by the French and British, brought commerce to a standstill, with idle ships and crews lying in port resulting in heavy loss to ship owners. In 1814, as a prelude to their burning of public buildings in Washington, the British took brief possession of Alexandria, captured most of hte ships in the port and seized the contents of the warehouses there. This was another reverse to the merchants and traders whose ships and merchandise were lost. Not content with these tribulations, fate dealt an additional blow in 1827 with a holocaust of fire leveled a large part of the city destroying most of the business area and causing a serious reduction in commercial activity. The coming of the steam-driven ship marked the end of large-scale commerce in Alexandria and in 1860 foreign trade had dwindled to a paltry value of $1,750,000 from a high point of almost $3,750,000 in earlier years. Alexandria's loss of trade, occasioned by the advent of the deep-draft steamship, whose owners feared damage to their vessels in the shallow reaches of the Potomac, was further aggravated by the War Between the States when the Potomac River was the boundary between those warring factions.

SPORADIC EFFORTS MADE

The century that has passed since 1859 has seen sporadic efforts at improvement of the river channels to recapture, for Washington and Alexandria, some measure of their former status as shipping centers. The efforts of local citizens and the action of Congress, however, failed to keep pace with developments in ship construction and though the Potomac River channel was deepened and widened it was, and is, able to accommodate only the smallest seagoing freighters. The last serious effort to improve the Potomac River for commerce started at the turn of the century when, in 1899, the Congress, even then impressed by the necessity for development of the resources of this area, authorized and appropriated funds to deepen the channel to 24 feet, and widen it to 200 feet along the 108 miles from Washington to the Chesapeake entrance. Unfortunately for the metropolitan area as a port, the drawing boards of shipbuilders were busy with design of bigger and better ships—24 feet of water in the Potomac River channel was not enough.

METROPOLITAN GROWTH

While the last hundred years has seen little improvement in the river that passes Alexandria's front door, the communities that once bordered it as a series of sprawling, and sometimes brawling, towns have become a metropolitan area, which includes Washington, D.C., Fairfax, Arlington, in Virginia, and Montgomery County and Prince Georges County in Maryland, and the independent cities of Alexandria and Falls Church, Va. The metropolitan area of Washington has led the 10 largest metropolitan areas in the United States in population growth. Alexandria has shared prominently in this growth, having increased its population from 24,149 in 1930 to 87,000 in 1957 with an estimated population of 105,000 by 1965.

Population is just you and me and many other people. But you and I and these other people must have, for living and for survival, many things—schools and hospitals, streets and highways, police and fire protection, business and industry, work and recreation. These things don't just pop up like magic produced from a magician's tophat. They require revenue for support and careful planning for orderly development. Without one, vital services could not be obtained, without the other a chaotic situation would result.

The communities that make up the metropolitan area are all experiencing growing pains. Each has its problem of land utilization, of economic development, of transportation, of all the things that make up life in an urban setting. Concerned by the impact of these problems in the Washington area a Joint Committee on Washington Metropolitan Problems, 85th Congress, 2d session held exhaustive hearings during 1958 to review what is being done by local governments and private organizations of the area to identify their growth problems and, where possible, to solve them. These hearings described population growing by leaps and bounds, with a metropolitan area population now totaling 2 million to become nearly 3,500,000 by 1980. Economic development was pictured which would, by 1970, completely close the corridor between Baltimore and Washington and would have expanded into the area south of Alexandria as far as Woodbridge, Va. The necessity for development of port facilities along the Potomac River, not alone at Alexandria and Washington, but along both shores was expounded as being vital to the future of the metropolitan area. Testimony was given by eminent economists, experts in transportation, engineers of distinction in the field of water use, all of whom emphasized the need to take action now to meet the problems of tomorrow. The committee will make its final report to Congress at this present session and should propose measures which will promote the economic stability of the metropolitan area. Alexandrians are confronted by essentially the same problems of growth that plague the rest of the metropolitan area and they are aware that these problems are insoluble without utilization of every available community resource, natural or manufactured. They see the vital necessity for redevelopment of the Potomac River into an avenue of world trade as a partial solution to the economic problems of their city. This dormant giant, drowsing now for a century, would be awakened and made to be a source of financial support as well as of scenic in-

terest. They recognize that the entire metropolitan area would be a beneficiary of a deepened and widened Potomac River channel, particularly in Alexandria.

ALL HAVE INTEREST

Though Alexandria is the logical first site for a deep-water freight terminal, it is evident that the District of Columbia, Maryland, and the rest of northern Virginia have an equal interest in the entire development project and need to be partners in its formulation and progress. The future can only bring additional growth and what is now visualized as an early development of Washington passenger terminal facilities and cargo handling terminals at Alexandria will undoubtedly result in similar, but later, development on the Maryland shore and south along the Virginia side.

The metropolitan area of Washington, particularly Montgomery and Prince Georges Counties in Maryland, and Fairfax County in Virginia, are experiencing a tremendous growth in research and development installations. These installations in turn will lead to the production of new ideas in the future. The development of the ports for this area will stimulate and further the development of light industry in these areas.

With this in mind a series of studies on the economic justification for the development of port facilities on the Potomac River was inaugurated by the city of Alexandria, the Alexandria Chamber of Commerce, and the Washington Board of Trade. The report on the first of these studies was made in April 1956 and, though admittedly limited in scope, was highly favorable.

A year later the Virginia State Ports Authority, after a more exhaustive study which included the metropolitan area and surrounding areas, reaching to parts of Pennsylvania, West Virginia, and Ohio, reported that there is a substantial foreign and intercoastal commerce potential for Potomac River ports, and recommended that everything possible be done to build up Alexandria as a world port.

RECENT STUDY MADE

The most recent study and probably the most important was authorized by the 85th Congress which appropriated $133,000 to the Corps of Engineers of the U.S. Army to conduct: (1) an economic analysis of additional commerce to be developed by a Potomac port development and the extent of transportation savings, and (2) a survey to determine dredging costs. According to Representative JOEL T. BROYHILL the first part of the Corps of Engineers analysis has been completed with a highly favorable report. This report, with its succeeding analysis of dredging costs, will be the basis for further congressional action to appropriate funds for the actual work of widening and deepening the Potomac River Channel.

These surveys have convinced the civic leaders of the community that they must actively support this project; that its fulfillment will bring a vitally needed economic boost to the entire metropolitan area. One of the first steps that they must take to insure its success is development of the master plan outlining construction which will be required to provide a modern and efficient freight terminal facility. This will necessitate a comprehensive survey of the present waterfront facilities and a detailed recommendation on the most suitable utilization of waterfront land, bearing in mind the need to integrate into the master plan access and egress routes which will provide optimum availability of highway and rail transport. One of the many badly needed highway bypasses that Alexandria is considering might be included in this plan as an elevated highway running the length of the waterfront serving the port activity and through traffic as well. The master plan, while addressing itself primarily to transit and storage facilities essential to an efficient port operation must give consideration to other municipal needs relating to recreational areas, sailing marinas and small-boat facilities. Our planners would need, of course, to establish a time schedule to provide for orderly progression and enable construction to remain an even distance ahead of requirements, obviously it would be uneconomical to build a capacity into either Alexandria or Washington's port facilities which would not be used until long after completion. Consideration should be given to the various possibilities of funding the development and of its operation. Operation of a busy port is a highly competitive and specialized business and selection of the form of port administration most suitable to our plans should not be long delayed. The benefits of a port will not come to this area without concentrated promotion to secure scheduled service by shipping interests and to convince shippers of the advantages to them in moving their goods through this area. As improvement of the Potomac River Channel advances, this promotion will be an important step in insuring the success of the ports of Alexandria and Washington.

VISUALIZE CARGO PORT

In the absence of formal plans, the Potomac River Port Association visualizes a cargo port, with wharf-type berths paralleling the mile-long waterfront of Alexandria. The port facilities should be capable of handling an annual flow of 3 million tons of cargo which will serve the entire metropolitan marketing area of part of Pennsylvania, Ohio, West Virginia, Virginia, and Maryland, an area that now has a population of over 10 million with a personal income in excess of $16 million. Few cities have going for them the transportation facilities which already exist in the Alexandria area; excellent highways connect with major centers east, south, and west; seven railroads, the Southern, the Richmond, Fredericksburg & Potomac, the Chesapeake & Ohio, the Atlantic Coast Line, the Seaboard Air Line, the Pennsylvania, and the Baltimore & Ohio serve the area. The Potomac Yard is one of the leading freight terminal and classification yards in the Nation. Washington National Airport is one of the most active in the United States and a new airport, now building at Chantilly, Va., not far from Alexandria, will add an even greater capacity for air traffic. With modern port terminal facilities at Alexandria and Washington to accommodate deep draft cargo and passenger ships, this area will be a well-balanced and complete trading center, with transportation readily available by rail, sea, air, and highway.

A POSSIBLE PLAN

It is contemplated that the port development will be fully integrated with other plans affecting both cities. A first step in terminal construction in Alexandria could be utilization of the spoil dredged from the channel to fill behind the bulkhead which will form the wharves, such a procedure will reduce the dredging cost by shortening the distance such material must be transported and will add a considerable usable acreage to the Alexandria waterfront. Storage and transit warehouses will be constructed for nine ship berths, and existing facilities used as far as practicable. A loop highway, connecting with the main arterial highways, will be elevated, running the length of Alexandria's waterfront over the roofs of the transit terminals. Existing rail spurs will be extended to serve all terminal warehouses and loop back into Potomac Yard. A 6-acre open lumber storage area with attendant wharf will be established at the southern extremity of the waterfront. Complete refrigeration services and cold storage facilities will be included in the terminal plans.

What will this revitalized port mean to the area? The terminals for deep draft vessels that are visualized will introduce a vitally needed new source of economic strength into the community. The surveys mentioned earlier have indicated that many millions of dollars could be saved annually to importers and exporters of the metropolitan marketing area by having their goods moved through Alexandria. This saving would be passed on to the consumer in lower prices for goods now received through rail and highway transportation from more distant ports. Passenger traffic through Washington, limited as it has been in the past by the 21-foot channel depth, has proved financially remunerative. With improved terminals and a deeper and wider channel which would accommodate modern cruise ships, Washington could richly support a flourishing and profitable seaborne tourist and cruise business.

MANY BENEFITS SEEN

The 3-year operation of the Yarmouth Castle and the Arosa Star has convinced the business leaders of this profit potential. An increase in the number of industrial plants in Alexandria and its vicinity would result from the increased volume of goods which could be moved to this area by seaborne transportation at reduced freight rates. Experience has shown that direct employment involved in operation of such a port as is planned for Alexandria amounts to over 1,500 men—and, more important, that supporting activity employs three men for every man directly employed by the port. These are direct benefits—savings, employment, payroll. Indirectly, the community will profit in numerous ways. The introduction of new industry, coupled with the activity generated by the movement of goods through the port, will mean a broadening of the economic and tax base of the community. The next 7 years will see an added 400,000 residents in this metropolitan area and the employment and civic services which will be required to support them will be in part found in port activity and the revenues generated there. An active port will not be a panacea for all the growing pains of Alexandria, but it will, as ports have in other areas, contribute in large measure to their cure. There are, unfortunately, still obstacles which must be overcome before the community can be assured of the port development so urgently required. But similar obstacles have been overcome by the enthusiasm and support of citizens of other communities who sought deep water shipping which was denied to them by the lack of adequate channels.

WORK TO BE DONE

Here, in the metropolitan area, while the Corps of Engineers has completed the first phase of their analysis of the value of Potomac River development, the second phase must be expedited. To obtain congressional authorization and appropriations to dredge the channel, the cost of dredging must be determined to finally demonstrate the economic justification for the project. This can only be done through the Corps of Engineers and each one of us must do all in his power to insure prompt action in this field. Improvement of the Potomac River channel and development of its port facilities is a project which will require the coordinated action of two States, the District of Columbia, and the Federal Government.

ASSOCIATION AT WORK

In order to insure that action is not delayed, and to maintain the interest and effort needed to insure the development of Potomac River ports, leading citizens, not only of Alexandria but of Washington and Maryland as well, have formed the Potomac River Port Association, a nonprofit public-service corporation, to spearhead the movement. An indication of the caliber of the men devoting their time and energy to this cause is shown by a listing of the associa-

tion's board of directors, which reads like a Who's Who of the metropolitan area. Their purpose is to collect and prepare data regarding the improvement, development, and uses of the rivers, harbors, and waterways of the metropolitan area, to promote and develop ports in the Alexandria-Washington area and to educate the people of the community to the importance of the development as well as inform them of the benefits which will result from its fulfillment. The association's program includes research into products which can most economically be brought into and shipped from the metropolitan area by water and publication of the results of that research to shippers and to shipowners. Through all possible means of communication the association is spreading information regarding benefits of port development, and its vital necessity to the future of the community, to those whom it would serve. The association is supported in its work by the voluntary memberships of businesses, organizations, and individuals of the metropolitan area who are in sympathy with its objective. If concentration of effort will bring Potomac River improvement to quicker realization, this association will provide the focus of interest and activity necessary to the job.

Lithuanian Independence

SPEECH
OF
HON. STANLEY A. PROKOP
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. PROKOP. Mr. Speaker, I am happy indeed to join in this observance of the 41st anniversary of the independence of Lithuania. This small nation, whose sons and daughters have contributed so much to the building of America—is, of course, not independent and free today.

Lithuania is a race of character, courage, and culture.

America is indeed grateful for the contributions that men and women of Lithuanian blood have made to our common strength.

They have a faith that the Soviets cannot destroy.

They have courage that the Soviets can never vanquish.

Lithuania has a character that will survive when all the fraud and force of godless tyrants will have vanished from the face of the earth.

This annual commemoration of her independence which was gained more than 41 years ago serves a most useful purpose. It is a reminder of the tragic fate of Lithuania and other countries that were formerly free but today are fettered by the chains of Communist slavery.

But this occasion is far more than a time for tribulation and sorrow over the fate of Lithuania and these other countries which are existing in the darkness of the Iron Curtain. Let us make it a time of rededication in the eternal fight for freedom and independence.

This observance here and throughout other lands where people of Lithuanian blood are living today will be heard behind the Iron Curtain. It will clearly demonstrate to the people of Lithuania that they are not forgotten, that their struggles are the struggles of the freedom-loving world.

It will help to keep bright in their minds and hearts the flames of hope for the day of liberation.

Our own Nation must also make it abundantly clear to all other nations that we stand for liberation from tyranny and oppression and for self-determination and freedom of choice for all peoples to ordain and to establish their own form of government under democratic processes.

I, therefore, extend congratulations to the Lithuanian people on this anniversary of their independence day. Let us all join them in more than words in their efforts to unloose the shackles of tyrants and reestablish their independence.

All hail to Lithuania on the anniversary of its 41st birthday. May her courageous people soon regain their precious liberties.

Time To End Special Favors

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared under date of February 16, in the Rockford Register-Republic, Rockford, Ill., entitled "Time To End Special Favors":

TIME TO END SPECIAL FAVORS

President Eisenhower and Secretary of Agriculture Benson last week answered effectively the false charges of the long-entrenched rural electric cooperative pressure group that the administration is trying to wreck its ambitious program.

Both the President and Benson pointed out the true facts—that the administration in the last 6 years gave out rural electrification loans totaling $1.2 billion, as compared with $3.8 billion in loans for the preceding 17 years of REA's existence; that about half the total power sales of REA cooperatives are now being made to industrial and nonfarm residential consumers; and that at the end of 1958, the cooperatives were $139 million ahead in principal and interest payments on loans.

The President told members of the National Rural Electric Cooperative association, who met in Washington, that they should pay their own way. The Government must live within its means or face inflation and cannot continue to pass out subsidies to favored groups.

Yet the cooperative association, showing hostility to any proposals to take away some of its favorable tax treatment and low-rate-interest privilege, wants to keep on moving into areas served by taxpaying, Government-regulated private power companies. Now that rural electric cooperatives have just about blanketed the areas for which they were established, they are aiming at selling power to suburban residential and industrial consumers.

The REA lobby has succeeded in persuading House Speaker SAM RAYBURN to join in protesting the President's request to increase the interest rate charged by the Government to the cooperatives from 2 to about 4 percent. The 2-percent rate has been in effect since 1935, and in those 23 years the Federal Treasury has loaned REA some $3 billion.

There is no valid reason why a successful enterprise should continue to enjoy what amounts to an outright Government subsidy. The U.S. Treasury loans money to REA at 2 percent, but must pay interest as high as 4 percent to borrow money from the rest of the taxpaying public.

If Speaker RAYBURN believes that the American public should continue to subsidize the electric cooperatives, he should be consistent and vote to restrict REA sales of power to industries and residential users in villages and suburban areas, because electric cooperatives were not set up on that basis.

Some electric cooperatives have devised a way of relieving their shareholders of Federal income tax payments on earnings; the cooperatives issue reports to their shareholders on earnings and amounts invested, but Federal courts have held that these certificates are not taxable as long as earnings are not taken out in cash.

Propaganda activities of the rural cooperative association are also exempt from taxation, a status not enjoyed by private power companies which band togther in public-information advertising campaigns.

Need for Improved Postal Service in Maine

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. OLIVER. Mr. Speaker, a very definite need has arisen in the State of Maine for improved postal service. The discontinuance of railway passenger service in many parts of the State has caused a serious deficiency in the system of postal transportation.

The need of better mail transportation has been evident in my State. For example, when a letter is sent from Rumford to Mexico, a distance of 2 miles, it must first be directed to the Portland terminal and back again, a round-trip distance of approximately 150 miles. Needless to say, the delay which this roundabout method causes is inexcusable. The people of Maine expect and deserve good postal service, which they are not now getting.

A personal example of this slow service is a letter which I sent airmail to Rumford from Washington, D. C. The letter took 5 days to reach its destination, although the plane trip from Washington to Portland, Maine, takes only 3 hours. It was, therefore, a 4-day trip from Portland to Rumford—75 miles.

Growing use is being made in some areas of the Highway Post Office Service—H.P.O.—a method of filling the needs caused by the disbandment of the railroads. Besides providing for better service, the Highway Post Office would also be less expensive to maintain. For these two reasons, I advocate that the Post Office Department extend the use of the H.P.O.

Following is an article, compiled by Robert W. Reed, secretary of the Portland branch of the National Postal Transport Association, which should give a further picture of the problem of mail transportation as it exists in Maine:

THE RISE AND DECLINE OF EN ROUTE DISTRIBUTION OF MAIL IN MAINE

From the time of the establishment of the first post route in what is now the State of Maine, a route from Portsmouth to Falmouth (now Portland), about 1760, until the time of the Civil War, distribution, or sorting of mail en route was unheard of or untried on any practical scale.

The Congress of the United States, on July 7, 1838, provided that every railroad then in operation or that should be thereafter completed should be a post route and the Postmaster General "* * * shall cause the mail to be transported thereon * * *". The first railroad to start operation was the Portland, Saco & Portsmouth Railroad on December 22, 1842. The report of the postmaster for the year ending June 30, 1843, shows service, Portland to Portsmouth, rail, 50 miles, 12 weekly trips, $5,000.

The route agent was the first departure from the custom of turning the mail over to the carrier for transportation. He was an employee of the Post Office Department placed on trains to receive and put off pouches along the route and have custody of the pouches in his possession. People soon came into the habit of handing loose letters to him at the train, when there was not time to mail them in the post office. These he carried with him to the post office at the end of his route.

Where the first experiment in distribution en route was tried, we do not now know, but one day a route agent took with him the key to unlock the pouches and a device to cancel stamps. He opened the necessary pouches and inserted the letters he had received on the train. From that, the next logical step was to take the entire contents of the smaller pouches received and consolidate them with the others. Thus mail for other offices along the line did not have to go to a post office at the end of the route for sorting and be returned the next day. This was about as far as the route agent could go without special equipment being built into the car.

In 1864, under the administration of Postmaster General Blair, a few cars were so equipped and en route distribution as we know it came into being. The savings in time and equipment, and the improved service were so obvious that the new Railway Mail Service spread very rapidly. It is sometimes hard to distinguish from the records that remain whether service at a certain time was by route agent or true en route distribution, but between 1875 and 1879 there seems to have been about 15 railway runs in Maine on which mail was actually distributed. Some of these overlapped to a degree.

Between 1875 and 1905 there are known to have been 28 railway post office runs in operation in Maine. Some authorities show a far greater number than this, but in almost all cases the extra ones will be found to have operated along a part of a longer line. In addition to these, several were operated in electric cars and at least two in summer operated in steamboats along the Maine coast serving the isolated points and islands.

At about the time of the First World War the railroads began curtailing service. This was resumed on a far larger scale after World War II and is now approaching its ultimate conclusion. The Post Office Department has sometimes gone ahead on its own, however, and discontinued railway post office service where trains were still operating.

Thus at the present time we find only seven railway post office runs serving the State of Maine and one of these is now under petition of the railroad for abandonment of service. Furthermore, in nearly every instance, there are far fewer trains per day left on the remaining lines. In other parts of the country highway post offices (HPO's), nicknamed by employees "hypos," have been used successfully, but as yet there are none in Maine. These bus-like vehicles can exchange mail at the post office door, thus saving mail messenger service to and from railroad stations. They are generally cheaper to operate than railway post offices, and since they include some of the functions of star route service, they provide much better mail service to the small towns than can be had by star routes.

Every curtailment in en route distribution brings the State back nearer to the times of 1840 when all mail was hauled to the end of the route to be distributed and either sent back or onward the next day. The only significant difference now is the use of trucks instead of a coach and four.

Policies of Washington Blamed for Missile Lag

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. William Hines, Washington Evening Star science writer, which appeared in that paper on Tuesday, February 17, 1959:

POLICIES OF WASHINGTON BLAMED FOR MISSILE LAG

(By William Hines)

A swing through the industrial and military complex we have labeled "Missileland" provides convincing evidence that the scientists, production men, and military officers in the field are doing a superlative job. But at the end of such a trip, there is still a nagging question:

Why are we where we are in missilery—in second place to the Russians?

The first, obvious answer is that we got started later. We waited for the feasibility of a hydrogen bomb to be proved and the Russians didn't, and consequently we are several years behind.

This explains the whole thing away nicely, although it begs the question of the wisdom of our course. But it does not explain the fact that while research, development, production and operating efficiency are high in Missileland, morale is sagging and perplexity is king.

Nor does it explain the widespread feeling out there that Washington is a sort of big brother—always watching, but not wanting to be bothered with a lot of troublesome questions.

OFF AGAIN, ON AGAIN

It leaves unanswered, too, questions about off-again, on-again production schedules; inaccurate public statements by officials that cannot be refuted by officials in the field because of security wraps; contradictory statements of objectives; tangled lines of authority; information policies that swing overnight from arrant press agentry to airtight security.

Too often, the observer feels, distraught missilemen look to Washington for guidance and find the paths of responsible officials crisscrossing like contrails in the sky.

Examples:

The Army is told to acquire some more for land for its White Sands range in the New Mexico desert so the antimissile missile, Nike-Zeus, can be tested there. But now there is doubt whether the Zeus will ever be built.

The Douglas and Chrysler people are ordered to open their Thor and Jupiter assembly lines to press tours at virtually the same moment as Thors and Jupiters are becoming passé

Project officers on the solid-fueled Minuteman ICBM forge doggedly ahead, but cannot be sure that Minuteman will ever get built—much less off the ground.

Congress, the usual thorn in the side of Government activities in the field is less of a vexation than in most cases. There are probably two reasons for this.

First, the missile business is spread rather evenly around the country and a lot of money is being spent. Inclinations to rock the boat are absent.

Second, with the exception of a handful of legislators, Congress doesn't comprehend the complexities of the missile age.

Occasional summonses to Washington to appear before this committee or that committee are regarded by military and industrial leaders in missileland as minor annoyances, rather than as outright harrassment.

INFORMATION POLICIES HIT

There are strong complaints, however, about information policies. Often the fire centers on Assistant Defense Secretary Murray Snyder, head of Pentagon public relations.

"Murray seems to regard public information as a proprietary commodity," one west coast industrialist commented. "He says this or that can't be given out because of security, so we point out that the information has already been published. 'All right,' he says, 'its policy' not to put it out. And how do we answer that?"

It is clear to the visitor to missileland that Mr. Snyder's role there is an important one. Constantly the visitor runs into evidences of a restraining hand on information that seems to go beyond the requirements of security. There is scarcely a plant but has things that can be shown, described in detail, even sketched—but not photographed because the timing isn't right. Hardly an industry publicist but has a drawer full of photographs he can show, but cannot release.

The restrictions are less oppressive than they might be, however, because newsmen have little trouble, given adequate contacts, in getting the information they need from services beyond Pentagon control.

STUNTS CRITICIZED

The other side of the information coin is the use of strategic weapons for publicity stunts. The sober second thought of 2 months since the orbiting of the talking Atlas has left scant doubt that the shot was a stunt, however good, with only secondary scientific advantages. Numerous industrial, scientific, and military men expressed the opinion to this writer that shots which could not stand up on their scientific value alone should not be undertaken.

"At a time when the American public should be aware of its defense and space potential, it is being confused," one scientist prominent in industry said. "Whether the confusion is deliberate or accidental, I am in no position to know."

NUMEROUS AGENCIES

The men in the field attribute a good part of the confusion surrounding the missile program to the complicated governmental setup which finds a sextet of agencies—the civilian National Aeronautics and Space Agency and the Pentagon's Defense Research and Engineering Office, its Advanced Research Projects Agency and the Army, Navy, and

Air Force—all figuring in the space and missiles programs.

The ire and perplexity of industrialists and military men was more than mirrored recently in that of Senate Majority Leader JOHNSON who heads the Senate Space Committe. So criss-crossed were chains of command in the Pentagon that Senator JOHNSON was unable to find out who, among Pentagon, space officials W. M. Holaday, Roy W. Johnson and Herbert F. York, was boss. Dr. York assumed the position—but only retroactively, a day after the go-round before the Space group.

COOPERATION IN THE FIELD

In evaluating America's missile progress, one looks at the obvious things. Cooperation among the services in the field is excellent, and sharply in contrast with the jungle warfare of the Pentagon. The performance of industry oozes efficiency, and whatever slippages in production schedules occur can usually be traced back to a moment of indecision or a change of plans in Washington.

The conclusion one reaches is that our place in the race must be blamed in part at least on this fact: There are seven leading contenders for space and missile supremacy in the world. One is in Moscow. The other six are in Washington.

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. GARMATZ. Mr. Speaker, on January 22, Ukrainians all over the world, except in Ukrainia, observed the 41st anniversary of the proclamation of Ukrainian independence. Normally, it would seem strange that such an event would be celebrated everywhere but in the country most concerned, but under the present conditions, independence there is but a memory, even though a vivid one, and one which sustains Ukrainians wherever they may be, and instills in their hearts a determination to continue their efforts to again make freedom a reality in their homeland.

The Americans of Ukrainian descent in Maryland, commemorated this anniversary with a banquet in Baltimore on January 25, with Federal, State, and municipal representatives present.

On this occasion a resolution was unanimously adopted, which I think is worthy of the consideration of all Members of the House and therefore is inserted in the RECORD herewith:

The following resolutions have been adopted by the Americans of Ukrainian descent of Maryland on the occasion of commemorating the 41st anniversary of the January 22, 1918—proclamation of Ukrainian independence.

The observance held on January 25, 1959, at YWCA, Patterson Park Avenue, Baltimore, Md.:

A. INTRODUCTION

"We, the delegates and representatives of the Ukrainian American organizations, who are organized in the Baltimore branch of the Ukrainian Congress Committee of America—have gathered on this memorable and glorious day of January 22, 1918—proclamation of Ukrainian national independence—to discuss and deliberate problems which have a direct bearing upon us, as citizens of this great and democratic Republic, the United States of America.

"On this occasion it is fitting to recall that our organization, the Ukrainian Congress Committee of America had been founded in 1940, at a time when the world was gravely threatened by the totalitarian forces of nazism, fascism, and communism. The U.C.C.A. has proved to be one of the most spirited and ardent antitotalitarian and anti-Communist organizations in the country.

"Strongly supporting the efforts of our U.S.A. Government in maintaining peace, our organization boldly and without hesitation states that a lasting peace could not be achieved without granting freedom and independence to the nations enslaved by the forces of Russian Communist imperialism and colonialism, among which nations is Ukraine, the country of our fathers' origin."

B. THE ENSLAVED UKRAINE

"The suffering of the Ukrainian nation has been largely due to the brutal and enslaving policies of Soviet Russia, which fact is recognized today by everyone, save the stooges of Nikita Khrushchev and die-hard Russian imperialists. Mass deportations and executions of Ukrainian patriots, ruthless destruction of all Ukrainian churches, Russification of Ukrainian culture and language, the unrestricted genocidal policy of Moscow with respect to the Ukrainian people—all these crimes express the fundamental and traditional Russian policy aiming at the destruction of the Ukrainians as a separate ethnic entity.

"Because Ukraine, by virtue of its geographical position, its numerical strength, and its natural resources has been and is a natural springboard for aggressive Russian imperialism, its full and unqualified liberation from the brutal rule of Moscow would contribute considerably to the strengthening of international peace.

"We do resolve—

"1. To support fully and unswervingly the aspiration of the 45 million Ukrainian people in their efforts to regain their political freedom and national independence.

"We call the attention of the U.S. Government and the free world at large to the fact that the Ukrainian people had achieved their full freedom when on January 22, 1918, they proclaimed their independence, and on January 22, 1919, they united all the Ukrainian ethnographic territories into one independent sovereign Ukrainian Democratic Republic, established through a due process of democratic elections and endorsed by the overwhelming majority of the Ukrainian people.

"The new free state of Ukraine was recognized as the legitimate nation of the Ukrainian people by many governments, including that of the Soviet Russia, the latter, however, almost simultaneously with recognition, declared war and conquered by forces the new Ukrainian Republic.

"In place of their free national democratic government, the Ukrainian people were forced upon by Soviet Russia a puppet Soviet Ukrainian Government, which from the very first day never represented the free will of the Ukrainian people.

"The Communist system has brought about the ruin of the Ukrainian people and turned their land into the status of colony of Russian imperialism. Since the final conquest of Ukraine by Russian Communist force of arms and subversion in 1920, Ukraine never surrendered in spirit or gave hope of eventual liberation and complete independence. The heroic struggle of the Ukrainian people today inspires peoples of all nations enslaved by Russia to fight for freedom.

"2. To support fully and unhesitatingly the ever increasing endeavors of the United States in its policy of maintaining peace in the world, and in its growing determination to oppose and challenge the aggressive and imperialistic policies of the Soviets, whose ultimate goal is imposition of slavery upon this country and the destruction of its freedom and independence, as it has already done in Ukraine and in many other non-Russian countries of central and eastern Europe and Asia.

"3. To call the attention of the U.S. Government to the fact that the Soviet Union, with a population of 200 million, is not a monolithic state of the Russian people, but conglomeration of many nationalities, among whom the non-Russian, people comprising 110 million, were conquered by Moscow by force and are kept in slavery and subjugation against their will. Their desire for freedom and independence presents the weakest link in the Soviet system, which, if properly capitalized upon, could greatly enhance our chances of success in combating Soviet Russia imperialistic communism.

"4. To denounce those undemocratic Russian anti-Communist leaders here and in Europe who, in unison with the Kremlin rulers, agitate against the democratic and just aspiration of the Ukrainian people for their basic freedom and independence, thus strengthening the power of Moscow over Ukraine and all other non-Russian countries within the U.S.S.R. and the satellite orbit.

"At the same time, guided by the sense of Christian charity and compassion, we recognize the important distinction between the perennially oppressed Russian masses and the traditionally undemocratic and aggresive Russian leadership; therefore, while denouncing the Russian chauvinist leaders and imperialists who would keep Ukraine in perpetual slavery of Moscow, we deeply sympathize with the Russian masses, who are entitled to a better life and unrestricted freedom, as are the Ukrainians and all other people enslaved in the U.S.S.R.

"5. To call the attention of the U.S. Government and the free world at large that in Ukraine there exists and resists Russian domination an indomitable Ukrainian insurgent army as well as an entire network of underground resistance, which oppose the domination of Moscow and strive for the attainment of a free and independent Ukrainian democratic republic and a free world as well."

C. APPEAL TO THE U.S. GOVERNMENT

"Whereas the U.S. Government is solely able to rally all the enslaved peoples behind the Iron Curtain toward a hopeful and meaningful free world of tomorrow; and whereas, the enslaved peoples of Eastern and Central Europe and of Asia look forward to our moral and political leadership:

"We do resolve, To appeal to and urge the U.S. Government to make it known to the enslaved peoples behind the Iron Curtain that it upholds the rights of all non-Russian peoples within the present U.S.S.R., as well as of the Russian people themselves, to their basic and inalienable freedoms, which include the right of unqualified self-determination and independence. Such a step ranks in importance with NATO, which is primarily designed to safeguard Western Europe against the encroachment of Russian communism and messianism.

"In doing so, the U.S. Government will bring encouragement and hope to those peoples oppressed by Moscow, peoples who are fighting against the same tyrannical power which killed brutally the flower of our youth in Korea and which threatens to thrust into ignominious slavery not only our country, but the entire world as well."

Dr. JAROSLAW SHAWIAK,
Chairman of the Citizens' Committee for the Observance of Ukrainian Independence Day.
STANLEY STELMACH,
PETER WOJTOWYTCH,
ANATOLE BULAWAKA,
Members.

Mr. Speaker, Mayor Thomas D'Alesandro, of Baltimore, was unable to be present, but was ably represented by Col. Richard C. O'Connell, superintendent of the bureau of transportation of the city of Baltimore. The address he delivered for the mayor, together with the mayor's proclamation, follow:

Due to a particularly heavy schedule for this afternoon and evening, it is impossible for Mayor Thomas D'Alesandro, Jr., to be with you in person, as much as I know he would have liked to be able to do so, therefore, he has asked me to bring you his official and personal greetings, and to read to you a copy of his proclamation designating the commemoration of the 41st anniversary of the proclamation of Ukrainian independence.

Today, as you observe the 41st anniversary of the declaration of your country's independence, we find the world in turmoil with many countries in Europe under the domination of a government who denies every right to the people of these lands, including your own country.

On behalf of all our people in Baltimore Mayor D'Alesandro asked me to give voice to the hope that is in your hearts, that the delivery of the Ukraine will not be long delayed, and that before many years have passed, not only your loved fatherland, but all the once-free peoples of Europe will be restored to that freedom and equality among the nations that is their just and God-given due. And, again I quote the mayor, who said: "In thus voicing the sentiments of the people of Baltimore, I am speaking not only for those who had America for their birthplace, but I know that I truly represent the feelings of those amongst us who came from the Ukraine and other enslaved nations, or who are descendants of former residents of these countries.

America glories in the fact that the people of other lands, while they have been assimilated into the great melting pot that is America, nevertheless, retain a love for, and a continuing knowledge and appreciation of, the customs and traditions of their fatherland.

We glory in it, I say, and we would not have it otherwise, for we believe that the man or woman, who comes from a foreign land, and who retains his or her love for that land, while giving their first loyalty to America, is the better citizen therefore.

As against the communistic doctrine which states that their form of government must rule the world, by fair means or foul, we, the American people, can stand cleanly before the world and say plainly to any state: "This Government will not assail you. You can have no conflict without being yourselves the aggressor."

Since the origin of the American people, their chief trait has been the hatred of war. And yet these American people are ready to take up their arms against aggression and destroy, if need be, by their might, any nation which would violate the peace of the world.

There can be no compromise with aggression anywhere in the world. For aggression multiplies—in rapid succession—disregard for the rights of man. Freedom when threatened anywhere is at once threatened everywhere.

With the monstrous weapons man already has, humanity is in danger of being trapped in this world by its moral adolescents. Our knowledge of science has clearly outstripped our capacity to control it. We have too many men of science and too few men of God. We have grasped the mystery of the atom and rejected the Sermon on the Mount. Man is stumbling blindly through a spiritual darkness while toying with the precarious secrets of life and death. The world has achieved brilliance without wisdom, power without conscience. Ours is a world of nuclear giants and ethical infants. We know more about war than we know about peace—more about killing than we know about living.

Karl Marx and his theory of communism tried to tell the world that his theory of government would be the salvation of the world. We all know how wrong he was, because the people now in power in the Kremlin only seek to enslave men and women, and deprive them of all those things freemen cherish and hold most dear.

We, here in America, believe in democracy. We believe the people should rule, and not a few dictators. If we will only believe in democracy, use, it, and practice it every day, we shall so strengthen ourselves that nothing can prevail against us—or against those who stand with us in like good faith.

PROCLAMATION BY MAYOR THOMAS D'ALESANDRO, JR., DESIGNATING THURSDAY, JANUARY 22, 1959, AS UKRAINIAN INDEPENDENCE DAY IN BALTIMORE

Whereas January 22, 1959, marks the 41st anniversary of the Declaration of Independence of Ukraine, proclaimed in the year 1918, in Kiev, the ancient capital of Ukraine; and

Whereas Ukrainians everywhere, especially those who came to America to escape the tyrannic dangers of communism which threaten the peace of the world today, realize that it is vital for all free peoples to combat the rising spread of subversive propaganda by spreading the doctrine of democracy, both here and abroad, and to bear witness to our American way of life; and

Whereas although the Iron Curtain makes it impossible for those subjects under temporary communistic domination to inform the free world as to the real nature of the rule of dictators, the Ukrainian Congress Committee of America is well aware of the true facts and takes the lead in pointing up for all Americans the danger of communistic world domination:

Now, therefore, I, Thomas D'Alesandro, Jr., mayor of the city of Baltimore, do hereby proclaim Thursday, January 22, 1959, as Ukrainian Independence Day in Baltimore, in recognition of the efforts being made by Americans of Ukrainian birth or ancestry to extol the merits of true democracy, and to urge all our people to be alert to the ever-present danger to liberty and justice throughout the free world. I further urge all citizens to joint with the Ukrainian Congress Committee of Baltimore in the hope and prayer that the 40 million Ukrainians, as well as all other persons temporarily behind the Iron Curtain, may soon be able to live as free men and be masters of their own destiny.

In witness whereof, I have hereunto set my hand and caused the great seal of the city of Baltimore to be affixed this 21st day of January, in the year of Our Lord 1959.

THOMAS D'ALESANDRO, Jr.,
Mayor.

Mr. Speaker, the Governor also issued a proclamation in this connection, which I would like to insert here:

GOVERNOR'S PROCLAMATION: UKRAINIAN INDEPENDENCE DAY, JANUARY 22, 1959

Forty years ago, on January 22, the free and independent Ukrainian Republic was proclaimed.

Now the Ukraine lies behind the Iron Curtain—after mass Ukrainian deportations and executions, ruthless destruction of churches and Russification of Ukrainian culture and language.

The stalwart Ukrainians and those of Ukrainian descent have not forgotten their lost liberty.

January 22 is observed as a memorial to a once free and independent Ukraine.

Marylanders welcome the opportunity to join with their Ukrainian brethren in a day of prayer and hope that the inalienable rights of all freedom-loving people, to live in harmony with their fellow men, soon will be realized.

Therefore, I, J. Millard Tawes, Governor, do hereby proclaim January 22, 1959, as Ukrainian Independence Day throughout the great State of Maryland.

Given under my hand and the great seal of the State of Maryland, at the city of Annapolis, this 20th day of January, in the year of our Lord, 1959.

By the Governor:

_____, _____,
Secretary of State.

Mr. Speaker, it was my privilege to be present at the banquet and to bring a brief message to the group, which was as follows:

May I first express my thanks and appreciation for the honor and privilege of being invited here today by the Maryland branch of the Ukrainian Congress Committee of America to join you in the observance of the 41st anniversary of the proclamation of Ukrainian independence.

We are all aware of the fact that the Ukrainian Congress Committee represents the unification of the Ukrainian people of the United States through numerous social, cultural, fraternal, and political organizations.

The overall purpose of the committee is to build and maintain a common, united front with all other peoples in the general anti-Communist struggle.

The Ukrainian people have no community of fate nor any community of interest in the Bolshevik doctrines of the Soviet Union which is dominated by the greater Russian people. Communist rule has been imposed upon the Ukraine by terror, by starvation, and by extermination.

The Ukraine today is a gigantic state of landlord system of agricultural peonage, enforced by terroristic repression. The Ukrainian peasant has been reduced to a status inferior to the serfdom of the 17th and 18th centuries.

Today the Ukrainian farmer cannot determine the hours of his labor nor the conditions of his labor. He cannot choose the crops he will plant, nor the time of the plantings. He has no choice in the disposition of his harvest nor in what he receives for his labor.

The struggle between 40 million Ukrainian farmers and the dozen men who ruled the Soviet Union came to a climax in that tragic winter and spring of 1932–33.

The Soviet authorities deported whole communities and villages en masse to Siberia. In some areas the people were blockaded from travel for food. The Soviet authorities as a last weapon, plundered and extorted all food from the people where any resistance appeared.

The Soviet's penalizing policy of national famine resulted in the death by starvation and undernourishment of more than 5 million freedom-loving people in the Ukraine.

The suffering and death of these millions of unfortunate human beings need not have been in vain.

If their death will help us to understand the true nature and the false philosophy of communism, then this tragedy may prevent the recurrence of similar mass-murders wherever communism might strike.

Most of us are aware of the denial of God in communistic dogma. We know that communism rejects and ridicules the moral precepts of Christianity and of every other religion.

This country is engaged in a cold war with the Soviet for the friendship and support of the free nations of the world.

The struggle today is not between the capitalism of the United States and the socialism of the Soviet. Rather it is a struggle between sunlight and darkness. Between individual dignity and state slavery.

We can no longer be on the defensive in this ideological war. We must unmask the Soviet and her propaganda of capitalism.

We must expose to the people of the free countries the fact that the Soviet is a new form of tyranny and slavery. We must prove to all free peoples that Soviet socialism, essentially is nothing more than concentrated state monopolistic capitalism, founded upon human slavery and held together by threat of violence.

I would like to assure the Ukrainian people that this country has not abandoned her interest in the freedom-loving peoples of Central Europe. We will continue our efforts to resist further aggression and to point the way toward the liberation of all oppressed peoples.

Liberian Ambassador Urges African Unity in Areas Where Cooperation Is Possible Now

---

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following releases:

LIBERIAN AMBASSADOR URGES AFRICAN UNITY IN AREAS WHERE COOPERATION IS POSSIBLE NOW

WASHINGTON, D.C., February 10, 1959.—Liberian Ambassador to the United States, George A. Padmore, said recently that the valued cultural diversities among the peoples of Africa might make it necessary to wait until doomsday for an African federation while opportunities would be lost in the areas where cooperation is possible now.

ADDRESSES CAPITAL PRESS CLUB

Addressing a dinner meeting of the Capital Press Club in Washington, D.C., Ambassador Padmore asserted:

"We do not object to federation in the least, provided it is entered into by states which are in a position to make up their own minds, free of outside interference, and which come to the decision that federation is the political arrangement best suited to their needs.

"But we have had a long experience of the way these things are done in the world, and we believe it is a sober truth, and not necessarily a frightening truth, that if we wait for a voluntary federation of all the states, all the tribes, all the peoples of Africa, we may have to wait until doomsday."

SAYS OPPORTUNITIES MAY BE LOST

"And while we wait, opportunities for fruitful cooperation, within the limits of political patterns less rigid than that implied by federation may go begging."

Ambassador Padmore said it was these factors which led President Tubman and his government to propose recently the formation of the Associated States of Africa, an organization which would achieve close association without burying national or international identities.

States associated under this proposal would have a common cultural institution, a regional health authority, a scientific research and training agency, and a uniform tariffs and customs convention.

Comprising this association would be Africa's independent states and dependent territories with fixed independent dates. Other nonindependent states could join when free.

STATES WOULD RETAIN SOVEREIGNTY

"No state entering the association," the Ambassador continued, "would sacrifice even a fraction of its sovereignty. Much less would it be exposed to the risk of being brought under the domination of a state whose language, culture and institutions might bear small resemblance to its own.

"We are convinced that cooperation on this basis is the kind that can be most speedily attained and will be most likely to endure," he added.

He said Liberia stands among those countries "who feel that freedom must not and cannot be unduly delayed unless irreparable harm is to be done to the cause of world peace."

The diplomat cautioned against breaking up Africa's coalition once colonialism has been vanquished, "even if it is only a coalition of the spirit," because poverty and disease are also among the common problems Africa will have to face.

DIVIDE AND RULE MAY ENSUE

Ending the coalition, he added, would also "be an invitation to outside influences to resume the dangerous game of divide and rule."

"We do not wish to see repeated on our continent the feuds and the clash of ambitions and the wrangling over frontiers which for centuries has made Europe a playground for the armies of proud monarchs and scheming dictators," Ambassador Padmore said.

"Unity then," he stated, "must be the continuing watchword for Africa. But how is it to be achieved? We know it cannot come overnight. * * * It is often said that there is as much difference between a tribe in Gabon, for example, and a tribe in Sierra Leone as there is between a Portuguese and a Swede.

"That is true, and perhaps we should be grateful it is, for the solution to the world's troubles lies more in the preservation of the right people to be different from one another than in any misguided attempt to reduce the whole of mankind to a drab conformity."

UNITY GROWS OUT OF DIVERSITY

"Unity should grow out of diversity and not be used to crush it. Eliminating national characteristics is likely to prove as hard a task as eliminating the difference between the sexes.

"Liberia has a unique history. It follows that it has also a unique culture. It has traditions and customs and social institutions of its own. We have no wish either to give them up or to impose them on other people," Ambassador Padmore stated.

The Capital Press Club, which he addressed, has 67 members, including editors, reporters, photographers, radio and television news commentators and public relations practitioners.

Among the media they represent are U.S. News & World Report, United Broadcasting Co., the National Negro Press Association, the Associated Negro Press, the New York Post, the Carolinian, the Cleveland Call and Post, the New York Amsterdam News, the Journal of the National Medical Association, the Afro-American, the Pittsburgh Courier, and the Chicago Defender.

PROMINENT CLUB SPEAKERS

The magazines and newspapers among these media have a combined circulation exceeding 4 million. The radio and television stations service a total area audience exceeding 1 million listeners.

Previous speakers before the club have included Supreme Court Justice Felix H. Frankfurter; Congressmen Adam Clayton Powell, of New York, and William L. Dawson, of Illinois.

Senator Paul H. Douglas, of Illinois; Postmaster General Arthur E. Summerfield; Presidential Press Secretary James C. Hagerty; Democratic National Committee Chairman Paul M. Butler; and Republican National Committee Chairman Meade Alcorn.

[From the Liberia Official Gazette, Jan. 26, 1959]

With the emergence of newly independent states in Africa, Liberia is happy that she no longer stands alone as she did in the age of colonial expansion and exploitation. In that age she lost over half of her territory and suffered unspeakable indignities, discrimination, and perils. But never for once have the Liberian people lost sight of the fact that they are inseparably engaged in the great total human struggle for freedom and independence taking place everywhere and more particularly in Africa.

Liberia has consistently maintained that every people have an inherent right to be free to decide upon the type or form of government they desire as well as the political machinery they wish to employ in the solution of their problems in their own way without interference.

However, when the Liberian Government speaks of noninterference in the affairs of member countries, this cannot be construed to mean that it advocates the principle that any government can violate fundamental human rights of its citizens without such violation being the common concern of the entire world community. Neither can it be interpreted to refer to governments which have not been voluntarily created by the people of their own free will and accord.

Therefore in the United Nations and elsewhere Liberia has sought every opportunity in a constructive manner to advocate the cause of African freedom and independence. She has always maintained that Africa should not be half slave and half free. She has felt that Africa must be totally free so that her peoples might become masters of their own destinies. Thus, even at great risks to her own safety, Liberia has remained an asylum for the oppressed peoples of Africa. But the Liberian people are convinced that only friendly cooperation among all nations and races will insure that degree of peace and prosperity necessary for universal progress.

The Liberian Government and people believe that there is no substitute for freedom except it be greater freedom through equal participation and unlimited fulfillment of the whole purpose of a people. They also believe that any hasty or superficial semblance of unity in areas where conflicting issues are not carefully resolved may undermine the entire structure of any permanent political unity and retard real cooperative effort.

Hence, taking into consideration differing economic systems, differing political allegiances and preferences, differing cultural backgrounds and differing social customs; and not wishing to superimpose any artificial unity upon these differences, it is the opinion of the Liberian Government that the peoples of Africa should resolve to achieve close association and cooperation, without prejudice to their national or international identities, in the following or some similar manner:

1. That a single convention which would provide for a permanent organization to be known as the Associated States of Africa, be concluded among the independent African nations and those which have fixed dates upon which they shall achieve independence, with the understanding that other nonindependent countries of Africa shall have the right to join the organization upon attaining independence.

2. That the Associated States of Africa provide for continuing consultation on problems of common interest and for the peaceful solution of all disputes which may arise among its members.

3. That, within said organization, regional associations be recognized where they already exist or be organized to develop closer unity and provide uniform and common solution to specific problems in certain areas. For instance, it is suggested that in west Africa:

(a) A regional health authority should be created which would concentrate on the eradication of diseases common to the area.

(b) An agency should be developed to direct regional scientific research and training projects.

(c) A common cultural institute for the region should be developed.

(d) A uniform reduction of tariffs and a customs convention should be undertaken.

The Liberian Government feels that these political, social, cultural, and economic actions should be achieved in consonance with the aims of the United Nations and in support of its endeavors to achieve peace and raise the level of living of the inhabitants of the earth.

By order of the President:

J. RUDOLPH GRIMES,
Acting Secretary of State.

Health Benefits for the Aged

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. FORAND. Mr. Speaker, I have again today introduced a bill providing for the payment of certain health benefits under the old-age and survivors insurance program. The measure I introduced today is substantially the same as the proposals I made in the 85th Congress, which are embodied in H.R. 9467, except for the omission of improvements in cash benefits, which were, in large part, enacted last year. I favor additional improvements in cash benefits along the lines proposed before, but I am not pressing that point at this time.

My new bill provides insurance against the cost of certain hospital, skilled nursing home, and surgical services for persons eligible for old-age and survivors insurance benefits. This is done as part of the established Social Security System. The new benefits would be financed by adding one-quarter percent to the contribution rates of employers and employees and three-eighths of 1 percent to the contribution rates of the self-employed.

A detailed analysis of the earlier bill is available in the printed record of the hearings before the Committee on Ways and Means last June—page 880—and in the CONGRESSIONAL RECORD for August 30, 1957. I shall not repeat that analysis now.

It is my sincere hope that the Ways and Means Committee can arrange promptly for hearings on my proposals so that the House can take action this year. The committee should give consideration to possible improvements along lines which have already been suggested to me or which may be proposed by members of the health professions, and other groups interested in the welfare of the aged.

As I said in the House, in 1957, the present details are not necessarily the best that can be drafted or the final ones that I shall support. But I am even more determined now than ever before to seek constructive legislation at the earliest possible date, because the more I study the problem of the aged the more I see the need for prompt action.

WIDESPREAD SUPPORT

Extraordinary interest has been shown in the provision of health benefits for the aged as part of our national system of social insurance. Many individuals have written me endorsing my efforts and telling their own tragic experience with heavy costs and other obstacles to security and good health care.

Important organizations have again strongly endorsed health benefits under the old-age, survivors and disability insurance program. These include the American Public Welfare Association, the American Nurses' Association, the National Association of Social Workers, the AFL–CIO, the Group Health Federation of America, and other organizations with an intimate knowledge of the problems of the aged and the values of social insurance.

The Governing Council of the American Public Health Association on October 30, 1958, adopted a strong resolution which states that "health services for the aged are inadequate throughout the Nation" and supports "appropriate proposals to provide paid-up insurance for health services required by aged persons."

The American Hospital Association has recognized the need for some type of Federal action and has been exploring alternatives.

The American Medical Association has also acknowledged the need for vigorous action along new lines and urged its member societies to explore and support private programs that will help to avoid Federal legislation.

SUPPORTING EVIDENCE ON NEED

Despite efforts to find alternatives stimulated by my proposal, the need for Federal action is greater than ever. A 1957 study by the Social Security Administration shows that only two out of five old-age beneficiaries have some form of health insurance. Much of it is highly inadequate. It is expensive—too expensive considering the meager resources of most of our older citizens. It can be canceled in most cases at the discretion of the carrier, and it may run out completely when lifetime ceilings have exhausted the benefits stated in the policy. Even when in effect, much of this insurance is of very limited amount.

The limits of commercial insurance for the aged are illustrated by a "65-plus" policy now being widely advertised by a national company that has been given publicity by the American Medical Association. The policy costs $6.50 per month per person, but its benefits are very limited. It provides only up to $10 per day for hospital room and board for a maximum of 31 days for each confinement. Have any of my colleagues, any members of their families—or indeed any of our constitutents—found a hospital room recently for $10 per day? Up to $100 is allowed for miscellaneous hospital expenses. Payments for surgery are limited to not more than $200, and the company reserves the right to increase rates or to cancel on a statewide basis.

For many aged, such a policy may well seem better than nothing and in fact the policy to which I refer does appear to be about the most liberal in its terms. Many are far more restrictive. Surely this is not a sufficient answer for people with limited incomes. And the aged, typically, do have limited incomes.

Many aged persons find increasing difficulty in meeting their health problems as charges continue to mount. Hospital charges have risen 4 percent or 5 percent a year, partly because of improved services and long overdue wage increases, but also because of inefficiencies, and the lack of available alternatives.

Welfare agencies are hard-pressed to pay for necessary medical care for their clients. Hospitals wrestle with large deficits as their expenses per patient-day mount above what they can collect. All protection under group plans has been lost by many workers because of continuing unemployment.

The voluntary prepayment plans established by the hospitals and medical societies—Blue Cross and Blue Shield—are threatened by increasingly severe competition from commercial insurance companies. The latter can balance losses in this field with other profitable business. They can and do select for coverage the groups which typically have the least need for health services. Charges can accordingly be reduced on an experience rating basis below the levels possible to the nonprofit associations who are carrying the more expensive load.

THE PROPER CONCERN OF GOVERNMENT

Many Blue Cross plans have raised their rates recently, by amounts ranging up to 40 percent. As a result, a growing number of State insurance commissioners and legislative committees have asserted that the State must intervene in regard to consumer representation on Blue Cross boards' overuse of hospitals, and methods of determining charges.

These and other developments are clarifying the inevitable concern of Government as the agency to which the people turn to seek ways in which they can obtain high quality health care.

The Federal Government has for many years played an active part in the provision and financing of health services. In fact, it was in 1798 that the Congress enacted measures to provide health services for our merchant seamen. The program thus established grew into the United States Public Health Service.

Today the Federal Government provides funds for medical care for millions of persons under the public welfare programs. We have appropriated billions of

dollars for veterans' hospitals, health activities of the armed services, the National Institutes of Health, the Hill-Burton Hospital construction program, and various State health programs, all of which I heartily approve.

The vastly intricate health system of our Nation is going through rapid changes. These developments necessitate congressional consideration of various types of constructive steps that will enable all our citizens to obtain high quality medical care of the type made possible by the remarkable skills and knowledge of members of the health professions.

DESIRE FOR EXPERT ADVICE

Last summer I told the House that I was suggesting to the Committee on Ways and Means that a subcommittee be appointed to look into the question of health care for social security beneficiaries. I added that I hoped that the subcommittee would be given the authority to appoint its own staff with a director and with its own group of advisers. I feel strongly that this should be done.

In developing our final legislative proposals, the committee will certainly want information and advice from persons intimately connected with the problems of the people who need medical care and with the people who furnish that care, whether they are hospital administrators, physicians, nurses, or representatives of other allied health and technical groups.

I repeat my earlier request that such persons come forward and give us the results of their studies and deliberations so that we can get a solution to this distressing problem in the not too distant future.

MINOR CHANGES IN BILL

In preparing the new bill, I have included financing provisions similar to those which related to the health benefits section of the 1957 bill. An additional increase in the contribution rates would take place starting in 1960, consisting of one-fourth of 1 percent more for employees and employers and three-eighth of 1 percent more for the self-employed. The estimates so far available indicate that one-half of 1 percent of taxable earnings will meet the cost of the program for some time at least.

The 1 percent increase in combined contributions provided in the 1957 bill took into account the proposed changes in the cash benefits as well as the health benefits.

Up-to-date cost estimates are due shortly as part of the report which the Ways and Means Committee has requested from the Secretary of Health, Education, and Welfare. It should certainly be available by March when I hope the committee may be ready to commence hearings. As part of our consideration, we can, if necessary, further adjust the schedule of contribution rates to take into account the best available cost estimates for the program which we recommend.

As usual, I personally shall support adequate financing provisions so as to maintain the soundness of the program, which has just been attested to by the Advisory Council on Financing.

I have at this time made only one substantive change in the provisions of the bill in regard to health benefits. It occurs in paragraph (2) of subsection (c) and has the effect of broadening the group of physicians among whom the patient may select a person to provide surgical services for which payment will be made. Some of my doctor friends told me that the original definition was too limited. Perhaps others will think that the new definition is too broad. I shall welcome suggestions for further improvements.

IMPROVEMENTS TO EXPLORE

Among the strongest backers of my original bill, who have continued serious study of the health needs of the aged, there are some who question the feasibility of including surgical benefits at this time. This is one of the matters which the committee will want to weigh as it hears testimony.

We have had much experience in this country with prepaid medical care programs and private medical care insurance. Such experience indicates that the method of payment for medical care is inseparable from the kind and quality of care provided. The broad extension of prepaid health protection through collective bargaining and other types of private plans has shown that pressures are created on hospitals and physicians to hospitalize people needlessly for diagnostic services when the cost of such services is insured only during hospitalization.

We fortunately can learn from such experience under private programs how to avoid over-hospitalization in connection with the provision of similar benefits under governmental programs. Our first line of defense, of course, must be the integrity of the medical profession and the hospital administrators. As a second line of defense we should help to develop standards such as those we have found appropriate in other areas where public funds are spent and where it is necessary to protect the public interest.

When the Federal Government lets contracts for its veterans' hospitals, it ininsists upon specifications which must be met. When a Federal agency buys a hospital bed or drugs, it uses quality specifications to be sure of getting its money's worth. We should similarly consider proposals for assuring that hospital care or skilled nursing home services paid for from the old-age and survivors insurance trust fund are of a quality approved by responsible and respected members of the health professions.

In addition to these safeguards I am most earnestly seeking from expert sources constructive suggestions on the provision of payment for medical services that are an alternative to hospital services. Aged persons typically do not want to be in the hospital unless it is essential, and they will often recover more rapidly if they can be in a more homelike environment. Outstanding hospitals and various private and public groups have developed valuable experience on steps that can be taken to minimize hospital care and encourage rapid and lasting recovery.

I intend to explore the possibility of paying for diagnostic services, such as X-rays and laboratory tests, on an outpatient basis. Payment for such diagnostic service as part of the insurance program might well be valuable in making prompt diagnosis more available to aged persons without the necessity of hospitalization.

I intend also to explore the possibility of including benefits for home nursing care through such responsible agencies as visiting nurses' associations, hospitals, or local health departments. Much valuable work of this kind is already being done by devoted members of the nursing profession.

Another worthwhile suggestion that has been made is that the Congress should provide funds from general revenues for demonstration projects in the treatment and rehabilitation of aged persons. Grants to hospitals and other appropriate organizations could well contribute greatly to patterns and practices that would help our older citizens to lead self-sufficient lives even after serious illness.

I recognize, in view of the immensity and complexity of the problem, that any bill we can enact will have its shortcomings. Not everyone will be satisfied with even our best efforts.

But, we cannot wait, and the older people who look to us, cannot wait for perfection. We must go forward carefully and soundly. We are not attempting to meet the whole of the problem. My bill does not provide payment for as long a period of care or as many forms of care as aged persons and other beneficiaries require. It will still be necessary for such persons to make what provision they can through savings and other forms of insurance to meet medical emergencies.

I am hopeful, however, that we can enact a measure which will result in better health care for millions of Americans, that will relieve many American families of serious financial worries about health bills, that will avoid financial disaster for many aged persons, and that will als lighten public welfare loads and hospital deficits, and bolster the efforts of Blue Cross and similar nonprofit groups to provide protection for the entire community at a reasonable cost.

Adm. William F. Raborn Tells Polaris Story

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of Jan-

uary 30, 1959, written by Mr. Courtney Sheldon.

ADMIRAL RABORN TELLS POLARIS STORY

(By Courtney Sheldon)

WASHINGTON.—Adm. William F. Raborn oversees the development of one of the Nation's most promising retaliatory weapons—the submarine-launched Polaris missile. In his opinion:

"Upwards of 50 (Polaris submarines) would be a most significant force, bearing in mind that we don't have to be able to clobber every military target in order to have a good deterrent.

"Mobility and using the hidden depths of the sea make the Polaris submarine almost invulnerable."

This is how Admiral Raborn told the Polaris story in an interview with this correspondent:

"What are the great advantages of the Polaris as a war deterrent weapon, Admiral?"

"With an effective deterrent system we would have the ability and the time to retaliate in case of overt action against this country. If a prospective enemy felt he could zero in (pinpoint as a target) the positions where our retaliatory capability is located, he might be misled into taking a calculated risk and try to wipe out our positions in a surprise blow.

"This is one of the reasons why mobile systems—such as Polaris—are so well thought of. Mobility and using the hidden depths of the sea make the Polaris submarine almost invulnerable. Certainly, if an enemy can't zero in Polaris submarines, we can have much more time to make a mature decision to retaliate, if we wish.

"Another desirable feature of Polaris is that it will draw the enemy's bombs to sea, away from population centers in the United States.

"Further, many millions of cubic miles of ocean will be available to the Polaris submarine as launching sites. It will be international real estate not subject to control by other nationalities."

"What would you say were the limitations of Polaris?"

"There is no weapon for any purpose that can be a panacea. The drawbacks—well, it is an expensive system, though it is not any more expensive than any other major war deterrent system that I know of."

"What about the number of missiles a submarine can carry (reportedly 16), the distances it has to operate over, and the ease of communications?"

"I think that people who have made a lot of to-do about these things probably knew the least about them. As far as the number of missiles go, we will have a surprisingly large number of missiles in these submarines. You should keep in mind what you are trying to do, how many targets you are trying to hit, and what constitutes a good deterrent system.

"I for one, feel that we should not have to put all of our money, a sizable portion of our national budget, into systems designed to destroy every military target and major population center in enemy country.

"Communications—we have been talking to submerged submarines ever since World War II and there is no reason to believe that we are suddenly going to forget how."

"When will the first Polaris submarine depart from a U.S. harbor with operational missiles aboard?"

"As far as operational dates, Mr. McElroy has said that Polaris would be available in 1960. I have some very well-defined dates that I have my eye on."

"What is the score on your successes and failures in tests of Polaris?"

"Well, tests to technical men mean tests of the whole system. We have conducted a very large number of tests in each of the major areas that contribute to the system as a whole and to date we have been extremely successful, and we are on schedule."

"At one time there was speculation that Polaris would be used as a land-based solid propellant missile. Then the Air Force was ordered to develop the intercontinental-range ballistic missile Minuteman. Is the difference in capability of those two solid propellant missiles mainly one of range?"

"Principally. A submarine can carry a missile 3,000 or 4,000 miles closer to the enemy. It is therefore more efficient for the Navy to build a shorter-range missile."

"It has been reported that the first Polaris missiles will have a relatively short range, and this will be upped later to 1,600 and ultimately 3,000. Is that correct?"

"The first missile we put in operation in 1960 will be as good a missile as we can possibly build. No one can say definitely what we will have. We know our technical goals, and it is going to be a very usable and useful weapon in a submarine where, if you don't have quite the range you want, you just walk the submarine in a little closer."

"Your goal is 1,500?"

"The Polaris is thought of as an intermediate-range ballistic missile, a 1,500-mile weapon. As we go along, we will make improvements which will permit us, of course, to improve this range. Our submarines have been constructed with this in mind."

"Nine Polaris submarines are, or will be shortly, in the works. What would be your idea of the size of a Polaris fleet necessary to be an effective war deterrent?"

"If you want Polaris submarines to be the only war deterrents, you will have to have one size force, but if you want to have Polaris submarines in combination with other capabilities, it will have to be another size. I would say that upward of 50, something of that sort, would be a most significant force, bearing in mind that we don't have to be able to clobber every military target in order to have a good deterrent."

"Have you solved to your satisfaction the navigation problems with which the Polaris system confronts you?"

"I can say that at this state of development of the entire Polaris system we are ahead in the program for the development of the navigation element of this system. I have no doubt of our ability to perfect the navigation element. It is easier to solve the navigation problems of missile ships than it is missile-carrying airplanes."

"Are there any indications that the Soviets have a solid fuel missile capable of feats you plan for Polaris?"

"I can't pose as exactly an expert on this, but I would say that we are considerably ahead of them in this field."

"Will Polaris be fired from naval ships and installations other than submarines?"

"We can capitalize on our investment in surface vessels hulls and machinery by adding a modest number of Polaris missiles. It would make vessels even more valuable and versatile."

Cost of Second Best

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 18, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial, "Cost of Second Best," appearing in the Washington Post of February 18, 1958.

As the editorial well said:

Mr. MAHON—

Congressman MAHON—

is one of the best-informed men in Congress on military finance, and his judgment is entitled to respect.

Congressman MAHON, one of the most sincere and ablest Members of Congress and a dedicated American is one of the best versed Members of Congress on military matters and national defense. His views are worthy of deep consideration.

The editorial is as follows:

COST OF SECOND BEST

Chairman MAHON, of the House Military Appropriations Subcommittee, has put the defense spending issue into much needed focus. He estimates that $700 million annually in additional spending authority would be sufficient to match possible Soviet production of long-range missiles, and that a total of $1 to $2 billion would meet this and other defense needs now neglected such as limited war preparedness. Mr. MAHON is one of the best informed men in Congress on military finance, and his judgment is entitled to respect.

The net effect of this estimate is to show for what essentially narrow budgetary considerations the administration is willing to jeopardize the country's power position. Secretary McElroy has virtually acknowledged that there has been a deliberate decision to accept a second best position in missiles, with the explanation that other methods of delivery such as manned bombers will maintain an adequate balance. Even if the latter point is true, the psychological consequence of an inferior missile status could be devastating.

The American people have never been willing to accept a second best position in defense, and if they were consulted on the basis of the facts we are confident that they would not do so now. A $2 billion additional expenditure on top of a $41 billion defense budget would not bankrupt the country. Whether the increase were financed by higher taxes or by new borrowing at a time of considerable unemployment, the impact upon a $450 billion economy clearly would not be great. The country can afford what is requires, and it requires at least parity with the Russians.

Apart from the possible military disadvantages if we sat by and counted our dollars while the Russians outproduced us in intercontinental missiles over the next 3 years (as there is general agreement that they could do), fruitful negotiations with the Soviet Union surely would be more difficult if the United States were dealing from real or apparent inferiority. An adequate military posture is as important in the immediate future as 20 years hence and this means increased production of present liquid-fuel missiles until solid-fuel carriers are available. Development of further limited war potential accelerated submarine and submarine-defense programs and perhaps some further intensification of solid-fuel missile efforts would round out the program Mr. MAHON is talking about.

Congress has as much responsibility in this matter as the President. If Members abhor the prospect that the United States will be reduced to a second-best position as much as they ought to abhor it—and many legislators have voiced their apprehensions—it is their duty to vote the military appropriations they think the country really needs. President Eisenhower and Secretary McElroy cannot be compelled to spend the money, but Congress certainly can say emphatically that it thinks the administration approach dan-

gerous. A wise President will reconsider his judgment in such circumstances.

One caveat needs to be added. Unfortunately Mr. MAHON tainted his valuable contribution with the suggestion that higher defense spending might be offset by reductions in foreign aid or in various domestic operations. Cuts of $1 to $2 billion in either area would be disastrous—and totally unnecessary. We do not have to sacrifice one essential element of overall defense to finance another; indeed, economic development help ought to be increased.

The entire $12 billion deficit forecast for fiscal 1959 need not be erased in a single year—and if the economy should pick up faster than is now anticipated a tax increase could cover the extra cost and provide any needed damper on inflation. In any event inflation is a lesser danger, and there has been altogether too much preoccupation with it at the expense of everything else. It is time that Congress broke loose from its close-quarters scuffling with the President about who has saved how much in the past 6 years and addressed itself to the more vital problem of who is going to save the country in the next 6.

School for Solons

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. WALLHAUSER. Mr. Speaker, the congressional seminars conducted by Congressmen JOHN F. BALDWIN, Republican, of California; FRANK M. COFFIN, Democrat, of Maine; CARL ELLIOTT, Democrat, of Alabama; GERALD R. FORD, JR., Republican, of Michigan; PETER FRELINGHUYSEN, JR., Republican, of New Jersey; JAMES G. FULTON, Republican, of Pennsylvania; MELVIN PRICE, Democrat, of Illinois; and STEWART L. UDALL, Democrat, of Arizona, for freshman Congressmen was an outstanding contribution to the difficult task of becoming oriented as quickly as possible.

The course was thoughtfully presented. The time and effort of those who conducted it will have a beneficial result, I feel certain. The ability to conduct this type of schooling on a complete nonpartisan basis and with a friendly atmosphere made the course an outstanding one.

I am very proud of the fact that one of the Nation's outstanding newspapers, the Newark Evening News, on February 10, 1959, commented editorially on the seminars, and I am pleased to include the editorial in full in my remarks.

I must admit that I do not recall learning how to get reelected, as suggested by the editorial, but still believe, after attending these very informative seminars, that the voters back home are the only ones who can teach us this part of the subject:

SCHOOL FOR SOLONS

The value of orientation seminars for freshmen Members of Congress was pointed up not too many years ago when a newly elected legislator from New Jersey sought to learn when it would be proper to stop by and introduce himself at the White House.

He was told, of course, to wait until he was invited, but the incident served to dramatize the bewilderment of many a newcomer to the House of Representatives, unable to find his way about Capitol Hill, much less fathom the intricacies of a parliamentary system unlike any other in the world.

The freshman Congressman is aware, of course, that he should be seen more than heard during his first 2 years, but he is also haunted by the fear that if he isn't heard at all during that period, he may never be heard of again.

The frequent consequence is that he introduces too many bills, becomes involved in too many debates, gets into procedural tangles from which he cannot extricate himself, fails to observe proprieties of which he knows nothing and alienates the friendship of veterans who can help him.

The recently concluded course of instruction in Washington for the many whose House of Representatives terms began last month must have been welcomed by all of them. They learned rules, procedures, traditions, etc., from veterans. They learned of research facilities available to them, and of the Legislative Reference Service where talents are at their beck and call.

They learned how and when to speak, how to socialize, and even how to get along with the press.

At the end of the course they learned how to get reelected, which is something every Congressman wants to know.

Relief Food Rolls Gain 12 Percent in Nation

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Washington Post of February 14, 1959:

RELIEF FOOD ROLLS GAIN 12 PERCENT

The number of Americans on relief rolls receiving donations of Government surplus foods at the end of 1958 was the largest since 1942.

Reporting this yesterday, the Agriculture Department said the number increased nearly 12 percent in the past year. It was 5,230,044, as compared with 4,719,300 a year earlier.

Pennsylvania had the most, 829,550. Numbers in other States and areas included: Puerto Rico, 596,076; Michigan, 538,385; Mississippi, 331,441; New York, 348,871; Oklahoma, 246,960; West Virginia, 278,223; Arkansas, 219,354; Kentucky, 254,377; Tennessee, 154,551; Texas, 127,698, and Louisiana, 137,713.

The Department reported that it had donated 347 million pounds of surplus foods to Americans in the last half of 1958 at a cost of $62 million. The foods included dry beans, butter, cheese, corn meal, flour, dry milk, peanut butter and rice.

In addition to those on relief rolls, donations were made to school lunch programs feeding 14 million school children and to charitable institutions housing about 1.4 million.

Illinois Farmers Had Good Year—Best Since 1951

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared under date of February 4, in the Rochelle, Ill., Rochelle News, entitled "Illinois Farmers Had Good Year—Best Since 1951":

ILLINOIS FARMERS HAD GOOD YEAR—BEST SINCE 1951

(By L. H. Simerl)

Most Illinois farmers had a very good year in 1958. Average net income was up 15 to 25 percent, making the year the best since 1951. The year ahead will probably not be so good as the one just ending.

Weather conditions did more than anything else to lift farm income. The weather helped to boost prices of livestock and produce bumper crop yields.

The boost in livestock prices came through the ending of the drought that had been particularly severe in the Southwest. As ranges improved and feed and water supplies increased, ranches and farmers began to hold back calves and cattle to increase their herds. This reduced marketing, lowered output, and raised prices of livestock.

The meat supply shrank 151 pounds per person in 1958, the smallest since 1952.

Where monthly average prices of choice steers ranged from $21 to $26 in 1957, the range was $26 to $30 in 1958. For the year as a whole, prices of fed cattle were the highest since 1952.

Monthly average hog prices, which ranged from $17 to $21 in 1957, were $18 to $23 in 1958. For the year, hog prices were the best since 1954.

Total volume sold by Illinois farmers was probably about the same in the 2 years.

Looking ahead to 1959, we anticipate that increased marketing of hogs, and probably of cattle, will reduce prices of livestock, particularly hogs.

Most cash-grain farmers, too, had a good year. Crop yields were generally much better than in 1957, and well above the 10-year average. The statewide average corn yield in 1958 was 68 bushels—4 bushels more than in 1957 and 13 bushels over the 10-year average.

Soybeans averaged 28½ bushels an acre, which was 3 bushels more than 1957 and 5 bushels above the 10-year average.

Illinois wheat in 1958 yielded 31 bushels, 10 bushels more than the year before and 5 bushels above the 10-year figure.

Oats made 53 bushels an acre, 14 bushels more than in 1957 and 11 bushels over the State 10-year average.

Ordinarily, extra big crops depress prices so that total returns decline. With price supports in effect, however, total returns went up.

Dairymen gained less than most farmers in 1958. Both prices and amount of milk sold remained about the same as in 1957. Dairymen benefited from good pastures, good crop yields and a substantial increase in prices received for calves and cows sold.

The State's poultrymen did not share in the increase in farm income in 1958. Profits from eggs, usually made during the fall, were

low. The broiler business became increasingly competitive. Prices on turkeys were lower than in the previous year.

Looking ahead to 1959, we can see an increase in the output of pork. Increased sales of hogs will offset only half of the expected decline in prices. The increasing abundance of pork and poultry, and a possible increase in beef, may depress prices of cattle.

As for most crops, it seems likely that both yields and price supports will be lower than in 1958. Farm income in the year ahead may be near that of 1957.

United States-Soviet Economic Warfare

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I have spoken several times about the Federal Government's need for additional tools in order to combat Soviet Russia's declaration of economic war against the United States. I introduced H.R. 2159 to create a U.S. Trading Corporation which I thought would go a long way in providing some of the tools we are lacking. I called attention to the problems created by Soviet Russia buying up Iceland's fish at an economic loss to herself in order to attain a political objective; the problems created by Russia's attempt to buy up the cotton crop of the Sudan for 5 years at uneconomic prices to attain other political objectives; the problems created by Russia swamping the aluminum markets of Western Europe with uneconomically priced aluminum. The private purchasers of Iceland's fish or the Sudan's cotton cannot compete with the state trading of Soviet Russia if she decides to concentrate her economic power in selected and limited areas. Even our powerful aluminum companies cannot compete with the low price for which Russia decides to sell her aluminum in order to disrupt the market.

I am placing in the RECORD an article appearing in the January 24, 1959, Business Week, entitled "Russia's Newest Trade Weapon," which points up another area in which the United States is unequipped to compete.

What is this new item that Russia is selling considerably below cost? School laboratory equipment. It does not take an expert in propaganda to understand what Russia seeks to achieve by underselling the U.S. market on school laboratory equipment. What better way to impress on the minds of our youth the scientific prowess of Russia than to have in the United States school laboratory equipment marked "made in Russia."

I am sending this material to the State Department and the Department of Commerce asking them just how they expect to combat this trade weapon of Russia's unless they have something like a U.S. Trading Corporation which I have proposed as a weapon in their trade arsenal.

The article from Business Week follows:

RUSSIA'S NEWEST TRADE WEAPON—SAMPLES OF SCHOOL LAB EQUIPMENT ARE EXCITING U.S. MAKERS AND CUSTOMERS—QUALITY IS SO GOOD AND PRICES SO LOW

Following a pattern laid down in aluminum and benzene, the Soviet Government's next invasion of the U.S. market will come in the school laboratory equipment market. That seemed clear this week as the first sample lot of 26 items arrived in the United States. The Soviet offer: delivery of the items, f.o.b. New York, at an average price only one-fifth of prevailing prices for comparable U.S.-made items.

In the opinion of educators who viewed the sample Soviet items, there is no question of the quality of merchandise up for sale. "They are," as one expert put it, "fantastically good."

"It would be impossible," according to one MIT scientist who carefully inspected the numerous spectrometers, microscopes, navigation instruction equipment, rotators, and the like, "to hope to buy anything of similar quality made domestically for six times the price. They're offering a top-grade spectrometer for $53, f.o.b. New York, including tariff," he points out. "That's about one-third the price of the cheapest spectrometer on the U.S. market today. And the Russian equipment is good enough for a number of industrial uses, too."

GROWING MARKET

The first shipment to be sold in the United States by the Ealing Corp. of Cambridge, Mass., will be valued at $45,000. This will bring in 300 to 500 of each of 12 different pieces of equipment.

The total U.S. market for school lab equipment is currently about $6 million a year. But with the new Federal bill for education, some experts think the total sales potential in the United States could run many times higher in the years just ahead.

AMERICAN WORRIES

Reaction of U.S. school lab equipment makers to the latest Russian move is a mixture of anger and frank incredulity. In an industry dominated by two manufacturers—Central Scientific Co. and W. M. Welch Scientific Co., both of Chicago—most companies admit they can't hope to fight back against price cuts of this magnitude.

Disturbed as they are over what would seem to be a stunning blow to their business outlook, however, they're banking on the belief that this is just another step in a larger Soviet plan to unbalance first one and then another section of the U.S. business community.

"Maybe," a manufacturer of microscopes suggests hopefully, "they'll shift their interest to somebody else soon."

In the past, this has been the pattern—a large supply of Soviet merchandise would suddenly appear on the market, then as suddenly dry up.

Official Washington is even more unconcerned about the latest Soviet economic maneuver. The average duty on scientific educational materials imported into the United States from Iron Curtain countries is about 42 percent, they point out. This is about as high a tariff bracket as you can find on any legal Russian-made item brought into the States. And it should be enough to protect the U.S. manufacturer, officials say.

MASS PRODUCTION

Why this may not be the case—and why the Russians apparently feel they are now in a position to export quality-grade equipment of this type—is a question that interests industry representatives who have seen the sample items.

One logical answer is supplied by Paul D. Grindle, president of the Ealing Corp. Print order numbers on the instruction books accompanying some of the instruments, he says, indicate that, compared with ours, the Soviet school lab instrument industry is huge.

Science education was one of the announced goals of U.S.S.R. leaders, and one of the first things the postwar Russian economy was tooled up to supply. As a result, the Soviet-produced equipment is the only equipment of its kind being mass-manufactured anywhere in the world today.

MORE TO COME

The economics of mass-manufacturing any standard item are well known. Having amortized engineering and development costs, the Soviet production machine has undoubtedly reached a point at which it costs hardly more than the price of materials to extend production of scientific lab equipment a few hundred thousand items more.

This puts the U.S.S.R. in a position to sell its run-off in world markets on a cut-rate basis. On the basis of reports coming out of Russia, the same over-run may occur sometime soon in other things from communications equipment to high-speed cameras. Grindle himself brought back a suitcase full of catalogs of electronic equipment.

MAKING CONTACT

How this particular deal came about is a story of startling simplicity. Ealing's president Grindle happened to notice a picture on the cover of the U.S. Physical Society's "Physics Today," showing a Russian physics teacher at work in his classroom. On the table top in front of the teacher was an array of lab equipment that would be unusual in a typical U.S. physics classroom.

Grindle asked the U.S. Department of Commerce about the legality of importing sample lots of this equipment and found that it was completely within the law. He inquired about the equipment at the Russian Embassy in Washington and was promptly referred to Amtorg—the Soviet trade corporation in New York. Amtorg suggested a note to the proper authorities in Moscow. This was answered by an encouraging letter and a list of 96 laboratory equipment items that the Soviet Union would be willing to sell, with estimated sales prices.

MISSION TO MOSCOW

Grindle then decided to go to Moscow to look over this bonanza for himself. He found a well-organized sales setup, prepared to handle his requests. Proper Ministry of Trade officials were available for discussions. Raznoexport, the Russian agency charged with handling Soviet consumer products, permitted him to examine any of its sales products.

Almost as startling as this organization and planning is the significance of the quality of the Soviet lab equipment. University professors, looking at the equipment, are flabbergasted at its educational implications. The Soviets seem to have planned it for use in classrooms up to the 11th grade level. In the United States it would be adequate in classrooms up to and including the first year of college.

Moreover, all of the instruments were obviously designed by people who understand and care about science education. "The most awful part about what we saw," says one professor, "is how embarrassingly good it is."

We'll Know Before Long

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I wish to

include the following editorial which appeared in the February 10 issue of the Savanna Times-Journal, Savanna, Ill., entitled "We'll Know Before Long":

WE'LL KNOW BEFORE LONG

Editor Godfrey M. Lebhar of Chain Store Age writes: "If the new Congress is wise enough to curtail public spending in order to curb the dangerous inflation which is otherwise inevitable, the outlook for the economy in general, and for retail sales in particular, will be bright indeed.

"But if, on the other hand, the new Congress should be unwise enough to increase public spending instead of reducing it, we will be following a path which can lead only to economic disaster.

"True enough, adding fuel to the inflationary flames which are already threatening the economy would mean an increase in retail sales in dollars as a result of rising prices, but any increase in dollar sales without a corresponding increase in unit sales hurts our economy instead of helping it. Declining unit sales mean reduced production, increased unemployment and a lower standard of living for all."

Lebhar goes on to say that retail sales are likely to increase this year no matter what Government fiscal policy is followed. But the question—and it's as big a question as the Nation faces—is whether this will be a healthy increase, based on a stabilized currency, or an increase which merely reflects further degradation of the dollar.

We will know before long. The answer is up to Congress.

Forty-first Lithuanian Independence Day

SPEECH
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 16, 1959

Mr. ADDONIZIO. Mr. Speaker, today we think of wars as the worst events in human history, and as the horrors of destruction and death that are sure to be caused by wars in this atomic bomb and nuclear age, we dread the thought of any war. In this we are probably and rightly justified in regarding wars as scourges of the human race. That is the consensus of today. But in the past, even in the relatively recent past, there have been wars which were regarded as the only way out of difficult international situations, and even out of some imminent calamities. Certainly defensive wars are always treated in this spirit. The First World War is also regarded as such by many peoples who found their liberation and independence in the culmination of that war. As that world holocaust drew to its close, autocratic monarchies tumbled down one after the other: The Russian czarist regime, monarchical Germany, the Austro-Hungarian monarchy and the Sultan of the Ottoman Empire, all perished in that destructive and devastating war. And that war shattered the chains which held millions of innocent and helpless people in bondage and servitude. The Lithuanians were among these people.

The Lithuanian people have a distinct place in the turbulent history of northeastern Europe. They are justly proud of their long and glorious past. For centuries the Lithuanian kingdom was a powerful force in the whole east European region. At times they not only successfully repelled some of the incursions of barbarian invaders from the east, but they were the stouthearted champions of Christianity and its advance guard in that part of Europe. Late in the 16th century their kingdom was united with the Polish kingdom, and formed a dual monarchy. This union lasted for about 200 years. During that time the destinies of both nations were wedded together. In the late 18th century when Poland was partitioned, most of Poland and with it all Lithuania was incorporated into the Russian Empire. But the loss of national independent almost 200 years ago did not mean the loss of the spirit of freedom on the part of Lithuanians. While they suffered under the autocratic regime of the czars, they worked hard for the attainment of their freedom. They became firmly convinced that individual and national well-being could not be fully achieved or enjoyed without national political independence. They learned that in order to enjoy the benefits of their labor, they should have complete freedom in their homeland. To regain that freedom they worked ceaselessly, but it took them more than a full century to see their cherished dream come true. Not until the detested regime of the czars was overthronw could they have their freedom. In 1917 when that regime was shattered by the Russian Revolution, then, along with other peoples, the Lithuanians felt free. On February 16, 1918, they proclaimed their independence and set up their Republic. That day marks a new day in the modern history of the Lithuanian people.

Both in the attainment of Lithuanian independence and in its maintenance for more than two decades the United States has made important contributions, officially and unofficially. The encouragement which the Lithuanians found in the famous 14 points of our former President Wilson was a boon to their cause. It was a source of inspiration for them to know that their struggle for liberty and independence had the support of our wartime President and our people. Nor was the moral and material aid given to Lithuania by the people of this country, especially by the body of our loyal citizens of Lithuanian descent, of less significance. With such aid, and through their own industry and perseverance, the Lithuanian people turned their war-torn country, in a short time, into a happy habitat for all lovers of freedom and liberty. They worked wonders in making Lithuania a prosperous and progressive democracy, a model in many respects. And during those two decades the people were happy, leading a contented life. But, unfortunately, this period did not last long. As the war-clouds began to thicken in the late 1930's, Lithuania sensed the danger to her independence. No mercy was expected from either totalitarian regimes, neither from Berlin nor from Moscow. In the end, however, it was Moscow that in a series of villainous acts put an end to Lithuanian independence in July of 1940 and enslaved the people.

Today, for more than 18 years, unhappy Lithuanians find themselves once more in chains and cut off from all contacts with the free world. There are some 3 million helpless and innocent souls completely sealed off behind the Iron Curtain. Many elemental means of livelihood and all freedoms are denied to them. They live as in a large prison camp, to work as slaves for their taskmasters in the Kremlin. Communist rulers of the country have been doing their very worst to eradicate any feeling of nationality and, one might say, rationality, among its inhabitants. All national events and the observance are rigidly controlled and prescribed. There is no freedom of speech, of press, of movement, and no one is free to correspond with people in the free world. The only freedom these poor souls have, the one which their heartless overlords cannot take away from them, is to cherish their freedom and pray for deliverance from Communist totalitarianism. On this historic anniversary, on the 41st Lithuanian Independence Day, I hope that they will regain their freedom and once more enjoy it in their historic homeland.

Under One Roof 58 Years

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of Sunday, February 15, 1959:

UNDER ONE ROOF 58 YEARS

Last week the Washington Bureau of the Associated Press moved out of the old Star Building to quarters in the spick-and-span new Machinists' Building, 1300 Connecticut Avenue NW. Within another 2 or 3 weeks (much about that later) we shall ourselves be leaving, setting up shop overnight in our brand-new building on Virginia Avenue between Second and Third Streets SE.

So ends an era for the AP bureau as well as the Star, and the beginning of a bright new one for both. But having shared the same roof for more than 58 years, the physical parting has not been without regrets. The Associated Press (although its organization and concept are vastly different now) is older than the Star, the first AP Washington correspondent having been stationed here in 1848—4 years before the Star was founded. In 1856 the AP established its lone correspondent in an office, which became the first AP Washington bureau, one of two in the United States. And in 1900, when the Star moved into its ultramodern "marble palace" at Eleventh and Pennsylvania Avenue, the AP bureau moved in with us. We have been together ever since, both of us, in recent years, bursting at the seams as we outgrew what, so few years ago, seemed

unlimited space. Both of us have room now for future expansion—but no longer under the same roof.

The physical separation between the Star and the AP bureau now is measured in miles, rather than feet. Yet, due to the marvels of modern communications, the Star will be in closer contact with the AP bureau, and the news and pictures it receives and send, than when we were separated by a few floors. For more than half a century we exchanged our copy with the AP through pneumatic tubes, a marvelous device when they were installed. Now the AP's battery of teletype machines and photo transmitters, bringing the news from around the world, will be within a few feet of the editors who handle the copy, with direct telephone lines linking the desks in both buildings.

This is all fine, and means progress. Yet 58 years is a long time to have shared a building together, and all the good news and all the bad news that rushed in and out of that building every day in all those years. It is hard to be casual about such a parting.

Truman Endorses Macmillan Visit

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 18, 1959

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 18, 1959:

TRUMAN ENDORSES MACMILLAN VISIT—HOPES MOSCOW JOURNEY WILL OPEN A DOOR—OPPOSES TRIP BY A U.S. LEADER

(By Harry S. Truman)

I hope the visit of Prime Minister Macmillan to the Kremlin results in the opening of a door. I, for one, can see no objection to the initiative of the British Prime Minister.

Macmillan may be able to use this occasion to take soundings of the Soviet's immediate intent. All recent attempts to engage in exchanges and conversations with the Kremlin have proved futile and have been subverted for propaganda purposes.

Despite all the discouragements suffered by the West to date and the continuing skepticism of the Kremlin's peaceful intentions, I think the Macmillan trip is all to the good. This mission cannot be construed as arising out of weakness, or division of the West, or appeasement, and is one not likely to be used by the Russians for external propaganda purposes.

VISIT BY AMERICAN OPPOSED

If the Russians have a grain of peaceful intention in their program, the Macmillan visit might provide them a chance to return to constructive diplomacy where matters may be discussed quietly without the need for waving missiles in public.

In my judgment, this approach could not now be undertaken by the President of the United States or the Vice President without such a move being misunderstood and leading surely to another serious setback.

I have seen some public suggestions that the Vice President undertake a trip to Moscow in return for the Mikoyan visit and address the Soviets and the Russian people, with the stipulation that all of his remarks be published as given.

Because of my well-known personal feelings about the Vice President, I hope that no one will misconstrue the conviction I have that a visit by him to Russia, particularly at this time or a visit by any other leading American official, for that matter, would backfire.

There is another reason why I think a mission such as Macmillan's should be welcomed by us. I feel that the situation in which we find ourselves makes it desirable for our allies to assume equal initiative in the diplomatic field, provided, of course, that they do so in full concert and communication with all their partners.

We must realize that what we are after is not only to keep the peace but to make it durable, and at all stages to leave the door open to reason and conciliation, if we are to be met by a like attitude. And by like attitude, I do not mean flippant statements such as Khrushchev made recently before the Soviet party congress in Moscow when he declared that he is willing to concede victory in the cold war to the West while expecting the West to capitulate on Russian terms.

BLAME FOR THE COLD WAR

The Soviets initiated the cold war and have kept it up ever since with taunts, threats, and broken agreements.

We never wanted the cold war, and we don't like it. It has diverted our economy from further expansion for peaceful purposes at home and abroad. We converted from a war economy, beginning in 1945, and achieved immediate and unprecedented success in full employment and a balanced budget. But Communist aggression in Korea and elsewhere compelled us to redirect some of our economy to measures of defense at great sacrifice to our people.

The Russians have now embarked upon an economic war against us. It is a war they cannot possibly win. They can only bring further privations to their own people. They could not win even if our own leadership failed to put to maximum use our enormous and as yet untapped industrial capacity and economic might.

Let me remind the Kremlin rulers that this would not be a struggle between socialism and capitalism but one between dictatorial state capitalism and a free enterprise system where there are laws protecting the rights and welfare of the individual.

The Russians may feel confident that they possess the ability and the capacity to upset the economy of the entire world. If so, they are laboring under a delusion.

Such a task is beyond their ability or that of any other single power. More and more we see that the future welfare of all mankind is based upon the free cooperation of all nations.

NO MISGIVINGS SEEN

We have no misgivings about the industrial and economic progress of Russia. Neither are we disturbed over the dramatic strides in industry and agriculture in Red China. If the policies of Russia and Red China were aimed at peaceful cooperation with all their neighbors and for the benefit of mankind, we would be the first to acclaim their achievements and extend to them fullest cooperation.

Mikoyan told the Soviet party congress that peace follows trade and that nations that trade with each other are at peace.

If Mikoyan had come here not with the blandishment of trade but with a program of peace, his chances for success would have been greatly enhanced.

But Mikoyan has the mistaken belief, as do the Kremlin leaders and, I suspect, some businessmen here, that trade comes first and is a cure-all for all international differences. They believe that if you have trade, peace automatically follows.

Two world wars have proved that trade alone is not the road to peace.

One thing history teaches us is that dictatorships almost inevitably have led to war. From the days of Augustus Caesar the record on this is clear.

WILL TO BE FREE SPREADS

In this respect, however, I think the world is getting younger, rather than older, and the will to be free is manifesting itself in every part of the world. There is comfort in the fact that in this century of the two most oppressive dictatorships in history, freedom has come to more nations and to more millions of people than has ever been known before.

I hope and believe that in Russia and in China—perhaps not in my lifetime—the indomitable will in the human being to be free will triumph.

This immutable process of the will to be free will take some time. But in the meantime we have the problem of living and getting along with the Russian and Chinese dictatorships as best we can. This means that we must keep our guard up, much as we would prefer not to do it, in order that we secure ourselves against rapacious and foolhardy imperialism.

If Russia would agree to a peaceful unification of Germany, with proper safeguards to Russian as well as European security, that would be an important step in keeping the peace.

If Russia would make another step by abandoning her intrigue in the Middle East so as to create a climate for peaceful international cooperation, the peace of the world would be strengthened.

Success in the direction of peace in these two critical areas could produce a constructive approach to the problems in the Pacific. But let us remember that up to now the Communists use words they do not mean.

THE PRINCIPAL DIFFICULTY

The principal difficulty is that where you have a government which has total control of mind as well as material things, it is hard to find many opportunities for meaningful negotiations.

But limited as the opportunities may be, the statesmen of the West must be on the search and on the alert for any possible chance to advance the cause of peace. The most immediate pressing problem facing the West is the ultimatum date set by Khrushchev to abandon West Berlin.

Russia would like a meeting at the summit without an agenda and we do not know for what purpose. Our experience at the summit conference at Geneva proved it a complete waste of time and effort. It only served as a stage to present Khrushchev and Bulganin to the world as the new rulers of the Kremlin.

It seems to make sense that before we are maneuvered into another such meeting we at least wait for the report of Prime Minister Macmillan after his visit to Russia.

Republicans, by Whatever Name, Are Not the Friends of the Masses

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 17, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the February 16, 1959, issue of the New Republic:

ROCKEFELLER TAXES

Faced with a large prospective deficit, mandatory increases in State aid programs, and uncertain revenue prospects in the State of New York, Gov. Nelson Rockefeller could

include the following editorial which appeared in the February 10 issue of the Savanna Times-Journal, Savanna, Ill., entitled "We'll Know Before Long":

WE'LL KNOW BEFORE LONG

Editor Godfrey M. Lebhar of Chain Store Age writes: "If the new Congress is wise enough to curtail public spending in order to curb the dangerous inflation which is otherwise inevitable, the outlook for the economy in general, and for retail sales in particular, will be bright indeed.

"But if, on the other hand, the new Congress should be unwise enough to increase public spending instead of reducing it, we will be following a path which can lead only to economic disaster.
